TABLE XIII

In Million.

| Age. | 1921 | 1931 |
|------|---------|------|
| 0-5 | .. 3.96 | 5.34 |
| 5-10 | .. 4.67 | 4.55 |

The reduction of the old age class in ratio from 105.2 to 94.5 between 1891-1931 is an index of the decrease of survival value of the population. Though population is on the whole progressive there is a gradual thinning out of the old. Even the upper middle-aged group (40-50) has declined in ratio from 100.4 in 1891 to 96.8 in 1931. This group everywhere shows the lowest mortality and the best leadership. The decline in proportion of this group which is already the lowest among all the countries tabulated above does not augur well for social progress in the immediate future.

A variety of factors operates to cause marked fluctuations in both age and sex composition of the population in India : (1) the variation of birth-rates which increases with good harvests and diminishes with bad harvests; (2) the variation of mortality which increases with bad harvests and diminishes with good harvests; (3) the selective incidence of certain diseases which have unfavourable effects on reproduction or which carry off a larger proportion of females or the very young or the very old. In Bengal the conception rate shows heavy increases in March and June and decreases in October or November when malaria breaks out after the monsoon. Influenza leaves a heavier toll from among infants and younger adults, i.e., persons between 20 and 35. Children and adolescents suffer less and old people particularly males do not seem to be so seriously affected. Influenza also strikingly reduces the conception rate. Malaria is particularly unfavourable to younger adults especially women. Similarly the incidence of mortality from plague is heavier among women. The diseases which affect women more than children and men also affect the conception rate! (4) Migration is spasmodic in India, the volume being

governed by the intensity of agricultural distress. In a year of scarcity there is an exodus of able-bodied men to places outside the district or province and this indirectly brings about a diminution of birth-rate in a scarcity year.

All the above factors which lead to the violent fluctuations of birth-rate and mortality bring about oscillations in the age composition and the proportion of female reproductive group in the population. This would make the net reproduction rate in India an unreliable index of population growth. We have already referred to the heavier increase of population of the minor and adolescent age-groups during 1921 and 1931 and especially of women at ages 15-20 and 20-25. The increase in the minor age-group is itself the result of a relative agricultural prosperity in India in the years previous to the agricultural depression when the prices of cereals remained at a relatively higher level for some years after all other commodities had come down in value. The increase in children under 5 years is specially remarkable. On the other hand, while the increase in females in age-groups 10-30 is responsible for the recent storm of breeding in the country, the low numbers in the 1931 census in group 5-10, which presumably are the result of the after-effects of the influenza epidemic of 1918, will probably reduce the birth-rate in the first half of the decade 1931-1951. It is thus that specific fertility or net reproduction rates cannot truly measure the population trend in India as in the Western countries.

There is an intimate connection between agriculture, nutrition and fertility which is discernible not by an all-India survey but only by agricultural and demographic investigations in particular agricultural regions or ecological areas. Such investigations indicate that fecundity is reduced as the result of the deterioration of the food position in the face of an intense population pressure. The relation between sterility and malnutrition has been traced in many countries. In feeding animals on diets extremely deficient in Vitamin B McCarrison noticed in 1918 that atrophy of the testis was one of the earliest effects. During famines and wars, sterility in women and failure of the menstrual functions have been recorded as evidences of malnutrition. Malnutrition by leading to specific deficiency in essential foodstuffs such as calcium and vitamins has direct effects in the reduction of fecundity, as laboratory experiments indicate.

No doubt the consumption of wheat, which contains Vitamin B, is considerably reduced if it does not altogether cease during a year of scarcity or famine, while milk and milk-products as well as some fresh vegetables, all of which are rich in Vitamin E that has also been considered to have favourable effects on reproduction, are entirely eliminated from the diet. The general loss of physiological vigour indirectly affects menstruation, leads to an increase of abortion and contributes to diminish fecundity. On the other hand, scarcity or malnutrition increases the death-rate, especially of children and mothers. There are several diseases like diarrhoea, dysentery, beri-beri, malnutritional cedemas, epidemic dropsy and xerophthalmia which are found especially in India and China and caused by inadequate or faulty diets.

In the heavily populated provinces: United Provinces, Bihar and Orissa and Bengal there has been a steady decline of birth-rate during the last thirty years, which the census superintendents of the Public Health Directors find difficult to account for apart from the inaccuracy of statistics. The figures are given as below :

TABLE XIV
*Fall of Birth-rate in the United Provinces,
Bihar and Bengal.*

| Year. | United Provinces. | Bihar & Orissa. | Bengal |
|-----------|-------------------|-----------------|--------|
| 1901-1910 | 41.4 | 41.0 | 35.5 |
| 1911-1920 | 42.3 | 39.0 | 32.5 |
| 1921-1930 | 35.1 | 36.5 | 28.5 |
| 1929-1935 | 35 | 33 | 29.6 |

Intensive study of vital statistics over a period of sixty years in certain congested districts in the United Provinces also indicates that there is a distinct tendency towards diminution of birth-rate after a district's saturation density is over-stepped. For instance in Jaunpur the average birth-rate was 36 per thousand between 1901 and 1911, it came down to 28 between 1919 and 1927. In 1932 it stood at 26.4. Between 1928 and 1932 the birth-rates remained stationary at 28. Such diminution of birth-rate is not due to human volition at all. Nor is it due to postponement of marriage. The practices of infanticide and abstention from intercourse have also largely been given up. The slackening of birth-rate is due to the direct and indirect effects of malnutrition, and the alteration of the age and sex composition of population.

Fertility, therefore, is reduced in the following manner: (1) Inadequate and ill-

balanced dietary by leading to a chronic deprivation of certain essential minerals and vitamins causes a decline of fertility. (2) Malnutrition raises infant mortality and thus reduces the birth-rate through the diminution in the proportion of adults in the total population. (3) Malnutrition is also unfavourable for the mothers and by raising maternal mortality reduces the birth-rate. (4) Epidemics which may affect persons of child-bearing age reduce the fertility. (5) An increase of the disproportion of sexes, *i.e.*, paucity of females also indirectly reduces fertility. The sex proportions at birth vary widely in different countries. In India during the last few decades the proportion of females per thousand males is gradually diminishing in some provinces.

TABLE XIV

Average number of female births per thousand Male Births.

Race, environment and dietary govern the sex-ratio at birth. It appears on the whole that there is a lower proportion of females born in North and North-Western India where the Aryan and Semitic peoples preponderate than in the South and Central tracts of India where the Dravidian race element is the strongest. But race is only one factor in the distribution of the sex ratios. The same castes which are distributed in different parts of Northern India

show a deficiency of females as one moves further towards the arid conditions in the West and North-West. In Sind, Gujarat, Rajputana and the Deccan where conditions of economic life are more severe, there is a striking deficiency of female births. Harder economic life led formerly to infanticide or deliberate neglect of girl babies, and this may have selected those females for survival who are likely to bear a preponderance of male children. It is not unlikely that severe economic struggle under hot and dry conditions which is aggravated by the increase of population is responsible for the downward trend of female births in the N.-W. F. Province, Punjab, Bombay, Bengal and the United Provinces. Caste, which promotes inbreeding may also have increased masculinity and perpetuates it so long as strict endogamy is maintained. Economic struggle and inbreeding seem both to lower the vitality of women and this promote paucity of female births. The sex proportions in the reproductive ages depend upon differential birth and death rates which are in some measure governed by the age of marriage, risks of child bearing, differential treatment of boy and girl babies and the nature and extent of woman's work in the field. Chemical and food materials have an enormous influence in the sex ratio and fertility of animals. As economic pressure increases, it is not improbable that the deficiency of females, which is the geratest in the Indo-Gangetic plains, will increase and this coupled with other factors may alter the age and sex composition of the population in the long run to the detriment in birth-rate.

Where man's institutions and social habits and his standards of living do not safeguard his equilibrium density, his ecological routine of life and his stable occupational adjustment in the region, ecological controls of population which are operative in the regulation of animal numbers come to play an increasing role in re-establishing the equilibrium. In the overcrowded regions of India we now meet with the familiar checks of animal numbers. (1) The rodent type of check or an increase of mortality, especially in the form of epidemic outbursts following storms of breeding. (2) The fruit-fly type of check or a gradual slackening of birth-rate with density as an average abundance is over-stepped. The greater the approximation of numbers to an equilibrium density through the ecological controls of fertility and mortality and the diminution of the average expectation of life, the more remote will be the indiscriminate reduction of population by actual starvation. But the

*The female ratio is higher among the aboriginal tribes and castes in Chota Nagpur and Orissa, and this explains largely the excess in Bihar and Orissa. The figures of Bihar proper are as follows:

| | 1901-11 | 1911-21 | 1921- |
|----------------|---------|---------|-------|
| North Bihar .. | 952 | 944 | 950 |
| South Bihar .. | 954 | 951 | 955 |

Malthusian nightmare of famine as the ultimate safeguard of an equilibrium density still haunts the population. Meanwhile the paucity of females increases with over-population and becomes established as a stable racial trait which is transmitted to the next generation. Where man does not exercise any control over his multiplication, the forces of evolution and heredity combine to check over-population and seek to

preserve the organic acquisitions of the past. But such check is both cruel and haphazard. Man's conquest of the soil is in vain if he fails to exercise his own volition or the socio-religious restraints of the past nor uses scientific technique for the control of his reproduction, but, leaves nature to control it indirectly, through its control over the rate of mortality and even over his capacity of reproduction.

PROFESSOR BHOLA NATH SINGH, D.Sc.

By X

PROF. B. N. Singh, D.Sc., Kapurthala, Professor of Plant Physiology and Agricultural Botany and Director, Institute of Agricultural Research, Benares Hindu University, has been the recipient of an international honour from the Academia de Ciencias e Artes, Rio de Janeiro (Brazil). "As a homage to his (your) technical merit and in gratitude to the services he (you) has (have) contributed to teachings in India" the Congregation of the above Academy has conferred upon Prof. Singh (you) the "Diploma of Honour" and "the Direction of the Academy has confirmed this act of high justice by conferring on him (you) the Scientific Medal of Merit". This Academy has been awarding this rare distinction to select workers of the world on an inter-continental basis in recognition of definite fundamental advances made in the realm of science or arts and for creating a new school of thought.

It is a matter of supreme gratification that Indian work has gained such wide recognition in the domain of science.

Prof. Singh's career is an instance of one who has fought his way with no adventitious advantages but by sheer ability, undaunted courage and devotion to his subject, to a position of honour in the scientific world.

In 1931 Professor Singh succeeded in inducing the university authorities to establish the Institute of Agricultural Research with the old plant physiology department as its nucleus, and here he gradually developed a very living and flourishing institution receiving appreciations from several distinguished men of science, both foreign and Indian. In 1937, a grant of Rs. 67,920 was sanctioned by the Imperial Council of Agricultural Research for Prof.

Singh's investigations on physiology of cane and wheat.

Prof. Singh has published a large number of papers in the fields of plant physiology and

Professor Dr. B. N. Singh

nutrition, bio-chemistry, agronomy, soil science, general geology, and plant pathology in some of the best known scientific journals of England like: The Annals of Botany, Annals of Applied

Biology, New Phytologist Nature, Journal of Ecology, The Bio-chemical Journal, The Empire Journal of Experimental Agriculture, The Empire Cotton Growing Review; of America like: Botanical Gazette, Plant Physiology, Soil Science, American Society of Agronomy, Science, Phytopathology, Journal of Heredity, Protoplasm (Germany), Tropical Agriculture (Trinidad); and of India like: Proceedings of the Indian Academy of Sciences, Proceedings of the National Academy of Sciences, Indian Journal of Agricultural Science, Journal of the Indian Botanical Society, Current Science, Science and Culture and Proceedings of the Society of Biological Chemists.

Commenting upon the published work of Prof. Singh *Nature* in an editorial note under the caption "Physiology of Indian Crop Plants" observed:

"For some time past the staff of the Institute of Agricultural Research of the Benares Hindu University has been engaged under the leadership of Professor B. N. Singh in detailed and comparative studies of the physiology of Indian crop plants. A considerable number of publications on this subject has now been issued.... and good progress has evidently been made in a highly interesting and important field of work. The most extensive work completed is that dealing with photosynthesis under different conditions of light, temperature and carbon dioxide supply.... Another specially interesting problem under investigation is that of the differences in respiration rate found to exist in plants differing in their duration of life.... Other subjects under investigation by comparative methods include the water requirement of seeds possessing different structural and bio-chemical properties, and the effects on plant growth of irradiating seeds with X-rays."

Professor Singh's published work has received similar recognition from time to time in the editorial comments of *Tropical Agriculture*, *Science*, *Burichte uber Die Gesamte Biologie Abteilung*, etc. The manurial yield trials on wheat and complex experiments on sugar-canes with reference to fertilizer effects were much commended by Sir E. J. Russel, F.R.S., Director, Rothamsted Experiment Station and Professor R. A. Fisher, F.R.S., the famous statistician, who are themselves actively engaged on similar work in England. Sir E. J. Russel in his recent report referred to Prof. Singh's Institute as "an unusually well equipped one, working on a variety of subjects which gives the students a wide training", while Prof. R. A. Fisher observed that "the Institute of Agricultural Research at the Benares Hindu University is doing great work and laying a fine experimental foundation". Dr. F. Crowther, plant physiologist to the Sudan Government, who was specially deputed to study the

work carried out in Prof. Singh's laboratory and farms, recorded: "It has given me the greatest pleasure at last to see some really good physiological work on my travels." Prof. V. H. Blackman, F.R.S., in his recent visit to the Benares Hindu University as a member of the British Science Delegation, observed that the "Institute of Agricultural Research so admirably directed by Prof. Singh and so excellently equipped with facilities for research occupies the same position in India as the plant physiological institute under my charge in Great Britain."

Prof. Singh's contribution on "Biology of Longevity and Death", which, through the kind offices of Prof. M. N. Saha, F.R.S., figures as the opening article in the Science Congress Silver Jubilee number of *Science and Culture*, received a remarkable tribute from Prof. Crew, Director of the Institute of Animal Genetics, University of Edinburgh, himself a great exponent of the subject. Prof. Crew while addressing the joint session of the Indian Science Congress and the British Association for the Advancement of Science at Calcutta on "Biology of Death" remarked that he had "not yet come across another biologist whose work on the subject has been more comprehensive than that of Prof. Singh, whose work and writing have greatly moulded his (my) thoughts in this direction" and that he considered Prof. Singh "a greater biologist than himself (me)". Some of the other lines of work of much practical value going on under the direction of Professor Singh are the cold and gas storage investigations on potatoes and fruits, physiological basis of drought resistance in Indian crops, the improvement of plants through physiological means from a study of the genetics of physiological characters, weed control measures, photoperiodism, Green manuring problems, etc. Prof. Singh has given us the benefit of his ideas about the future development of agriculture in the country in two articles, one entitled "Reorganising Agriculture in Federal India" and the other as a Presidential Address to the Old Boys' Association of Benares Hindu University.

Lack of space forbids mention of the high appreciation of Prof. Singh's work by eminent men like Sir J. C. Bose, His Excellency Sir Harry Haig, Governor of U. P., Sir Sivaswamy Iyer, Sir M. Viswesweraaya, Sir T. Vijayaraghavacharya, Sir Bryce Burt, Sir Frank Noyce, Sir Francis Younghusband, Sir Richard Gregory, members of the British Association for the Advancement of Science, and others.

BURMESE ERAS, YEAR, MONTHS AND DAYS

By BIRESWAR GANGOOLY

(From Irwin, Htoon Chan, U Dana, U Wili and other sources)

THAT Burmese astronomy was originally taken from India, is now a well-established fact and no one versed in Burmese astronomy will ever deny it. Kings of Burma, though often engaged in war and conquest, were great patrons of learning and used to take great interest in Indian astrology. Even from as early as the 4th century B.C. they used to entertain in their courts Pouna (Brahmin) astrologers from India and performed the ear-boring and marriage ceremonies of their children on auspicious days and hours fixed by these Pouna Brahmins.

The Guru, with his son and younger brother, of the Yakhaing Pouna Brahmins of Mandalay. Mark the *namavali* on the person of the boy.

Learned Pouna priests were placed in charge of their coronation ceremonies and they used to attend daily the Royal Courts, opening and closing them with sacred hymns and prayers. With the help of learned Bikkhus of Burma, they translated Sanskrit astronomical books into Burmese and introduced in Burma a system of astronomical calculation, which now forms the ground-work of the Burmese calendar and also of their astrology.

U May Oung, late Home Member, in a learned article published in the *Journal of the Burmese Research Society* (1912) confirmed this statement and averred that "the methods of Burmese astronomical calculation were doubtless drawn up by the Hindu Astrologers from India at one of the Courts of Burma."

This was supported by Justice Irwin of the Rangoon Chief Court and was more definitely corroborated by Htoon Chan, an advocate of the same Court, who in his very useful book *The Arakanese Calendar* ably proved, by a careful comparison, that "the system of astronomical calculation prevalent in Burma was originally derived from Indian works on astronomy and expounded by Pouna astronomers from India."

The Burmese books of astronomy, mentioned at the close of this article, will further prove the correctness of this statement.

BURMESE ERA

The Era now current in Burma was introduced from 22nd March 638 A.D. by Pubba Saw—a Rahan, but supposed to be a King of Pagan. It is called the Kachha-Panchabda (i.e., The Fifth Era), because there were four other Eras previous to this Kachha-Panchabda, but why "Kachha," no one can definitely explain.

It is interesting to note that in the same year and month, new Eras were also introduced in Arakan and Siam, though politically these two Kingdoms were then entirely independent. In Siam, it is called the Chula Sakabda or Chulabda. The explanation perhaps lies in the fact that there was intimate international, religious and commercial intercourse between all the countries in Indo-China, from the days of the great Hindu expansion in the 7th century B.C. and there were then land and sea routes open from India to Burma, Siam, Cambodia, China and Japan.

The four Eras previous to the current Burmese Era (Kachha-Panchabda) were as follows :

(1) Gajabda

Gajabda was, according to a book written in 1863 by Kani Min, a Minister in the Court of King Mindon, introduced by Kootha Min leaving 14, 938, 560 years of the previous Era—Akarabda—which were too old to be reckoned. This Era was prevalent for 8,650 years before the 7th century B.C.

(2) Anzanabda—King Anzana, grand-father of Goutama Buddha, on a consultation

with the learned hermit Devala, suspended the Gaja Era and introduced a New Era called Anzana-Era, from 691 B.C. It continued for about 583 years. These years and those mentioned just below, are not however very accurate, and reveal anomalies when compared with other chronicles.

- (3) Maharaja Ajatasatru of Magadha suspended this Anzana-Era and introduced a New Era called the Buddya-Era from about 544 B.C. to commemorate the death of Goutama Buddha.
- (4) In the year 624 of this Buddya-Era, Samundarit, a King of Prome (not shown in the list of the known Kings of Burma) introduced a New Era in 82 A.D., called Samundarit-Era, and it is from the year 562 (rather 556) of this Era (*i.e.*, in 638 A.D.) Pubba Shaw Rahan of Pagan introduced the current Burmese Era called the Kachha-Panchabda. It is now 1300 B.E., that is to say 1,300 years have elapsed and the 1301st year has commenced from the 15th April, 1938 and will expire in April, 1939. So, in the Burmese method of calculation, 1300 B.E. means 1,300 years have been completed, and 1301st year is going on, contrary to what we generally understand by the English Era.

Mohnin Thado, a King of Ava, desired to suspend this Pubba-Saw-Rahan-Era and perhaps he actually introduced a "Sabana" Era; but the priests were against the change and he died soon after the change, as prophesied by the priests and no new Era was introduced.

In Thaton, the ancient citadel of the South Indian Buddhist civilisation in Burma, a different Era was in force, introduced from the arrival there, of Arhan Sona and Uttara [272 B.C. (?)]. But it came to an end in the year 1057 A.D., as King Anurudha (Awnaratha) of Pagan had destroyed Thaton in 1014 A.D. and had taken its King as a captive. The Thaton Era, therefore, continued for about 1329 years, and ended with the end of the political independence of Thaton.

YEAR

According to the Burmese conception of a Mean Sun, as also of the Hindu astrologers, the Burmese solar year is of 365 days 6 hours 12 minutes and 36 seconds, instead of 365 days 5 hours 8 minutes and 49.75 seconds of the true solar year. In their calculation, therefore, the

Burmese do not use either the tropical year or even the sidereal year of 365 days 6 hours 8 minutes and 5 seconds. Their solar year (of 365 days 15 *nayi* 31 B and 30 K=365 days 6 hours 12 minutes and 36 seconds) is in reality a sidereal-anomalistic year, shorter than the sidereal year by 4 minutes 31 seconds and longer, as shown above, than the true solar year.

Owing to this difference—a divergence is caused from the Equinox (as Irwin points out) at the rate of one month in 94 cycles of 1786 years. So the New Year day of the Burmese Era, which first fell on the 22nd March 638 A.D. has been, since then, gradually advancing towards the middle of the year, *e.g.*, in 1938 A.D. the Burmese New Year fell on the 15th April instead of in March (23 days later than the 1st New Year) and in 3500 years, the New Year day will fall in June instead of in April, as it now does.

The Burmese New Year again does not begin until about 2 days after the Mahavisuva-Sankranti of the Bengali Calendar: because the Burmese Era commenced when the Mean Sun entered the Meitha (Mesha Rashi) in 638 A.D., while the true Sun at that time had advanced more than one *pād* of Aswini in the Meitha (Mesha). The true Sun takes 363 days 75 Kyammat to reach the 1st *pād* of Aswini, while the Mean Sun takes 365 days 207 Kyammat to complete the circuit. So this difference of 2 days 132 Kyammat (2 days 3 hours 57 minutes and 36 seconds or rather 2 days 4 hours 1 minute and 12 seconds, as the Burmese Calendars show) is compensated by postponing the Burmese New Year day 2 days 4 hours 1 minute and 12 seconds after the true Sun has arrived back at the 1st *pād* of Aswini.

Mythologically the lay man has a curious story attached to it. He says that the Thakya Min (King Sakra of Heavens) comes down to this Earth at the expiry of the solar year and resides here for 2 days and then goes back to his high abode. The day on which he arrives is called the "Akya-day," on which the water festival begins and the Burmese Buddhists receive the Thakya Min with small jars of water covered with seven kinds of twigs, *viz.*, Thabye (Jaman), Thee (Kad-bel), Dan (Mahandi), Ohn (Coconut), Awza (Custard apple), Makala (Guava) and Mye-sa-yet (Durba leaves). The day following is called the "Akyat-ne" or the intermediate day; and the 3rd day on which he departs, is called the "Atet-Ne" (day of rising up). The Burmese astronomers carefully calculate the time of his arrival and departure and the Kings of Burma used to announce them

by report of guns, bombs, rockets and beat of drums from the Palace. The day following the Atet-Ne is the Burmese New Year day—a day on which the water festival ends and the people go out with small jars of water containing new Thabyet and Malka twigs and Mye Sa (Durba leaves) bunched with flowers to pay homage to their superiors.

MONTHS

There are of course 12 months in the Burmese year, as it is with us; but the Burmese months are Lunar months alternately of 29 and 30 days, *e.g.*, their Tagu (Chaitra) is of 29 days while the next month Kason (Baisak) contains 30 days; and Nayun, the third month, (Kaith) is of 29 days and the fourth month contains 30 days and so on. Thus in 12 Burmese Lunar months there are 354 days only—11 days 6 hours 12 minutes 36 seconds shorter than their solar year. To regularise this shortage, intercalary months and days are inserted, which are called “adhi-masha” and “adhi-nes.” The years in which the “adhi-masha” and “adhi-nes” are to be inserted are fixed by well-calculated rules; and the Pouna astronomers of Burma, though they sometimes disagree, profess proudly to be correct in their calculations.

The Burmese months, being Lunar months, begin from the 1st day of the Moon (*Sukla Pratipada*) and expire with the end of the next inter-Lunar day (*Amabasya*) but their New Year does not, as explained above, begin with the 1st day of the Moon (Lunar month) nor does their year end with the last day of the month (*Amabasya*). For example the Burmese New Year in 1937 A.D. fell on the 8th Lasan (*Sukla Ashtami Tithi*) of Kason (Baisak) instead of the 1st day of the Moon in Kason.

The Bengalee Hindu *Tithis* also do not exactly correspond with the Burmese *Tithis*. There is a difference of about 12 to 24 hours.

The Burmese month being a Lunar month, one would expect that the dates of their month would correspond to their *tithis* (or *Dithis* as called in Burmese). But it is not so; for a Burmese *Dithi* is not exactly equal to a Burmese Lunar day. For example, 3rd February, 1938 was the 4th day of Lasan of Tobodwe (*Sukla Chaturthi*) but the *Dithi* on that day was *Dwitiya* or *Tritiya*, according to their calendar.

For explanation, Htoon Chan writes: “Months are calculated by the *Dithis* and each month is divided into 30 *Dithis*; but each month has 29 days, 31 Nayi, 50 Bizana and $5\frac{88}{88}$ Kaya (29 days, 17 hours 44 minutes, 2.3897 seconds) and so the ratio

between the day and ‘*Dithi*’ is expressed as $\frac{692 \text{ Days}}{708 \text{ ‘Dithi’}}$.” To find out the *Dithi* of a day, U Wili says, “Add the Longitudes of the Moon and the Sun and divide the result by 720. The quotient and the remainder will show the *Dithi*”.

Counting the months by the Moon is of course a very old method in the East and is in existence even now in Sambat and Fazli eras of India. In Bengal, too, the Lunar months had been introduced and the Bengali month is still named after the constellations, on which the Full Moon day of the month ends and not by the sign of the Zodiac in which the Sun enters at the commencement of the Solar month.

THE SIGNS OF THE ZODIAC

The Zodiac, as we all know, is an imaginary path of the Sun. The Burmese astronomers call it by the name of “*Dwadatha-Yathee*” (*Dwadasha Rashi*). The constellations of the Zodiac also bear the same Sanskrit names, though slightly deformed, *e.g.*, Mesha (Meitha), Vrisha (Parietha), and so on.

Though the signs of the Zodiac have been slowly shifting from their original positions, the Burmese astronomers, like the Hindus, take them as stationery, for their astronomical purposes.

The Burmese months are also, in their astronomical books, named according to the constellations (such as Baisaka, Jaistha, etc.). But these astronomical names naturally clashed with the popular names already given to them by the lay man and they were not therefore changed and are called as Tagu, Kason, Nayun, etc., as before. The meanings of these names, however, are too long to be described in this article.

The Burmese Zodiac is also divided into 27 Stars (Aswini, Bharani, etc., excluding the Abhijit) as the Hindus have and are denominated by the same Hindu names, such as Chitra, Bishakha, Aswini etc. Each of these asterisms, has 4 *pads*, making 9 *pads* for each sign.

In Burmese astrology the calculations relating to the constellations are highly important. Their astrologers can correctly determine the position of a planet at a fixed time and place and profess also to know their influence on the course of life of a man and his character.

DAYS OF THE WEEK

The names of the days of the week are also taken from Hindu astronomy. Like the

Hindus, the Burmans believe that the sun, the moon, and the other planets rule the days and their names are given as Taninga-nwe (for Ravi), Tanin-la (for Soma), Ainga (for Mangala), Bouduha (for Budha), Kyathabade (for Brihaspati), Thoukya (for Sukra) and Saney (for Sani).

DIVISION OF TIME

The Burmese day begins astronomically from midnight and ends at the next midnight, though in common parlance, the day begins from the time the sun rises.

The Burmese month is, as stated before, a mean period of lunation from a New Moon to the next New Moon.

The Burmese astronomers understand the Hindu division of time, the Hora, Danda, Pala, Bipala, etc. But they use a different division of time for their astronomical calculation.

Their 1 year is equal to 12 months; 1 month=30 days, (or more accurately =29 days 31 Nayi 50 B and $5\frac{20}{100}$ Kaya); 1 day=60 Nayi (more accurately, 59 Nayi 3 B 40 $\frac{40}{100}$ Kaya).

The word Nayi is now wrongly used to express one English hour; but astronomically 1 Nayi is equal to 24 minutes that is to say 4 pads; 1 pad=15 Bizanas; 1 Bizana=6 pranas. 1 prana=10 Kayas; 1 Bizana is equal to 24 seconds; Kyammat is 800th part of a mean day.

These divisions of time are however used in their astronomy. The villager does not care for these astronomical divisions and has no clock to determine the time of the day or of night. He uses queer phrases to denote the time. An incomplete list of these phrases is given below for our inquisitive readers.

1. Kye-oo-Thon=cock-crow-time 4-30 A.M.
2. Aun-chhon-kat-chhain = 5 A.M.
3. Nayhtwe-daw-pyu-chhin=Sun-peeping-time.
4. Chhon-khan-chhin=Phongyi-begging-almstime 6 A.M.
5. Nay-Htwe daw phya=Sun-on-palm-rah-tree time.
6. Nanet-Son-Si-chhein=Meal time for Phongyis—about 8 A.M.
7. Ne-chhon chhachhein = Meal time for Phongyis = 11 A.M.
8. Mun-Tet-chhein=Midday—12 Noon.
9. Nya-Sa, Thamin-Sa-chhein = Evening meal time 5 P.M.
10. Moh-Hmoung-Kya-chhein=Sky-darkened time—7 P.M.

11. Mee-Hton-Chhien = Light-kindle time.
12. Nwa-Yaing-Thwingyin chhein = vicious-cows-to-be-put-in-shed time.
13. Nee-Ako-Mathee-Tathi-Chhcin=Brothers. won't-know-each-other-time=7-30 P.M.
14. Thu-Nge-taik-chhein=Child-sleeping-time.
15. Lubyo-lay-chhein = Youths-to-roam time.
16. Than-goung-chhein=World-quiet time.

The Phongy Kyaung in the village usually keeps a clock, but a stick placed perpendicularly on an open ground near the Kyaung tells them the time of the day by its shadow; and the candles or the Stars show them almost as accurately as clocks, the time in the night. During the Burmese regime, there was a Royal sun-clock and a water-clock in the Palace; and time was used to be notified by beats of the Royal drum (one beat two beats and so on).

SEASONS

Astronomically there are six seasons in the Burmese calendar as we have, according to the sun's position in the Zodiac. But popularly, they speak of three seasons only—Summer, Rains and Winter.

BURMESE BOOKS ON ASTRONOMY AND ASTROLOGY

The following Books are only a few of the astronomical books used by the Burmese astronomers:—

Raja-mattan, Nirnaya Sindhu, Mala-Kasha, Loka-Deepani, Chandra-Surya-Gati-Deepani, Maha-Nayi, Sankha-bodha, Makaranta, Surya-Siddhanta, Briha, Arya-Siddhanta, Dwadasarathi, etc.

The Burmese astronomical books are too numerous to be mentioned, but they are all based on Hindu astronomy. The modern Burmese astrologers are using English and American books also to help their predictions.

In the "Briha" it is mentioned that Pandit Bhagawandeen, a learned man in astronomy from Benares, was brought to Mandalay by King Mindon and was employed by him as a Court astronomer. Bhagawandeen is reputed to have altered the Malamasha-Shifts into 1, 4, 7, 9, 12, 15 and 18 and the next shift also will be necessary in a short time. There are Bengalee Pouna Pandits in Mandalay who are quite adept in Burmese astronomy and astrology and a few of them were given the pompous title of Raja-Guru.

RURAL BROADCAST IN ITALY

By DR. P. N. ROY

THE Radio has come to stay in modern life and every day the number of its users is increasing. It has become a cheap source of entertainment to thousands of people and it has proved itself to be a powerful instrument in the hands of almost all governments for mass-contact and the shaping of public opinion. But its utility has a wider extent. It disseminates news, rivaling the newspaper in this respect and it undertakes the task of educating the people by means of instructive talks and scholastic broadcasts.

It is because of this versatile character of the Radio and its great utility to the State that broadcasts in all countries are either State-managed or State-controlled. But the needs of urban listeners are perhaps not the same as those of the rural listeners. Moreover, varieties of programmes meeting the needs of different classes of listeners cannot perhaps be satisfactorily arranged within a limited period of time from the same broadcasting station. A programme which includes general items of entertainment and special items for special classes of listeners cannot perhaps allot more than ten minutes to each special item, which also is possible at irregular intervals and at varying hours.

It is the recognition of this fact that has led some countries to make separate arrangements for urban and rural listeners. Italy has a special radio-organization, called the *Ente Radio Rurale* (Rural Radio Corporation), in existence for several years now, which caters to the special needs of the rural population of the country, bringing instruction and entertainment to the doors of the farmers and other modest dwellers. Every Sunday, this Corporation broadcasts for full one hour a special programme called The Farmer's Hour, when topics connected with agriculture, the farmer's life and life in the country in general are discussed and practical advice suited to seasonal work in the field and the sale of products is given. The programme also includes a brief period of pleasant entertainment.

The programme of the Farmer's Hour is divided into three parts, each lasting for about 20 minutes. The first part consists of the political and economic happenings of the week and the second of songs and music. These two parts are broadcast from Rome. In the third part

different branches of farm-work are dealt with according to the different agricultural work carried on in the region. This part of the programme is broadcast from the various regional radio-stations of the country. As the listeners of this programme are all people whose education does not perhaps go higher than the elementary school training, care is taken that no pedantry and no difficulty of technical language creep into the talks and instructions given during the Farmer's Hour. The Rural Radio Corporation claims that the initiative has had the greatest success among the rural classes and it is estimated that hundreds of thousands of the rural population crowd round the various radios installed in different localities. For the benefit of the listeners, the Corporation also publishes a weekly magazine called *La Radio Rurale* (The Country Wireless), which is distributed free of charge.

But the Farmer's Hour is only a part of the programme conducted by the Corporation. Complementary to it is the programme of rural scholastic broadcasts meant for supplying the teachers of the rural schools with suitable teaching material of current interest, so that they may enliven and complete the ordinary routine of teaching.

It would be wrong to suppose that scholastic broadcasts diminish the importance of the teacher. The Rural Radio puts otherwise unobtainable teaching material at the disposal of the teacher, who previously gives a lesson on a particular subject and the wireless then enters to supplement his instruction. For example, a teacher in a village school has first of all given a lesson on the submarine, its inventions, its construction and its activity. When the theoretical lesson is over, in comes the wireless. A microphone is installed in the very heart of a submarine and thence the details of its very life and of its inmost workings are carried to the school children who thus receive a vivid impression of life on board. The plain narrative of the teacher is thus rendered more vivacious and interesting. In this way the Rural Radio broadcasts, for instance, dialogues regarding traffic regulation, personal hygiene and gardening or carries the imagination of the young listeners on

Rural Radio listeners : Italy

Radio lesson in a rural school in Italy

Lesson on malaria in a rural school in Italy

Hitler's home, "Berghof", at Obersalzberg in the Bavarian Alps, where the last discussions between Hitler and Schuschnigg took place

board a ship or a submarine, to the field of military manœuvres, or inside factories, barracks, aerodromes, etc. It also excites the curiosity of its listeners by giving drawing lessons and promoting competitions in letter-writing, etc. All important patriotic celebrations and ceremonies are broadcast from Rome or from wherever they take place. During the last Abyssinian War, the Rural Radio was used as an instrument for teaching the children to assist their elders in facing the situation.

But to do all this successfully two things are necessary—to develop the habit of listening-in and to supply radio-sets at a cheap price. The first, *i.e.*, the listening-in habit, depends to a large extent on the second. In order, therefore, to facilitate the purchase of radio-sets by schools and similar bodies, a highly sensitive and powerful receiving set has been put on market. This is sold at a low price. But in order not to injure the radio trade in general, the sale of this set is limited to the abovementioned organisations.

Another problem is the establishment of social centres where country people can gather for collective listening-in. Naturally such centres cannot be in the house or courtyard of a private individual. The Rural Radio Corporation has thought out the problem and found that the best place for installing radio sets in the rural area is either a school or the seat of any other State-organization, *e.g.*, the Fascist Headquarters, the Afterwork Recreation Room, the Parish Hall, the Agricultural Syndicates, the Headquarters of the National Balilla Organisation, the Offices of the School Inspectors, etc. Every village in Italy has one or more of the abovementioned places where a radio can be installed.

It cannot be said that at present all schools in Italy are supplied with radio-sets. But of late the Italian Ministry for Education has issued an order, as a result of which every elementary school would, in the near future, be provided with its own radio.

The question of rural broadcasts in Italy reminds the writer of the present article of the similar effort made by some of the radio stations in India. The Delhi Station tried to popularise the listening-in habit in some of the villages in the Punjab and U. P. and it is said that the trial was a failure because the villagers did not show any sustained interest. The causes of this lack of interest may be enquired into. Some evident ones seem to have been the monotony of programmes and the lack of centres suitable for collective listening-in. Rural programmes should be entirely separated from and not inserted within the urban programmes and variety with interest must be sought in making them. The programmes might be best prepared in consultation with people who actually live in villages, and attention should be paid to regional necessities. In fact all rural programmes ought to be regional programmes and different hours should be allotted for different regional programmes. Villagers themselves from various regions might sometimes be invited to speak before the microphone on the problems of their own regional life. At the same time the significance of the important events of the outside world, particularly those that affect the life of the rural population, should be explained to them. And in preparing the amusement part of the rural programme, village artists should be taken into consideration.

As regards the centre for collective listening-in, rural broadcasts will always fail in India so long as the radios are installed in the houses of private individuals, whether village headmen or not. Villagers have their own political, social and private divisions, jealousies and rivalries which would come into play when the radio-sets are installed in the house of any one individual. Under the circumstances, they should be installed in the village post-office, the village school, the union board, the thana and so on.

Rural uplift is now a major problem of the Government and it is hoped that the radio will play its proper part in it by bridging the gulf between the city and the country.

Book Reviews

Books in the principal European and Indian languages are reviewed in THE MODERN REVIEW. But reviews of all books sent cannot be guaranteed. Newspapers, periodicals, school and college text-books, pamphlets, reprints of magazine articles, addresses, etc., are not noticed. The receipt of books received for review cannot be acknowledged, nor can any enquiries relating thereto answered. No criticism of book-reviews and notices is published.—Editor, THE MODERN REVIEW.

ENGLISH

THE ATTEMPTED WHIG REVOLUTION OF 1678-1681: *By Francis S. Ronalds. Published by the University of Illinois. Price \$2.50.*

The last few years of the reign of Charles II form one of the most intriguing periods in English history. The Whig leaders tried every means to exclude the Duke of York from the throne, and cleverly bolstered up the bogey of the Papists' "bloody designs." Titus Oates, the most amazing villain in English history, William Bedloe, another unmitigated scoundrel and rogue, William Scroggs, the profligate Lord Chief Justice, Ralph Montagu, the immoral and unprincipled diplomat, Mrs. Cellier, the disreputable midwife of Meal-tub fame, and James of Monmouth, the illegitimate son of a prostitute, are some of the strange characters who played their part in the attempted Whig revolution of 1678-1681. The book under review is an interesting survey of the political drama that was enacted during these fateful years. The account is based on original and contemporary documents and State Papers, and embodies the results of valuable research into the history of the stirring events of the period preceding the death of Charles II. The author has been able to throw new light on some of the characters and events on which there is still divergence of opinion among the historians. The exhaustive bibliography given by the author is a valuable feature of his scholarly work. His references in the text are, however, mostly to printed rather than to manuscript sources. For example, where documents are listed in the Calendar of State Papers, the citations are made to it, and not to the Public Record Office originals. The work on the whole is an important contribution to the history of the Whig politics of the XVIIth century.

NANDALAL CHATTERJI

LONDON MUSIC IN 1888-89 AS HEARD BY COMO DI BARSETTO (LATER KNOWN AS BERNARD SHAW). *Constable Coy. Standard edition of the works of G. B. S. Price 5s.*

G. B. S. comes from a musical family from the mother's side. He was trained in music, and his first experiments in livelihood were in musical journalism. Of literature he had no dreams at all, "any more," as he says, "than a duck has of swimming." Probably, it was all to the good. Adolescent dreams have always been poor substitutes.

But what a vigorous musical mind it was to appreciate the greatness of Wagner, the Liberator, behind his monstrous Cacophonies, to realise his supreme necessity to 'smash the obligatory superstitions' and fight 'the tyranny of arabesques'. Rosalias and tawdy rum-tums had to be eschewed from orchestration and they were by Wagner.

Such a man required a mind keen and akin, and it was there in bristling red. Today G. B. S. thinks that the most poignant dramatic quality can go with the elaborate design of Bach and Mozart. But his 'to-day' is not ours in India. The sense of form that precipitates after deep stirrings is not the same as that of being complacent with a surface placid by shortage of movement. The beauty of calm that descends after a storm is not to be compared with the muffled stillness of days before rains come. A saint's face is qualitatively different from that of a child, though both are reputed to be simple. In most cases, our love of classical forms is the reflection of inertia, of our desire not to think and live. Sometimes one wishes for a crude artist and a vulgar critic to debunk our classicism.

TRENDS IN SOCIALISTIC THOUGHT AND MOVEMENT: *By Ilyas Ahmad, M.A., Lecturer, Allahabad University, Indian Press, Allahabad. Pp. 113 plus four Appendices and a select Bibliography from 116 to 201. 1937. Price Rs. 2.*

The book dismisses the origin, growth and development of Socialism down to our own times in 75 pages. The onslaught of that movement in India—the phrase is on the jacket and describes a part of the scope of the book—is however interesting. Its clue is furnished by what follows, 'Islam and Socialism,' which should have been re-named as 'Islam in Danger.'

The author has completely misunderstood the significance of the growth of Socialism in India and the part played by Pandit Jawharlal in its spread. Panditji may not be a 'True Socialist'; his tragedy may be similar to that of the last great Victorian, John Stuart Mill, but to be blind to his contribution to link up India's destiny with the world's through anti-imperialist struggle is to shut one's eyes to socialistic theory and to historical facts, and take the name of academic detachment in vain.

I am not sufficiently, acquainted with Islamic theology to pronounce on Islam's connection with or superiority over Socialism. But what is known as the Muslim community under the new dispensation enjoys certain historical and social advantages over the non-Muslim brethren-at-arms in being able to skip the step which the latter were forced to take by the exigencies of certain situations in the recent past. This probably accounts for the fact that an appreciable number of Muslim intelligent young men today are Socialists in theory and practice. The author of the book is a well-read man, but has not looked out of his library to know what is happening outside. This book is unfair to the present, and therefore, unreal. An additional proof is the number of 'isms' littered over the pages. No account of socialistic theory, here or anywhere, is possible without due attention being paid to the history of strikes

and trade-union movements. More so in India, where much leeway has to be made.

DHURJATI MUKERJI

WHY THE VILLAGE MOVEMENT? By J. C. Kumarappa. *Hindusthan Publishing Co., Ltd., Rajamahendry. 2nd edition. 1938. Pages 136. Price Twelve annas.*

This book is a plea for a new economic order in India and not a mere recital of the benefits of the village movement. The author has gone to the root of the matter and has taken up the problem of analysing the characters of western and eastern civilisation. Sjt. Kumarappa has made the Gandhian outlook of life his own and has given expression to thoughts in a way which is strikingly original, clear and convincing.

Sjt. Kumarappa divides human organisations into two types, the industrialised and the social type, from which originated what he calls the "pack type" and the "herd type," if they are named after their animal prototypes. The pack-type is a predatory one and possesses those qualities that make for success of the tiger or the wolf in the forest-life. This type in human beings develops an attitude for central control and concentration of power in the hands of individuals or small groups and places the prospect of gain as the motive force for all activities and attempts to gather as much as it can without reference to the value of service rendered.

On the other hand, the herd type possesses qualities which in forest-life make it possible for the elephant or the cow to exist and thrive in spite of the tiger and the wolf. This type develops aptitude for social control and decentralisation and distribution of power. The working and regulations in this case are impersonal. It attempts to safeguard the weak and the helpless and wants to distribute gain as widely as possible.

Sjt. Kumarappa then traces the development of the institutions of the east and the west and shows how the western or pack-type organisations found expression through a civilisation centering round cities and made way for the strife for raw material, for markets and for industrialisation and led to unemployment and ultimately to violent occupation of territories and destruction of what the 'herd-type' hold as culture.

The herd-type organisations on the contrary centered round villages, producing and distributing mainly for markets nearest home and made way for development of society by creation of joint family and caste systems and ultimately of village republics.

Sjt. Kumarappa puts the case for the preservation of the social institutions of India, in a masterly way. If they are revived the villages will automatically take their rightful place and bring out the character of the civilisation they stand for. The book is of immense importance to those who want to understand the inner currents of civilisation and the root cause of the present world strife.

India is naturally socially minded. Its socialism is as deep as it is wide. When the 'pack-type' nations, after living centuries of predatory life, were looking for discovering something better, they got a glimpse of Socialism. But their socialism is found to be tinged with predatory philosophy. I believe that if the modern socialists will seriously study this little book, they will be able to grasp why Gandhism is to be regarded as the highest type of socialism.

From 1908, Gandhiji has been preaching his doctrine of non-violence as an abiding force for maintaining and developing society and therefore of politics. It appears that it took us 30 years to realise the futility of violence in our national struggle. The western ideas of socialism have come as a wave sweeping over the country.

Shall we take another generation to understand that Gandhian socialism is of the rightest sort? A serious and critical study of Sjt. Kumarappa's thoughts and presentations will be of great help at the present moment.

Sjt. Kumarappa is at the head of the All-India Village Industries Association. His contribution to the cause of village movement are great and this book is no small addition to his many achievements.

SATISH CHANDRA DAS-GUPTA

ECONOMIC CONDITIONS IN MAHARASTRA AND KARNATAK : By Y. S. Pandit, M.A. *Published by the Tilak Swaraja Sangh, Poona. 1936.*

This is a prize-essay published on behalf of the Lokamanya Tilak Memorial Fund. The conditions laid down for the award of the essay included:—(1) That it should be written from a nationalist point of view, (2) that the treatment of its subject-matter should be scientific and (3) that the writer should hail from Maharashtra or Karnatak. These conditions the essay fulfilled to the satisfaction of the examiners and the writer was awarded a prize of Rs. 1,000.

The essay gives a fairly complete and accurate picture of the economic conditions in Maharashtra and Karnatak as pieced together from Government Reports and published books. There is no attempt made at first hand investigation. The last chapter entitled "Conclusion" gives a general summary and indicates the views of the writer on the various economic problems of Maharashtra and Karnatak.

The essay is well written and the views expressed are generally sound. But the treatment is purely economic and that too from rather a narrow standpoint. The population question is not dealt with except in a short appendix in spite of the conclusion of the author that it is the human factor that is responsible for the poor economic condition of the tract. Nor has the author devoted any attention to the subject of education, general and technical, which obviously had a great deal to do with economic backwardness of the people both in Maharashtra and elsewhere. Nonetheless, the essay of nearly 200 pages, gives a useful review of the economic conditions in Maharashtra and Karnatak and is eminently readable.

LIFE AND LABOUR IN A GUJRAT TALUKA : By J. R. Shukla, M.A., edited by C. N. Vakil, University Professor of Economics, Bombay. *Published by Longmans, Green & Co., Ltd., Calcutta. 1937. Price Rs. 5.*

INDIAN AGRICULTURAL ECONOMICS : By A. D. Patel, M.A., with a Foreword by Sir T. Vijayaragacharya, K.B.E. *Published by D. B. Taraporevala Sons & Co., Bombay, 1937. Price Rs. 6.*

These are two theses approved by the University of Bombay for the Master's degree in Economics and are the result largely of personal investigation conducted by two research students under the guidance of University teachers.

Professor C. N. Vakil has explained in an editorial note as to why a Taluk was chosen and neither a village nor a district or a larger regional unit. The two studies are both conscientious and painstaking and give a careful analysis of the factors affecting moral life and prosperity. Both make useful and practical suggestions for improvement.

To the scientific investigator and the Government both the studies are of equal value and importance and the one supplements the other as the Talukas chosen are of two different types. But for the general reader "Indian Agricultural Economics" by A. D. Patel is more helpful—it is both better planned and more readable.

The two studies under review have still further strengthened my belief that detailed investigation into rural economic life may make our knowledge more impact and definite but it is not likely to add anything new to it. The facts disclosed by the two studies are not at all new nor are even the suggestions made for improvement original or novel. As a matter of fact Indian economic problems are extremely acute and they are very well known—a few more details makes hardly any difference to their understanding and search for solutions. Who is there who does not know that the pressure of population on agriculture is great and has been increasing and that little improvement can be expected unless this pressure is relieved through industrialization? Similarly the evils of subdivision and pregmentation of holdings and the causes thereof are too well-known to need repetition or emphasis. The lack of capital and of credit facilities, the colossal indebtedness of the agricultural classes, the need for proper measures of suitable bye-industries, the ignorance of the ryot and the cleverness of the money-lender, the hopeless condition of roads and of sanitation, the poor irrigation and marketing facilities and other difficulties and drawbacks of rural life are familiar to all students of Indian economics and of public affairs in the country. The same is true of the suggestions for improvement, cooperation—for consolidation, credit, purchase of seed, manures and other materials and implements, sale of produce, etc.—; land mortgage banks; supplementary industries like spinning, rope and basket making, dairy, poultry and bee farming, etc., are the usual remedies suggested. What is needed is planned action by provincial Governments—and if studies of the type under review act as timely reminders and goad the provincial Governments to systematic and persistent action they would have served not only their academic purpose but also a practical purpose of great public utility.

GURUMUKH N. SINGH

RELIGIOUS THOUGHT IN FRANCE IN THE SIXTH CENTURY: By Canon W. J. Sparrow Simpson. Published by George Allen and Unwin Ltd., Museum Street, London. Pp. 192. Price 5s. net.

The author gives us in this book a careful and well-written summary of the views of various Frenchmen of the last century on religion and religious subjects. He reviews not only Christian but anti-Christian writers as well, and not only writers but also preachers, Catholic as well as Protestant. The Catholic bias of the author is not concealed; and he does not profess any sympathy for what is called Biblical criticism but what very often turns out to be little better than undisguised hostility towards religion. And the fact that several literary men of the period, originally hostile to religion, were in later life converted to Catholicism, has not escaped the notice of our author.

Many of the accounts could, very profitably for the reader, be much longer. Sometimes the summary is so brief as to produce in the readers' mind the impression that he is going through a bibliography. Yet, on the whole, the book is an excellent account of the subject it professes to deal with.

TOWARDS A NEW MANNER OF LIVING: By Dr. Howard E. Collier. Published by George Allen & Unwin, Ltd., Museum Street, London. Pp. 99.

The new manner of living, and the best manner of living according to our author, is that which harmonises the individual with society—which unifies "at one and the same time personality and sociality" (p. 15). And

this manner of living, we are told, is provided by Quakerism. To the first of these propositions, assent may readily be given; the second, however, is a matter of opinion.

The author belongs to a group of men whose "aim is the creation of a World Organism of Christian Friends, a Religious Society of Friends here on earth," and who believe in the reality of "the creative power of the Logos" (p. 95). The book is written in a fervid style, not free from a ring of mysticism, and will have an appeal for all who believe in the potency of "Christian friendship" and in the power of that religion to shape our life for the better.

POPULAR CULTURE IN KARNATAKA: By Masti Venkatesa Iyengar. Published by Satya Sodhana Pustak Bhandara, Fort, Bangalore City. Pp. 163. Price Rs. 2/2.

As the name of the book implies, it is an account of some popular cultural movements that took place in Karnataka (Mysore and the surrounding area of land). Such movements have taken place in other parts of India also and are worthy of being remembered. They have shaped the life of the ordinary people and generally shaped it well. The impact of modern civilisation is fast destroying their effects; perhaps they have outlived their period of usefulness; but in their time, they were a reed on which the religion and morality of the masses rested. And history would not be complete if the originators of these movements were not remembered. Our author's endeavour, therefore, deserves praise. Besides, the book has been written in a simple and attractive style.

There is one peculiarity of expression used by these Karnataka people to which our author has drawn pointed attention and which he regards as specially indicative of their high spirituality: It is that when any of them are indisposed, they do not say "I am unwell" but would rather say "My body is not well." This, our author contends (p. 11 and also p. 149), implies a knowledge that the body is not self. Perhaps it does; but it may be an idiom of the language as well. In Bengali, too, the idiomatic expression employed on such occasions is exactly the same. But for that alone, Bengal (and perhaps Karnataka also) would not be justified in claiming an extraordinarily alive spiritual consciousness.

U. C. BHATTACHARJEE

HAR BILAS SARDA COMMEMORATION VOLUME: Edited by P. Seshadri, M.A. Published by Vedic Yantralaya, Ajmer. 1937. Pp. xlvii + 555. Price: not mentioned.

Dewan Bahadur Har Bilas Sarma is chiefly remembered throughout the length and breadth of India as the author of that highly beneficial nation-building measure—the Sarma Act. But the Dewan Bahadur throughout a busy life of over 70 years has been serving Mother India by his Speeches and Writings. It was, therefore, a happy idea on the part of Principal Seshadri to commemorate Har Bilas Sarma's completing 70th year by presenting him with a Commemoration Volume.

Frederic Harrison has protested more than once against the practice of holding celebrations in honour of living personalities, and wished that the public would reserve judgment till they could be seen through the long perspective of past history. But there is genuine and sincere pleasure in expressing our appreciation of one who is still happily amidst us. It is a great satisfaction to feel that honour is being done where honour is due. It is again almost a national duty to express our gratitude to those who have rendered valuable national services, however much they themselves may not look forward to rewards of this kind.

It is in this spirit that the Volume under notice has been edited. It is a sumptuous volume of over 555 quarto pages, rich alike in its contributions and in its contributors. The messages and greetings come from far and near; from men like Mahatma Gandhi and Sir Tej Bahadur Sapru; from the Ruling Princes and from officials like the Executive Councillors to the Government of India and the Residents of the Native States. The contributions cover a very wide field: from Indian Art and Archaeology in British Isles to the Technique of Social Reform in India; from Cultural Coalescence in the Atharva-Veda to Folk Songs of Syrian Christians; and from the making of American Constitution to the Co-ordination of Indian Education. The value of the book has been enhanced by the inclusion of a table of the principal events of Har Bilas Sarda's life with dates, and a list of his writings, and of several plates. We have nothing but praise for this Commemoration Volume; and we congratulate Principal Seshadri on the successful completion of his self-appointed task.

DEBT LEGISLATION IN BENGAL: By Kumar Bimal Chandra Sinha. Published by M. C. Sarkar & Sons. Pp. 40. Price Re. 1.

It is a good, short, interesting study on a subject of considerable practical importance to Bengal.

J. M. DATTA

RUSSIAN REVOLUTION: A PERSPECTIVE AND RETROSPECT: By M. N. Roy. Published by D. M. Library, Calcutta. Price Re. 1.

FASCISM: ITS PHILOSOPHY, PROFESSIONS AND PRACTICE: By M. N. Roy. Published by D. M. Library, Calcutta. Price Rs. 2.

Comrade M. N. Roy brought with him the revolutionary experience of three continents, as he is proud to avow, to apply to the Indian situation. The two small books from his pen are, therefore, welcome to all. More than anybody else in India he can speak about the Russian Revolution with authority, and more than most other such people he knows what Fascism is and means to the world. And, the books also explain, to a discerning mind, the strange fate that pursues Comrade Roy, in spite of his ability and ardour, in India and abroad, his rise and fall in public affection.

The Russian Revolution presents a historical perspective and a retrospect of the great upheaval, and, the socialist reconstruction that follows it. It is clear in its survey of the conditions and forces; it is thoroughly logical and reasonable in its analysis, and it will satisfy none; for there are few whose opinions are not already formed, and encased in the iron bars of prejudices or predilections of one kind or other. Roy defends Stalin and his policy as a Marxist and as an independent thinker, condemns everyone of the Left or Right who disagreed with the Stalinists, for 'under the given conditions' the communists could not do otherwise. Yet every Communist must 'under the given conditions' of the Comintern fall foul of this expelled member, the more so, when the 'renegade' holds that the Russian revolution was, and, 'under the given conditions' could not be, a proletarian revolution but a peasant revolution under the leadership of the proletariat. The Communists must denounce this 'revisionist'. But Roy, perhaps, would deserve a better treatment from the ordinary, unbiased reader, if there be any left so, who may even go so far as to suspect him to be a Stalinist.

'Fascism' will meet with little opposition from any of the comrades of the writer. It will evoke protests from all Indians who hold Indian philosophy and Indian culture dear and near to their heart. Roy is acute in his analysis

of the Fascist mind, the western schools of thought which supplied the philosophical strands for this unscrupulous socio-political movement. Mercilessly the writer pursues further and traces the affiliation, psychologically, of that philosophy with our Indian thought as enshrined in the Gita and other sacred sastras. We are as a subject people, all against Fascism; but we are also nationalists, at least proud of our cultural inheritance. The dangerous parallelism, and the close affinities that Roy shews to exist between Indian thought and Fascist philosophy, are not likely to make us feel comfortable. Most will disagree with Roy, many will call him superficial and confused in his knowledge of Indian philosophy; but the truth is more likely to be on the side of Comrade Roy than on that of his critics.

One thing is certain—Comrade Roy knows how to think and how to speak. In thought and style, he is absolutely clear and penetrating.

SANDHANI

CENTRAL BANKING IN INDIA (1773-1934): By Om Prakash Gupta, M.Sc., LL.B., F.R. Econ. S. Hindusthan. Times Press, Delhi. Pp. 290, Price Rs. 5.

Establishment of the Reserve Bank of India, ushers in a new era in India's financial administration. Since the beginning of the present century there had been a number of committees and commissions dealing with India's financial and banking problems. Apart from the reports of these committees and commissions there had been a host of publications on the study of these subjects by well-known economists. Mr. Gupta's book on "Central Banking in India" recounts the story of India's attempts, for the establishment of a Central Bank, since the year 1773. The book also gives a co-ordinated history of the long chain of events, during these 162 years, relating to India's currency, finance and banking. Mr. Gupta, in his book presents in a concise and scientific manner the importance of the Reserve Bank of India in the national economy of the country. In the concluding chapter of the book the author examines the evolution of the central banking system in general and explains at length the Reserve Bank of India Act, 1934 in the light of the laws, chapters, and statutes regulating the central banks in the different parts of the world. The book will prove useful to the students of Indian Banking.

NIHAR RANJAN MUKHERJEE

A GUIDE TO BELUR: By Dr. M. H. Krishna, M.A., D.Lit. (Lond.). Published for the Government of Mysore, Bangalore, 1937. Pp. 29 + 10 plates. Price 4 annas.

We are sure this neat little booklet illustrated by several well-printed photographs will prove helpful to visitors to Belur in Mysore.

A GUIDE TO THE SCULPTURES IN THE INDIAN MUSEUM, (PART II, THE GRAECO-BUDDHIST SCHOOL OF GANDHARA): By N. G. Majumdar. Archaeological Survey of India. Delhi, 1937. Pp. ii + 137. 15 plates and one map. Price Re. 1/8.

In the introduction, the author gives us a learned account of the chief characteristics and historical affiliations of the Gandhara School of Art. This is followed by a detailed description of the exhibits together with copious explanations from Buddhist sacred literature. The illustrations are of a uniformly high quality.

A GUIDE TO FATEHPUR SIKRI: By Muhammad Ashraf Husain, M.A., M.R.A.S. Delhi, 1937. Price Re. 1. Pp. 77 + 12 plates.

AN HISTORICAL GUIDE TO THE AGRA FORT (BASED ON CONTEMPORARY RECORDS): By Maulvi

Muhammad Ashraf Hussain, M.A. Delhi. 1937. Pp. vii + 71 + 8 plates.

These two booklets illustrated by excellent photographs and maps will not only serve the purpose of the layman but also of the more serious student of history. The appendices containing translations of the inscriptions and the bibliography will be particularly helpful to the latter. One however misses in the latter book any reference to Sarkar's *History of Aurangzeb* although books of lesser value find a place in the bibliography.

NIRMAL KUMAR BOSE

THE BATTLE OF CHINA: By Dr. K. R. Menon, Ph.D. Published by the School of Printing, Printers' Association, Singapore. \$1.00 or 2s. 6d.

This book, which bears the sub-title *The Lay of a Chinese Girl*, is to be appreciated rather for the cause than the achievement. Written in championship of the Chinese people engaged in a life and death struggle against the Japanese invader, and bearing a declaration to the effect that the entire proceeds of the sale of the book will go to the Chinese Red Cross, the book describes the 'valour and gallantry of Chinese soldiers at the front and the intense patriotism of the people at the rear.' The story culminates in the historic episode of a brave Chinese girl who offers herself as a prize in a lottery to raise funds for the defence of China.

The verse is poor at best, but it is bad English in a good cause; and, to misuse a line from Tennyson, 'the cause, the cause alone is eloquent.'

S. H. V.

SANSKRIT

THE MAHABHARAT: *Virataparvan* (Fascicule 8) critically edited by Dr. Raghu Vira. Published by the Bhandarkar Oriental Research Institute, Poona (1936).

Difficulty lies at the beginning of all things and this universally accepted truth is exemplified in the *Adiparvan*, the opening section of the Great Epic. Like a real Mahabharata hero, Dr. V. S. Sukthankar the general editor, has fought against legions of hostile problems and recovered for us, the basic elements in the *Adi*, the crown-jewel of textual criticism. His devotion was so keen and his technique so reliable that his learned colleague Dr. Raghu Vira could not help observing at the end of his introduction: "The technique of reconstruction has been perfected to such a degree that the personality of the Editor has been almost eliminated. That is the triumph of our labours."

Yet the difficulties, here in the *Virataparvan* as elsewhere, appeared to be overwhelming. The *Parvasamgraha* figures for the *Virata* are 67 adhyayas and 2050 slokas. These figures were accepted by the late Mr. N. B. Utgikar, who prepared the Tentative Edition (1923) of the Institute. Prof. P. P. S. Sastri, in his "Southern Recension critically edited" (1932) figured at 67 adhyayas (although all his MSS. divided the text into 76!) and 3500 slokas. Dr. Raghu Vira after a most exacting analysis, accepts with the detachment of a scientist, under the limitations of our present MSS. materials, the figures of 67 adhyayas and 1834 slokas. He regrets that Prof. Sastri's uncritical method has not helped very much in arriving at good results and that a sounder edition of the Southern Recension would be most welcome. Under the circumstances Dr. Raghu Vira with perfect reason, adhered to the more reliable textual traditions of Northern India, utilizing the Sarada, the Devanagari and the Bengali versions (collated at the Visvabharati Library). He has

utilized also the Dutch edition of the *Javanese Virataparvan* (11th century A.D.) published by Dr. Juyaboll.

The Bhandarkar Institute deserves the congratulation of the nation for having acquired and utilized a manuscript dated V. Sam. 1493=1437 A.D. and thus the *oldest dated* manuscript (so far traced) of the Mahabharata. It is written on old unglazed Indian paper which has withstood for five centuries, the ravages of climate and insects. It should be advertised as a National Treasure.

The Asiatic Society of Bengal from its rich collection, supplied the only Sarada MSS. (1708 A.D.), extant of the *Virata*; and how the folios of the MSS. stuck together on account of moisture, were separated deftly by the collator Shankar Sastri, reads like a romance. A few other MSS. from the Bombay Government collection (now deposited with the B. O. R. I.) are dated 1494, 1539, 1614 and so forth, showing how with better technique of preservation and a little more attention of our big Provincial Universities, we may save thousands of such rare MSS. documents of our national culture. Thus the Mahabharata research, initiated by the learned Editor and his devoted colleagues of the Bhandarkar Institute, clearly points to the next urgent line of work where the Central and the Provincial Governments may co-operate with a view to the collection and conservation of the fast decaying MSS. treasures of India. What is possible for the scholars of India to do has been admirably demonstrated through the Mahabharata work of the Institute; but, mere scholarship is not sufficient and funds are needed if we mean to organize, on a nationwide scale the work of MSS. conservation and cataloguing. Dr. Raghu Vira has in the *Virataparvan*, gloriously continued the traditions of the Bhandarkar Institute to which as well as to the learned Editor we offer our hearty congratulations.

KALIDAS NAG

HINDI

RAJASTHAN RA DUHA: *Part I. Collected and edited by Prof. Narottamdas Swami, M.A. Published by Navayuga Sahitya Mandir, Delhi. Pp. 112+248, Price Rs. 2.*

The book under notice is the second volume of the Pilani Rajasthani Series instituted and financed by Seth G. D. Birla, our well-known and literal-minded countryman.

The book contains Rajasthani verses on various heads, some of which are of historical interest. This is a contribution to our folk literature. Here we find the Marwaris at home and at their best. The Introduction deals with all about Rajasthani language and literature. The Preface written by Mm. Rai Bahadur Gourishankar Hirachand Ojha of Ajmer is a short history of anthology compilation in India. The Notes are very useful, giving parallel passages from both old and modern authors.

The book is a welcome addition to Hindi and Rajasthani literature.

RAMESH BASU

MARATHI

HINDUNCHE ARTIHASHTRA (*Part One*). By Govind Mahadev Joshi, B.A. Published by W. H. Munje, Secretary, Hindu-Sanskrit-Sampadak and Granth-Prakash-Mandal, Walker Road, Nagpur. Pages 234. Price Rs. 2.

Starting with the publisher's and author's dogmatic prefaces stating that poor Hindu culture is standing unsafe amidst a hurricane of rebelling and reacting idea-forces and is endangered every moment with the imaginary onslaught of alien materialism and horrors of class-war, the book aims at a reconstruction of the fundamentals of the science

of economics from the cultural and sociological standpoint of the Hindoos—a phrase unexplained all through the book. But stuffed with the unimaginative and unbridgeable insularity of a typical conservative and symptomatic of unpurposive analysis, rigid and harsh; the book leaves the reader with an utterly disappointing impression that the author has presented a rehash of undigested material from the Western Economists only. The bibliography, suggesting that all the main reference books used in this attempt at re-establishing Hindu culture are English and a paragraph on the third page in the introduction dealing with the abstruse Ricardian equations, given in the Greek and Latin mathematical terms are pieces of a ridiculous paradox, upsetting downright the very claims of the author. In its design to embrace all the four corners of the wide fields of knowledge, and to solve all the possible problems of space and time and population and moral values in its narrow limits; the book has neither remained philosophy, nor sociology nor economics but a hopeless higgledy-piggledy of all sorts of what-nots: without selection or emphasis. For example, the first chapter entitled 'Thought about Sciences' simply repeats the deductive logic, that too in the western fashion; the fun being, all through the book the author proposes to be logical but is led away at places by the blind belief in authorities and at places loses integrity in the oblivion of abstracted argumentation.

On the whole the book is written in a tedious technical manner, at places tinted with verbose, and in an unintelligible Marathi; though one may perceive some sense in chapters as on population problem, after undergoing the ordeal of a curiously manufactured phraseology. How is the book going to serve Hindu culture, when one Hindu per hundred will hardly follow it?

P. B. MACHWE

GUJARATI

MUNSHI PATHAVALI: By *Sombhai Patel*. Published by R. R. Sheth & Co. Bombay. Thick Card Board. Pp. 238. Price Re. 1-40 (1937).

The Hon'ble Mr. K. M. Munshi, Home Member in the Bombay Provincial Cabinet, is a brilliant and versatile writer of merit. He has handled novels, biography, drama, and essay writing with great effect and the best passages from his works have been selected for presentation to students in the present compilation. Indeed it is a great honour to a living person to see his work appreciated in this fashion, and a source of pleasure too. The Introduction is contributed by a young friend of his, Chandravadan Metha,—an admirer but at the same time an outspoken writer. He treats in a sarcastic way, the reception which possibly the compilation may meet with, at the hands of persons engaged in the teaching line. He has a few plain words to say to the spirited students who are likely to study the spirited sentiments of Mr. Munshi.

JAINACHARYA SHRI ATMANAND JANMA SHATABDI SMARAK GRANTH. Published by the Shatabdi Smarak Committee, Bombay and edited by Mohanlal Dalichand Desai, B.A., LL.B., Advocate. Cloth bound. Illustrated. Pp. 188. (English), 213 (Hindi), 144 + 260 (Gujarati). Price Rs. 2-8-0. (1937).

This stupendous memorial volume has been ably edited by that well-known Jain man of letters and Law, Mr. Mohanlal D. Desai. It contains very interesting pictures to illustrate the many articles which are found in it and the articles contributed are in three languages, English,

Hindi and Gujarati, so that a very wide field of choice has been provided for the Editor. Atmanandaji was well-known as a religious head, an author, and ideal saint amongst the Jains during his life time. It was he who inspired the late Virchand Raghavji to go to America to propagate the Jain Sampradaya there. The mechanical get-up of the book is of a superior quality and the varied information contained in the contribution make it an interesting and informative volume.

K. M. J.

TELUGU

RADHIKASANTVANAMU: By *Muddu Palani*, No. 1 of *Srungara Grandha Mandili series* of K. G. Murty, Masulipatam. Demy 1/8. Pp. 28 + 147. Price As. 12 for members only.

Muddu Palani, the mistress of the Maharana Chief tain, Pratapasimha, who held the reins of the Chola kingdom between 1740-1765, is the authoress of this good literary piece of 4 cantos. The divine love of Krishna, and Ila and Radha is the theme of the story. It is erotic in sentiment. This creditable work long suffered the curse of oblivion through the ban of the Government. Public gratitude and support are due to the Mandali for its care and pain in saving it from decay.

TATA CHARITRAMU: By *K. Satagopachari, M.A.*, B.L. Cocanada. Pp. 12 + 164. Price As. 10.

A life history of the Indian industrial pioneer, the late Jamshedji N. Tata, who worked for India's material regeneration, and to whose indefatigable endeavours the Tata Iron & Steel Company, the Indian Institute of Science, the Taj Hotel, the Lonavala Hydro-Electric Scheme, and a host of others owe their shape and existence. The presentation of the material tends to be a contribution to industrial history rather than to biography.

SHOULD THE INDIAN SPEAKER FOLLOW THE BRITISH OR THE AMERICAN MODEL ?

By D. N. BANERJEE,

Head of the Department of Political Science, University of Dacca

THE SUBJECT which I propose to discuss is : "Should the Indian Speaker—and I mean by the expression 'Indian Speaker' not merely the Speaker of a Provincial Legislative Assembly today or the Speaker of the Federal Assembly of India when it will be constituted, but also the President of the Council of State or of a Provincial Legislative Council—follow the British or the American model?" That is to say, whether in the execution of the duties of his office, the Speaker in India should follow the example of the Speaker of the British House of Commons or of the Speaker of the American House of Representatives? Incidentally, I shall also refer to the position and functions of the President of the French Chamber of Deputies. The subject is not merely of academic interest, but also of great practical importance to this country, particularly in view of the ruling given by the Speaker, Mr. Purshottamdas Tandon, on 19th January last in the United Provinces Legislative Assembly,¹ and the endorsement of that ruling by the then President of the Indian National Congress.² The occasion for the ruling was the notice of a motion for adjournment given by Mr. Zahirulhasan Lari for the purpose of discussing the question of "the participation of the Speaker in party politics."³ And Mr. Speaker Tandon has been reported by the Special Correspondent of the *Statesman* at Lucknow to have declared, among other things :⁴

"I have expressed on several occasions my views in regard to the functions of the Speaker. I have made it clear that no one deserves to occupy the chair of Speaker who cannot commend the confidence of the House as a whole and who cannot be impartial while he takes part in politics. I have made it also clear that I do not believe in the convention of the House of Commons. I believe in the conventions of France, U.S.A. and some other countries, which permit the Speaker to take part in politics. Situated as we are in this country, I am particularly emphatic that it is absolutely necessary to allow the Speaker to take part in politics. If he does not

do so you may be content with a third-rate person or a civil or criminal judge, but you will not get a prominent politician."

And in a statement⁵ to the Press Pandit Jawaharlal Nehru has declared that he wholly agrees with the position taken up by Mr. Speaker Tandon on the question whether a Speaker in India should abstain from participation in politics outside the legislature. His actual words are :⁶

"Some people have inclined to the view that the practice of the British House of Commons should be followed here; others have inclined to the different practice which prevails in the United States of America and elsewhere."

"The question is whether a Speaker should abstain from participation in politics outside the legislature. Personally, I wholly agree with the position taken up by Mr. Purshottamdas Tandon, Speaker of the United Provinces Assembly. It is obvious that a Speaker must be absolutely impartial in his dealings as Speaker. He must protect minorities from the over-bearing weight of a great majority. If that is conceded, as it must be, then I see no reason why he should not participate in political activities outside the legislature."

"This becomes all the more important in a country situated as India is at present, that is, a country under alien domination struggling to be free."

"Every Indian feels or ought to feel strongly in this matter and should try to throw his weight on the right side, the only side so far as he is concerned. Every Congressman is bound to do so by his convictions and temperament. For him to say that by virtue of election to the Speakership he will suddenly become a neutral element in politics is to delude himself as well as others. We cannot become neutrals."

This frank declaration, coming as it has done from the President of the Indian National Congress, is very significant, specially in view of the fact that there are already several provinces in India in which the government is virtually in the hands of the Congress.

Although Mr. Speaker Tandon has admitted that no one deserves to occupy the chair of Speaker "who cannot command the confidence of the House as a whole and who cannot be

6. *Ibid.*

impartial while he takes part in politics," yet it is very clear from what he has said that he does "not believe in the convention of the House of Commons," but that he believes "in the conventions of France, U. S. A. and some other countries, which permit the Speaker to take part in politics."

Now, what is the convention of the House of Commons referred to by him? It will be evident from what follows. The most distinguishing characteristic of the Speaker of the House of Commons is his impartiality. "He has," as Bryce has stated in his *American Commonwealth*,⁷ "been chosen by a party, because a majority means in England a party."

But on his way from his place on the benches to the Chair he is expected to shake off and leave behind all party ties and sympathies. Once invested with the wig and gown of office he has no longer any political opinions, and must administer exactly the same treatment to his political friends and to those who have been hitherto his opponents, to the oldest or most powerful minister and to the youngest or least popular member....It makes little difference to any English party in Parliament whether the occupant of the chair has come from their own or from their hostile ranks....a custom as strong as law forbids him to render help to his own side even by private advice. Whatever information as to parliamentary law he may feel free to give must be equally at the disposal of every member."

This impartiality is "the most precious attribute" of the English Speaker, and like the English King he is "supposed to have no politics." As Michael MacDonagh has beautifully put it in his *Pageant of Parliament*,⁸

"whether the Speaker is first designated by the Government, or, in case of a division, is carried by the majority of the Government, when he is being conducted by his proposer and seconder from his place on the benches to the Chair, he, as it were, doffs his Party colours, be they buff or blue, and wears, instead, the white flower of a neutral political life.....Henceforth he sits above all Parties. As Speaker he has no political opinions."

He is, as another eminent English writer^{8a} has nicely remarked, "as near as can be in a human being, the Rules and Practice of the House come to life without interposition of his own view." And this admiration for the office of the Speaker of the House of Commons is not confined to British writers alone. Prof. Josef Redlich of the University of Vienna has observed⁹ that "from the moment of election he discards every outward tie that has hitherto

bound him to his party; he refuses to enter a political club, and, both *within the House and without*, abstains from expressing any political opinion;" and that even at a general election he "only offers himself as a candidate by written communications and refrains in his election address from touching upon political questions."¹⁰ As a result, the office of Speaker in England has become, to quote him¹¹ again, "a synonym for dignity and impartiality." This is a high tribute indeed—and that from a foreigner!

Moreover, even distinguished American writers on the constitutional system of the U. S. A., like the late President Woodrow Wilson, Prof. William Munro and Prof. Arthur Holcombe of Harvard University, Prof. Frederic Ogg of the University of Wisconsin, Professor Edward Sait of the University of California, Prof. James Young of the University of Pennsylvania and Prof. Charles Beard of Columbia University, have, while contrasting in their works the office of the English Speaker with that of the American Speaker, either directly or indirectly expressed their admiration for the former. Thus we find Prof. Frederic Ogg remarking (*European Governments and Politics*),¹²

"Outside, no less than inside, of the House, the (English) Speaker abstains from every appearance of partisanship. He never publicly discusses or voices an opinion on party issues; he never attends a party meeting; he has no connections with party newspapers; he never sets foot in a political club; he, of course, makes no campaign for his own re-election. The Speaker of the American House of Representatives is, quite frankly, a party man.....an official who serves, and is expected to serve, the interests of his party so far as it can be done without too flagrant unfairness to the opposition. The contrast with the speakership at Westminster is indeed striking.....As would be expected, the deference paid the Chair at Westminster is considerably greater than at Washington, having often been, as Sir Courtenay Ilbert remarks, 'the theme of admiring comment by foreign observers'."

Again, "the speaker," writes Prof. Munro,¹³ "from the moment he takes the Chair, ceases to be a party man."

He discards his party colours, be they buff, or blue, or red. He is no longer a Liberal, a Conservative, or a Labour partisan. He attends no more party gatherings and is not called into consultation on any matters of party policy. He must be a neutral in politics.....Whether in entertaining his friends at dinner, or in recognizing members who desire to speak, or in ruling on points of order, he must act with the impartiality of a chief justice. If he has personal and political likes or dislikes, as most

public men have, he must somehow manage to keep them submerged."

But what does the American Speaker do? He "has great political power, and is permitted, nay expected," says Bryce,¹⁴ "to use it in the interests of his party...."

In calling upon members to speak he prefers those of his own side. He decides in their favour such points of order as are not distinctly covered by the rules.... Although the Speaker seldom delivers a speech in the House, he may and does advise the other leaders of his party privately; and when they 'go into caucus' (i.e., hold a party meeting to determine their action on some pending question) he is present and gives counsel."

Prof. James Young of the University of Pennsylvania has gone further. He has said (*The New American Government and Its Work*)¹⁵:

"Whether the Speaker has been Clark, Crisp or Randall of the Democrats, or Cannon or Reed of the Republicans, he has been forced (in the interest of his party) to abandon all pretence of impartiality and to support and guide his party in its legislative program.As presiding officer, he decides points of order and procedure, always with a view to the promotion of his party's legislative program."

And before 1910-11 the Speaker was virtually "the autocrat" of the House of Representatives—"in a real sense the dictator of the House."¹⁶ He had gradually acquired this position, through his prerogative of 'recognition' of members which would alone enable them to address the House, his power of appointing the Standing Committees of the House, and of interpreting and applying its rules of debate, and "through the instrumentality of the small Committee on Rules," of which he was the Chairman. Thus, says Prof. Holcombe in his *State Government in the United States*,¹⁷

"The combination of the power of recognition, appointment, and control of the committee on rules made the Speaker a veritable dictator in the House of Representatives. A similar development in the influence of the Speaker took place in those states where business was heavy, where members were numerous, where time was short, and where party lines were closely drawn. This was notably the case in the state of New York."¹⁸

14. *The American Commonwealth*, Vol. I, pp. 140-141.

15. Pp. 49-53.

16. See Young, *The New American Government and Its Work*, p. 50.

17. Holcombe, *State Government in the United States*, p. 260.

18. We also find in Woodrow Wilson (*Constitutional Government in the United States*, 1911, pp. 91-98):

"The power of appointing the Committees, which the House has conferred upon its Speaker, makes him the almost autocratic master of its actions.

"In all legislative bodies except ours the presiding officer has only the powers and functions of a

And it may also be noted here that in appointing the Standing Committees of the House, the Speaker, as Woodrow Wilson has remarked in his *Constitutional Government in the United States*,¹⁹ not only allowed "himself to make them up with a view to the kind of legislation" he wished to see enacted; he was "expected to make them up with such a view"—was "expected to make them up as a party leader would." Even his own personal views upon particular public questions he would not "hesitate to enforce in his appointments."^{19a} And although the powers of the American Speaker have been considerably curtailed since the reforms of 1910-11, they are "still great."²⁰ He is still "a party man" and still "wields the strongest influence in legislation."

The Speaker is also "the most powerful officer in the lower houses of the state legislatures"²¹ in the U. S. A. And this is more or less due to the same causes, *mutatis mutandis*, which made the Speaker of the House of Representatives "the Czar of the House" before 1910-11.

It is evident from what has been shown above that the Speaker in the U. S. A. is not only a party man, but he is also not *strictly* impartial in the discharge of his duties as the Chairman of the House of Representatives or, as the case may be, as the Chairman of the Lower House of a State legislature. He often acts, in the execution of his duties as Chairman, in a manner that is likely to promote the

Chairman. He is separate from parties and is looked to to be punctiliously impartial.... But the processes of our parliamentary development have made the Speaker of our great House of Representatives and the Speakers of our State Legislatures party leaders in whom centres the control of all that they do. So far as the House of Representatives and its share in the public business is concerned, the Speaker is undisputed party leader..... The whole powerful machinery of the great popular chamber is at his disposal, and all the country knows how effectually he can use it."

19. Woodrow Wilson, *Constitutional Government in the United States*, pp. 91-92.

19(a). We also find in Munro (*The Government of the United States of America*, p. 236): "It became his regular practice to make up the Committees in such a way that they would do just what he wanted them to do.... The Speaker in a word controlled the Committees and the Committees controlled the House. One man, in this way, determined both the form and the destiny of the laws. It was he who decided whether a measure should go on its way to the statute book or be relegated to the discard."

20. Bryce, *The American Commonwealth*, Vol. I, p. 142.

21. Holcombe, *State Government in the United States*, 1916, p. 252.

interests of the party to which he belongs or to help the adoption of measures in which his party is interested.²² And this is well-known in the U. S. A. But although the warfare of parties there is "based upon a real difference of opinion about the needs of the community as a whole," yet the parties themselves are not divided there on religious or communal lines. Parties in this country, however, are, and will for a long time to come be, formed on communal or religious lines. And we cannot get away from these facts, however, ideological we may be. Thus the lines of cleavage in the two countries are fundamentally different. Regard being had to this fact, would it not be disastrous to the true interests of this country if the Speaker here were allowed to follow the American model rather than the English? Besides, whatever Mr. Speaker Tandon and Pandit Jawaharlal Nehru may say, it is difficult for an ordinary mortal, *although there may be exceptions*, to be an active party man outside, and to be strictly impartial in the performance of his duties as Chairman inside, a legislature. Moreover, even if he attempts to be impartial in the legislature, his impartiality may sometimes run the risk of being adversely commented upon. And if once the impartiality of his rulings becomes rightly or wrongly suspect as having been influenced by party considerations—and this will inevitably be the case sooner or later if the Speaker takes an active part in politics outside the legislature—then it may be extremely difficult for him to restore order when there will be a "clash of wills and

temper" in the legislature. And this will not certainly help the smooth working of legislatures in this country, which again will unfortunately have repercussions in other directions, not conducive to its best interests. What I mean is this: If the Speaker's rulings become suspect, they will be challenged. This will not only entail "waste of time", but will, what will be much worse, also give rise to a controversy after the passage of a bill that it has been "unfairly passed". And a law made under such conditions will, as Dr. Finer^{22(a)} has said in another connexion, lose part of its authority. And this may lead to many undesirable consequences at the time of the enforcement of the law. The Speaker's conduct, both inside and outside the legislature, should, therefore, be such as to be, like that of a judge, above suspicion. And the same considerations which forbid the judge to take part in politics, should prevent the Speaker from participation in politics. He should be the one person in the legislature who should be able, by his tact, firmness, character, personality, and, above all, the strictest impartiality, to inspire in the minds of its members confidence in, and respect for, him.

What I have said above against the imitation of the American example may be urged with an equal force against any proposal for the adoption of the French system by the Indian Speaker. My justification for this statement is that the President of the Chamber of Deputies in France, who is "elected anew at every session," resembles, to quote the words of Bryce²³ again, "the Speaker of the American House of Representatives rather than the Speaker of the British House of Commons, for *he is not expected to display that absolute impartiality which is the distinguishing note of the latter.*" He too is "a party man." and on election to the Chair "does not cease to be a party man,"²⁴ but "remains.....a politician."²⁵ As a result, he "does not enjoy in the Chamber (of Deputies) the consideration" which is accorded to the Speaker in the British House of Commons. According to Mr. Bodley,²⁶ he is not elected to his office "by reason of his impartial temperament." The choice generally falls, he says, "upon a combatant politician who does not sink his opinions in the Chair.

22. This is also the view of Dr. Herman Finer. He says:

"In U. S. A. the Speaker is not impartial and is not intended to be by the majority, nor, if we judge by experience, does he intend to be, although he is expected to be fair to the minority. He is to-day one of the majority party leaders; before 1911 he was the party leader in the legislative branch of government.

"When the Speaker is chosen he does not cut off connexions with his party—on the contrary, they are even more sedulously cultivated; he occasionally promotes bills of great and sometimes of general importance; he speaks in debate, although the written rules of the House deprecate this; he votes, although the rules of the House do not encourage him to vote except in certain circumstances; his seat is contested, and therefore he must nurse his constituency by titbits from the "pork barrel" and by declarations of policy, and he must, frequently, harbour a certain resentment against his opponents. He promotes by positive strategy and intervention a legislative and executive policy. Thus the Speaker of the House of Representatives is the avowed agent of the majority, he is involved, often he leads, in the party counsels. *The Theory and Practice of Modern Government*, Vol. II, pp. 783-84.

22(a). See his *Theory and Practice of Modern Government*, Vol. II. p. 781.

23. See his *Modern Democracies*, Vol. I, p. 275.

24. See Munro, *The Governments of Europe*, 1932, p. 468.

26. See Bodley, *France*, 1907, p. 420.

which, on the contrary, he most often quits to assume the lead of a party."²⁷ There are many instances²⁸ of the Presidents of the Chamber of Deputies becoming Prime Ministers of France and, again, of their reverting back to the position of President of the Chamber on the fall of their ministries. And in the past—although it has become unusual in recent years—there have been occasions when the President has left the chair and taken part in the debate as a partisan, like an ordinary member of the Chamber.²⁹ In such circumstances it is idle to expect the strictest impartiality from the President; nor can the President, in these circumstances, expect from the members of the Chamber of Deputies that attitude of awe and reverence towards him, which is shown to the Speaker in the British House of Commons.

Going now back to the question of Speakership in America, I should like to refer to two other important considerations. In the first place, as Prof. Beard³⁰ has observed, in a sense leadership has been thrust upon the Speaker in America by its system of Government, which has "provided the House (of Representative) with no official leadership," whereas in England the Prime Minister "assumes responsibility for the fate of all measures under discussion." This absence of official leadership, Prof. Munro³¹ also agrees.

27. *Ibid.*

28. "Since M. Grevy, the first occupant of the chair under the Constitution of 1875, left it to be Chief of the State," writes Mr. Bodley "down to the general elections of 1898 all the Presidents of the Lower House, excepting M. Burdeau who died in office, subsequently became Prime Ministers, namely, MM. Gambetta, Brisson, Floquet, Méline, Casimir-Perier, and Dupuy; and each one save M. Méline descended straight from the chair to form a Ministry. MM. Perier and Dupuy had also each the curious experience when overthrown as Prime Minister of being forthwith re-elected to the presidency of the Chamber which had just driven him from power."—See *ibid.*

A recent case of the President becoming the Prime Minister, is that of M. Herriot who was called by the President of France to form a new ministry on the fall of the Briand Government in July 1926, caused by his own speech.—See Finer, *Theory and Practice of Modern Government*, Vol. II, p. 790.

29. Gambetta, writes Mr. Bodley, "so far regarded the post as that of a political leader that he used to call upon himself to speak, descending to the lower tribune and ceding his chair to a vice-president."—See his *France*, p. 427.

Also see Munro, *The Governments of Europe*, 1932, p. 468; also Sait, *Government and Politics of France*, p. 201; also Finer, *Theory and Practice of Modern Government*, Vol. II, p. 790.

30. See Beard, *American Government and Politics*, 1935, p. 116.

31. See Munro, *The Government of the United States*, 1929, pp. 233-34.

accounts "for the gravitation of leadership into the hands of the Speaker, as the only conspicuous officer chosen by the House itself." He "became the recognized leader of the majority party, chosen virtually by its caucus..... became the man on whom the majority depended for getting its measures safely through the maze of rules."³² But this plea cannot reasonably be advanced in India, where the principles of the parliamentary system of Government as it obtains in England, with their automatic solution of the question of the leadership in the legislature, have been introduced into its provincial constitutions, and are expected to be shortly introduced into its central sphere.

In the second place, the term of the House of Representatives in the U. S. A. is only two years but the normal duration of the Legislative Assembly of a province under the present constitution of India is five years. The party which commands a majority in the House of Representatives today may not do so after the next election to it. And the Speaker there, who is chosen by the House at the beginning of each Congress, being practically the nominee of the majority party, the present Speaker may not be the Speaker at the end of two years. The evils of partisan Speakership even for two years may be enough: such evils are bound to be multiplied and aggravated when the term of the partisan Speaker is five years—or even longer, which may be the case if the party now in power in a provincial Legislative Assembly comes back to power after the next quinquennial election. This argument will equally apply to the question of the Speakership of the Federal Assembly of India, or to the question of the Presidentship of a Provincial Legislative Council or of the Council of State.

Mr. Speaker Tandon has also said:

"Situating as we are in this country, I am particularly emphatic that it is absolutely necessary to allow the Speaker to take part in politics. If he does not do so, you may be content with a third-rate person or a civil or criminal judge, but you will not get a prominent politician."

This seems to be, with all respect to Mr. Speaker Tandon, a little too much. No one—not even Mr. Speaker Tandon—will say that the late Mr. V. J. Patel was a third-rate person or was not a prominent politician. And what did he say on his first election as the President of the Legislative Assembly? "In the

32. *Ibid.*

discharge of my duties," he declared,³³ "I shall, I assure you, observe strict impartiality in dealing with all sections of the House, irrespective of party considerations.

From this moment, I cease to be a party man. I belong to no party. I belong to all parties, I belong to all of you and I hope and trust, my Honourable friend, the Leader of the Swaraj Party, will take immediate steps to absolve me from all the obligations of a Swarajist member of this House, if, indeed, it has not been done by implication in consequence of my election to this Chair."

If a person like Mr. Patel could, with grace and dignity, cease to be a party man on his first election as the President of the Legislative Assembly, I do not think there is much force in the argument of Mr. Speaker Tandon referred to above. Nor do I believe that our country has become so poor in point of really able men who can worthily occupy the Chair of Speaker as has been implied by Mr. Speaker Tandon's statement!

In his statement to the Press to which we have previously referred, Pandit Jawaharlal Nehru has also remarked:

"There is another aspect of this matter. We are apt to follow almost blindly British practice and procedure whether they fit in with our requirements or not. There is no reason why we should do so and we must shake off these shackles. It is open to us, of course, to accept this practice where we choose to do so, but it must not be 'thrust down' on us either by law or convention or, what is worst of all, by a slavish habit of mind which is unable to think in other terms."

Certainly, we must not follow a British practice blindly and slavishly and we must resist

every attempt at thrusting anything down on us. But, nor should we refuse to follow a British practice simply because it is British in its origin and character, provided that it fits in with our requirements. My contention is that the British practice is in itself, so far as the Speakership is concerned, superior to the American or the French, and, in the peculiar circumstances of India—and particularly in view of its cleavage of parties on religious or communal lines—will best suit its requirements. Among the many political institutions which the genius of the British people has evolved in the course of centuries of its history, I consider the institution of Speakership to be a most valuable one, which may be copied by other countries—and particularly India—with great advantage to them. I, therefore, maintain that the adoption of the American or the French model by India will not only have a very bad effect upon the smooth working and the proper development of its self-governing institutions, which are yet in their incipient stages, but will also be otherwise disastrous to its true and ultimate interest. For instance, it will certainly, to my mind, not tend to promote the growth of inter-communal goodwill, and will, therefore, materially check the progress of its growing sense of nationalism. And our ideal of Swaraj will ever remain a mere *ideal*—an empty dream—unless it can be made to rest on a solid foundation of nationalism. It is gladdening, however, to note here that so far the views of Mr. Speaker Tandon or of Pandit Jawaharlal Nehru have found no support anywhere outside the United Provinces.*

Picasso: The Man and His Art

Garnet Rees writes in the *Journal of the Royal Society of Arts*:

The twentieth century has seen an extension of the subject-matter of art and a corresponding change in treatment. It has seen Cubism, Surrealism, and other movements more or less revolutionary. All these movements dragged along in their train a group of imitators, euphemistically called "Les Jeunes" and it is largely due to their exaggerations that public appreciation of Cubism and Surrealism was so effectively diminished. All the effervescences of experiment found Picasso in their midst, not as a theorist but as a practician. One of Picasso's most striking characteristics is that, although he was a leading member of these schools, he cannot conveniently be labelled "Cubist" or "Surrealist," for his work far overlaps the confines of any one movement. There are constantly to be found in his work the two currents of experiment and tradition, one fused into the other by the artistic mastery of the painter.

The strength of his work derives from the training that he had, the vast qualities of instinctive painting which were latent in him. He could afford to experiment because this basis of taste effectively prevented the gaffes which were so common at the time of the *Fauves* and Cubism.

Miss Stein insists on the purely Spanish quality of Picasso's work, which she postulates as an explanation of his Cubism and abstract painting. She comments on the lack of colour in Spanish landscape and the queer geometrical value of the land masses; she adds further that the landscapes which Picasso brought back from Spain in 1909 (the *Village near Tarragona, etc.*), and which were clearly cubist in character, were in actual fact a close reproduction of the landscapes that Picasso had painted. Picasso was able to prove this by photographs which he had taken.

With Derain and Braque, the first attempt to present Cubism to the public was made in 1911, to the accompaniment of storms of derision. These checks had little effect on Picasso who continued his abstract and cerebral painting. The architectural qualities of his abstract groupings demand an effort on the part of the amateur because they represent a movement away from photographic realism towards an idealized reality. Picasso was trying to do in painting what Mallarmé had been attempting in poetry.

In 1917, Picasso did a cubist decor for *Parade*, with Erik Satie and Jean Cocteau, but this was the end of the heroic struggles of the Cubist movement. Another stay in Spain and Picasso came back to traditional painting. His connection with the theatre reminded him of his early love, and in the short period (1918-1921) he produced the *Harlequin* pictures, and the portrait of Madame Picasso.

The traditional side of his work appears in this period too, with the series of nudes, in classical draperies. The opulence of form and colour is almost oriental, and the solid masses are a proof of what Picasso had learnt from Cubism. He had not finished experimenting, however, for side by side with his classical studies, he continued his search for new forms and combinations of forms. It seems as if he needs to express something too subtle for the ordinary means of painting. The Negro influences of 1906-7 seem to have recurred again, but only as a start-

ing point for further re-search into the abstract. *Guernica*, the mural which he painted for the Spanish Pavilion in the Paris Exhibition of last year, is only another stage in his development, and his search for complete self-expression.

His influence on modern painting is very great, for he unwittingly dominated a whole generation of young painters, but Picasso remains the quiet friendly figure he has always been. His habits are the same, and he still works as absordedly as ever. He is a familiar figure in the Café de Flore almost each night, with his small group of friends and his dog, but he rarely talks of his painting—that work goes on in his head. As he seldom gives away his secrets, Picasso's work cannot be understood without an effort; but that effort is very much worth while.

Future of Spain

John C. deWilde observes in the *Foreign Policy Reports*:

The end of the civil war is indeed unlikely to bring the unadulterated triumph of either fascism, communism or democracy. A totalitarian regime, whether communist or fascist, may well prove incompatible with the intense individualism of the Spanish people. Should Franco triumph, he would probably meet with great difficulty in any attempt to impose the Italian or German brand of fascism. In the event of a Loyalist victory, communism is equally unlikely. In fact, the influence of the Communists in the Loyalist government appears to have declined steadily in recent months. Yet the development of a real democracy also seems improbable in a country where it is not deeply rooted in national traditions and where tolerance for clashing political views hardly prevails.

The external policy of Spain would appear in greater danger of falling under foreign domination. Since both parties, especially the Insurgent, have benefited extensively from outside assistance, they owe a debt to foreign powers on which payment may be demanded. But any attempt to demand political concessions in return for this assistance would undoubtedly arouse the indignation of the Spanish people who are proud of their independence and traditionally intolerant of foreign intrusion. Thus the Nationalists would alienate whatever popular support they have obtained should they provide Italy or Germany with permanent air or naval bases; and the Loyalist regime would arouse equal resentment if it permitted continual interference by the Soviet government in Spain's internal or external affairs.

As yet there is no convincing evidence of foreign domination of Spain. On the Loyalist side, Soviet influence appears to have become less conspicuous after the recall of Marcel Rosenberg in April 1937. On the Franco side, many foreign reports regarding Italian and German penetration were proved subsequently to be greatly exaggerated. This was true, for example, of the alarming news concerning German activity in Spanish Morocco. While the Italians were once reported in almost complete control of the strategic island of Majorca, dispatches of newspapers correspondents on the spot during October and November 1937 revealed that Franco had asserted his authority and garrisoned the island exclusively with

Spanish troops, excepting only a few hundred Italians engaged in the air forces. Yet Franco will no doubt allow Germany and Italy to reap considerable commercial benefits, if only to liquidate the debt incurred for delivery of war material. The Nationalists are said to owe 3.5 billion lire to Italy, and probably a greater amount to Germany. With the Reich an active trade is being conducted under a compensation agreement concluded on July 17, 1937. While Germans have been increasingly active in organizing Spanish business, they have no monopoly of commerce or raw materials. British and French companies in Spain have been left in possession of their mining and other concessions, although raw materials have been requisitioned in substantial amounts to pay off debts to Germany and Italy.

New Rights for Women of France

We reproduce the following from *The Catholic Citizen*:

The Renoult Bill under which the married women of France will gain a larger measure of civil rights has at last become law. The Act slightly modifies the civil marriage declaration by eliminating the words: "The wife owes obedience to her husband," and substituting a declaration that the husband is the head of the family, that he can choose the family domicile, and that his wife is compelled to cohabit.

Under the new Act a married woman may enter the university, pass examinations for various liberal professions, have a separate bank account, draw and sign cheques in her own name, accept an inheritance or gifts, and witness a will. She may also carry on a business in her own name with her husband's consent, and choose a separate profession, but in the latter case her husband may oppose this action unless his disapproval is contrary to the family interests. The wife may appeal to the ruling of the court.

This law is a great triumph for French women in spite of the fact that it does not give them all they demand. Married women are now regarded as adults under the law so that "there is now no longer any excuse to continue to deprive them of their political rights."

The Story of An Exterminated Race

The history of colonisation and imperial expansion during the ages is full of tragedies; but few so pathetic as that of the total destruction of the Tasmanian race, writes J. W. Poynter in *The Inquirer*:

Abel Jansen Tasman, the Dutch sailor, cruising in 1642 in the then untravelling waters of the Southern Ocean, came to an island with a rocky wooded coast. He named it Van Diemen's Land, but later this was altered to Tasmania, after Tasman himself.

Tasman, however, found no inhabitants in the island; he hoisted his country's flag and went away on his voyages.

Not until a century and a half later did any white man set eyes on the aborigines of Van Diemen's Land. A French sailor, Captain Marion, landed there in 1772, and was met by a party of natives. About thirty of them came down to the shore where were the sailors. There were women carrying children fastened on their backs with ropes of rushes, and men carrying spears and stone axes. The Frenchmen offered them pieces of iron, cooking-

glass, and bits of cloth, but the gifts were waved aside with scorn. Then came an unfortunate incident. One of the natives advanced and offered a lighted stick to a sailor. The Frenchmen interpreted the act as an attack and opened fire upon the natives, who fled, leaving one dead and several wounded.

In 1803, however, Lord Hobart, then British Secretary for the Colonies, commissioned Captain Collins to form a settlement in Tasmania. The tragedy began. The instructions received by Collins were good: "To endeavour, by every means in your power to open an intercourse with the natives, and conciliate their good will." However, the first conflict had already occurred. Shortly before Collins' arrival a party of white men from the Australian mainland had come ashore near where now is the city of Hobart. One day some natives, including women and children, appeared on a high land above the camp of the whites. They showed no hostility, but for some unknown reason fire was opened on them and several were killed.

However, there were no further serious conflicts for some years. Even then they would not have occurred save for reasons discreditable to the white settlers.

Governor Macquarie condemned any hostile treatment of the natives, but it continued, and in 1816 the interior of the island was gravely disturbed. The *Hobart Town Gazette* (as quoted by Bonwick) said:

"The Black Natives of this Colony have for the last few weeks manifested a strange hostility towards the up-country settlers, and in killing and driving away their cattle, more than has been witnessed since the settling of the Colony."

Yet such acts clearly were reprisals for ill-treatment received. Indeed, in 1817, Governor Sorell was compelled to issue a proclamation against base outrages on the persons of aborigines.

The worst enemies of those natives were the white-out-laws; bushrangers. They would tie natives to trees and use them as targets, or drag off native women by force. The natural result was reprisals on any white indiscriminately. In 1824 a proclamation was issued against "settlers and others" who were massacring natives.

The intermittent warfare, however, continued.

Between 1927 and 1830 no less than twenty-one inquests were held on whites murdered by natives.

In 1830 appeared George Augustus Robinson, who undertook a mission of conciliation. By tireless efforts and consummate tact—he went unarmed and alone amongst hostile natives—he achieved what was practically the cessation of a war.

However, the ultimate doom of the native Tasmanian race was now inevitable. It was decided to remove all the aborigines from the main island to one of the islets in Bass's Strait. "Chief Justice Pedder protested vigorously against the proposed scheme of transportation. He declared it to be an un-Christian attempt to destroy the whole race; for, once taken from their old haunts, they would, he believed, all die. Sir John Pedder, in after years, saw the fulfilment of his prophecy."

From one islet to another the few remaining natives were shipped, being settled at last on the Great (or Flinders) Island: a barren spot, where they died off quickly. In 1847 only forty-four remained: twelve men, twenty-two women and ten children. These were removed to a better district—but too late.

In February, 1869, the last Tasmanian man died—William Lanne. In May, 1876, died Truganina, the last woman.

Thus, in 104 years a whole race had been exterminated.

INDIAN PERIODICALS

Education in Ancient India

Dr. Radhakumud Mookerji writes in *The Aryan Path* on the educational method in Ancient India :

The ancient Indian educational system has a most significant name—*Brahmacharya*. The name indicates that education is a process of life. The *Atharva Veda* describes the Brahmachari as a practiser of ascetic austerities.

The first point of this system is that a school is a natural formation, not an artificial institution. The pupil must seek the teacher who can admit him to his teaching.

The formal admission of the pupil is by a ceremony called *Upanayana*, of great spiritual significance.

In ancient India the school was the home of the teacher. It was a hermitage. The constant touch between teacher and taught was vital to education as conceived here. India believed in the domestic system in both industry and education, and not in the methods of large-scale production in factories turning out standardised articles.

The pupil's membership of the family of his Guru constitutes a constant stimulus to the ideas to which he is dedicated, while it also appears as a protective sheath, shutting out unwholesome influences, and as a restraining force. Again, the novice feels that he is not lost in a crowd.

Apart, however, from the special educative value of the teacher's home as the school, there is the factor of its environment or setting as an integral part of the scheme. The school is in sylvan surroundings. The pupil's first daily duty is to walk to the forest, cut and collect wood, and fetch it home for tending the sacred fire.

The ceremony of *Agnihotra* brings home to the pupil the reality of religion in the form of sacrifice.

The writer then speaks of certain other duties of the pupil, concomitant with *Brahmacharya*.

The pupil's next duties were to tend the teacher's house and cattle. Tending the house was training the pupil in self-help, in recognition of the dignity of labour, of menial service for his teacher and the student-brotherhood. Tending cattle was education in a craft as part of the highest liberal education. The craft selected is the primary industry of India.

The *Brihadaranyaka* tells of Rishi Yajnavalkya, the foremost philosopher of his time, a good enough herdsman, with his band of pupils, to drive away home from the court of Janaka the thousand cows which the King bestowed on him as the reward of his learning.

Another duty of the Brahmachari is to go out on a daily round of begging, not for himself but for the support of his school. Its educative value is explained in the *Satapatha Brahmana* (xi. 3, 3, 5), which points out that it is meant to produce in the pupil a spirit of humility and of renunciation.

We may now have an idea of the working of the school as a whole. Its physical surroundings away from centres of population give to its students opportunities for contact with nature and for solitude.

Alone in the woods or pastures, an individual gets emotive responses in the form of fear, wonder, or joy, which reawaken in him the consciousness of self which he loses in the crowds of the city. For emotional tension brings in its wake the feeling of selfhood.

Then, again, solitude has its own effects on a man's inner development.

It is these sylvan schools and hermitages that have built up the thought and the civilization of India.

The Wardha Scheme

The case for the 'Basic Education' scheme, as outlined by the Zakir Hussain Committee and announced in the *Harijan* (Dec. 11, 1937), has quite naturally raised far-reaching issues. T. N. Ghose in an article on "An Aspect of the Basic Education Scheme" in the *Visva-bharati News* brings out certain implications of the Scheme, which have appeared to the writer to be of vital importance :

The Scheme of education we are now considering and which moreover in all essentials is likely to be adopted as the Government system in the seven Congress provinces of India has the uniqueness of harnessing non-violence with ideals of nationalism and citizenship.

It betrays widely and fundamentally divergent ways of thinking being forcibly made to bear each other company—the politician's way and the way of a great lover of mankind, who still wavers between nationalism and humanism.

When statesmen undertake to steer the bark of education, it is only just and fair that it should be politics-ridden. Our only grievance is that the little of liberty that is still left in the domain of thought as nourished by education, disorganised and undeveloped as it maybe, should be snatched away. Politics does not give us liberty. It is too late in the day to establish it. Education, rightly conceived, may redeem certain fields where statesmen will not consider it worth their while to lord it over, but where men, otherwise smarting with mortification, might discover much to their relief sources of enjoyment born of the free spirit of man.

The sort of education that the Wardha scheme envisages is suspected to have a strong political bias. Interest in national life is bound to foster a spirit of violent competition. It is rather difficult to understand how non-violence of the type that Mahatmajī has prescribed can ever be made to emerge out of a scheme of education with such a definite national bias.

Sunflowers : VAN GOGH

It is not our contention here that the Scheme under consideration has been mischievously devised to wheedle a whole nation but that it requires to be released from the grip of people who are essentially politically-minded. Quick results may be necessary in other fields of human endeavour, but never so in education. Politics is an organisation which is the playground of human qualities that make man feel that he is but a link in the great chain of Nature's exhibits; and hence there must be occasions when it should be a little enlightened by considerations other than merely natural. Education alone is the great source of such light; and as such, in the hurry and frenzy of political, communal or even religious passions, it should not be allowed to be the mere handmaid of any mere Time-spirit.

Heramba Chandra Maitra

Though vehemently opposed to students meddling in politics and getting entangled in its sordid squabbles, when they actually got into trouble through indiscretion or exuberant enthusiasm they had no doughtier champion to fight for them than Dr. Maitra. Writes Principal Suresh Chandra Ray in the *City College Magazine* :

In politics Dr. Heramba Chanda Maitra belonged to what was known as the Moderate party. It is not known who was responsible for this atrociously uncouth nomenclature. But the term as descriptive of Dr. Maitra is singularly inappropriate. A single instance will prove the intensity of his political emotionalism. The incident happened at the time when the non-co-operation movement was at its height, when non-co-operation was of the thoroughbred class, not the knock-kneed hybrid of later times, a nondescript cross between co-operation and non-co-operation, Lord Ronaldshay was then Governor of Bengal. Picketing had been declared unlawful. Hundreds courted prosecution and were sent to jail. And the jails became full. Then the order went forth that picketers were to be dispersed by force and not sent to jail. Soldiers were posted at the crossing of Harrison Road and College Street. The inevitable call for sacrifice came upon our students and large numbers of them came forward to offer themselves as *lathi-fodder*. It was a sickening sight, and one evening Dr. Maitra saw it. He was coming down College Street on his way home from a meeting of the University. He was an old man and a "Moderate," but the sight which he saw at the crossing caused his blood to boil, and with the rash indiscretion of a young man of 16 whose indignation has been roused he strode up to the military picket thundering at what they were doing. A British Tommy on duty knows no God other than his officer in command, and the inevitable consequence followed. He was assaulted and fell down. The sequence is well known history and need not be repeated. The incident has been recalled merely for a correct understanding of the character of Dr. Maitra and his political "moderation."

The next morning the citizens of Calcutta found that the military picket had been taken away. For days people, mostly students, had been kicked and caned, and in the press there had been much spilling of furious ink but to no purpose; it was the assault on Dr. Maitra that did the trick. The action taken by Lord Ronaldshay—it was at his personal intervention that the soldiers had been removed—was a recognition of the peculiar position of Dr. Maitra in the public life of Bengal. As a politician neither he nor his party counted for much in those days,

but as a personality in the world of religion and education he was held in high regard both by the public and the official world.

The Art of Criticism

The wrong impression that criticism is inferior to creation because it does not deal directly with the facts of life, but concerns itself only with books and is therefore a parasitic art, will be removed, when we recognize that if all beauty is the sphere of literature, the masterpieces of great minds are undoubtedly suitable subjects for such treatment. In the course of his article on the art of criticism Principal P. Sheshadri observes:

It is possible to indicate the aims and nature of criticism by reference to what some experts in the art have said.

One of the most attractive and striking statements on the subject is that of Anatole France, who says in his *Life and Letters* that "literary criticism consists of the adventures of a soul among the masterpieces of the world." If it is felt that this definition is vague, though beautiful, attention may be invited to Walter Pater's observation, that criticism is a threefold process, perceiving beauty, disengaging beauty and expressing beauty. There is not much chance of success in the Art of Criticism, if a man's soul is dead to beauty; there are some in whom the chord is never touched in the manner necessary for even one's own private appreciation, not to speak of communication to others. Disengaging beauty, again, is a process somewhat akin to the isolation of the microbe by the investigator in medicine, if one may borrow such a simile from the scientific world of today. There is of course, the third quality, which is the consummation of all, the capacity to express the ideas in artistic forms, without which no literature can exist.

The difficulties in a complete realization of this triple ideal of Walter Pater are obvious. It is not everybody whose mind and soul are attuned to all aspects of beauty in form and in spirit. As Anatole France has said, elusiveness is one of the essential qualities of beauty, and as it does apply to literature also, there is the difficulty of being able to grasp its essence. What Matthew Arnold has called "the incommunicable elements of literary work" are things rather difficult of analysis and exposition. The language suitable for criticism has to combine in itself a fine sense of intellectual balance with charm of expression which is not easy of achievement. We have critics like Swinburne, for instance, who are carried away by the rush of their own eloquence, "intoxicated by the exuberance of their own verbosity" as Disraeli would have said, and at the other extreme, we have a large number of textbook writers, whom we ruthlessly impose on our students and who seem to have a profound capacity for stifling all literary taste.

The good critic enables the readers to take increased interest in the work by pointing out its numerous beauties not unmindful, at the same time, of its blemishes.

The critic's work has been rightly characterized as twofold, interpretation as well as judgment. The world is not likely to wait with folded hands and bated breath for the judgment of a critic, unless he happens to be an eminent master like Goethe or Sainte-Beuve. With a growing literary democracy, this attitude of reverence is

rapidly disappearing and, perhaps, it would be wiser to lay more stress on the interpretative aspect of literature. The good critic has a keener sense of beauty than the average reader. His judgment is regulated by his extensive study of literature and knowledge of the essential principles of success in the art of writing. His powers of analysis are more acute and he is also capable of more detached and dispassionate judgment. He has also a better command of the apparatus of expression necessary for critical comment. His usefulness, therefore, depends on the extent to which he has acquired these qualities and has utilized them in his work.

Sarat Chandra Chattopadhyaya

Satya Bhushan Sen writes about the distinguished novelist, Sarate Chandra Chattopadhyaya, and his place in Bengali literature in *The Educational Review*:

Sarat Chandra Chattopadhyaya, the greatest (barring of course Rabindra Nath Tagore) literary figure of present-day Bengal died on the 15th January, 1938. Sarat Chandra was pre-eminently a novelist and as a novelist he was the most popular of all authors in spite of Tagore. His rise to fame was almost meteoric; he appeared on the literary horizon of Bengal when Tagore was shining in his midday effulgence and just got universal recognition by the award of the Nobel Prize. During the quarter of a century since then Sarat Chandra has held novel readers spell bound.

The present-day Bengali novel owes its origin to Bankim Chandra Chattopadhyaya. The successive production of so many novels at the hands of this mighty man added force and gave a definite mould to the literary prose which he had brought into being. Here the genius of Bankim stands unrivalled.

After Bankim came Rabindra Nath Tagore.

Tagore literature is meant to include his inimitable short stories where Tagore stands comparison with the best authors of all climes and ages.

Sarat Chandra came in at the full flood of Tagore. But in spite of the influence of Tagore he was able to carve out a distinct and distinguished career for himself.

Sarat Chandra drew his inspiration and his materials from the social life of the people. Tagore had also largely used the same materials. Yet there was a difference between Tagore and Sarat Chandra. Tagore in literature was not wanting in sympathy for the people, but he used to view the life of the people with the outlook of a philosopher and give expression to his ideas about them with the mind of a poet.

In literature Sarat Chandra's philosophy of life takes cognisance of the fact that in spite of the sin and frailties so common to men, man cannot go so low as to be beyond redemption; and he seems to have taken upon himself the task of reclaiming the essential manliness inherent in each man in spite of his sin and worthlessness.

The genius of Tagore is of course without parallel but with the mass of novel readers Sarat Chandra was even more popular than Tagore. The secret behind this phenomenal truth was admirably brought out by Sarat Chandra himself when one of his acquaintances interviewed him. The gentleman seemed rather jubilant over it when he asked, "How is it that Tagore is very often so unintelligible to us, and we have to exert our brains about it, whereas your works are as clear as anything and come to us as natural as food and water?" Sarat Chandra was as prompt and natural in his reply as

perhaps his interviewer did not even expect. He said in reply, "The reason is not far to seek; no wonder that Tagore literature is so frequently not intelligible to you because Tagore literature is in fact not intended for you at all. Tagore writes not for you, average readers, but for us who are authors; and it is we who write for average readers like yourself".

But after all Sarat Chandra though so widely appreciated in Bengal is, unlike Tagore, hardly known to the outside world, because only a few of Sarat Chandra's books have ever been translated into English and only one or two were translated into French.

The Peking Man

In the course of an article on "China and the Dawn of Asiatic Culture", in *The Calcutta Review*, Dr. Kalidas Nag gives an interesting description of the discovery of *The Peking Man*:

A most remarkable event in the study of Asiatic prehistory was the first scientific symposium held in the auditorium of the Medical High School in Peking in honour of the visit of the Crown Prince of Sweden (October, 1926). The most sensational communication was from Zdansky saying that working on the Chau K'ou tien material he had found a molar and a pre-molar teeth of a creature resembling a human being. Dr. Grabau named this hominid the *Peking Man* and a systematic study of the same was organised by the Geological Survey of China in co-operation with the Peking Union Medical College and the Rockefeller Foundation. Dr. Black examined several prehistoric teeth and placed beyond all doubts the hominid character of this new genus *Sinanthropus* with the species name of *Pekinensis*. In 1928 Mr. Li who was collaborating with Dr. Bohlin (discoverer of an important tooth) was assisted by Dr. C. C. Young and W. C. Pei in the excavation of the cave and they brought back to Peking the richest harvest of prehistoric materials from the bone-bearing deposit of the cave. Up to 1929 they worked for 64 weeks bringing 1485 cases of their collections. Mr. W. C. Pei who conducted operations at the cave in the autumn, of 1929, discovered the most complete *Sinanthropus* skull. On this epoch-making discovery Dr. Black published a beautifully illustrated monograph. "An adolescent skull of *Sinanthropus Pekinensis*" (*Paleontologia Sinica*, Vol. VII, 1931). The two brilliant Chinese scholars, C. C. Young and W. C. Pei directed the excavation in 1930-31, making some of the most important anthropological discoveries.

Thus the Choukoutien Deposits came to revolutionize the whole theory of the earliest history of man.

Eminent scientists like Elliot Smith discussed "The significances of the Peking Man" (Edinburgh, 1931). So Sir Arthur Keith, in his "New Discoveries relating to the Antiquity of Man," devoted three chapters to the Peking Man. They substantially agreed with Black who, after exhaustive comparison between the skulls from Java and from Peking came to the following conclusion: "Whereas *Pithecanthropus* is a highly specialised, not to say in certain respects degenerate type, *Sinanthropus* is a remarkable combination of highly original and purely modern features." Black sums up its characteristics by saying that *Sinanthropus* is a generalised and progressive type, closely related to the original type of hominidae which was the prototype not only of the Neanderthal man and the South African fossil human races, but also of the modern *Homo Sapiens*. The Neanderthal race is now

admitted to have introduced to Western Europe, the middle-paleolithic or monstorian culture from Central Europe which again is now seen to have cultural relations with Central Asia of prehistoric epoch. This relation is kept up down to the Neolithic ages when Europe got her first batch of domesticated sheep, pig and other tame cattle types from Central Asia, horse appearing much later.

Organisation of Rural Health and Sanitation Work

Capt. A. S. Varma, District Health Officer, Patna, writes in the *Bihar and Orissa Co-operative Journal* :

The Government is fully alive to the utter inadequacy of medical relief which is being rendered to the rural people of Bihar. It is time now that the District Board Dispensaries should be left in the hands of subsidised Doctors on honoraria for say a period of 5 years, and where such suitable and willing subsidised Doctors are available the District Board Dispensary Doctor can be set free for public health work at a small additional cost to pay for the honorarium of the subsidised Doctors and the travelling allowance of the Dispensary Doctors. If the Dispensary Doctors be willing to work on subsidised system there is no reason why his offer will not be accepted first; and the new recruits may be taken in on a scale fixed by the authorities to fill up his place.

There is some doubt if suitable subsidised Doctors would be willing to work on pittance. As they are not whole time servants and are more or less independent except for the 3 hours of duty in the morning there need be no difficulty in the matter. We need not prolong the hours of hospital attendance, for, after all, even in the present circumstances they are not fully availed of by thousands owing to great distances and extreme poverty. The poor suffering from pneumonia, plague, cholera, typhoid can not attend dispensary and cannot pay for the Doctors, why then worry so much over this costly paraphernalia only to meet the requirements of minor indispositions such as indigestion, scabies, ringworm, etc. We must make a deeper drive for the solution of the problem. We must make such conditions prevail in the rural areas so that diarrhoea, dysentery, cholera, conjunctivitis, typhoid and such other diseases disappear altogether.

The modern state is now realising the preponderant utility of prevention over cure and it is high time that we did not lag behind. The medical and public health budgets require a thorough overhauling and it is extremely encouraging to find that the Congress Governments of this

country are paying their serious attention to the transformation of the whole medical staff into public health staff by gradually leaving the hospital treatment in the hands of the honorary experts or subsidised Doctors.

With the advent of the District Board Doctors in every Thana, aided by the village guides the public health activities are bound to achieve great success. The present idea is to have a number of Union Boards in every Thana endowed with all sorts of administrative power. The village guides then will be under the direct administrative control of the executives of the Union Boards and the Thana Doctor will submit his inspection note to the Union Boards as well as to the District Health Officers.

Worshippers of Buddha

THE war drums are sounded.

Men force their features into frightfulness

and gnash their teeth;

and before they rush out to gather raw human flesh

for death's larder,

they march to the temple of Buddha, the compassionate,

to claim his blessings,

while loud beats the drum rat-a-tat

and earth trembles.

They pray for success;

for they must raise weeping and wailing in their wake,

sever ties of love,

plant flags on the ashes of desolated homes,

devastate the centres of culture

and shrines of beauty,

mark red with blood their trail

across green meadows and populous markets,

and so they march to the temple of Buddha,

the compassionate,

to claim his blessings,

while loud beats the drum rat-a-tat

and earth trembles.

They will punctuate each thousand of the maimed and

killed with the trumpeting of their triumph,

arouse demon's mirth at the sight of the limbs

torn bleeding from women and children;

and they pray that they may begot minds with untruths

and poison God's sweet air of breath,

and so they march to the temple of Buddha,

the compassionate,

to claim his blessings,

While loud beats the drum rat-a-tat

and earth trembles.

Rabindranath Tagore in the *Visva-bharati Quarterly*

AUSTRALIAN CHURCH, MELBOURNE

According to an advertisement appearing in our advertising columns, an Assistant Minister is required for the Australian Church, Melbourne, Australia, which was founded, and a fine building erected, over fifty years ago. Dr. Charles Strong, for nine years minister of the Scots' Church, one of the leading Presbyterian Churches, has been the sole minister, and has carried on the activities of the Church with the assistance of laymen and Associate ministers who have been appointed from time to time.

The Minister and members of the Congregation have been active workers for the improvement of Social and Industrial conditions; for the abolition of war and the promotion of International Co-operation and Fraternity; for the Moral training of the young; for Equality of Women with Men; for reform of the Penal system; for Temperance as well as the Scientific Study of the great Religious questions of today.

For years the Minister has edited the *Commonweal*, a monthly Journal devoted to the advocacy of Religious and Social progress.

WORLD AFFAIRS

"Italy has not yet forgotten the sanctions," declared Signor Mussolini after Herr Hitler's departure from a visit. She has forgotten, the world might conclude, only a recent document that she signed—the Anglo-Italian Pact. In the same speech, however, Il Duce had deigned to assure Mr. Neville Chamberlain, "It is our intention to respect the Anglo-Italian Agreement scrupulously". Scruples, however, are not a dictatorial virtue, and this profession of it certainly ill accords with the Dictator's resentful reference to the sanctions, or his reminder, "Mr. Neville Chamberlain's last speech was a recognition of the power of Italy," or with the concluding threat: "In an ideological war the authoritarian states must march solidly forward."

AFTER THE ANGLO-ITALIAN AGREEMENT

This is no doubt hard on Mr. Chamberlain and his new babe—the Anglo-Italian Agreement. It is proving still-born. Secretly the British had calculated that the Austrian adventure of Hitler must cool off the Italian fervour for the friend appearing now on the Brenner. The Anglo-Italian agreement coming in its wake would 'tilt the Berlin-Rome axis,' Britain hoped, against Berlin. Rome, of course, could not be accused of encouraging this idea. But, the British Cabinet certainly expected a new turn in the diplomatic alignment, as is evidenced by the references from the British press. Certainly, they had a claim on Mussolini to be spared the humiliation that the Dictator's references to Mr. Chamberlain's speech involved. The Premier has been always so considerate. In the House of Commons when the Agreement was drawing on itself the criticism of the opposition, Mr. Chamberlain stated that the "settlement" in Spain was a pre-requisite of recognition of the Italian conquest of Abyssinia. Pressed by Mr. Attlee, the Premier refused to define what he meant by 'settlement.' "I cannot tell the House even when this protocol and annex will come into force. No doubt, the situation will clear itself up as time goes on."

This is truly wise of the British Premier. Situation always clears up as time goes on—either it worsens or it improves, it simply peters out or remains where it was, steady and static. Anyway, the Premier's proposition showing that noble resignation to the inexorable decree of time cannot be contested. And time already is clearing up the show. The Führer arrived in Italy to receive a royal welcome, reviewed

the Italian manoeuvres, and returned with the friendship repaired and perhaps a totalitarian future course of action discussed and decided. Has the Berlin-Rome axis any way weakened? Time proves otherwise. So long as the two 'Have-nots' stand to gain more by their united march against the 'Haves' they are likely to tolerate each other agreeing on the comparatively minor matters of differing interests. So, the Anglo-Italian Agreement still waits to come into operation, and, the Franco-Italian talk for a negotiation, favoured by the British, could not get really a start; and, time proves now that Italy with a renewed faith in the Führer's alliance, would move away from it on the plea of the pro-Governmental leanings of the French in the Spanish war. The British Premier may have declined to define what the 'settlement' according to the Agreement meant, but Mussolini has interpreted it as nothing short of a victory of General Franco, and time is bound to show this to be the acceptable interpretation to Britain as well.

ABYSSINIA "LIQUIDATED"

In the League Council, meanwhile, time was taking its vengeance. Lord Halifax moved, according to the Agreement, for recognition of the Italian conquest of Abyssinia. Only Russia and three others lacked this 'spirit of realism' and tuck to the old spirit of 'sanction'. Yet, to believe a French paper, Abyssinia is far from being thoroughly subjugated, as the following letter from the Duke of Aosta to Mussolini, quoted in the local European press, shows:

"The situation is really terrible. Italy's influence extends only within gunshot, and no further. The whole of the 6,000,000 natives are absolutely hostile. Within 80 kilometres of each Italian garrison the Ethiopian Races rule just as they did before the war... We lack everything; the natives refuse to sell anything to the Italians, having no longer any confidence in the paper money we offer them. The only money in which they have any confidence is the Maria Theresia thaler. The result is that the natives refuse to come to the markets frequented by the Italians, it would cost too much and be too dangerous to send bodies of police against them. Italian financiers in spite of the pressure of the Duce, have so far only invested 150,000,000 francs in Ethiopia, a sum which is altogether insufficient. Much more is necessary; it must be found at once in view of this situation many Blackshirts, who had meant to settle down as colonists in the country, have decided to return to Italy, where they spread most angry stories among their parents and friends... If a European war broke out we should be chased from the country in a few weeks."

The dark land of the Ethiopians offers an interesting commentary on the international history of the era and on the paradoxical politics

of the period. Introduced to the League by Italy, Abyssinia was to fall a victim, ironically enough, to Italian aggression, and, Italy found to her wrath Abyssinian membership of the League the only barrier to her aggression. Opposed by Britain in her application for membership of the League, Abyssinia discovered to her delight in Britain a valued friend in the League of her liberty and League principles. Standing on the principles and backed by the powers, the Negus refused to enter into any bargain with Italy outside the League, and, lost his entire Empire finally, while the League powers sat in conference, weighed evidence, debated sanctions, fumbled over any effective action against the aggressor. The League too has made history—and unmade many fond dreams. For the first time—and last too—its sanction clause was invoked against an aggressor member. It at once proved how hollow it is. Only false hopes were raised in the Ethiopian breast so that their betrayal was more thorough and more helpless. Horrified the League saw in the final chapter the use of poison gas by the civilizing mission of Mussolini, in which everything is blotted out. The League has witnessed many memorable scenes in connection with the Abyssinian affair—Sir Samuel Hoare and Laval and Eden, and lastly the Negus appearing personally with his final appeal. It heard now Lord Halifax's *Te Deum* over Abyssinia. The Abyssinian affair is liquidated at last—for the League and Britain. Time really clears up situation, as Mr. Chamberlain rightly said.

JAPAN'S CHINESE TIME-TABLE

Time, however, is likely to prove a handicap to the Japanese. The Chinese war is proving for Japan a long-drawn out affair. It would not follow the Japanese time-table; hence, Japan is likely to appeal to more drastic and more savage measures. Poison gas, as in Abyssinia, when victory appears about to elude the grasp, is likely to be last resort. It is already talked of, and, the League Council at Geneva has already received an appeal against it from the Chinese. Meanwhile, the reverses have been made good. The 'net of steel' round Suchow, the vital junction of the Lunghai and Tientsin-Pukow Railway, has closed, leading to a comparative disaster for the Chinese forces there. This success "sets the seal to the junction of the Japanese forces in North and Central China, and will make possible the long-delayed amalgamation of the Japanese fostered regimes in Nanking and Peking." "The city has

become," according to the *Reuter*, "a vast slaughter house." Japanese fury and hate will necessarily take worse turn as the war prolongs. In South China, on the occupation of the island of Amoy, probably meant only to divert Chinese attention from the North to the South, a similar scene of savagery was witnessed.

The story of how the Japanese invaders lined up prisoners taken at Amoy, and shot them down in batches, is related by a European ship's officer. Chinese refugees, states the Hongkong correspondent of *The Times*, allege that boats containing women, children and crowds of refugees on the water-front at Amoy were machine-gunned.

Still, the recent visitors from China maintain that the Chinese resistance is not wearing out. Japan's ability as a fighting force, as Mr. James Mill, foreign correspondent of the *Associated Press* of America points out in an Indian interview, has been generally over-rated. Her marksmanship in land and sea and from air is considered not so satisfactory. She has not met any first class power in a modern war. Hence, her strength as a fighting force is yet to be known. Her economic order of course will stand the present strain; for in spite of the western method of stupendous industrial development, it has so far not been sapped by the accompanying western evil of class war. The Samurai spirit and the semi-feudal mental outlook has up till now persisted though the old social structure is yielding to the pressure of new industrial life. It remains to be seen how long the subjective forces of an old order can triumph over the objective transformation of the new times. Any economic catastrophe, coming in the wake of a big war, must sweep off the shreds of the old. Does Japan stand that danger now? Not impossibly, if the war drags on as now for a year or two more, when Japanese intensiveness of the campaign is likely to exhaust the country, whereas the semi-primitive Chinese rural economy may slowly organise itself more easily into a sort of low-level equilibrium. Thus,

China, seemed to have ample money to carry on indefinitely. She had no trouble in getting foreign credits, whereas Japan had been compelled to finance the struggle almost entirely through forced internal loans. The Tokio Government had not been able to get any financial help even from Germany and Italy with whom Japan was allied politically.

Asked about the extent of Russian assistance to China in the conflict, Mr. Mill said that the Soviet is supplying China in a large way with aeroplanes, tanks and other war supplies, but all on a strictly cash basis. Up to the present the Chinese Government had purchased nearly 400 Soviet-made bombers, pursuit machines and observation planes. All of these are manned by Russian volunteer pilots who within the last two months have scored several notable success against the Japanese air force.—(A.P.)

THE CZECHOSLOVAK CRISIS

The quick development of the Czechoslovak crisis in the third week of May, however, has eclipsed the Chinese war and the Japanese victories temporarily. There at last Europe is facing the inevitable catastrophe which it may be difficult to be postponed.

For some time the world eagerly speculated what the Dictators meeting in Rome decided. Will Trieste, the former Austro-Hungarian port, be returned to the Reich for a freer hand promised in the Mediterranean to Italy by the Führer? The Spanish position must have been reviewed, and so also the Central European and, more particularly, the Czechoslovakian situation. Everyone was curious, for the Dictators really dictate today in their own land as well as in others, in European politics as a rule. Other nations only propose, Hitler and Mussolini dispose. Britain and France,—France can now-a-days be always bracketed with Britain—proposed some days ago a solution, for example, of the question that challenges the Central European republic. It must have been one of "appeasement"—the Chamberlain line of solution. But Berlin would not appreciate these good offices of Britain. The Sudeten Deutsch was no concern of the islanders. Hitler disposed of these British attempts in God-like silence and with God-like disregard. His plans were already maturing. While Herr Henlein, the leader of the Sudeten Deutsch Party, was in London explaining to Hitler's British critics the reasonableness of the Sudeten German claims, the municipal elections in Czechoslovakia, to come off in the last week of May, and to be followed in June by the Czech election, were raising the Czech-German tension into a crisis. The Nazis cannot tolerate many things—least of all an election or a plebiscite unless conducted by them to shew up their majority. So, in Sudeten Germany riots are breaking out, scuffles occur; while German troop movements, explained to be usual, are reported on the frontier. For, has not the Reich a responsibility for protecting the Germans in a State which is failing to give the fundamental guarantee of safety to its people (the same plea, it may be remembered, that was put forward on the eve of the Schuschnigg plebiscite and was proved to be 'false from A to Z')? M. Hodza, the Czech Premier, in the deepening crisis has come forward with the maximum of concessions, an "autonomous administration" for the region, as far as permitted by the Czech constitution. But concessions will be no longer enough. Henlein Party invited to a negotiation to ease the position

declined to meet the Government. Hitler is again at Berchtesgaden and knows the value of the other tension that has been created over the Spanish question between Italy and France,—necessarily diverting the attention at the psychological moment of the Western Powers, particularly France, from the Czech situation to the Pyrenees—a planned diversion perhaps to keep the Mediterranean powers engaged while the Czech tension reaches the climax that the Dictator wants. Things are moving quickly in and around Czechoslovakia. On the Carpathian troops have been massed; the Polish and Hungarian minorities are not forgotten by the respective people; and Hitler is the model for all in the art of the solution of questions. Prague, in reply, has also called for the reservists to be trained in the use of new arms. For Czechoslovakia a temporary solution may be available if as a price for the Führer's grace, in addition to autonomy promised to the German minority, the Soviet alliance is repudiated. The ultimate logical consequence of it would certainly be a hegemony of the Reich over the country. The coming weeks may prove decisive, and the British Foreign Office is waiting to see how time clears up the situation.

FRENCH DILEMMA

France under M. Daladier is now incapable of having any effective voice on the Czechoslovakian position. Mussolini is cross with her. The Qui d'Orsay looks to the British Foreign Office for its policy and measures, and, even the last of the appeals of the Spanish Republicans, when Italian troops and arms were gaining for Franco important victories, had to be turned down by the Fronte Populaire Government of M. Blum. M. Daladier, his successor, is known to be dependent on Britain for his policy. So, France, it appeared, was to agree with Britain in refusing arms to the Republicans, and was thus to be a party to her encirclement by the Fascist powers. Beyond the Pyrenees, it was known, chains of aerodromes had sprung up in the insurgent territories, the complete control of which were in the hands of the Germans and Italians. M. Daladier and the French military staff discussed with Britain the defence plans of the two countries; and the consultation reached a decision of great value on all branches of defence—land and sea and air. This is a distinct gain for France, but certainly not in itself of such magnitude as to warrant France to leave Spain to her fate, or rather to Hitler-Mussolini-Franco. Supplies it appeared, therefore, trickled through

the French frontier into the Spanish Republican hands and the insurgent advantages were thus going to be neutralised. The result has been a quick and forceful warning from Mussolini and his Italian press who would never see their Spanish adventure to come to grief or its success delayed any more. Italian-French negotiations, under the circumstances, do not give, any promise of success and M. Daladier is likely to be pressed hard by Mr. Chamberlain to fall in with him here in a policy of further Italian appeasement and necessarily, resulting in a tightening of the Fascist grip around France, and finally to be wounded off with a break away from the Soviet alliance. Mussolini may consider even the Anglo-Italian Agreement endangered if France cannot be controlled in this matter. So, Czechoslovakian situation is developed now by Hitler, and Mussolini raises again the Spanish issue—as if according to a plan previously decided.

The position of France is really anomalous. A great people, a great empire, great in military strength and morale, France by her strategic position is precluded from taking an independent line. Her politics and decisions await on Britain's—and, make her yield the advantages to the Fascist Powers more and more as the British Government of the day move closer and closer to the Fascists. She is about to strengthen her forces in French Indo-China and French Africa, which was long overdue there, and at once by Mussolini the plea is raised that an increase of the French forces in the French Equatorial Africa would upset the balance there so as to prevent Italy from reducing her strength in Libya and Eritrea as agreed to in the Anglo-Italian Pact. Indirectly, therefore, it would amount to a pressure on France through Britain to abandon the plans. Thus France is being driven into a dilemma—friendship for Britain, or opposition to Fascists; London-Paris Axis or Paris-Prague-Moscow Axis.

BRITISH CONFLICTS

In fact the conflict between two opposing policies and ideologies tears not only France but most of the European powers. Great Britain, it has been observed by us before, is in a quandary too. Mr. Chamberlain and the ruling classes have no doubt made their choice—the inevitable choice that their interests forced on them;—and they are landed on the side of the Fascist powers, at a safe distance from the Soviet which had made a dangerous approach to Britain in the name of democracy and the League and other cherished ideals of Britain. But, it cannot be said yet that Britain has for that matter escaped

from the unenviable position in which conflicts of policy are unknown. The ineffectiveness at present displayed by the British politicians, in Office or in Opposition, appears, it is at last recognized, but “a reflection of the fundamental bewilderment prevailing among the British people on the major problems of foreign policy and contemporary ideological controversies.” A satisfied imperialist power has no reason to desire anything but peace; but the ambitious ‘Have-nots’ would not hear it. They do not appreciate British peace policy; they do not believe colonies are economically of no value; they do not understand that Britain's defence of democracy, which has brought her vast territories, is no mere hypocritical pretention of the “Perfidious Albion.” Britain finds herself thus misunderstood. Indeed, she herself cannot fully understand her own position in relation to the other forces. British public life is thus rent into puzzling and paradoxical divisions. The Conservatives in Office, for example, points out the *Statesman*, take rebuff after rebuff from the aggressive States silently. They suffer British imperial pride and imperial strategic interests to be challenged by these ‘Have-not’ powers. The socialist leaders, on the other hand, in defence of the democratic people, appear as champions of the Empire, its interests and honour, and advocate even a war policy—of course a war of intervention, a war ‘to make democracy safe’ again. Yet, they point-blank refuse to be united in any Popular Front lest bursting the narrowed dams of democracy the flood of socialist ideas and activity carry away the old Parties and old traditions of theirs. Mr. Lansbury and Lord Snell side with the Government on the ‘appeasement’ question; Mr. Churchill is often nearer to the Opposition though not actually in the same lobby on questions of foreign policy. The Duchess of Atholl, as a critic of the Spanish policy, addresses from the same platform as the communists. Good conservative tradition in the country delights in the exploits of the upstart ‘strongmen’ in Germany and finds in these men of the people, who swept away the old caste, a confirmation of itself and its faith in the soundness of its own ruling class. Socialists today, again strangely enough grow sentimental over the plight of the Jewish millionaires or aristocrats of Vienna.

This psychological conflict naturally expresses itself in practical inconsistency. Egypt and Ireland get at last rights for which they must be thankful to Mussolini and Hitler. Even India is sought to be reconciled with occasional gestures—the situation in the Far

East, Middle East and Europe are already too big to leave room for playing the old 'die hard' in India any more now. At the same time in Palestine, the air-way station of great strategic importance to the Empire, the Arabs must be held in leash. In Mexico, the oil interests of the British capitalist are too sacred to be handed over to the 'pink' Cardenas regime, and diplomatic relations are therefore, broken off. Were Mexico so strong the expropriation would have to be tamely accepted as was done when the British oil interests in Manchukuo were thrown out, or when to the Pehlavi's terms the Anglo-Iranian Oil Company silently submitted. At home, while the armament programme requires to be fulfilled within as short a time as possible the Amalgamated Engineering Union, on their experience of the past, refuse to be enthusiastic over longer hours as future security of employment is not guaranteed and the present unemployment of its members is not reduced. The Air Ministry itself was to come in for criticism in the House from the Opposition and Government Party as well for its failure to satisfy the demands of the times. The Cabinet has been reshuffled to quieten and still that criticism, dropping the Air Secretary, Lord Swinton, and the Colonial Secretary, Lord Harlech. The 'mediocrity of the British foreign policy' thus is as patent as the inefficiency of the heads of the Government to carry through even an urgent programme of national defence in so vital a branch.

It is pertinent to inquire why this conflict and confusion reign in British life and thought today. The cause has to be searched for in many fields; but delving deeper and deeper the conclusion becomes irresistible that inherent in British imperialism lies hidden the seeds of anomalies, the conflicts and contradictions that the system generates in its working, cut across the policies of its old Parties, and that ultimately will drive it to a war and disaster.

THE BRITISH FOREIGN SECRETARY

It is an irony of fate, that the man most sincerely desirous of peace, Lord Halifax, should unconsciously serve as the instrument of the War God to pave the blood-red path. It is but another paradox of the period. In an Empire with democratic traditions, in a people with rooted faith in 'ordered progress,' and believing its super-profits and dividends to be somehow the return of its muddled idealism, and a prize for its spiritual integrity,—a man like Lord Halifax alone could fulfil the purpose of history, leading to war and Fascism, inch by inch through

peace and democracy. Mr. Harold Laski's analysis of the man and the moment is worth remembrance and helpful to understand the position as we read it from the U. S. A. press.

"Lord Halifax, who has now taken charge of the Foreign Office for the time being, has many private virtues which endear him to his friends. He is deeply religious; he is an ardent lover of country life; he comes from a family in which, for three generations, the tradition of public service has been profound.

"Lord Halifax belongs to a class that is, I think, peculiarly English in outlook. He is kind and gentle in manner. He is always prepared for compromise on un-essentials. He is the perfect country gentleman. He gives the impression that his political life is something external to his real interests. Just as Earl Baldwin would have wished—but for the call of duty—to cultivate his garden, just as Sir Edward Grey always longed for his birds, so Lord Halifax has assured us that he would rather be Master of Foxhounds than Prime Minister. But the call of duty is too peremptory to be denied. His friends think him indispensable to the party, so that, for its sake, he cannot avoid the invitation to serve."

"Professor Laski believes that Lord Halifax is the most influential man in England with regard to English foreign policy, which means the foreign policy upon which European democracy must depend. He wishes to preserve peace at any cost, no matter if Austria, Spain, China, Czechoslovakia, the Soviet Union, and other States, are all sacrificed—even European democracy itself. He fears that war would bring socialism. Hence, he prefers anything to war, even a victorious war, which might bring radicalism in its train.

"This makes Lord Halifax a perfect mark for the diplomatic duplicity and territorial aggression of Hitler and Mussolini."

That Hitler and Mussolini regard the world as an artichoke that they can eat as they wish he does not for a moment contemplate. That solemn engagements have no meaning for them he is not prepared to recognize. That they look upon Great Britain as the final enemy, to be destroyed when they have a Fascist Europe under their heel, does not occur to him... They will play with them just so long as it suits their purpose. He will be their willing tool, assuming always that the finer their words the more sincere are their intentions.

"In the end, Lord Halifax is likely to wind up with Fascism and defeat, which might be even worse than socialism and victory. He is likely to sell both British and world democracy down the river.

Lord Halifax is a grave danger to peace in Europe, because he has no notion of how intimate is the interdependence of peace and democratic institutions. All his gestures will be noble gestures. All his words will be pacific words. But, piece by piece, he will surrender the fortresses of democracy. He will betray them all like a gentleman. He will carry us over into what is effectively the Fascist camp in the simple faith that he is fighting the battle of democracy."

Herr Hitler after the *anschluss* (i.e., after the annexation of Austria)

The niece of Field-Marshal Goering greeting Herr Hitler after his return to Berlin from the Austrian tour. The Field-Marshal also is seen in the picture

Herr Hitler speaking in Vienna when he proclaimed the annexation of Austria to Germany

Notes

Wife-stealing and Husband-snatching

Wife-stealing, whether by seduction, abduction or kidnapping, is considered wrong in all civilised countries, including India.

In India, and in some other countries, in communities in which polygamy is not forbidden, if a girl is married to a man who has another wife or more wives living, the girl is not necessarily a husband-snatcher, for generally such marriages are arranged by the guardians of the girls, who are generally minors. Even in these communities enlightened men look upon polygamy as wrong.

In the West, there is both wife-stealing and husband-snatching. Just as some men there seduce other men's wives and marry them after divorce or judicial separation, so some women wean some married men from the affections of their wives and marry them after the legal requirements have been satisfied. In these cases the men, too, are to blame.

In India, it has been known all along that some adult women of loose character wean some married men from the affections of their wives. But these disreputable women cannot be exactly spoken of as husband-snatchers. For the men, who become addicted to them do not become their husbands.

Some Western women, British, other European, or American, have been known to have married Indian men who had other wives living. Some of these Western women have done so not knowing that the men were already married; but some have done so knowing that the men had wives living. These latter may be rightly stigmatized as husband-snatchers. Of course, in these cases the men also are to blame.

Husband-snatching Facilitated by Some New Marriage Laws?

It is greatly to be regretted that in recent years some cases of husband-snatching by educated Indian women of respectable classes have

occurred, though their number has hitherto been extremely small. But, nevertheless, their occurrence is of evil omen. We shall mention a few instances.

A few years ago a respectable young woman, educated in India and abroad, married a young man of a different caste, who had a faithful wife living. This bigamous marriage was celebrated according to the (Sikh) Anand Marriage Act. Evidently they had recourse to this Act, as both Act III of 1872 and Gour's Special Marriage Act sanction only monogamous marriages.

Some weeks ago, a Hindu man, who had a devoted young wife living, professed to have become a Brahmo and went through a so-called Brahmo rite of marriage with an unmarried, respectable young Catholic woman, who also professed to have become a Brahmo. As soon as the affair became known to the President and Executive Committee of the Sadharan Brahmo Samaj, they strongly condemned this so-called marriage and declared it null and void, as it was both morally and legally wrong.

More recently, a young man, educated in India and abroad, having a devoted wife living, has married a respectable young woman similarly educated in India and abroad. These two persons belonged to different Hindu castes. So, in order to make the marriage legally valid, they had recourse to the Arya Marriage Validating Act.

Such cases of husband-snatching are ominous, as we have said. The last case has been callously characterized in some newspaper reports as a "romance." A sordid romance it may be, but what a tragedy to the poor faithful devoted first wife, who appealed to her unworthy husband to allow her to serve him as a slave!

The poor practically discarded first wives could not possibly compete with their rivals in winning or retaining the affection of their husbands. Most probably they were married when they were not even adolescent and so had not the charms of mature young womanhood to

capture the hearts of their husbands. Moreover, they did not possess the accomplishments of their rivals. These came upon the scene in the full bloom of their youthful charms and with all their accomplishments, and had an easy victory.

The subject is sickening and unsavoury. We do not wish to dwell upon it longer.

In all these cases the men, too, were guilty.

No honourable married young man ought to pose as a bachelor—particularly when mixing with young unmarried women. If any such young man finds the least sign of having attracted the favourable attention of an unmarried woman, he ought to make it known at once in some way or other that he is married, and avoid her company.

Far from trying to capture the heart of a married man, unmarried women ought to take all possible care to avoid consciously or unconsciously attracting or being attracted towards them.

In spite of Islam not prohibiting polygamy, it has been made illegal in Turkey. Perhaps in India, too, polygamy will be made illegal for Hindus, Moslems and others for whom it is not yet illegal. But in the meantime, our legislators ought not to enact any new marriage laws which do not prohibit polygamy, and they should amend those new laws already passed, mentioned above, in such a way as to prevent the validation of polygamous husband-snatching.

Tagore's Works in European Languages

In his very interesting and informative book of lectures, *Indian Politics Since the Mutiny* Mr. C. Y. Chintamani writes:

I did not see a book-stall at railway stations in England, France, Germany or Belgium where the works of Tagore in the languages of the respective countries are not stocked. A Norwegian gentleman with whom I happened to go from Paris to Versailles told me that Tagore's name was a household word in Norway and that he himself had read translations in his mother-tongue of all his important works. He remarked to me that the people of India must be the best educated in the world. When I told him that illiteracy was the badge of the tribe in our country, he exclaimed in wonder, "What, the countrymen of Tagore to be illiterate! Incredible!"

Are Indian Monthly Reviews Politically Insignificant?

In every chapter of the book mentioned in the foregoing note Mr. Chintamani has something to say on the press, and in the last chapter he has quoted "the following observations of an honoured and veteran publicist on the position of the press and of government's manipulation of it":

"In a modern community the newspaper is an essential part of government of the people." "The press might get on without politics, but politics cannot get on without the press." "Government themselves have been among the worst offenders in the manipulation of the press; and to increase their control would be the means of extinguishing their critics and making the rest their tools."

So, in treating of the subject of Indian politics since the Mutiny the author has properly devoted some space to the activities of the press.

The question is what is meant by the press. It may be that only the dailies and the weeklies constitute the press. But periodicals like monthly reviews are also subject to the press laws. Many of them also have had to deposit considerable amounts as security. They also are recipients of the kind attentions of Government press officers. But all this may amount to a mere technical, though unpleasant, recognition of the fact that these periodicals are a part of the press. The real question is whether they influence the politics of a country in any way.

Looking at Britain one finds that, not to speak of monthly reviews, even quarterlies like the *Edinburgh Review*, the *Quarterly Review*, etc., have done much to "develop and strengthen the political convictions" of the people. These and monthly reviews like the *Nineteenth Century and After*, the *Contemporary Review*, the *Fortnightly*, "are devoted to critical comments on public events and literature...they are influential, and these publications are much quoted...." (*Chambers's Encyclopaedia*, 1926) The *Edinburgh Review* ceased publication in 1929. The *Quarterly* and *Blackwood* came out as its rivals, soon after its publication. "These three journals together maintained the political and literary note of the founders, the political predominating." (*Encyclopaedia Britannica*, 14th edition.) Mentioning the important British monthlies, the same *Encyclopaedia* states that the *Nineteenth Century* "took the foremost place in the political and literary field."

We do not in the least suggest any comparison between British and Indian periodicals. We know India is not Britain and the Indian press and Indian politics are different from the British press and British politics. What we suggest is that, just as British periodicals are not without their influence on politics merely because they are periodicals, so it is possible that Indian periodicals, too, may have to a slight extent either reflected or moulded the political ideas of their readers, or done both.

It is intriguing to find that, though

Mr. Chintamani mentions many dailies and weeklies in his book, he does not mention a single monthly. It becomes all the more difficult to understand or guess the reason why, when one finds that he has mentioned the names of three well-known journalists without referring to the monthlies edited by them.

Of the late Mr. Malabari he writes that "the *Indian Spectator* was Mr. Malabari's paper," and that it and the late Mr. N. N. Ghose's weekly "were the most thoughtful of weekly papers in the whole country". So, if the same Mr. Malabari's now defunct monthly review, *East and West*, had been named, it would not have been considered surprising. Mr. G. K. Gokhale had a high opinion of it, and it used to publish political articles also.

Of Mr. G. A. Natesan it is written, "Mr. G. A. Natesan has distinguished himself both as a journalist and as a public man". Mr. Natesan's fame as a journalist rests on his editorship of the *Indian Review*, whose name is not to be found in the book. Every month it deals with contemporary politics.

Of Mr. (now Dr.) Sachchidananda Sinha it is said:

"Lawyer, journalist, politician, speaker and debater. Mr. Sachchidananda Sinha has been in public life for nearly forty years and served his province and country well."

Dr. Sinha's fame as a journalist rests chiefly on his editorship of the *Hindustan Review*, which is not mentioned in the book. Mr. Chintamani himself had at one time much to do with its editing, and, if we remember aright, it was he who obtained political articles for a certain issue of that journal years ago from Dadabhai Naoroji, Sir William Wedderburn and W. C. Bonnerjee. Perhaps at least these articles had something to do with "Indian politics since the Mutiny."

Mr. Shareef, C. P. Minister, Resigns

Mr. Shareef, Minister of Justice, C. P. and Berar, who distinguished himself by releasing two years before the expiration of the term of imprisonment a felon named Jafar Hussain who had been convicted for committing rape upon a minor girl, has resigned and his resignation has been accepted. The report of Sir M. N. Mukherji, to whom the case had been referred, left no other alternative to the Congress Working Committee.

This precious Minister of Justice ought to have been discharged as soon as his remarkable achievement came to be known. That he has been allowed to resign is in reality a miscarriage

of justice. But it has to be recognized that the Congress "High Command" must be extremely considerate and cautious in any matter in which a Mussalman of any kind is concerned. So what has happened must be considered the best that could have happened in the circumstances. And it has prevented the charge of vindictiveness being brought against the Congress.

"Liberality" and Free Speech

Professor Gilbert Murray gave two lectures in 1937 in the Universities of Bristol, Glasgow and Birmingham at the invitation of the Hibbert Trustees. These have been published in book form by Messrs. George Allen and Unwin under the title, *Liberality and Civilization*. He explained in the first lecture why he used the word "Liberality" instead of "Liberalism". It was "partly because I wish to keep clear of mere party politics."

"A superfluity or reserve" is "that great necessity of civilization without which civilization soon perishes."

"A reserve of wealth whereby to keep oneself alive through special trials and have something to give to others who need it more. A reserve of security, whereby, not being always on the edge of fear, man can afford to be tolerant, to be kindly, to listen to opinions or put up with habits which differ from his own. A reserve of leisure, from which proceeds all progress, all increase of knowledge and reflection, all the sciences and arts."

The professor continues:

"So far, I think, most people will agree. The next characteristic of liberality is one of fundamental importance. A free man must obviously be able to think freely. If he is deliberately harnessed in blinkers or forced into a particular groove from which he cannot escape, he is not like a free man, not "liberalis." And in order to think freely he must have freedom of speech. It is not merely that most of our serious and useful thinking is the result of talking things over with other people: the thoughts of a man who never expresses himself and never listens to other men cannot remain healthy or normal. But beyond that it is for most people quite impossible to think clearly without putting the thought into words, looking at it and trying again. To deny the right of free speech results in a denial of free thought; and to be denied the power of thinking is the direst slavery."

The Path of Madness and of War and the Paths of Peace

Professor Gilbert Murray observes in the same book regarding the activities and attitude of some governments:

"The governments of certain great nations have chosen a path which, to the eyes of most of us here, seems the path of madness and of war. The rest if they hold together are still strong enough not merely to resist their attack successfully—that is not what we want—

but by clear warning to prevent that attack being made, and thus, by closing the road that leads to war, gradually to turn the aggressors towards the paths of peace. But this depends on two unsolved questions."

The first is:

"Can the peace-lovers work with as much devotion and enthusiasm for truth and common sense as the warmongers for what they call national honour, and we call falsehood and unreason? Can sober men stand up to fanatics? Or will the fury of a few madmen beat down the half-hearted resistance of many sane men?"

The statement of the other unsolved question follows:

"And secondly, can nations that have been trained in an age-long tradition of cautious isolation, realize that the age for that has passed and that each one will perish unless all stand together?"

Professor Gilbert Murray continues:

"We have promised in the Covenant of the League to protect one another. For the first ten years that promise was kept, but of late, since the failure of the World Disarmament Conference in 1931-1933, the forces of peace have been progressively weakened, and on each occasion when a weak member of the League was attacked by an enemy, the strong members have looked on, mumbled a protest or an apology, and let the destroyer work his will. That is the road of old custom, of mental inertia, of the sluggishness that waits numbed and passive while all those who might befriend and help are destroyed one by one; the way of dead wood, not of the living tree."

The Professor concludes by stating what he thinks ought to be done:

"Against the awful weight of blind tradition and bewildered selfishness let us throughout Europe who believe in Liberty and are free in thought and speech see that our eyes are open and our consciences alert; let us see that, under repeated disappointments, our sane courage does not fail us, till we or our children can at last, throughout the world, bring to men of goodwill peace and brotherhood."

Words of sage counsel and resolve undoubtedly. But who will listen?

Development of Village Industries

The All-India Village Industries Association has been doing useful work. The May number of the *Gram Udyog Patrika* states:

At the last Board Meeting sub-committees were formed and deputed to recommend to the Congress Ministries a programme for the development of village industries. The Secretary reported that as the former governments had been following a policy which was city-centred, its servants were ill suited to carry out our programme and therefore the preliminary programme of work submitted by our Association was in effect a plan to supply the need of workers by getting workers trained in accordance with our ideals. Training in the following industries were suggested by us:—

Paddy husking and flour grinding, gur making from cocoanut, date, palmyra and sago palms, bee-keeping, oil pressing by bullock ghanis, paper making from village waste, soap making from sajimati and indigenous materials, tanning and bone crushing. Some governments

have acted on our scheme with modifications. It is too early to report any progress yet. (Further details will be found in our Annual Report for 1937 to be published shortly).

Among these industries many are still carried on in Bengal villages, e.g., paddy husking, gur-making from the date palm, oil pressing by bullock ghanis. If village industrialists have inventive skill and exercise it, they can improve the traditional industrial methods and invent new ones. This has been done at Sodepur by Babu Satish Chandra Das Gupta of Khadi Pratisthan in the tanning and bone crushing industries, the industry of making matches, and oil pressing by ghanis. Gur-making from cocoanut and palmyra palms may be tried in some Bengal districts.

The All-India Village Industries Association is soon going to open the All-India Village Industries Museum at Wardha. It has a training school, of which the academic year will begin on the 15th June this year. In connection with these two associations there should be a Village Industries Research Institute. Perhaps Babu Satish Chandra Das Gupta will be able to suggest how this Institute should be conducted—if, of course, the idea commends itself to the Association.

Teaching of Crafts According to Wardha Scheme

According to the Wardha Scheme of Basic National Education, the training of boys and girls from seven to fourteen is to centre round some rural craft, to be chosen according to the agricultural and other economic conditions of the areas where the schools are to be situated. The crafts will no doubt be taught and practised according to the prevalent traditional methods at their best. But many, if not all, of these methods are capable of improvement. Without going in for power-driven machinery methods followed in big factories, contrivances can be thought of for improving rural industrial methods. Research relating to such contrivances may be carried on in the Village Industries Research Institute whose foundation has been suggested in the previous note.

Wardha Scheme to be Considered by Central Board of Education

Simla, May 23.

The Committee of the Central Advisory Board of Education, appointed to consider the Wardha Scheme of Education will meet in Simla on the 28th June, next.

This Committee, it may be remembered, was appointed by the Board in its third annual meeting held in New

Delhi on the 28th January to examine the scheme of educational reconstruction incorporated in the Wardha Scheme in the light of the Wood-Abbott Report and other relevant documents, e.g., the reports of committees appointed by certain Provincial Governments, and to make recommendations.

While we support this move, we have to observe that of the twelve members of the Committee the majority—perhaps all with a very few exceptions—are conversant more with the problems of high and higher education than with elementary or basic education. We do not know how many have practical acquaintance with rural conditions and the village crafts round which basic education to be given according to the Wardha scheme is to centre.

If it be not too late, a few members should be co-opted from institutions actually carrying on the work of revival and practice of rural crafts and the work of rural reconstruction.

Industrial Advisory Board of Experts

The Congress Working Committee, it is said, has appointed or intend to appoint a board or a committee of experts to prepare or suggest industrial and other schemes for the economic advancement of the provinces of India. Such a body is urgently required. Foreigners, mostly British, have already occupied much of the industrial field in India and are actively engaged in trying to occupy the remaining portions. In the process, they are destroying some of the industries started by Indians on up-to-date modern models. The seven Congress provincial governments at least ought to try their utmost to save these industries and help to start all possible industries to supply the Indian market and oust from it the ever-increasing kinds and quantities of foreign manufactured goods which are finding their way even to remote villages.

It is stated (May 25) that the members of the Bengal ministry have been discussing the question of a comprehensive survey of the industrial programme for the province and that schemes are already before the cabinet in this connection. Possibly other non-Congress ministries also are engaged in similar discussions or have finished them.

There ought not to be any "caste-feeling" dividing the Congress and non-Congress ministries. Some industries are provincially inter-related. Why cannot all the ministries, Congress and non-Congress, take counsel together for the industrial advancement of the whole country? Leading industrialists of the Indian States should also be invited to give the ministries the advantage of their experience.

Question of Non-European United Front in South Africa

Durban, May 23.

At a reception in honour of the Agent General, Mr. Ram Rao, at the Orient Club the President of the Natal Indian Congress strongly repudiated the rumour that the Congress favoured a non-European united front. He stated that only the smallest minority supported the proposal. Supporters of the United Front movement stated that their object was not a united front of non-Europeans against Europeans but a united front of all sections of the South African nation, including Europeans, based on goodwill. They indicated, however, that the present trend of the Union Government legislation in discriminating between Europeans on the one hand and non-Europeans on the other contained the inherent danger of the non-European sections combining to protest in their common interests. The Union Government therefore had the remedy in their own hands.—(Reuter.)

Tagore Birthday Banquet in America

We have received the following communication from Mr. N. R. Checker, president of the India League of America.

A banquet to celebrate the seventy-eighth birthday of Rabindranath Tagore was tendered by the India League of America in the Aldine Club, well-known centre of civic and cultural activities on Fifth Avenue in New York City, on the evening of May 6th last. The toastmaster, Mr. N. R. Checker, the president of the League, welcomed the guests of honour who were among the chief speakers, including Mr. Joseph Auslander, head of the department of poetry of the Library of the Congress (Washington, D.C.), one of the outstanding contemporary American poets, Miss Audrey Wurdemann and Mrs. Stella W. Herron, both distinguished poets, Prof. Arthur U. Pope, eminent Iranist and former professor of philosophy at the University of California, Khuda Bux, "the master of magic," from Kashmir, and Ram Gopal, the danseur from South India, and Madam and Miss Brunner, painters.

It was truly a brilliant gathering in which representative American and Indian talent was conspicuously represented.

The toastmaster opened the after-dinner programme with introducing Madam Boulter, acting secretary of the League, who then sang in French, "The song of India".

The first speaker, Prof. Arthur U. Pope, whom Mr. Checker welcomed as "India's most steadfast and consistent friend of nearly forty years past", paid a rarely brilliant and comprehensive tribute to the poet, from which these points are elicited:

"It is impossible to summarize in a few minutes the manifold contributions to the advancement of our times of so genuinely a great man of our age as Dr. Tagore.

"I believe that there are three characteristics which, above all, shine forth in the great poet-philosopher: candour, courage and compassion.

"As examples of his candour and courage, displayed at times when it was perilous to do so, I recall his slashing rebuke to Western civilization during the World War. His compassion is profound and most alluring, and more than anything else, perhaps, the expression of India's traditional genius at its best.

"I met Dr. Tagore in Moscow, and the most vivid recollection I have was of his glowing enthusiasm and optimism after he had seen the kindergarten system of the Soviets. In the company of these happy, beautifully brought up Russian little boys and girls the great Hindu Poet's spirit rose to exalted levels, and he saw in New Russia's training of the children a new hope for mankind.

"No other man has done so much as Dr. Tagore to reveal and enhance the gems of India's traditional culture. Nevertheless, he has another side, that of the purifier, of the rejector of old and worn-out creeds, institutions, and attitudes. Let not modern India become complacent. To observe Tagore's Birthday suitably, one must continue to strive for truth, respecting neither ancient habits nor new-fangled pseudo-scientific shibboleths."

Mr. Auslander followed Dr. Pope :

"Prof. Pope has stolen my thunder, and has called attention to the philosopher George Santayana's statement that through the use of most carefully selected words the poet—when he is a really great poet, like Dr. Tagore—enables us to discover the truth, and most important of all—the truth about ourselves.

"Reading Tagore's poetry and meeting him on one occasion, in New York, shaped my own course to which I have adhered—the pursuit of poetry, the endeavour to discover truth through this art.

"The poet Tagore does not need us, does not need our celebration in his honour. But we do need him, need him more than ever at this critical moment of humanity."

Mr. R. K. Rakshit, of Calcutta, one of the leaders of the Indian students in America, and now a businessman, told of the influence of Bengal village life upon the career of Rabindranath.

"Under his great father, Maharshi Debendranath Tagore, he has united the village and the modern city cultures, thus arousing a fundamental renaissance out of the soil of our ancient land,"

said Mr. Rakshit.

Dr. Gobind Behari Lal, Science Editor of the Hearst Newspapers and International News Service, paid to the poet "a scientist's and a Punjabi's" glowing tribute, making specially these points:

"On four occasions when I met Rishi Tagore in the United States, new aspects of his greatness were impressed upon me. In 1915-16, he was the prophet of compassion and world unity, in 1927 or '28, while touching the Port of San Francisco, he was the reincarnation of an ancient Vedic Aryan leader raising the standard of civilization and power of our race, in and far out of India. In his last visit, when he landed in New York, he was the supreme Teacher, eloquently praising New Russia's efforts

to banish illiteracy and superstition from a semi-Asiatic former autocratic empire.

"One of Tagore's songs is: 'Some day the Sun shall have its last look upon me.' Well, how can the Sun ever have its last look upon itself? For to us, Rabindranath—whose very name means the Lord God of the Sun—is for ever the harbinger and creator of Dawns, of Re-births of nations and humanity."

Nirmal Das, a Hindu poet and artist, praised Dr. Tagore as "the supreme patriot"—who had started the 'rakhi-bandhan'—the day of dedication to the freeing of India—at the time of the Partition of Bengal. Ever since his stirring songs have been sung by the heroic Bengal patriots, marching to their dooms.

The meeting concluded with the musical rendition, and chanting, by Mr. Das, Madam Boulter and others, of Dr. Tagore's patriotic lay: '*Jana-gana-mana-adhinayaka jaya he Bhārata-bhāgya-vidhātā.*'

"Victory, victory unto Thee—O Lord of India's Destiny!"

Peasant Satyagrahis of Mansa State

Srijut Subhas Chandra Bose, Congress President, has given the following message to the peasants of Mansa State:

"I sympathise with the peasants of Mansa State in the fight that they have been carrying on against the State authorities for the last eight months. I hope that they will continue their struggle in accordance with the principles of satyagraha—viz., truth and non-violence. If they do so, they are bound to win in the long run."

The peasant women of Mansa in particular have shown their heroism in a signal manner. They deserve to gain their object.

Why Germany Annexed Austria

The American pocket periodical, *World Events*, writes:

The Nazi annexation of Austria carries to completion a program which had been formulated in the days of Bismarck by the Pan-Germans and which after the World War came to be known as Anschluss. This German-Austrian union was viewed as a voluntary coming together of the two countries, both Germanic in language and culture. Hitler's action, however, was not Anschluss but conquest, and the Nazi hordes have acted as conquerors since they took control.

Economically, this union was always looked upon as favoring Austria and the situation is no different today. Austria's balance of trade has been unfavourable and the deficit was largely made up out of tourist spending. Germany will receive the valuable iron mines of Styria, extensive forests with their lumber, and great hydro-electric potentialities. But unless Austrian industry is to be ruined entirely, this will not materially relieve the economic stress of Germany.

Indeed, one of the reasons why Hitler struck was the fact that some of these Austrian raw materials, which had hitherto been exported to Germany, were about to find other markets. Germany imported Styrian iron ore but was unable to pay for it. In 1937, Austrian exports

to Germany of iron ore rose enormously. Since it was not paid for, it was planned to curtail this export to Germany by 40 per cent. This would have spelled disaster for German armaments, hence the annexation. Sentimental and pan-German reasons also played their part.

American Support For Militarism

World Events supplies the following figure:-

Just for the record: Shipment of U. S. arms and war materials for January, 1938 to Japan, \$538,243; to China, \$380,091; to Brazil, \$60,991; to Rumania, \$537,312. Shipments of U. S. scrap iron to Japan: 1936—\$14,000,000; 1937—\$39,000,000.

The shipments of United States scrap iron to Japan have almost trebled in one year!

Anti-gas Precautions India's Greatest Need!

From distant America comes the news that "India is to have all the anti-gas precautions which England has"! So India is really in equal partnership with England! But the *Pioneer* asks:

Why spend money for air-raid shelters when public lavatories are lacking? Why sign-boards and instructions when 90 per cent of the people are illiterate? Why emergency medical aid posts for people who receive no medical attention in normal times?

And the Indian peasantry ask: Why not allow us to be gassed, as we cannot be fed.

University of Hawaii Scholarships

The *Oriental Institute Journal* of the University of Hawaii writes:—

The University of Hawaii plans to offer in June, 1938, ten scholarships for graduate students in the field of Oriental Studies. The generosity of several Honolulu friends makes these scholarships possible. Details will be announced in a pamphlet which may be procured on application to the Director of Graduate Studies, Dr. Paul S. Bachman. Each scholarship will amount to one thousand dollars, a sum sufficient to enable the student to come to Hawaii and to work solely for a master's degree. The student who in his undergraduate days has studied basic courses in economics, political science, anthropology, sociology, literature,—and the histories of Japan, China, India,—and who has a knowledge of French or German,—will find himself better able to do graduate work in Oriental Studies. If, too, he has a reading knowledge, however slight, of Japanese or Chinese or Sanskrit he will have a considerable advantage; but, for the present, knowledge of an Oriental language is not required for admission to the graduate department of the Oriental Institute.

The person who intends to devote his life to a study of the cultures of the Orient should learn at least one Oriental language. The Oriental Institute provides instruction in Japanese and Chinese, and this year, with the presence of Dr. Johannes Rahder, of Leiden, it is offering an elementary course in Sanskrit (a course we expect to offer in 1938-39, with Dr. J. Takakusu, of the Imperial University, Tokyo, as the instructor).

We could wish some Indian Sanskritist were at Honolulu to teach Sanskrit in Hawaii University.

An Indian Liberal's Reply to an Indian Socialist

It appears that a Bombay socialist gave last month a broadcast talk on socialism from the Bombay station of the All India Radio, in the course of which he attacked the Indian Liberal party. Sir Chinnanal Setalvad answered the socialist through the same medium. Here is part of his reply:

Mr. Socialist, it appears that you have woefully misunderstood the aims and objects of the Liberal party. It is a gross perversion of facts to say that the Liberal party is a rank conservative party of capitalists and landlords. If the list of members of the Liberal party is scanned, one will find it made up of middle class people who are working for their bread in the professions and other walks of life. The capitalists and landlords are not in the Liberal party. Some big businessmen and industrialists are sitting on the fence and are supporting the Congress without openly joining as members thereof. It is equally incorrect to say that the Liberals are content to acquiesce in British rule and bask in the favours it can bestow. They want complete responsible government of the character that Canada, Australia and other dominions are enjoying. Dominion Status for India under the Statute of Westminster is what Mr. Gandhi has said he would be satisfied with and the Liberals are asking for that and nothing less and still you will malign them for not joining the cry of Independence. To ask for complete severance of the British connection will obviously be suicidal in the present condition of Indian defences.

As regards social justice Sir Chinnanal Setalvad observed:

The Liberals have consistently stood for the raising of the standard of living of the masses, more equitable distribution of profits between capital and labour and even nationalisation of certain industries. The Liberals want socialism of a character suitable to this country. But they are strongly against the socialism—really Communism—of the Soviet Russia type that you are in love with. You want to uproot the present structure of society and enforce perfect equality among all people. This is an idle dream which, if attempted to be enforced, must lead to civil war, suppression of individual liberty and freedom, destruction of the family system and ultimately mass executions as in Russia. Your socialism is pure Bolshevism. You want perfect equality between all human beings when nature has made inequality. Is there equality anywhere in the Universe? Cast your eyes on the stars and planets, the animal world, the earth itself, is there any equality? Some countries are endowed with fertile lands and vast mineral resources while others are denied such bounty of nature. Take human beings. Some are born with robust health and keen intellect while others are denied all this and some are even blind and decrepit. Some women are endowed with beauty and intellect while others are plain and even ugly or with no brains. Nature knows no equality.

We have no desire either to adversely criticize or support any of the statements made

by Sir Chimanlal Setalvad. Those who have knowledge of present-day conditions in Russia will be able to assess them at their true value. Only with regard to family life in Russia we should like to quote what Dr. Sherwood Eddy, the famous American Christian traveller and worker, author of *The Challenge of Russia*, has written in the American quarterly, *World Christianity*, first quarter, 1938, page 37, after his 13th visit to Russia:

"The family and the home have received a fresh emphasis. Divorce has been made somewhat more difficult, and abortion is prohibited except where the health of the mother demands it."

As regards what some leading socialists and communists and some others of their party think of human equality, we take the following from our Notes in the last April number:

We shall quote a few sentences from a "highly provocative book," *Heredity and Politics*, by Professor J. B. S. Haldane, "one of the most outstanding and challenging personalities in science and politics to-day."

This book was published in England on the 8th February last and has been just received.

In the first chapter, devoted to an examination of "The Biology of Inequality," Professor Haldane writes:

I wish to examine certain statements regarding human equality and inequality, some of which have been used to justify not only ordinary policy but even wars and revolutions. . . .

We will first consider the doctrine of the equality of man. I will quote from a great revolutionary document of the eighteenth century, the American Declaration of Independence, which was published in 1776 and is mainly due to Jefferson.—"We hold these truths to be self-evident, that all men are created equal, that they are endowed by their Creator with certain inalienable Rights, that among these are Life, Liberty, and the pursuit of Happiness." This or a very similar doctrine of equality was important for the French Revolution. What did it mean in practice? The thirteenth and fifteenth amendments to the United States' constitution were needed to abolish negro slavery and racial discrimination in the matter of the franchise. For whites it meant a very considerable measure of equality before the law, and it has, I think, meant a somewhat greater equality of opportunity than exists in England; but it did not give rise to any systematic attempt to bring about economic equality."

Coming to more recent times, the author observes:

Modern revolutionary theory is much more modest in its statements regarding equality, though in practice it goes somewhat farther in that direction. "The real content of the proletarian demand for equality is the demand for the abolition of classes. Any demand for equality which goes beyond that, of necessity passes into absurdity." So wrote Engels, and the passage was considerably amplified by Lenin. Modern revolutionary theory looks forward to two types of society; Socialist society in which each citizen works according to his

ability and receives in accordance with the amount of work done, and Communist society in which each works according to his ability and receives according to his needs. There is a certain approximation towards Socialist society in the Soviet Union, but Communist society remains an ideal. Neither of these theories is equalitarian. Stalin in a report to the seventeenth Congress of the C. P. S. U. said: "Marxism starts out with the assumption that people's tastes and requirements are not, and cannot be, equal in quality or in quantity, either in the period of Socialism or the period of Communism." Further, so far as I know, official Communist theory includes no clear statement of the origins of inequality other than economic.

Now, although Jefferson regarded the truth of human equality to be self-evident, there is remarkably little positive evidence for the Jeffersonian theory, and its interest is, I think, mainly historical.

In conclusion Sir Chimanlal criticizes a dictum of Bernard Shaw thus:

You will give the same remuneration to a Marconi or Edison as you would give to a labourer. This is your scheme, which, on the face of it, is highly undesirable. You quote Bernard Shaw as saying 'that the idiots are always in favour of inequality of income and the really great in favour of equality.' One may well ask how Shaw who is really great is acting up to this pronouncement. Is he distributing to the needy his huge royalties on his works? And is he not living in comfort and luxury, while millions in his country are unemployed? In the same manner, do all those who profess to be socialists practise the equality they preach? Why do the socialists live in well-furnished flats, dress well and move about in motor cars, instead of denying to themselves those amenities or sharing them with other people? Why do you Mr. Socialist work and earn the four gold mohurs that you speak of and why do you entertain the pleasant vision of earning 50 gold mohurs, which I hope and wish you will do very soon? But that will not be equality.

Linguistic Hungerstrike!

Newspapers have printed the news of the hungerstrike of a Tamil-speaking person in Madras who has resolved to fast unto death unless Mr. C. Rajagopalachariar, the Madras Premier, withdraws his order to introduce Hindi as a compulsory subject in schools. We do not in the least approve of this hungerstrike.

It is reported that many meetings are being held in Tamil Land to protest against the order to teach Hindi as a compulsory subject.

Perhaps feeling runs high there in this matter, as can be guessed from a cartoon which has appeared in a Tamil paper, in which Mr. C. Rajagopalachariar is represented as stabbing his mother (-tongue). Such cartoons should be condemned.

We do not know whether the Madras ministers are thrusting Hindi upon an unwilling public. We have no means of knowing whether the majority of Tamil-speaking persons are for or against the introduction of Hindi. Of that the Madras ministers are better judges than any

outsiders can be. All that an outsider can say in general terms is that the introduction of Hindi in schools as an optional subject in all non-Hindi-speaking tracts would be moving along the line of least resistance.

Hindu-Moslem Unity Talks

We have written much on this subject recently in previous issues as well as in years past. We have not found any reason to change our opinions. The reason why we write again is that the subject continues to be a current topic. Our difficulty in writing on it is that neither Mahatma Gandhi, nor Sri Subhas Chandra Bose, nor Shri Jinnah, has yet issued any statement of what has passed between them either orally or in writing. These will appear, no doubt, on some future date. But that may be too late a date for us to write upon them for the present June number.

Shri Jinnah's Attitude and Demands

Shri Jinnah has contradicted the news that it was he who wanted to have a talk on the subject with Mahatma Gandhi or any other Congress leader. We are not concerned to ascertain whether he is right or wrong. The pose is that he, the president of the Moslem League, which is at least as great an organization as the Indian National Congress (never mind what Viceroy may think *in practice*),—he cannot approach anybody in thought, word or deed! It is the other party which must seek him out. So Mahatma Gandhi *waited upon* Shri Jinnah. It is to be hoped, the humour of the situation has not been lost even upon Shri Jinnah. A Sanskrit poet* prayed to Providence, "Arasikeshu rasasya nivedanam sirasi mā likha, mā likha, mā likha," "May I not be destined to make an offering of humour to those who do not appreciate humour" (*free translation to suit the occasion*). Such prayers are not always favourably responded to. We hope Mahatma Gandhi never offered any such prayer unsuccessfully.

There are numerous Mussalmans in India, not to speak of others, who do not admit that the Moslem League is the sole or the chief representative organization of the Indian Muhammadan community. The very small number of members of the League is a sufficient proof of that fact. But Shri Jinnah wants India and the world outside to believe that it is. By *waiting upon* him Mahatma Gandhi and the

Congress President may have misled those in the world outside who do not know to fancy that the Moslem League is at least as important a representative body as the Congress and that Shri Jinnah is the Dictator of India or at least the arbiter of India's destiny who has a stranglehold on all freedom movements. One cannot be sure how many living outside India may be misled to form such a wrong impression, but in India itself there are most probably a certain number of Muhammadans who will be impressed with the great importance of Janab Jinnah Sahab.

Let us consider what Shri Jinnah is reported to have demanded.

It is reported that he has demanded that the Congress should discontinue the Moslem mass contact movement. The object of this demand is plain. It is that the Congress should not have a larger number of Moslem members than it has at present. Perhaps it is also implied that those Muhammadans who are already members of the Congress should cease to be so. But if they do not resign of their own accord, are they to be driven out? Has the Congress any power to do so according to its constitution?

Even before Congress started the Moslem mass contact movement, many Muhammadans had become members of that body. So, even if Congress discontinues the Moslem mass contact movement, still many of them may seek to join that body. Can Congress refuse to enroll Muhammadans as members according to its constitution?

Supposing that by changing its constitution Congress drives away all its Moslem members and refuses to admit any new recruits from that community, does Mr. Jinnah expect all the present and all the would-have-been members of Congress to become members of the Moslem League? Vain hope. If all these nationalist Moslems had been convinced that their political principles were identical with those of the Moslem League, they would have joined the League long ago. But they did not.

Moreover, the Moslem League party is not the only or the chief Moslem party in the country. That community has many other important parties, which need not be named. If Congress drives away all Moslems from its ranks and refuses to admit any new recruits, nationalist Muhammadans will join Muhammadan organizations other than the Moslem League. The League did nothing to help the Frontier Pathans in their hour of need. Congress stood by them. Why will they join the League?

What Shri Jinnah seems to want is that

*We ought to have quoted from Arabic, but we are sorry we do not know it.—Ed., M.R.

Congress should become a practically Hindu body, that the Moslem League should be the only organization having Moslem members, that there should be a coalition between Congress and the Moslem League *on his terms*, and that this coalition party should prevail upon or force the British Government to do only that which he wants, or at least not to do what he disapproves of.

As Congress is not likely to commit political suicide as a national organization by acceding to this reported demand of Shri Jinnah, it is unnecessary to pursue the subject further.

Another demand of his is said to be that there should be a larger number of Muslim ministers in the cabinets of Congress provinces and that these Muslim ministers are to be nominated by the Moslem League, that is, by Shri Jinnah. We think only the ablest men among the elected members of the provincial legislatures should be appointed ministers, irrespective of their creed, race, or caste. But as a matter of expediency and policy and by way of compromise Congress may agree, as it has already agreed, to have a certain number of Muslims in the cabinets;—it may agree even to increase their number. But why should it and how can it agree to their being nominated by the Moslem League? It should not and cannot so long as it retains its formal national character and does not divest itself of that character.

Of course, as in many other matters, so in the choice of the Muslim members of the Congress provincial cabinets, Congress has practically yielded to Moslem communal feeling by choosing only those persons as Muslim ministers who were the nominees of Moulana Abul Kalam Azad.

If Congress were to accede to the Moslem League's (or Shri Jinnah's) demand that Muslim ministers must be nominated by the League, the question might be asked why similarly the Hindu ministers were not to be nominated by the Hindu Mahasabha, the Sanatan Dharma Mahamandal, or the Varnashram Swarajya Sangha, or by them all jointly. But, though Congress is for the abolition of untouchability, perhaps all those Hindu bodies are untouchable—there must be no contact with them, no recognition of them: Congress is the Brahmana among all Hindu(?) organizations, others are Pariahs! Is that so? Our idea is different. Congress is a national organization. It includes all races, religious communities, castes and classes. Therefore, it is competent to negotiate with the Moslem League, as well as with

Hindu bodies. That it does not do so with the latter does not prove that it is a mere Hindu body. But Shri Jinnah looks upon it only as a (not *the*) Hindu organization. He cannot be blamed. For, if Congress wanted to behave like a *national* organization and to be looked upon as such, in arriving at any decision on any question of national importance it ought to have arrived at its decision either without consulting any communal body or leader or after consulting all the principal communal bodies or leaders. It has not adopted the former course. Therefore it ought to have adopted the latter, that is, it ought to have consulted all the principal communal bodies or leaders. But it is consulting the leader of only one organization of only one community.

Another demand of Shri Jinnah is reported to be that Congress must give up direct and indirect propaganda in favour of Hindi being made the national language of India. Here Congressmen (and non-Congressmen, too) may put him the question, "Will you and other Mussalmans discontinue direct and indirect propaganda in favour of Urdu?" As Shri Jinnah wants everything relating to the Mussalman community, even its politics, to be the exclusive concern of the Moslem League, why does he want to dictate what non-Moslems should or should not do? He wants to reduce Congress practically to the position of a Hindu organization and to make it practically admit that it is one. If so, why will he not allow it to exercise its freedom as a Hindu body? Why will he not allow it to decide either in favour of Hindi or Urdu as the national language? We do not mean to say that these are the only two possible alternatives. Even Azad, a Bengali organ of Bengali Mussalmans (who are the largest provincial Moslem group in India), wants Bengali to be made the national language. But that is only by the way.

Shri Jinnah is reported to have put forward many other demands. But we will notice only one more. He wants *Bande Mataram*, even in its mutilated form, to be given up as a national song of India. As in the case of the demand discussed in the previous paragraph, so in the case of this it may be asked, if Congress is to be looked upon and to look upon itself as a Hindu organization, why it should not be free to use *Bande Mataram*, in its entirety or in part, as a or the national song of India.

Evidently Shri Jinnah wants freedom for himself and his organization but would deny it to others—which is a characteristic of dictators and despots.

Alleged Congress Terms Offered to Shri Jinnah

Two of the terms said to have been offered to Shri Jinnah by Mahatma Gandhi are that all members of the Moslem League should sign the Congress creed and pledge, *i.e.*, practically become Congress members as well, and that the Moslem League should whole-heartedly participate in the Congress struggle for freedom including opposition to the Government scheme of Federation.

There is nothing new substantially in these terms. At the so-called Round Table Conference in London, Mahatma Gandhi promised to give the Moslems a blank cheque provided that they joined the Congress in the national struggle for freedom. But that condition was not accepted. So the blank cheque remains in the cheque-book of the Naked Faquir—it has not been torn off and delivered to the Moslems to be filled in by them.

Will Shri Jinnah accept Gandhiji's terms now? Will the Moslem League and other Moslem organizations? One does not know--cannot guess.

But suppose Shri Jinnah does accept them, will Gandhiji and will Congress give up opposition to the Communal Decision (very lukewarm opposition amounting almost to acceptance though it be), which Shri Jinnah and the bulk of Mussalmans want to remain intact?

We do not know. But this we do know that Hindu India outside Congress-Hindu India will never be reconciled to the Communal Decision. This Hindu India outside Congress-Hindu India is not at present as organized an entity as Congress-Hindu India. But Congress acceptance of the Communal Decision will go a great way to generate the heat necessary to fuse this India into one whole. But organized or unorganized, there are men in this Hindu India who are prepared to fight the Communal Decision to their dying day.

Mr. P. R. Das on Bengali-Bihari Question

Mr. P. R. Das has been dealing with the Bengali-Bihari question in a statesmanlike manner. He has raised the question to the high plane of Indian nationalism. In the course of his speech delivered at the Ranchi Union Club Hall on the 23rd May last he said:

"It has been suggested to me that I should claim the right of a minority community in Bihar. I wholly deny that politically the Bengalees form a community in Bihar. Politically we are all Indians, and I contend that no ministry has any power to exclude us by reason only of the fact that we are Bengalees."

But some of them are being excluded solely on that ground. Let us take a flagrant instance cited by Mr. P. R. Das in the course of his ably argued and soberly worded speech. Said he:

I am going to give you one instance to illustrate the principle upon which the Bihar Ministry is working. Ramkrishna Mukherji was a candidate for a post in the office of the Conservator of Forests, Bihar. There is no doubt whatever that he is a native of this province. He also took the precaution of arming himself with a domicile certificate. There was no doubt whatever that he was the best candidate and that he was strongly supported by Mr. Owden, the Conservator of Forests. His application was turned down by the Government. I am informed that Mr. Owden wrote a special letter to the Government and pointed out that Ramkrishna was the best candidate and that he was a native of the province, although he bore a Bengali name. To this Mr. Owden received the following reply, a copy of which was forwarded to Ramkrishna. The reply was as follows:—

"With reference to your letter No. 7978, dated the 2nd March, 1938, I am directed to refer to the Government orders conveyed in this department letter No. 749/R, dated the 31st December, 1937, and to say that Babu Ramkrishna Mukherjee is a Bengalee and as far as his appointment in your office is concerned it is immaterial whether he is a native of Manbhūm or domiciled therein. As already admitted by you there is undue preponderance of Bengalees in your office, and further appointment of Bengalees in your office, (whether native or domiciled) until other communities had had their due representation is not desirable."

I ask you to judge whether this is not petty communalism of a most aggravated kind and totally inconsistent with the Congress resolutions.

Mr. Das went on to put other questions.

I ask you, who is communal? Remember provincialism is only another name for communalism. Are we communal, because we are protesting against appointment in public services on communal or provincial lines? Or is the Bihar Ministry communal in so far as it recognises the principle that different communities are entitled to representation in public services on communal lines? On behalf of the Bengali Association I demand the withdrawal of the Brett circular, the Houlton circular and the Owden circular. I demand the withdrawal of these circulars not on narrow provincial ground but on national ground because the working of these circulars must inevitably prevent the growth of an Indian nation. This is exactly what the great framers of the American Constitution foresaw, and they took early steps to prevent the catastrophe.

Mr. Das told his audience what exactly the framers and amenders of the American constitution did.

The great danger of Provincial Autonomy is the centrifugal force to which it gives birth. The great men who devised the American Constitution were fully aware of this danger. As you know, there were different independent states in America before their union. The great American Constitution, while it left the existence of the different states untouched, provided that the citizen of each state should be regarded as the citizen of the United States of America and must have equal rights and privileges in every other state. Even this was not found

sufficient to prevent the fissiparous tendency in the different states; and so by a celebrated amendment the Federal Assembly passed a law prohibiting the different states from passing discriminating legislation against the citizens of the other states. It is upon this amendment that the great American nation was built; and it is worthy of note that the Australians adopted this celebrated amendment as part of the Australian Constitution. I humbly beseech the Prime Minister to study this amendment. When Provincial Autonomy comes into existence there is a natural tendency to exclude those not of the Province on protective grounds. It is an unfortunate tendency; but it is a natural tendency. But once you regard those not of the province as foreigners, you make it impossible for the growth of an Indian nation. The genius of the American people solved the problem for the American. Is India going to lag behind?

The "great danger" of provincial autonomy was foreseen by the members of the Joint Parliamentary Select Committee. And, therefore, in order to strike a blow at Indian unity they provided for provincial autonomy. We have repeatedly quoted their exact words from their Report in support of our assertion.

"As I understand the Congress viewpoint," said Mr. Das, "there is one people, one nation, one India, and we are all the children of the Indian soil."

Duties go with rights. If Bengalis in Bihar are equal citizens with Biharis, they owe a duty to Bihar no less than the Biharis. They have all along been comrades in arms with the Biharis. Let them continue to do their duty to the province with undiminished—nay, increased, enthusiasm.

Provincial and Communal Division of Occupations

Assignment of certain percentages of different occupations along provincial or communal lines is bad. But if any such allotment is to be made, all occupations must be treated in this way. This, however, is impossible. Central and provincial governments in India have not promulgated any rules as to what per cent of the people of any religious community or of any province are entitled to become skilled labourers, unskilled labourers, artisans and mechanics of different kinds, followers of handicrafts of different kinds, peasants, traders, merchants, bankers, etc. People of some provinces, communities and classes have special aptitudes for some kind or other of these classes of occupations. That there is no exclusive or restrictive law, regulation or rule about these occupations is greatly to their advantage; and it is justly so.

Similarly there are other people of other provinces, communities or classes who have an aptitude for Government office jobs or jobs in

different Government departments. What has been done by the Central Government and some Provincial Governments is to lay down that for them there is to be no open door to talent in these offices and departments but that they are to be either excluded or to have a very limited number of appointments.

So Governments strike a blow at only these people of these provinces, communities and classes! The plea is that all classes and communities must be duly represented, according to their population ratio, in government departments and offices. But are they proportionately represented among the total number of men qualified for these jobs by education? And why should not all classes and communities be proportionately represented in *all* occupations? Can any government undertake to see that they are? Obviously no government can.

The net result is that there is free competition in some occupations, whilst there is none in others. This is highly unjust to those who are or make themselves fit for the latter, and cannot make for contentment and peace.

It does not make for efficiency in the public services either, or for national solidarity.

Vernacular Medium in Orissa

We read in the papers that recently there was a conference in Cuttack to consider the question of the medium of instruction in schools. There is no question that the mother-tongue of every child should be the medium through which it should be taught.

"Opinions were expressed as to whether Oriya should be the only medium of instruction."

For Oriya children it should certainly be the only medium. But for Bengali children, Bengali should be the medium.

Calcutta University recognizes all the principal languages of India—even some aboriginal languages. But it is regrettable that in some provinces outside Bengal even some Congress "nationalists" seek to deprive Bengali children of the human right of learning through their mother-tongue!

What is both tragic and amusing is that some Assamese and Oriya Congressmen who are enthusiastic in pushing the idea of teaching Hindi in Assam and Orissa schools (and they are rightly so) seem to be even more enthusiastic in seeing that Bengali should be excluded from their schools, though it would be difficult to find educated Assamese and Oriya gentlemen and ladies who do not understand Bengali and though Hindi is not so generally known in

Assam and Orissa as Bengali. If arrangements can be made for teaching Hindi, surely it is not impossible to make arrangements for teaching Bengali to Bengali children, there.

By all means teach Hindi, but why seek to deprive Bengali children of a right which other children of all provinces enjoy or should enjoy? It is particularly regrettable and condemnable that now that there is *Nationalist* Congress rule in these provinces, Bengali children are sought to be deprived of a human right which they had been enjoying under the previous purely bureaucratic rule.

There was a time when the Russian, German and Austrian Empires tried their worst to deprive the Poles of the knowledge of and the right to cultivate their mother-tongue Polish and its literature. But these *Imperial* attempts failed. So must fail all *Provincial* attempts, if any were made, directed against the Bengali language.

We should be prepared to support campaigns against the use of the Bengali medium for Bengali children if the deprivation of these children of a natural right could be shown to be necessary for making non-Bengali children great scholars!

"Mr. Shareef's Case"

Pachmarhi, May 25.

Despite Mr Shareef's resignation his fate, it is felt, is not definitely sealed. A largely attended public meeting held here last night adopted resolutions recording sorrow at his resignation and urging the Congress High Command to review his case in the light of Mr. Shareef's motive in releasing Zafar Hussain which was dictated by humane consideration for his forlorn family.

By another resolution, the Congress Working Committee was further urged to restore the confidence of the Moslem public by not accepting his resignation.

Later, a local deputation waited on Maulana Azad and Sardar Patel and acquainted them with the trend of the above-mentioned resolutions.

Another influential provincial Moslem deputation headed by Nawab Riyat Ali waited on Maulana Azad and requested him to continue the policy of having a Moslem Minister on the provincial Cabinet.—(U. P.)

One can only pity those who attended this "largely attended public meeting" and "adopted resolutions recording sorrow" etc. etc.

Mr. Shareef could have easily helped Zafar Hussain's forlorn family himself and asked his friends to do so. It was not at all necessary to release the man before he had served out his full term. There are thousands of prisoners guilty of far less heinous offences whose families are more forlorn, destitute and friendless. But no minister, not even the highly humane Mr. Shareef, with his delicate percep-

tion of moral values, released them on that ground untimely. Mr. Shareef released not only Zafar Hussain but his "pimps and procurers," too. Were their families also in a forlorn condition?

The telegram does not say what answer Maulana Azad and Sardar Patel gave to the "local deputation" which waited upon them, nor whether the two unenviable leaders gave the deputation a "*patient hearing*," as the phrase goes.

"The Moslem public" must be in a very peculiar ethical condition indeed, if its confidence cannot be regained except by considering the pre-concerted rape of a minor girl as a trifle.

Certainly the confidence of the Moslem public is worth retaining by having a Moslem minister in place of Mr. Shareef. Only his ethical sense should be better developed than that of Mr. Shareef.

"Uniting" The People of India!

London, May 25.

Responding on behalf of India and Burma to the toast of the British Commonwealth at the Royal Empire Society banquet in London Lord Zetland made a reference to the Federation.

"We sought," said Lord Zetland, "and to a large extent we have already been successful, to give the people of India a unity that they never before possessed." But there remained the supreme act in the story of unification of the Indian people bringing together beneath the dome of a single political edifice, the new democracies of British India and the ancient autocracies of the Indian States. That was the supreme task to which their energies were now devoted." Etc.—(Reuter.)

It is literally correct that the people of India are going to have a kind of unity which they never possessed before! But it is also a historically correct statement that they have and had a different and better kind of unity, which we along with others have repeatedly referred to and explained.

Some European idealists dream of Pan-Europa. They should seek the assistance of Lord Zetland to elaborate their plans. They will simply have to bring the democracies and the autocracies of Europe under the subjection of Japan and give the whole the pompous name of Federated Pan-Europa.

The "new democracies" in India are not democracies at all. "The ancient autocracies of the Indian States" are autocracies so far as their subjects are concerned, but are "servocracies" so far as the suzerain British power is concerned.

Lord Zetland speaks of "the people of

India." Where has his lordship discovered this horde of human beings? The Government of India Act of 1935 does not know it. There one reads of Hindus, Scheduled Castes, Moslems, Indian Christians, Sikhs, Aborigines, Anglo-Indians, Europeans, Labour, Commerce. But where are "the people of India?"

That "the people of India" are nowhere mentioned or referred to in the Act; that they have been deliberately divided and sub-divided; that there are different grades of citizenship for Europeans, Anglo-Indians, Indian Christians, Moslems, Sikhs, Scheduled Hindus, "Caste Hindus," Aborigines; that there are separate electorates for artificially separated groups; that there are varying degrees of weightage for some non-Hindus and for the Indian States' rulers and "lightenage" for Hindus in some areas; and that the people of the Indian States have been kept entirely without any franchise—are the contents of the "unity" which the British Government has given to "the people of India."

To be brought under a common subjection is a very precious kind of unity indeed.

Lord Zetland spoke of united India playing a part as a member of the [British] Commonwealth. No such part is assigned to her in the Act. The expression Dominion Status was deliberately excluded therefrom.

"Criminal Tribes" and "Scheduled Castes"

Christians, it is said, do not believe in caste. But the British Government does.

"Scheduled castes" are virtually asked to admit that they are an inferior people, in consideration of some illusory advantage given to a few of their members. Some castes have been classed as "scheduled" in spite of their protests. Some particular members of some scheduled caste may be intellectually, morally, physically, and even complexionally superior to vast numbers of "caste Hindus"; yet they must bear the badge of the tribe, "Scheduled."

The labelling of large numbers of people from generation to generation as "criminal tribes" is a very much greater offence against humanity than to label some as "scheduled castes." For the word "scheduled" has no moral implication, "criminal" has. The very name acts as a dead weight upon the moral nature of its victims, hindering their moral growth. No wonder there have been protests against the continuance of this offensive nomenclature. It should be done away with.

Kenya Land Reservation for Europeans

Mr. Ishardas, M.L.A., one of the members of the East African Delegation, who sailed for Kenya on the 25th May last, and Mr. C. F. Andrews have issued the following joint statement to the press:

"The announcement that an order-in-council at Westminster and two bills in Kenya will be shortly introduced in respect to the Kenya highlands has brought to a head an issue of the gravest character. The reservation of the highlands for Europeans was one of the main subjects of controversy in the Kenya conversations of 1923 and the Indian position has always been that there should be no racial discrimination whatever. The Secretary of State, however, has insisted on reserving the highlands for Europeans for what he has called "administrative purposes". He has also given the assurance that there would be no change made in the legal position.

"Now in spite of the Colonial Secretary's assurance that the legal position would remain unchanged, there is, in our opinion, a practical certainty that these new Acts which are contemplated will finally take away the rights which both Indians and Africans have always claimed with regard to the highlands.

"The issue is so vital that the question cannot be left open. It appears to us, therefore, necessary, at the earliest possible moment, to send a deputation including prominent Indians, both from Kenya and India to meet the Colonial Secretary before he takes any final action.

"Such steps seem to us to be the only way in which the full weight of Indian opinion can be given on the spot at the present moment in London itself."—(A.P.)

That is a correct view.

More Burma Rebellion Prisoners Released

Rangoon, May 24.

A further batch of 25 Rebellion prisoners, who were recently transferred from Thayetnyo and Myingyan Jails to the Rangoon Central Jail, has been released.

Five more prisoners have been granted conditional release, and their release will be effected as soon as the necessary documents have been prepared and executed.

Prior to their release the prisoners presented an address to the Hon'ble U. Paw Tun, who accompanied by U. Chit Maung, Judicial Secretary, visited the jail, and assured him that they would in future lead a peaceful life.

U. Naginda, who was confined in the Alipore Central Jail, arrived yesterday by the s.s. *Karagola* under escort. He was taken to the Rangoon Central Jail, where he was released.

This brings the total number of Rebellion and political prisoners, who have been released, to 62; while those, who have been granted conditional release, number 14.—(A.P.)

Zanzibar Indian Association Congratulated On End of Clove Deadlock

The Committee of the Indian Merchants Chamber have today sent the following cable to the Indian National Association, Zanzibar:

"Committee Indian Merchants' Chamber congratulate your Association on successful termination of clove deadlock. Your sacrifices for the cause you championed have

evoked unstinted admiration. The fight put up by our countrymen in Zanzibar to assert and preserve Indian rights abroad will go down to history and the success is also success for the cause of Indians overseas."—(A.P.)

In Zanzibar the credit for this victory belongs to our Indian countrymen there, who have never wavered in the fight. In India in awarding praise one must think of the Indian National Congress above all and its leaders like Mahatma Gandhi, Pandit Jawaharlal Nehru and Sardar Ballabhbhai Patel. Mr. C. F. Andrews is no less entitled to praise. The Clove Boycott Committee, the volunteers who literally bore the brunt of the boycott struggle, the Imperial Citizenship Association, the members of the Central Legislature who raised the question there repeatedly, and the daily and other newspapers who kept up public interest in the boycott have all done their duty in the matter in a laudable manner.

The Congress and the States' People's Fight for Freedom

In the latest resolution on the subject passed by the Congress Working Committee it has refused permission to the political organizations in the Indian States to use the word "Congress" before their names. This has caused dissatisfaction among the people of the States. But the Working Committee has explained that this had to be done to give effect to the letter and the spirit of the resolution passed at the Haripura session of the Congress which laid down that the internal struggle of the people of the States must not be undertaken in the name of the Congress. In his presidential address at the recent session of the Deccan States' People's Conference Sardar Ballabhbhai Patel has explained why Congress passed such a resolution.

"The claim of Congress is to secure complete independence for India. Therefore the attention of Congress is directed towards that struggle alone. It could not possibly direct its attention and weaken itself by participating in Indian States' affairs."

This may appear to be a rather unsympathetic attitude. But it is useless to profess sympathy if it cannot be implemented. Congress must look to its resources first. Is it powerful enough to engage in a sort of triangular or perhaps a pentangular fight? Can it simultaneously fight British Imperialism and its servant the Government of India, their allies the British men of business, the rulers of the Indian States, the capitalists and the landholders of India? We ourselves on some occasions had suggested that Congress should not issue a challenge to so many parties at the same time.

It is not that Congress has not been fighting the States' subjects' battle at all. In fighting British Imperialism Congress is fighting their battle, too, indirectly. Those among the rulers of the States who are tyrants count upon the sovereign power to come to their rescue should their subjects show signs of rebellion or actually rebel. If British imperialism in India be weakened and if it ultimately gives up its grip on India, the tyrants among the Indian rulers must come to terms with their subjects and Congress, for their own resources are not sufficient to enable them to be defiant. And Srijut Subhas Chandra Bose, the Congress president, has told these rulers that Congress will not tolerate autocracy. Moreover, all the ruling princes are not senseless and despotic. Some of them have sense enough to be able to read the signs of the times and shape their conduct accordingly. The influence of Congress is being exercised and felt in this way.

The people of the States may naturally call to mind the words of the Irish poet addressed to his compatriots:

"Hereditary bondsmen, know ye not,
Themselves must strike the blow who would
be free?"

Shri Jinnah-Sri Bose Talks

According to the Associated Press of India, the following is an account of the Shri Jinnah-Sri Bose conversations which was available in Allahabad:

The negotiations between Mr. Jinnah and Mr. Bose proceeded rather slowly in the early stages. It was suggested to Mr. Bose by prominent Congress leaders that he should request Mr. Jinnah to reduce in writing the points, whereon he wanted to have a settlement. Mr. Jinnah expressed unwillingness to give anything in writing but indicated that before taking up other questions dealing with safeguards, which Mr. Jinnah considered of secondary importance, it was essential they should agree on the preamble to be attached to any agreement arrived at between the Congress and the League. The preamble was to state clearly that the Congress on behalf of the Hindus enters into an agreement with the League representing Mussalmans the terms of which were to be specified.

Mr. Jinnah in the course of talks is reported to have also mentioned that all Ministries should be formed afresh and that Muslim Ministers in the newly formed Cabinet should be nominees of the League.

Mr. Bose consulted Congress leaders present in Bombay and it looked as if negotiations should terminate at that stage. After prolonged discussions and consultations Congress leaders however decided to state clearly the Congress position in a memorandum, which was ultimately handed over to Mr. Jinnah.

The memorandum stated inter alia, that Congress as a national institution recognised the need for satisfying the communities living in India that their rights were safe in its hands. In pursuance of this principle the Congress was willing and ready to discuss and come

to an agreement with the league, but it was impossible for the Congress to reduce itself to the level of a communal organisation. As regards the demand that Muslim Ministers should only come from the League the Congress took the stand that it was prepared to extend the present Congress ministries with a view to including representatives from the Muslim League but the demand that the present ministries should be dismissed and new ones formed was not acceptable. The Congress did not ask for any representation in the Punjab and Bengal Ministries, but only stated what it was prepared to do in Congress Provinces. Mr. Jinnah then wanted time to consult the League Council before he proceeded any further.

It appears that during Mr. Gandhi's last interview with Mr. Jinnah, Mr. Jinnah expressed a desire that until the negotiations concluded the Congress flag should not be made to fly on public buildings. There was also some talk regarding the singing of "Bande Mataram."—(A.P.)

Assuming that the above is a faithful summary of the conversations between the two leaders, one is at once struck with Shri Jinnah's characteristic unwillingness to give anything in writing. How can he possibly do so and lose the advantage of adding fresh "points" to his fourteen or twenty-one already before the public?

Shri Jinnah wants Congress to settle terms with him on behalf of the Hindus recognizing him as the representative of the Mussalmans! So Congress must admit that it is a mere Hindu communal organization and that the Moslem League alone represents the Moslem community. Two patent falsehoods are to be embodied in the preamble before Shri Jinnah can proceed further.

At his bidding all Congress ministries are to be re-formed and the Muslim members thereof must be nominees of the Moslem League. A rather tall order.

As regards the alleged Congress reply, we do not find it possible to praise the willingness of the Congress to enlarge the present Congress ministries in order to take in Mussalman members nominated by the Moslem League, that is, by Shri Jinnah.

In the first place, who will pay these additional members? Not certainly the Congress leaders. The present number of ministers is in all provinces quite sufficient for the conduct of provincial state affairs—in some there is a superfluity of ministers, and the coffers of no provincial government are full to overflowing. Has Congress any moral right to waste the taxpayers' money even to a small extent to satisfy Shri Jinnah?

In the second place, it being well known that the Moslem League is not the sole representative of the Moslem community, supposing Congress agreed to take in some additional Muslim members as ministers, where is the

guarantee that some other Moslem organization, new or old, will not demand a similar concession on its behalf? *Oliver Twist* has had many re-incarnations and may have yet more.

As regards the Congress flag, it was extremely merciful of Shri Jinnah that he demanded only a temporary and provisional, not a permanent, discontinuance of its flying on public buildings and that he did not demand the flying of the Moslem League flag in lieu of or in addition to it.

Regarding the singing of "Bande Mataram" we have nothing to add to what we have already written.

The demand that in the preamble it should be stated that Congress was entering into the agreement on behalf of the Hindu community as its representative was perhaps also meant to undermine the position of the Hindu Mahasabha as the principal organization of the Hindu community.

It need not be made plain that Shri Jinnah does not want one united Indian nation or people, but two main separate "nations."

It may be observed here incidentally that it may be that Congress has not hitherto consulted the Hindu Mahasabha with regard to any Hindu-Moslem unity agreement, not because it is hostile towards it or considers it of no account, but only to avoid complicating matters further. A *Moslem* League is trouble enough, why invite fresh trouble by consulting Hindus, Christians, Sikhs, etc., also? That may be the feeling of Congress leaders.

Congress Working Committee and the Frontier "Teacher-Abductor"

The public cannot have forgotten the case of the Frontier teacher Abdullah Shah who was concerned in the abduction of the girl Ram Kuar and who has been re-instated by the Frontier ministry in his post of teacher. The Congress Working Committee had this case under its consideration at its last meeting in Bombay. It has simply asked the Frontier Premier to hold a judicial inquiry into the case, as if the conviction of the man after open trial by a competent court and the upholding of the conviction by the Appellate Court were not sufficient!

In the past history of many countries, peace was obtained by a King giving away a sister or a daughter *in marriage* to a victorious monarch. But, however humiliating to the defeated such peace might be, the damsel was given away in marriage, not dishonoured in any way. It is to be hoped that to wink at dis-

honour done to womanhood is not the latest idea of having peace between two parties.

The Tribune of Lahore, which is nearer the Frontier than most of us and which is not hostile to the Congress, observes:

The decisions of the Congress Working Committee with regard to the action of the Frontier Government in re-instating a teacher who had been convicted of an offence involving grave moral turpitude will not, we are constrained to say, give satisfaction to the public. The facts of the case have already been set forth in these columns. In essence and in substance, though not in form, it is on all fours with the C. P. case; and it might have been expected that having definitely decided that the C. P. minister responsible for the premature release of the C. P. prisoner should go, the Working Committee would at least have expressed its frank and unequivocal disapproval of the action of the Frontier Government in this case. This is exactly what it does not appear to have done. All that it did was to direct the Premier to hold a judicial inquiry through the machinery of the Government to see whether the re-instatement of the teacher was legally justified. In the Frontier case, as in the C. P. case, the issue that is predominantly involved is not a legal but a moral issue, and no judicial inquiry is needed to enable the Government to come to the right decision on that issue. A person convicted of the offence of which the individual concerned in this case was convicted is the unfittest person in the world to be entrusted with the duty and responsibility of a teacher.

Government of India Act to be Amended ?

For some time past there have been rumours that, in order to induce Congress to work the federal part of the British-made constitution of India in the same way as the provincial part is being worked by the Congress ministries, the British Government may amend the Government of India Act in some particulars. This rumour may not be entirely unfounded. British imperialists must have been by now duly impressed with the undoubted strength of Congress and its hold on the people of India. What Lord Lothian and Lord Samuel has told the British public and their own personal friends in private conversation must have strengthened this impression. It may be that, when Lord Linlithgow goes home on leave, he, and the provincial governors who have already reached England or will go there ere long, will be consulted as to the probable amendments required. Perhaps it is one of the objects, if not the main object of their visit.

Mr. Bhulabhai Desai, the Congress leader, may have gone to Britain as India's unofficial ambassador to prepare the ground. What he has been saying in public has been cabled to India. But it is certain that this does not constitute the whole of the activities of this able

diplomat. Pandit Jawaharlal Nehru is also going to England. But he goes with other objects. And he is not the man for half-way houses and compromises.

There have been rumours, too, of another, so-called, Round Table Conference in London; and it is said Mahatma Gandhi has been invited to take part in it.

It is probable that there is a modicum of truth in these rumours. So, it would not be untimely to discuss what amendments would be required to make the British-made constitution acceptable to Indian nationalists. Indian publicists have repeatedly enumerated them. Some are of a radical character, some not so. We ourselves have written on the subject on many occasions. Even our last May number contained a note on How Federation Can Be Made Acceptable. Hence, so far as this journal is concerned, repetition of the points is unnecessary.

But two amendments we must insist upon. All the sections of the Act based upon the Communal Decision must be deleted or radically changed. Congress, our greatest national organization, has called it anti-national and anti-democratic. If an opportunity comes for pressing amendments upon the British Government, Congress should demand that it be set aside.

As it has done the greatest injustice and the greatest wrong to the Hindu community, all representative Hindu bodies, particularly the Hindu Mahasabha, ought to actively agitate against it in India and send a strong deputation to England to agitate there and place the Hindu case against it before the British public, Parliament and Cabinet.

The Indian National Liberal Federation is also a national organization and has repeatedly protested against the Communal Decision in its resolutions. It should renew its activity in this respect now.

The other important amendment required in order to make the Act acceptable is as regards the chapter on "Discrimination". India should have as much power of discrimination to safeguard her own interests as the British Dominions and the independent countries of America, Europe and Asia have. Nothing less can satisfy Indians. We cannot allow our country to be sucked dry by foreigners. Political Swaraj and economic Swaraj are both vitally important and necessary.

And, of course, dyarchy at the centre must go, all subjects being placed under the charge of responsible ministers.

Object of Mr. Nehru's European Tour

Allahabad, May 26 (Delayed).

"I am not going to Europe for a pleasure trip, though I love pleasure trips. I am not going there to recoup my health, because my health is quite good even now. As for meeting my daughter she could have come to India if it were only to see her. Therefore my chief object in visiting Europe at this juncture is to study the European situation as the Indian problem is not separated from the world problem and we have to keep in touch with the world problem to fulfil our mission which we have taken in hand for emancipation of India and whatever we can contribute from our side for a solution of the ills present in various struggles going on in many parts of the world."

Thus said Pandit Jawaharlal Nehru at a party given in his honour this evening by the Allahabad City Congress Committee on the eve of his departure to Europe.

Mr. Purushottamdas Tandon who spoke on behalf of the City Congress Committee said that Pandit Nehru's visit just now to Europe was most opportune on account of the various world problems. He had no doubt that Pandit Jawaharlal who by his very name shined with his sincerity and devotion to country's cause, would come out successful in his mission of study and travel which would benefit India by the information and knowledge of his. His visit, Mr. Tandon observed, would also raise the status of India in the estimation of the world which was very necessary for the solution of world problems to which India could no more remain as a passive spectator. He wished safe return to Panditji and a successful journey.—(U. P.)

No More Provinces to be Constituted ?

Recently the Under-Secretary of State for India stated in the House of Commons that the British Government had no intention to constitute more provinces. In spite of that pronouncement those who want a separate Karnataka province and a separate Andhra province have been carrying on their agitation in favour of the constitution of such separate provinces. There is no finality in politics, no settled fact.

What Bengalis want is not a new province. They want that all the Bengali-speaking areas adjacent to the province of Bengal, which were at sometime or other parts of their province and are integral parts of the home of the Bengali people, should be given back to the province of Bengal. They now form parts of the provinces of Assam and Bihar. Biharis got a province of theirs in 1912. No Bihari-speaking area lies outside Bihar. Oriyas have got a province of their own by the new Government of India Act, and they are agitating for the inclusion in their province of whatever Oriya-speaking tracts still lie outside it. There is no just reason then why the desire of the Bengalis should not be fulfilled. Congress has passed a resolution in favour of the Bengali-speaking tracts in Bihar province being transferred to Bengal. And, as we have said, the pronouncement of the Under-

Secretary of State for India does not go against the fulfilment of the desire of the people of Bengal.

Bengalis all over India should be up and doing.

Linguistic Provinces

What we have written in the foregoing note does not mean that we are not conscious of one drawback of dividing India into many provinces on a linguistic basis. The advantages do not require recounting in detail. The advancement of education is facilitated, cultural progress is made easier, administrative work is smoothened, —and so on. Let us dwell a little on the other side of the medal.

Many languages are spoken in India. Even the principal ones number more than a dozen. And they have growing literatures of their own, embodying their culture. When India comes to have a national language—whatever it be, even then these languages will continue to be used and these literatures go on developing.

The people of India have thus got to learn to live amicably like one people, though consisting of separate groups speaking different languages. If there be multilingual provinces, then we get the opportunity there of serving apprenticeship in the art of fraternizing with persons speaking languages different from our mother-tongue. But in mono-lingual provinces there is much less of this opportunity and much greater linguistic isolation and separation.

We should be distinctly in favour of multilingual provinces if the biggest linguistic group in such provinces or the group whose name the province bears, did not seek to discriminate against other groups as regards educational facilities, employment in the public services and industrial and commercial openings. Unfortunately, while in the bigger provinces, this discriminatory spirit is not in evidence, in some of the smaller ones it is very much so.

If the re-distribution of areas on linguistic lines eased the situation a little in this respect, then that would be an additional argument in favour of linguistic provinces.

Prosperity of Bengal Landholders

The district of Bakarganj, with its headquarters in Barisal, is said to be the granary of Bengal. Thence comes the following bit of news, indicating the prosperity of the landholders of the district :

Barisal, May 22.

It is reported that as many as 303 permanently settled estates and 516 Khas-mahal tenures could not pay off the Government revenue due for the last March "Kisli" and have been classified as fit to be advertised for sale by auc-

tion. The number is reported to be the highest and the amount of default the heaviest in this district in recent years. —(U. P.)

Czechoslovakia

The tact and firmness of the leading Czech statesmen of Czechoslovakia, and the fact of Britain, France and Russia having given indications that they would not remain unconcerned lookers-on if Germany invaded Czechoslovakia, appear for the present to have prevented a German-Czech war. But the danger is not quite over yet.

River Physics

Professor M. N. Saha has written in this journal more than once on the subject of river training and generally on river physics. For the industrialization of India and for facilitating inland water traffic the importance of the study of river physics and of research relating to it, cannot be exaggerated. The subject has been recently drawing public attention. This has led us to publish in this issue a synopsis of a symposium on river physics specially prepared for the occasion by Dr. Saha himself. We have no doubt it will be found instructive and interesting.

"Herr Funk Carries Out Predictions by Dr. Das"

Under the above caption Mr. Lemuel F. Parton, a well-known American journalist, has contributed a note to the *New York Sun* of the 8th March last, in which he writes, in part:

About eight months ago this writer quoted an interesting prophecy about Europe, made by his friend, Dr. Tarak Nath Das, lecturer at the College of the City of New York. Dr. Das said that within a year or less England would lure Italy away from its German alliance by a shrewd deal in credit and raw materials. There have been some interesting developments in that line, and another prophecy of Dr. Das is pertinent today. He said that, after Mussolini began to bargain, Germany would begin to make overtures to the democratic Powers, which happens to have everything that the absolutist Powers need.

So here today is Walther Funk, Germany's new Minister of Economics, bidding for United States trade, suggesting a world plan for international currency stabilization, and announcing that "we will leave nothing undone to promote trade relations with foreign countries." Herr Funk was appointed to his present post in January 15, and at that time there were at least two European correspondents who saw in the reorganization of the ministry a move by Germany to bargain rather than shoot its way out.

Oxford Municipality Fights Lord Meston

The Calcutta Corporation and consumers of electricity in Calcutta know to their cost

how high the rates charged by the Calcutta Electric Supply Corporation were in former years and are even at present. Lord Meston is the president of this corporation. He occupies a similar position in the Oxford Electric Company. It is interesting to note that, as an article published in *Science and Culture* for May last shows, Oxford Municipality has been fighting practically the same Lord Meston about its supply of electric power. The article shows that as the result of the fight, the Oxford Municipality was able to reduce the electric charges to one-third of the rates charged by Lord Meston's concern. The article also shows how capitalistic intrigues have been hindering the development of even such places as Oxford in free, independent and democratic Britain.

How much more strenuous will the fight against foreign capitalists in India have to be if this country is to make sufficient progress in industries and generally in economic conditions.

Capital Versus Labour in Cawnpore

The struggle between capital and labour in Cawnpore continues. How we wish it could be brought to an early close peacefully with justice to both parties, instead of being fought out to the bitter end!

A Lesson from Australian Defence Plans

[Special Correspondent to *New York Times*.]

Sydney, Australia.

Between \$70,000,000 and \$75,000,000 will be spent on defence by Australia this year. . . .

All spheres of defence will be covered by the new plan now being prepared by the Government's Advisers, but the chief points are bettering naval and aircraft protection and strengthening the country's position as a manufacturer of munitions.

The steadily expanding range of military aircraft has meant increasing concern in Australia. Each advance in design of military planes brings Japan's bombers, hopping off from the near-by Caroline or Marshall Islands, within easier range of one of the longest and most unprotected coasts in the world. To give greater security the Government means to post anti-aircraft batteries at strategic points along the coast, and it is now considering providing dwellers in the largest cities with gas masks.

In addition, the Australian Navy—never built up to pre-war standards, when it had a battle cruiser, four light cruisers and six destroyers—is to be reinforced. . . .

First objective of the expanded defence plans is the security of main ports against sea and air raiders. . . .

MAKING OF MUNITIONS

When the Australian Defence Council, composed of naval, military and air chiefs, under the chairmanship of the Federal Minister of Defence, met in mid-March it considered a scheme to expand munitions production in this country. . . .

Last year Australia spent \$57,500,000 on defence: two years ago the total was \$40,000,000. With the vote of \$70,000,000 this country falls into line with the recent move of Prime Minister Chamberlain to make over Britain's plan of rearmament.

Australia's population is less than 1/30 of that of India. But the Australian people are free and, therefore, when they spend money for national defence, they train Australians to take charge of all branches of national defence including air forces and navy. India has virtually no navy although we are told that India might be a prey to Japanese imperialism. We are also told if the British forces and military control be removed from India, some time, then the country may be a victim of attack by land by Russia or some other nation. What can Indian statesmen do to increase Indian national efficiency in the field of national defence? We can give no definite answer.

Externment of Some Released Prisoners

Two Kakori prisoners, whose home is in Bengal, were recently released from prisons outside Bengal. They came back to Bengal, but have been externed from the province by the Government of Bengal.

They had not been doing or planning to do anything unlawful here. They were externed evidently because of their past record. But for that they had already undergone punishment. Why then this fresh punishment, and that without any fresh trial?

In some provinces some men in power, or in possession of influence, appear to have made up their mind that even Bengalis with a clean record and with satisfactory educational qualifications must not be allowed to make a living there. Such being the case, Bengalis whose past record is not satisfactory must find the problem of keeping body and soul together very difficult in such provinces. Hence, it would be easy to suspect them of "bad livelihood" or no ostensible means of living at all, and extern them on that ground alone. Should that happen and they be externed from outside Bengal also, where are they to go? Would it not be more humane to keep them in prison for life?

We have said, it would be very difficult for such men to make a living outside Bengal. That was not to suggest that it was easy for educated Bengalis to make a living in Bengal. It is not. What we meant was, if a man had to die, it might be some consolation for him to die in the midst of his near and dear ones.

Sino-Japanese War

The people of China have been putting up a very brave fight and are on the whole regaining lost ground. That is happy news.

The Japanese, however, have not thrown up the sponge. They are about to use their powerful navy to the full against South China. On the sea China is no match for Japan. But after landing anywhere the Japanese are sure in the long run to meet with stubborn resistance.

The reshuffling of the Japanese Cabinet shows that Japan's plans have not been on the whole successful. The reshuffling has been obviously made for a more successful campaign. But it is a question how long Japan's financial resources will last.

Palestine

Palestine is far from being quiet. The British Government evidently intend to cope with the unrest and disturbances there by repression, some of the methods followed being those made use of in Bengal.

Spain

That the rebels in Spain have succeeded to the extent they have and have been going on with their campaigns are due in great part to the help they have been receiving from Italy and Germany in men and materials. But that the republican government of Spain have been fighting against such tremendous odds is due entirely to the courage, patriotism and tenacity of purpose of the loyal Spanish population:

Britain's War Preparations

London, May 27.
The old reluctance to join the army has disappeared and the best men in the kingdom are joining. At some depots full records of enlistments are being registered weekly, declared Mr. Hore-Belisha, in a speech at Devonport.

He mentioned that the country was now spending a million sterling a day on rearmament.

In anti-aircraft there are 40,000 men compared with 5,800 in 1936.

Although the rush of recruits was unprecedented in the last two months, all men had been provided with accommodation, equipment and training. The weekly intake in the regular army was twice the last year's figure. —(Reuter).

Some Bengal Cabinet Decisions

Darjeeling, May 28.
It is understood that the Cabinet has sanctioned a sum of two and half lakhs of rupees for the Youth Welfare Scheme. This scheme contemplates the appointment of 25 physical instructors, who will go round the schools, and besides looking after the physical well-being of the students will organise inter-school sports and games.

The Cabinet, it is learnt, has sanctioned seven and a half lakhs of rupees for the establishment of a first class Commercial College in Bengal on the lines of the Sydenham College of Bombay. There is a suggestion to name the college after an eminent industrialist of the province.

The Cabinet is understood to have decided to observe one week a year as the "Water Hyacinth Week" when organized efforts will be made all over the province to destroy the pest.—(*United Press*).

The special problems of the districts of Bankura and Birbhum have not been receiving any attention of the Cabinet, so far as our knowledge goes.

Honouring the Peaceful Brave

World Events for May 1st writes:

May 30th is Memorial Day. The Peace Heroes Memorial Society, continuing its sixteen year effort to demilitarize this holiday, will hold its annual service of remembrance for heroes and heroines of peace. After a program of hymns, readings and an address, the group will place flowers on the grave of a policeman, a fireman, a railroader, a factory worker, a nurse, and a scientist who lost their lives in the performance of their duties, and of a woman who died in childbirth. Headquarters of this group are in Cincinnati, but these exercises are being held in many parts of the country.

Persons interested may obtain a copy of the publication, "Service of Remembrance for Heroes and Heroines of Peace" by writing to the Secretary of the Peace Heroes Memorial Society, Abraham Cronbach, 842 Lexington Ave., Cincinnati, Ohio.

It is seldom, if ever, that mothers dying in childbirth are honoured as heroines—not in any case in India, where their number is enormous.

Lord Zetland's Word of Caution Anent Federation

London, May 28.

An important statement respecting Federation was made by Lord Zetland at the Bombay dinner.

After paying tribute to the services rendered to Bombay by Lord and Lady Brabourne, Sir Roger and Lady Lumley and congratulating Lord Brabourne on his appointment as Acting Viceroy during Lord Linlithgow's leave, Lord Zetland said,

"Let me say a word as to the future. One of the greatest achievements of Britain in India has been the gift of unity of her peoples. In spite of the immense differences in race, religion, language and culture, her people are stirred today as never before by the consciousness of nationhood and our task is to prepare in the constitutional sphere a dwelling place for this new consciousness.

"There are, I know, criticisms of the Federal provisions of the Government of India Act on the part of both the Princes and those who speak for British India. Yet I should hope that room may be found within the framework of the Act to accommodate the reasonable requirements of both the provinces and States.

"I can understand, for example, the views of those who will represent the provinces in the Federation as a result of the election, that some elements of popular choice as distinct from pure nomination should enter into the selection of those who represent the Princes. Well, that

is for the Princes themselves to decide. There is nothing in the act to prevent it; nor will the Paramount Power be found standing in the way of any Prince who seeks to temper the rigid autocracy of bygone days with a more liberal system, as indeed some at least of the Princes are tending more and more to do today.

"But here let me put in a word of caution. The fact that the Viceroy is shortly coming home on leave has given rise to speculation. I have seen it suggested that he is coming home to discuss with His Majesty's Government changes in the Federal structure embodied in the Act, and I should fear that silence on my part in the face of such suggestions might be assumed to indicate my concurrence with them.

"Let me say at once, then, that so far as I am aware there is no foundation for any such suggestion. The Federal provisions of the Act were the outcome of prolonged and exhaustive examination and discussion over a term of years, and in my view there is not the least likelihood of His Majesty's Government or of Parliament being willing to consider before even deliberation has come into operation any alteration in its structure.

"Both the Viceroy and I are ready at all times to listen to comments on Federal provisions of the Act, whether by the Princes or by those who speak for British India, but within the framework prescribed by Parliament there is in my view ample scope for providing people of India with a degree of political cohesion which they have never before possessed in all the age-long epochs of their history.

"Let it not be said of India when this generation stands at the bar of history that they discarded lightly an occasion which if it be not now grasped may never recur."—(*Reuter*).

The speech is characteristic of the superior British imperialist. He will humiliate himself *vis-a-vis* strong independent nations and their dictators, but his pose is that of adamant firmness in the presence of a people subject to them.

The oft-repeated talk of the generous gift of unity which Britain has made to India has become so nauseating that we had better say nothing more about it.

Lord Zetland's speech shows that the British Government has felt the necessity of some changes. But he has not been able to say what he has said, in a gracious manner. He reminds Indians as the arbiter of their destiny not to ask for the moon, not to expect too much. They may have some crumbs, if they are sufficiently humble in their supplications and sufficiently moderate in their prayers. All the changes must be within the framework of the constitution, which is sacrosanct.

John Bull is in a particularly generous mood: he will not interfere if any ruling prince "seeks to temper the autocracy of bygone days with a more liberal system" by introducing some elements of popular choice as distinct from pure nomination.

Finally, there is the threat that, if Indians of the present generation do not eagerly clutch

at the British-made scheme of federation, they may never have such a good thing again. But this does not seem to have stamped any Indian political party into a mood of eager acceptance of the proffered gift.

Transactions of the Bose Research Institute

The publication of this, the eleventh (1935-36) volume of the Transactions of the Bose Research Institute of Calcutta, by Messrs. Longmans, Green and Co., Ltd., just received, has a melancholy interest. This is the last volume of which the great scientist passed the proofs. He did so on the 20th November, 1937, and breathed his last three days later. The date of publication of the volume is May 9, 1938.

The frontispiece bears a fine portrait of Sir J. C. Bose sitting in front of one of his marvellous instruments.

The volume has an eight page introductory chapter by Sir J. C. Bose.

There are twelve papers in this volume on biological, biochemical, genetic, anthropological, and physical subjects, by S. C. Das, B. K. Palit, A. Guha Thakurtha, B. K. Dutt, H. N. Banerjee, N. C. Nag, A. K. Pain, H. K. Nandi, Sasanka Sekher Sarkar, Arun Kumar Dutta, Radhesh Chandra Ghosh, and R. C. Majumdar.

The illustrations, which are many, are excellent.

What Hindu Mahasabha Stands For

From a speech delivered last month at Ajmer by Mr. Vinayak Damodar Savarkar, president of the Hindu Mahasabha, one can get some idea of what the Hindu Mahasabha stands for. A summary is reproduced below.

The president of the Hindu Mahasabha began by referring to the questions frequently put to him by persons who doubted whether the Hindu Mahasabha was a national body.

He explained that the aim of the Hindu Mahasabha was practically the same as that of the Indian National Congress, namely, the achievement of absolute political independence. But the Swaraj envisaged by the Hindu Mahasabha was different from that contemplated by the Congress. The Hindu Mahasabha wanted that, in a free and independent India, every community should have equal rights and privileges. It did not demand more rights for the Hindus because they formed the majority and it was prepared to give equal rights to the Muslims including the protection of their language and culture. If the Congress had also stood for this principle, he would have been the first to join the Congress.

Clarifying the difference of outlook between the Mahasabha and the Congress, Mr. Savarkar said that

while the latter tried to differentiate between the two communities, Hindu and Muslim, the ideal of the former was to recognize only a common citizenship in which merit alone counted. To prefer a Muslim matriculate to a Hindu graduate was not nationalism but communalism. He claimed that, in this respect, the Hindu Mahasabha was more national than the Indian National Congress.

Continuing Mr. Savarkar paid a tribute to Mahatma Gandhi, Mr. Jawaharlal Nehru, Mr. Subhas Chandra Bose and other Congress leaders for creating a spirit of awakening in the country.

But he did not see eye to eye with them in their attitude towards the Muslims which attitude he characterized as 'anti-national'. He said that Mr. Jinnah wanted to keep the Muslims as a separate entity and wanted the Congress to recognize the existence of two nations in India. The Hindu Mahasabha did not want the Indian nation to be so divided up, but the Congress leaders were forcing the Hindus to have their separate entity. If the Congress did not consider it communal to negotiate with the Muslim League, why should it neglect the Hindu Mahasabha? The Congress, asserted Mr. Savarkar, had gained strength and attained its present position by the sacrifices made by the Hindus. He further averred that the sacrifices, if any, made by the Muslim community in the cause of the freedom of the Motherland were negligible, while every grain of the soil of India was covered with the blood of those Hindus who had laid down their lives in the fights for the freedom of India. The Hindus loved the Congress but not so the Muslims. As a matter of fact, by going out of its way to meet the Muslim League, the Congress had itself proved that it was predominantly a Hindu organization.

Mr. Savarkar went on to point out very forcefully that, if the Hindus were in a majority in India, it was not a gift of the Muslims and the Hindus were not obliged to them for this circumstance.

On the contrary, the Hindus had every reason to feel proud of themselves and take credit for the fact that they had been able to maintain their majority in spite of every effort of Muslim Kings to convert them into a minority. The Hindus had strength enough to resist any onslaughts. They were the primary race of Hindustan and Hindu culture had been recognized as one, of the highest among mankind. To the Hindus, India was not simply their Motherland but their Holy Land, the land of their forefathers, the land of the Ganges and the Jumna. The Muslims on the contrary did not even consider India as their Mother country and were constantly dreaming of their Pakistan.

In this connection, Mr. Savarkar referred to an utterance of Maulana Shaukat Ali to the effect that, if India did not become free, the Muslim would not lose anything because they had other Muslim countries to which they would migrate, but the Hindus had no other land to go to in such a case.

Mr. Savarkar, by way of reply to Maulana Shaukat Ali, requested him to clear out of India bag and baggage without the least possible delay and leave the Hindus to their fate. Because the Hindus had no other country where they could go, it was all the more necessary

for them to fight for the freedom of India and they would never think of leaving their Motherland but would continue to fight for its independence until their object was achieved.

Mr. Jinnah was claiming that the Congress could not win Swaraj without the help of the Muslims but Mr. Savarkar was not prepared to accept this claim.

The Hindus, he said, would continue to fight for their country in spite of Mr. Jinnah and Mr. Fazlul Huq who were emitting fire and brimstone against the Hindus. In the present age of democracy, there was always the rule of the majority; the Hindus were in a majority in India and they had, therefore, every right to rule their country. The Hindu Mahasabha wanted nothing more for the Hindus than what was their right. This, said Mr. Savarkar, was not communalism. If this was communalism, was not, he asked, nationalism also communalism in relation to humanity. Why should not mankind be considered as one and the world as a whole? But the fact was that there was a Hindu nation and a Hindu culture and if any community fought for its legitimate rights, it could not be accused of communalism. The Muslim League was communal because it demanded more than what was right for the Muslims.

In conclusion, Mr. Savarkar said that the Hindus would never leave the Congress because they had worked and sacrificed the most for the Congress.

The Hindu Mahasabha was not against the Congress and was prepared to work shoulder to shoulder with it in all national matters. The Indian National Congress was a great organization but the Indian nation was supreme. The Indian National Congress was only a means to an end, the Indian nation. The Hindu Mahasabha would continue to exist even after India was free because it would be necessary even then to safeguard Hindu interests and to prevent encroachments upon Hindu rights. He exhorted the Hindus not to feel ashamed in calling themselves Hindus and to prepare themselves for sacrifices in the cause of the Hindu nation.

Mr. Savarkar said that, on his own part, he was always prepared to go ahead of any person who called himself a nationalist to sacrifice his all for the Motherland.

Hindu Mahasabha on Unity Talks

The Hindu Mahasabha Working Committee has passed a long resolution on the Bose-Jinnah unity talks of which the concluding paragraphs are quoted below:—

"The Working Committee reiterates as emphatically as possible its protest against any attempt on the part of the Indian National Congress to enter into any agreement whatsoever with the Muslims in the name of Hindudom as a whole. It will be pure misrepresentation to call it a Hindu-Muslim agreement and cannot be binding on Hindudom as a whole unless and until the Hindu Mahasabha which alone represents the Hindu community is consulted on the issues raised and sanctions such agreement under its own hand and seal.

"The Hindu Mahasabha deplors the fact that evasions of the Congress in not maintaining a purely nationalist attitude and pondering to Muslim communalism indefinitely postpones the building up of a strong united nation

and perpetuates the stronghold of British Imperialism on the people of India.

"The Hindu Mahasabha, therefore, sternly enjoins upon the Congress to step out from any attempt to settle the communal question as by its anti-Hindu and notoriously pro-Muslim attitude it has ceased to be qualified for the task.

"Finally the Hindu Mahasabha warns the Government not to acknowledge any such Congress-League agreement as a Hindu-Muslim settlement, or to proceed to frame any constitutional changes on that basis."

Sir Manmathanath Mukherjee on the Shareef Case

The following classic pronouncement is taken from Sir Manmathanath Mukherji's report on the Shareef case:—

"Although in exercising clemency the authority concerned is moved by considerations not merely of justice but also of expediency and broadly speaking takes a much wider outlook of the entire situation than what a court of justice is permitted to do, yet if the limits within which clemency may be legitimately exercised are transgressed, the clemency is bound to have its repercussions on the moral foundations of the entire social structure, weaken the prestige of the authority concerned and bring into disrepute the administration from which the clemency proceeded. Looked at from the standpoint of the community at large, punishment of a crime affords them a sense of security which they lose if the punishment is remitted on a ground which is wholly unjustifiable. The view of the Hon'ble Minister that the offence was of a technical nature is entirely unsupportable; and the way in which the clemency in the case of Zafar Hussain was brought about, viz. by the remission, in the first place, of the sentence in respect of three pimps and procurers as regards whom any clemency was entirely out of the question, must be severely deprecated."

The Question of India's National Language

The *Bihar Herald* writes:

"We have noted not without some misgivings that there is a movement in Bengal for dislodging Hindi from the position of the national language of India."

After noticing and admitting the force of some of the arguments of the protagonists of Bengali, it observes:

"But what is play to the Bengalis in Bengal may well be death to the Bengalis in Bihar. It is the sacred duty of every Bengali who means to stay on in Bihar to learn to speak and write not simply Dr. Suniti Chatterji's bazaru or basic Hindi but very, very good Hindi. In no other way can they win over the hearts of their Bihari brethren and hold their own in the economic struggle . . . Even for our brethren in Bengal, the agitation against Hindi is distinctly suicidal. Its only certain result will be to oust the Bengalis more and more from positions of leadership in the Congress. When Madras and Orissa are making Hindi a compulsory second language it is idle for the Bengalis to cavil at it. They do not realise that other provinces are stealing a march over them. The majority of the population in Bengal are Muslims. Though their mother-tongue is Bengali they do not object to Hindusthani. Mr. Fazlul Huq can speak English, Ben-

gali and Urdu with equal ease. So can many other Bengali-Muslim leaders. Why should the Bengali-Hindus who parade their intellectual superiority so much fail to do something which the backward Muslims do not find difficult? Let the Bengalis follow the glorious example of S. Subhas Chandra Bose who can speak Hindi as well as anyone else in India."

The Modern Review has allowed different views on the question of India's national language to be expressed in its pages in order that the public should know them. But personally the editor of this journal does not believe that the bulk of non-Bengalis would favour Bengali even if the case for it were very much stronger than it is. He has told Bengali audiences so in some of his speeches to them on some occasions, mentioning his reasons, which need not be repeated. Personally he holds that on the whole Bengali is best fitted to be the national language of India.

As for Bengalis in Bihar learning Hindi, certainly they should do it, at least in their own interest. Bengalis dwelling in different provinces of India will find it to their advantage to learn the languages of those provinces.

Whether Hindi be or be not ultimately adopted as the national language of India, for

purposes of business it ought to be learnt. When we were in Germany 12 years ago we found Pandit Tarachand Roy of the Panjab teaching Hindi in Berlin University. The Germans, understanding the commercial advantage of knowing Hindi, had engaged him to teach it.

Whatever may happen in future, under present circumstances, no public man can make his influence felt in the Congress unless he can speak Hindi well.

Finally, Hindi has a literature for which alone it would be worth one's while to learn it.

As regards Bengali Muslims, we have to state it as a mere fact that their foremost Bengali organ, *Azad*, is in favour of making Bengali the national language of India.

Purloining From Our Pages

A Bombay paper has lifted an article from our last April issue without acknowledgment.

We have no detective on our staff to find out all who may be similarly guilty, as it is not our intention to pillory all plagiarists. It is only by chance that plagiarism of this sort meets our eyes.

The big winner wants to stop

The Union

INDIANS ABROAD

Indians, at home or abroad, generally fight a losing game. They do not fight, unless of course it is forced on them by the pitiless world. And, even when they have to, they do it rather in an amateurish manner, more to lose than to win. The Indian abroad, however, must shed off some of his virtue of quietism—he has to be more alert, more active, more ready to defend himself in a world of strange faces and hostile forces. He is to make his way in an unknown part of the globe and he must hold himself there. The law of life—and the law of self-defence—he learns in that new world, which is not friendly to him. This perhaps accounts for the fact that the greatest Indian fighter of the century—truly Indian too as a man of peace—has had his first training in South Africa. Who knows how much the Indian struggle owes in this respect to the Indians abroad? Yet, victory seldom graces our long suffering, we know, whether in India or overseas. The Zanzibar Indians' success, therefore, comes to all Indians as a relief—and a message of hope.

ZANZIBAR SETTLEMENT

At last a settlement has been arrived at between the Indians and the Zanzibar authorities and in general the Government had to yield to the clove traders over 50% of their demands. The Secretary of the Indian National Association, Zanzibar, addressed the following letter to the Congress Office, Allahabad, thanking handsomely the Congress and informing it of the terms of settlement of the dispute.

"I am enclosing herewith the text of the agreement on the clove dispute reached between the Indian community and the Zanzibar Government as a result of negotiations carried on for the last three weeks. The agreement on our side is subject to confirmation of the Congress. The credit of any settlement goes to the Congress and India for the marvellous support given to the Zanzibar Indians. The Zanzibar Indian community owes a deep debt of gratitude to Pandit Jawaharlal Nehru, S. Subhas Chandra Bose and Sardar Vallabhai Patel for organising and intensifying boycott. The terms of settlement have given satisfaction to all sections of the Indian community at Zanzibar. The Indian community highly appreciated your untiring efforts on our behalf in this fight."

POINTS FROM AGREEMENT

The main items of the agreement are as follows:—
"The monopoly of purchase by the Clove Growers Association is entirely given up. There is only to be a licence

system for persons desiring to deal in or export cloves. The Clove Growers Association will enter on the market as any other dealer, except that it will fix the minimum price. The Association will not also sell direct to overseas markets so long as the normal flow of exports is maintained. There is only one stipulation that the exporter will buy fifty per cent of cloves, that he exports from the Association. The Government of Zanzibar will invite the Indian National Association of Zanzibar acting in consultation with the Chamber of Commerce to submit a panel of names from which British residents will select an Indian representative to serve upon the Board of Management of the Clove Growers Association and the Advisory Committee. Indian traders will also have the benefit of buildings and marketing centres near the depots of the Clove Growers Association upon the payment of a fee for their use. The Clove Growers Association will neither employ buying agents, nor grant Credit facilities for purchase of cloves, nor any increase of the number of Association's buying depots is contemplated. From the terms, it is understood that the Indian trader will thus be completely free to carry on his trade and there is no danger of his being ousted by the Association."

The decision on the Agreement is still pending. So far however the Agreement is a concession to demands of Indian traders in Zanzibar.

We congratulate the Zanzibar Indians heartily on their victory, however partial. They have proved their worth and proved as well that right, even when that is on the Indian side, may sometimes win. The Indian National Congress, which valiantly took up the case of these traders, and went so far as to organise a boycott of clove in India of course deserves our congratulation. The Secretary, Foreign Department, A. I. C. C., may legitimately write as follows:

"I welcome it as a major achievement of the Congress foreign policy," said Doctor Rammanohar Lohia commenting on the terms of the Agreement. Continuing he said, "Throughout the equatorial belt of the British empire where Indians live and work and trade, justice and freedom are being fought for and I am happy the Congress is in a position to further this fight."—(U.P.)

The Government of India too did not let down the Indian case, we should recognize, and stood by the Zanzibar Indians, and deserve all praise for that. More courage, more faith in their strength, and a determination not to take things lying down—this must be the message of Zanzibar to all Indians abroad.

KENYA HIGHLANDS

Zanzibar has won the fight that was forced on it, Kenya Indians are unwillingly being pushed into one just about the hour. The whole land question in Kenya is now coming ahead.

It will be discussed in the next session of the Kenya Council, arising out of the Bills which the Government published to implement the recommendations of the earlier Commission. A memorandum of the Kenya Government was laid on the table, and the Bills, it is stated, will be shortly introduced to form Land Boards for Native and European Reserves. "The White Highlands from which Indians are being debarred will have more or less the seal and approval of law." "The question will not be subject to further discussion," points out *The Kenya Daily Mail* (April 24, 1938) "as was promised to the Government of India in the White Paper of 1923." With regard to the Highlands the memorandum proposes:

As regards the Highlands a Notice giving a detailed definition of the boundaries of the Highlands will be published shortly. This will subsequently appear in a Schedule to the Crown Lands (Amendment) Ordinance and in due course the Highlands Order in Council will define the Highlands by reference to that Schedule except as provided in the Crown Lands Ordinance and the new Native Lands Trust Ordinance the boundaries so defined will be unalterable.

This Order will provide for the establishment of a Highlands Board consisting of the following persons:—

- (a) the person for the time being lawfully discharging the functions of the Colonial Secretary who shall be the President of the Board;
- (b) the person for the time being lawfully discharging the functions of the Commissioner for Lands and Settlement who shall be Vice-President; and
- (c) five persons not holding office in the public service of the Colony four of whom shall be chosen from time to time by the European Legislative Council and one of whom shall be nominated from time to time by the Governor.

FUNCTIONS OF HIGHLANDS BOARD

The proposed functions of the Board will be to protect the interests of the inhabitants of the Highlands in the land situated in the Highlands and in particular to make representations to the Governor when in the opinion of the Board, anything in relation to the administration, management, development of control of these lands is not in the best interests of the inhabitants of the Highlands. The Board will also be required to give or withhold its consent in all matters in which its consent is required by any Ordinance for the time being in force in the Colony; and provision will be made requiring the Governor to consult the Board on all matters relating to the disposition of land within the Highlands.

No provision, it is seen, for Indian representation is made and the land interests or requirements of the Indian community in Kenya are entirely ignored. The powers of the Boards are such that "they practically become the bodies to use the veto powers of the Governor." Yet, successive ex-Secretaries of State for the Colonies and

Foreigners, as pointed out by the Indian representatives in the Kenya Legislative Council, "assured the Indian community essential safeguards about their future in regard to the control and administration of the Highlands." To take only two of them, the one of the then Secretary, Sir Philip Cunliffe-Lister, came in 1935, and the other from Mr. Ormsby-Gore only last November. Mr. Ormsby-Gore's statement in the Commons ran as follows:—

"It is not intended that the Order-in-Council defining the boundaries of the Highlands area shall include any provision involving legal or administrative discrimination on the basis of race or nationality in connexion with the occupation of land in that area. The issue of the Order will not affect the policy which had been followed since 1906."

In vain would one point out the declaration of Mr. C. E. Mortimer, Acting Commissioner of Local Government, Lands and Settlement, as quoted by *The Statesman* correspondent (April 14, 1938), running as follows:

"Such an unequivocal statement leaves the policy of H. M.'s Government on this point beyond all doubt, and I trust the honorable mover will accept that statement as the declaration which he desires and that it will go far to dispelling the unhappy phantoms of uncertainty and disquietude to which reference has been made."

The present authorities are determined to squeeze out the Indians and Africans. 'Racial discrimination' is a term apparently meant for application against Indians—in India or abroad.

KENYA AND GOVERNMENT OF INDIA

It was only in last April that the Council of State in Delhi accepted Mr. Ramdas Pantulu's resolution on the Kenya position:

This Council recommends to the Governor-General in Council to take prompt action not only to prevent the issue of the proposed Order-in-Council by His Majesty's Government implementing the recommendations of the Kenya Land Commission but also to remove the ever-increasing disabilities imposed on Indians in Kenya, specially in pursuance of the so-called administrative practice which prevents Indians from acquiring and occupying land in the Highlands by grant, transfer or lease and which is now sought to be legalised and so widened as to shut out Indian settlers both from the African reserves and the European Highlands and to discriminate against them in favour of even non-British European settlers.

The Government of India readily accepted the resolution with great pleasure.

Sir Jagdish Prasad, replying for Government, stated that it was and had always been the policy of the Government of India to safeguard the honour and interests of Indian nationals abroad. He quite appreciated that the implications of the proposed Order-in-Council would be to give moral acquiescence to the "administrative convenience." The Government of India had already represented to the British Government the strong feeling in India on the subject.

The Government of India, therefore, must be on their trial now. It is a fight against them. Indeed, the Deputy Leader of the European elected members in the Kenya Council, Major F. N. Cavendish-Bentinck, concluded his speech on their resolution, asking to give effect to the Kenya Land Commission Report, with the following significant words:

"As far as the White people are concerned, threats from the Government of India leave us cold. We don't want racial troubles, but if they come I know who is going to win."

The European imperialists would certainly now fail to remember the service of the Indians in defence of the East Africa during the Great War. The interest of Kenya would also hardly count, though the Indian leader Mr. Pandya may point to that,

Umbrage was taken by the European representatives of the Legislative Council at the fact that Mr. Mortimer could not undertake to fix "the qualifying adjective 'white' or 'European' before the word 'Highlands' in the proposed Order-in-Council."

COMMUNALIST ABROAD?

It is the more tragic therefore to read, in the face of the above, the following in a leader of the *African Tribune* of Mombasa, Kenya:

Reactions of the recent Indian elections in Mombasa are now being felt. In a recent article, the *Tribune* referred to the "gentlemen's agreement" whereby one Muslim and one Hindu were to stand for election as a guarantee of mutual good faith between the two great communities and an indication of the harmony that prevailed between them. Unfortunately, this excellent arrangement was broken by some self-interested party of the contract with the result that two Hindu not Indian representatives were returned to the Legislative Council, the election being carried on totally on communal basis.

SOUTH AFRICA

South African Union is in the throes of an election in the middle of May now.* It is not devoid of interest for the Indians. The United Party, with Generals Hertzog and Smuts as their leaders, stand for a more liberal outlook in which racialism plays no part, at least openly. The Nationalist Party of Dr. Malan of course is frankly a 'racialist' party. The two pronouncements quoted below (from the *Statesman*) will speak for themselves, and give us an idea as to how the Indians would fare under the respective Parties if they come to power.

Generals Hertzog and Smuts of the United Party, in their manifesto to the South African people, said: "We want a victory that will make this country safe for us and our children against the disintegrating forces of mere party divisions and racial strife." General Hertzog further said in his first election speech: "Division with its anti-South

African, anti-British, anti-Jewish, anti-Native policy,—a policy that is inherently anti-everything from which political capital can be struck—is a policy of despair, carried on the wings of selfishness and hate, eating out of its own entrails and promoting its own destruction."

The Nationalist Party manifesto which was signed by Dr. D. F. Malan, Dr. N. J. van der Merwe and Mr. J. G. Strydom, runs, in part, as follows: "The Party would abolish the Cape Native Franchise, keep surplus natives from the towns and introduce residential segregation. A stop would be put to the wholesale buying of land for natives, and the native would be left to acquire land by his own initiative and in accordance with his real needs. Segregation of non-Europeans would be enforced in industry, with a quota system of employment where desirable. Cape coloured voters would have separate representation. The Party would prohibit mixed marriages and the employment of Europeans by non-Europeans."

THE INDIAN POSITION

The Indian position in South Africa is neither strong nor happy. The list of their grievances will be as long as the list of their shortcomings. We learn from the *Indian Opinion*, whose 'call to youth' on the grounds we heartily endorse:

The Indian in the Natal and Transvaal Provinces has not the franchise—that bulwark of all democratic countries—and he must need therefore to be always on the alert. The Indian labours under tremendous difficulties both in Natal and Transvaal. Employment is difficult to obtain. The Natal Railway System which at one time employed several thousands of Indians and which owes a great deal to them for its development, now employs only a few hundred. The White Labour Policy is driving our men to the streets. Notwithstanding the prosperity that South Africa is now enjoying, the economic condition of our people has not changed for the better. "Equal pay for equal work—a clause which beautifies the Capetown Agreement, is not worth the paper that it is written on." The State which should set an example by paying the Indian an economic wage is, constantly in breach of the formula. (The wages that are being paid to the Indian employees in the Railways and Harbours, will send any civilized country to shame. Our Teachers who are in the employ of the Natal Education Department, are paid niggardly. Our graduates at the Sastri College who put in as much work as the European staff, are paid much lower than their European confreres. These are naked truths that our youth must face. What is going to happen to the hundreds that the Sastri College turns out every year? Is the Indian youth going to sit with folded arms and Micawber-like, wait until something turns up?

AGENT-GENERAL IN SOUTH AFRICA

Mr. Rama Rau, the new Agent-General in South Africa arrives in Natal about the same time. He succeeds to some great name and to a difficult task. We would wish him all success, and, happy and loving welcome from his countrymen in South Africa.

G. H.

Indians in Mauritius

THE new session of the Legislative Council has been opened today, 12th April, by the new Governor, Sir Bede Clifford. In a very long

*The elections have since returned the United Party with a clear majority.

address His Excellency has referred at great length to the political and economic needs of the Indian population and he will shortly lay before the council a plan for the revision of the constitution whereby the interest of all classes of the Indian people will be fully represented. In anticipation of those reforms His Excellency has taken a very bold step in appointing two Indians as members of the Legislative Council in the place of two European members (one official and the other non-official) who are now on leave. The two members are: Messrs. Abdool Latiff Osman and Seeparsad Seerbookun, both of them being small planters. The former is the elder of Mr. A. R. M. Osman—the first Indian to be appointed as magistrate in this colony, now acting as substitute Procureur General. Referring to the new members, Sir Bede, in his speech, says,

"But to remove any justification for the charge that the Government is out of touch with, and contains no representative of the working classes, I have decided to nominate two representatives of the small planters and labourers to the vacancies caused by the absence, this Session, of the Commissioner of Police and Mr. Robinson. I have deliberately selected for these posts, men who belong to the agricultural class and I have pleasure in welcoming them to the Council today. I am sure they will show that even if they are inexperienced in public and political affairs and have had lesser opportunities for education than some of us, they are nevertheless capable of acquainting us with the outlook of their people on all matters directly affecting their interest"

With these appointments, the number of Indian members on the Legislative Council is brought to four. The other two are the Hon'ble R. Gujadhur now on leave in India and the Hon'ble G. M. D. Atehia, Mayor of Port Louis. At no time more than two of our people sat on that Council.

The report of the Commission of Enquiry that was appointed to enquire into the unrest on sugar estates that occurred in August of last year has also been laid on the Council table. It is a voluminous publication covering more than 250 pages in which all the facts relative to the strike of Indian labourers have been fully stated.

We can only publish the summary of the principle conclusions and recommendations.

IMMEDIATE AND REAL CAUSES OF THE UNREST

(1) The immediate cause of the outbreak of the unrest was the cut of 15 per cent in the Uba cane carried out by the directions of the Manager of Sans-Souci Estate Co., Ltd. This cut itself would not have brought about such a big strike and such a widespread manifestation of discontent had there not been other causes at work as well. The real cause that brought about the outbreak of the strike was the cumulative effect upon the workers of Dr. Cure's labour campaign and his speeches delivered to audiences of Indian and

other workers on Sugar estates on behalf of the Mauritian Labour Party which he founded, assisted by his associates, Mr. Anguetil and Pandit Sahadeo. At the same time, a general rise in the standard of living of the Indian inhabitants in Mauritius has been an important element in causing discontent amongst Indians with their present lot.

INTERFERENCE AND INTIMIDATION

(2) During the course of the strike, interference with men working on their way to work definitely took place, but no evidence has been placed before the Commission to show that systematic intimidation or threats or reprisals were ever addressed to workers to induce them not to work. There is, however, evidence of what the Commissioners call "mass fright" as a result of which numbers of persons left their work, as they were afraid of outsiders coming after them, and this as a result of false rumours. There was no organised form of intimidation directed by a central or local organisation for the purpose.

ARMING OF ESTATE PERSONNEL

(3) The estate personnel on the majority of the estates were armed with a view to defence, shortly after the outbreak of the unrest. This is deprecated, although in a crisis similar to that through which the Colony has just passed all persons in any way likely to be concerned are entitled to have the maximum amount of police protection available at their disposal.

THE SHOOTINGS AT UNION-FLACQ AND L'ESCALIER

(4) The enquiries of the Commission into the shootings at Union-Flacq and L'Escalier show that:

- (a) active preparations were made beforehand by the factory management of Union-Flacq Sugar Estate to arm and to open fire, in defence of life and property, should any hostile mob enter the estate;
- (b) the pointing of rifles at the crowd of members of the estate personnel was a provocative act on their part, though this was not the cause of the rush on the factory and the firing which ensued;
- (c) the firing took place owing to the fact that the factory staff were, at the moment firing took place, in fear of their lives owing to the hostile action of the crowd in the estate yard;
- (d) that firing could have been avoided had the Police been present in sufficient numbers to deal with the situation and it is unfortunate that Police in sufficient numbers did not arrive until just after the firing had taken place;
- (e) the Manager refused to allow one of the lorries available on the estate to be used as an ambulance to take the wounded labourers to hospital, an act greatly to be deprecated;
- (f) the shooting at L'Escalier by the Police was inevitable.

SPEECHES OF DR. CURE IN THE COUNCIL OF GOVERNMENT AND ON BEHALF OF MAURITIUS LABOUR PARTY

(5) The speeches of Dr. Cure in the Council of Government, while an elected member for the Plaines Wilhems Division, and his own account of the speeches delivered by him during the course of his campaign on behalf of the Mauritius Labour Party, compared with the verbatim reports and notes taken by the Police, show that Dr. Cure has carried on a systematic political campaign on behalf of labour. Certain statements made by Dr. Cure at his meetings were of a nature likely to be exacerbate racial feeling and intensify colour

prejudice and occasionally, highly inaccurate statements were made by him without any trouble being taken to verify whether they were correct.

THE SOCIÉTÉ DE BIENFAISANCE DES TRAVAILLEURS DE L'ÎLE MAURICE

(6) The constitution by Dr. Cure of the Société de Bienfaisance des Travailleurs de l'Île Maurice was carried out principally to enable him to lodge a complaint with regard to, an alleged failure by Great Britain and Mauritius to implement international obligations with regard to labour. This object was not made known to the competent authority by Dr. Cure when he applied for the incorporation of the Société de Bienfaisance as a friendly society under the Friendly Societies Ordinance of 1874. The resulting legal position might with advantage be investigated by the Government's legal advisers. The Mauritius Labour Party have sent a student of economics named Jomadhur to England to act there as a representative of the Labour Party, with a view to getting into touch with labour leaders in order to secure greater recognition by the British Government of the aims of the Mauritius Labour Party. The necessary expenses incurred by Mr. Jomadhur from the funds of the Société de Bienfaisance and this appear to be *ultra vires* the powers and constitution of the Society.

AMENDMENT OF ORDINANCE NO. 22 OF 1874

(7) The Government's legal advisers should be invited to consider the possibility of altering the terms of ordinance No. 22 of 1874 under which Friendly Societies are constituted in order that power may be given to an outside authority to investigate the affairs or finances of any Friendly Society.

POLITICAL CAUSES OF THE UNREST

(8) Several witnesses, in addition to Dr. Cure, have appeared before the Commission and are unanimous in stating that some of the causes of the unrest are of a political nature and arise out of the fact that the present electoral system results principally in the return of representatives of one section of the community only. The Commission have carefully borne these representations in mind and have come to the conclusion that one of the causes of the present unrest is political discontent. The Commission abstain from making any specific recommendation on the political aspect of the unrest, as they are aware that the question of adjusting political representation in Mauritius is already engaging the attention of His Majesty's Government in England.

GRIEVANCES OF SMALL PLANTERS

(9) Small planters generally complain that they do not receive sufficient sugar in return for canes which they send to the mills to be crushed. As a result of their investigations, the Commission have come to the conclusion that small planters in Mauritius, generally speaking, receive more generous treatment in respect to their canes than any other Colony or Country. They recommend that a Committee of experts be set up to determine the minimum amount of sugar to be received by small planters from the factory, such amount to increase with the increase in the sucrose content of their canes, and that a Standing Committee of small planters should be set up, the Chairman of which should be the Director of Labour, to supervise the application of the decisions of the Committee of Experts.

CUT OF 15% IN THE UBA CANE

(10) The complaint of the small planters with regard to the cut of 15 per cent in the Uba cane is justified in the sense that they received no specific notice, until they had brought their canes to the weighbridges

in the ordinary course, that the cut would be carried out. On the other hand, the amount hitherto paid by estates for the Uba cane appears to have been too high. The actual amount which contributes a fair return should be determined by the Committee of Experts, the setting up of which is recommended to determine what is a fair amount to go to planters in return for their canes, based upon the sucrose content of such canes. No cut however should be made of the 1938 crop. Thereafter, a progressive reduction in the amount given in respect of the Uba cane should be made extending over a period of years, if the findings of the Committee of Experts, show that the deduction is in fact justified. At the same time, the Department of Agriculture should continue the experiments, they have been making to find a cane to replace the Uba cane.

RELATIONS OF SMALL PLANTERS WITH CANE DEALERS

(11) Another complaint of small planters is in connection with cane dealers or intermediaries. Their complaint that they are forced by the estates to deal through a certain cane dealer whether to do so or not is justified, especially when the operation of this constraint is examined in the light of the limitation of Area system. On the other hand, cane dealers, play a part in the present financial organization of the sugar industry in advancing *faisance valoir* to small planters in circumstances where neither the factory nor a Co-operative Credit Society would do so. The evil part of this system is that which deprives small planters who are under no financial obligation towards the cane dealers, of their freedom to send canes to the factory of their choice, under their own name or that of their authorised representatives and on terms arrived at in direct negotiation with the factory, either personally or through their authorised representatives. The general principle to be observed is that the small planter must not be adversely affected, nor his liberty of action taken away, by arrangements entered into by parties unknown to him.

SMALL PLANTERS AND LIMITATION OF AREA SYSTEM

(12) A further complaint of small planters is against the limitation of Area system. In principle the Commission agree that as matters stand at the present time, it is in the interests of the sugar industry as a whole to avoid ruinous competition which would result from outbidding each other for small planters' canes. On the other hand, when agreements are entered into between estates for limitation of area, the small planters, either individually or through their representatives, should be consulted. The system of limitation of area should be operated by means of regional agreements to be entered into between mill-owners and representatives of small planters on terms agreed to by them. This might be carried out by means of the Standing Committee of small planters, the setting up of which has been recommended in direct negotiation with the representatives of estate Managers.

CO-OPERATIVE CREDIT SOCIETY SUGAR FACTORY

(13) The Commission investigated the possibility of the creation of a Co-operative Credit Society Sugar Factory but upon examination of all the factors involved came to the conclusion that any increase in the number of factories would be bound to result in a diminution in the amount of small planters' canes available to supply the factories already in existence, and that being so, decided that they are unable to support any such proposal.

SMALL PLANTERS AND THE AGRICULTURAL BANK

(14) The Commission recommend that if possible the limit of Rs. 5,000 contained in the Agricultural Bank Ordinance of 1936 should be reduced to Rs. 1,000; in

New in civilization, and unrivalled land — and sea-scapes.

BOARD OF TOURIST INDUSTRY

JAPANESE GOVERNMENT RAILWAYS

order to ensure that small planters may benefit by long term mortgage loans under the terms of the Ordinance.

WEIGHING OF CANES AT WEIGHBRIDGE

(15) The Commission recommend that small planters should be allowed in all cases to check the weighing of their canes upon arrival at the weighbridge, and that periodical inspections of the weighbridges should be carried out by Government Inspectors. The weights and the weighbridges should be tested at least once a year by a Government Inspector and stumped by him to the effect that both are correct. A representative of the small planters should be present at each weighbridge at the time the canes are weighed to certify that the weight of each consignment of canes delivered at the weighbridge is correct.

PAY OF ESTATE SERVANTS TO BE INCREASED

(16) The Commission recommend that the pay given to estate servants at the outbreak of the strike should be increased in cases where no increase was made during or after the strike, to the extent of 10 per cent in respect to cash wages, without prejudice to any decision arrived at by those entrusted with the duty of implementing the wage fixing machinery.

PAY OF CASUAL LABOURERS TO BE INCREASED

(17) The Commissioners have come to the conclusion that all things considered the average day labourer is underpaid. They similarly recommend that in cases where no increase was made during or after the strike, wages of casual labourers should be increased by at least 10 per cent without prejudice to any decision come to by those persons who will eventually be entrusted with the duty of implementing the wage fixing machinery.

PAYMENT OF CASUAL LABOURERS TO BE MADE BY ESTATE

(18) The Commission recommend that payment of the wages of casual labourers should be made in each case by the estate direct and not through the entrepreneur. The names and full details of all casual labourers should be kept by the estate and the amount and remuneration of all tasks should be made public.

AMENDMENT OF WORKMEN COMPENSATION ORDINANCE

(19) The Commission recommend the amendment of the Workmen's Ordinance of 1931 so that the period within which notice of an accident may be given shall be extended to six months and that notification of such accident by employers should be made compulsory.

OLD AGE PENSIONS, SICKNESS INSURANCE, WIDOWS AND ORPHANS

(20) The Commission recommend in principle the institution of old age pension and sickness insurance schemes, and the making of better provision for the maintenance of widows and orphans, though these schemes will obviously require careful investigation before adoption.

TRADE UNIONS

(21) The Commission are in favour of the establishment of Trade Union and the introduction of legislation into the Council of Government to that effect.

ADOPTION OF THE PRINCIPLE OF A MINIMUM WAGE

(22) The Commission recommend the adoption of the principle of a minimum wage and the application of a sliding scale of wages above the minimum fixed. They also recommend the appointment of wage fixing committees, including representatives of employers and employed, presided by a person having a knowledge of labour questions in relation to the sugar industry.

CONCILIATION BOARDS

(23) Conciliation Boards composed of employers and employed should be set up with the object of composing peacefully any difference which may arise between them.

ESTABLISHMENT OF A DEPARTMENT OF LABOUR AND SOCIAL WELFARE AND ENACTMENT OF A NEW LABOUR ORDINANCE

(24) The Commission recommend the establishment of a Department of Labour and Social Welfare to deal with all questions of labour and such matters as old age pensions, sickness insurance and supervision of the welfare of widows and orphans. The carrying out of the duties of the new Department of Labour should be assured by fresh legislation, and the enactment of such legislation and the repeal of the Labour Ordinance of 1922 are recommended. The appointment of an English official with Indian experience to take charge of the Department for an initial period of eighteen months is recommended, after which he should be replaced by an English official having experience of labour conditions in Great Britain, who should be assisted by two English labour experts to be appointed at the same time as the acting Director of Labour, and who should work under his guidance and inspiration. After the departure of the acting Director, the person appointed from England would finally assume direction of the new department.

MAURITIUS SUGAR SYNDICATE

(25) The committee of the Syndicate might be strengthened by the inclusion of small planters.

THE INCREASE IN WAGES POSSIBLE

(26) The present economic position of the sugar industry is such that an increase in wages can be made.

THE ESTATE MANAGERS

We cannot conclude our survey of the labour problems confronting the sugar industry in Mauritius without a reference in general terms to those men who are responsible for the day-to-day work of running the sugar estates. We have had the advantage of hearing the evidence of many of the estate managers and in general have been favourably impressed both by the frank way in which they spoke and by the obvious grasp they had of the facts and technique of the industry. Most of them have spent a life time in the occupation of growing the sugar cane and manufacturing sugar and we doubt so far as facts and technique are concerned, whether there is much left for them to learn.

Nearly all the above recommendations will be accepted by Government. The Labour Department has already been established and a Director of Labour has come from the Malaya Federated States to take charge of that service. The Commissioners are of opinion that the Indian Government has always taken a paternal interest in the progress of Indian labourers outside and in support of their belief, they refer to the coming to this island of Sir Kunwar Maharaj Singh to enquire into the conditions of Indians, on behalf of the Indian Government. There is every likelihood of a change for the good in the state of Indians of Mauritius and they are very hopeful of the administration of Sir Bede Clifford. 1938 is likely to be our *annus mirabilis* writes a correspondent of ours from Port Louis, Mauritius.

THE MODERN REVIEW

JULY

1938

VOL. LXIV, No. 1

WHOLE No. 379

NOTES

Bankim Chandra Chatterjee Centenary

The Bangiya Sahitya Parishat, the principal literary society of Bengal, celebrated the centenary of the birthday of Bankim Chandra Chatterjee in a manner quite worthy of the place which he occupies not only in Bengali literature but also in the national life of Bengal and India. Not a politician himself, he has been the inspirer of political thought and action and the influence of his writings has been felt also in the economic, social and spiritual spheres.

On the first day of the celebrations a public meeting was held at the Senate Hall. Sriyut Hirendranath Datta was quite fittingly chosen to preside over this meeting and all subsequent gatherings held in connection with the centenary. The meeting was attended by the leading personalities in the worlds of literature and education and in public life of Bengal who were present in Calcutta that day or could come from mofussil stations, some like the Poet Rabindranath Tagore and the Congress President Subhas Chandra Bose being unavoidably absent. A vast concourse of students and the general public thronged the hall. Some notable non-Bengalis were also present.

The proceedings commenced with the singing of "Bande Mataram". It was followed by Mangalācharanam in Sanskrit by Mahāmahopādhyāya Phanibhushan Tarkavagish, an auspicious introduction in the form of a prayer for the attainment of success at the beginning of all undertakings.

Messages sent by the following persons

among others were read at the meeting: Rabindranath Tagore, Subhas Chandra Bose, Amarnath Jha (Vice-Chancellor of the Allahabad University), Srimati Sophia Wadia, W. C. Wordsworth, Sarat Chandra Bose, Karnatak Sahitya Parishat and Gauhati Sahitya Parishat.

An excellent inaugural address, instinct with fervent patriotic feeling, was delivered by Sriyut Syamaprasad Mukherjee, Vice-Chancellor of the Calcutta University.

He would like, said S. J. Mukherjee, to conclude his observations with one more remark. The chairman had suggested that the University should take the initiative in founding study circles among the student community for proper appreciation of Bankim's works. The chairman had also suggested that the University should organise a special examination on Bankim literature, at a nominal fee, in the month of Poush or Magh next. Those who would come out successful would receive certificates and he who would occupy the first place would be suitably rewarded. S. J. Mukherjee heartily supported the idea and hoped that there would be no difficulty for the University to accept the suggestion.

In conclusion S. J. Mukherjee prayed that the object of the celebration be crowned with success. Let no Bengalee think that he had paid his due tribute to Bankim's memory by a few days' celebrations. It would not be done until and unless the message of Bankim was preached in every hearth and home of Bengal and the Bengalee chose the proper path and built up his national life fearlessly, inspired by Bankim's message.

"Let Bengalees sink their differences, be united, be full of action and self-reliant without being dependent on any others. Bankim Chandra used to hate the coward Bengalee. If the Bengalee can stand up as a man, disregarding all obstacles, Bankim's blessings would be on Bengal and Bengalees would be able to rehabilitate themselves."—(*Amrita Bazar Patrika's* translation.)

The president, Sriyut Hirendranath Datta, then delivered his speech.

THE MODERN REVIEW FOR JULY, 1938

The creator of Bengali literature, observed S. J. Hirendranath Datta in the course of his address, the memory of Bankim would live for ever in the heart of the Bengalee race. Not only a novelist, Bankim Chandra was poet, philosopher, historian, litterateur, archæologist and theologian. In fact his genius, which hardly bore any parallel, embracing a number of spheres, had considerably enriched the Bengali literature.

Today, the speaker went on, Bankim centenary was being celebrated all over the province. It was not impossible that in many cases the celebrations would end with holding of meetings and exhibitions without leaving any lasting effect. But two things which had been undertaken by the Bangiya Sahitya Parishat were expected to be of permanent value. First, the Centenary edition of Bankim Chandra's entire works, of which *Kapal Kundala*, *Ananda Math*, *Dharmatattva* and *Vijnan Rahasya* had already been published. "Kamala Kanter Daptar" would soon be published. In that connection S. J. Datta referred to the munificent donation of Rs. 10,000 made for this purpose by Kumar Narasinha Malladev of Jhargram. Poet Rabindranath had wholeheartedly approved of the enterprise undertaken by the Sahitya Parishat.—*A. B. Patrika*.

The president also referred to the examination to test and reward knowledge of Bankim Chandra's works, already announced by the Vice-Chancellor. The Sahitya Parishat has come into possession of what at present remains of the great author's family residence in *Kānthālpārā*, near Naihati railway station. The Parishat will get the residence properly repaired and maintain it in good condition.

The poem which Rabindranath Tagore had specially composed for the occasion was read.

Srijukta Sarala Devi Chowdhurani related some personal reminiscences of the great author, as she had seen him about 50 years ago.

Srijut Ramananda Chatterjee made a very brief speech on the work done by Bankim Chandra as an editor and journalist.

Sir Jadunath Sarkar read a learned and convincing paper, enlivened with wit and humour, to show that Bankim Chandra was not anti-Moslem.

In the course of an article entitled "Bankim in the eyes of a non-Hindu," Maulvi Reza-ul-Karim, M.A., B.L., a noted Bengali publicist, expressed the opinion that Bankim as a man was greater than Bankim as a Hindu.

He had a great love for humanity. He felt for the humblest peasant. Today peasant movement was sweeping over the country. But fifty years ago he had written immortal words supporting their legitimate cause. He had advocated the cause of women. He had raised his voice against tyranny and oppression.

English literature without Shakespeare would dwindle into nothing. Similar was the case with the Bengali literature. Very little would remain if Bankim's contributions were left out. But it must be admitted that Bankim was greater than Shakespeare. Shakespeare did not solve any problems nor did he attempt to set up an ideal before his nation. But there was practically no problem which the great Bengalee had not dealt with. He had set up an

ideal before his countrymen which would never fail to inspire them.

Accusations might be levelled against him, said Maulvi Reza-ul-Karim, but Bankim was too great for those. He never cherished any hatred for the Muslim community. That was abundantly proved by the fact that he had never attacked Islam or its Prophet although he might have attacked certain Muslim individuals. It would be absolutely unfair to call it a hatred for the Muslims. For instance, his pen-picture of Aurangzeb could not be construed as an attack on the religion he followed. Besides that, historians were not unanimous on that point and it had not been proved that Bankim's version was wrong. He had depicted an age when tyranny, injustice and oppression reigned, and if he portrayed the oppressors, it was not because they were Muslims, but because they were oppressors.—*Amrita Bazar Patrika's* abridged translation.

Srijut Guru Saday Dutt, I.C.S., spoke next, making some telling remarks in his characteristic manner.

A Hindi poem was read. After the reading of summaries of some papers received from outside Bengal, the function came to a close for the day.

Reports of the second and third days' celebrations are summarized below from the *Hindustan Standard*.

Kānthālpārā, the birth-place of Bankim Chandra, was en fete on Sunday the 26th June, when a large number of literary men from Calcutta paid a visit to the place and held meetings in connection with Bankim Centenary celebrations.

The first batch of literary men, headed by S. J. Hirendranath Datta and Sir Jadunath Sarkar, reached Naihati station by the Chittagong Mail. Others who joined them later travelled by different local trains.

The visitors took great interest in going round Bankim Chandra's ancestral home and seeing things for themselves associated with his loving memory. Bankim Chandra's drawing-room where he composed his "Bande Mataram" and used to write for the *Bangadarshana* is located in a single-storied building and this became the centre of the greatest attraction on the occasion.

From Naihati station to Kānthālpārā the parties proceeded singing the "Bande Mataram" song, attracting large crowds on the way.

At 9 o'clock in the morning a large crowd collected in the compound of the house when a public meeting was held in celebration of the Bankim Centenary. S. J. Hirendranath Datta presided over the meeting. The speakers addressed the meeting at great length on Bankim Chandra's invaluable contributions to the cause of Bengali language and literature and also to the cause of Indian nationalism.

In the evening an exhibition of the early editions of Bankim Chandra's works, interesting documents in his hand-writing etc., was opened at the 'Ramesh Bhaban' attached to the Bangiya Sahitya Parishad Hall in the presence of a big gathering.

This was followed by a social gathering at the same place where recitations from Bankim Chandra's works were given.

Select scenes from Bankim Chandra's 'Kamalakanta' were also staged on the occasion.

The closing function of the centenary was marked by inclement weather. But,

NOTES

In spite of pouring rain a large gathering was present at Ramesh Bhaban in Upper Circular Road on Monday evening, 27th June, at the closing function of the Bankim Birthday Centenary Celebrations. S. J. Hirendranath Datta presided.

Messages were read from Babu Rajendra Prasad and Hon'ble Mr. N. Qanungo, Minister, Orissa expressing their sympathy with the organisers of the celebrations.

The proceedings commenced with the "Bande Mataram" song sung by S. J. Dilip Kumar Roy and his pupil Miss Uma Bose in a new tune.

This was followed by recitations and readings from Bankim Chandra's works, the singing of a song of Ramprasad's, the singing of a Kirtan composed by Bankim Chandra and of a humorous song by the same author.

Extending his hearty thanks on behalf of the Bangiya Sahitya Parishad to all those who had endeavoured to make the Bankim Birthday Centenary Celebrations a success, S. J. Hirendranath Datta hoped that these celebrations would at least result in inducing the young men and women of the country to read more closely Bankim Chandra's works. Bankim Chandra passed away at the age of 56, but during this comparatively short span of life he had succeeded in laying Bengali literature under a deep debt of gratitude to him by his priceless contributions, which had no parallel in the history of the literatures of the world. The speaker had endeavoured to have some knowledge of the principal literatures of the world and he could say this that the literature produced by Bankim Chandra would occupy a prominent place in world literature. He hoped that Bengalis would not deprive themselves of the priceless legacy which had been handed down to them. They would be raising their lives to a higher and nobler plane by reading the literature produced by Bankim Chandra. Bengalis had special reasons to be proud of the fact that they could claim Bankim Chandra as one of those born in their province.

"Bankim Parichaya"

In commemoration of the centenary of the birth of Bankim Chandra the Calcutta University has published a brochure, entitled "Bankim Parichaya", containing selections from the writings of the great Bengali novelist, with the purpose of acquainting the younger generation with the ideals he preached.

Bankim Chandra Chatterjee on Bengali Literature

It is not generally known that Bankim Chandra Chatterjee contributed an article on Bengali literature to *The Calcutta Review*, in 1871. Srijiut Manmathanath Ghosh, M.A., has enabled the *Hindusthan Standard* to re-publish it in its Bankim Centenary Number. We reproduce the concluding paragraph of the article below. Readers will bear in mind that it was written 67 years ago, and that during this period Bengali literature has made great strides.

But here must end our brief and imperfect sketch of Bengali literature—a literature which, with much that is

feeble and base and utterly worthless, yet has within it what may encourage no small degree of hope for the future. Its character is for the most part imitative, but what literature, save that of Greece, has ever been independent and original in its youth? Once and again has a voice from that holy land of beauty and truth awakened the torpid heart and mind of Western Europe. Horace himself, the most spontaneous and genuine of all the Latin poets, entertained no higher idea of originality than to make it consist in the importation of a new form of poetry from Greece. An imitator in those days meant an imitator of Latin authors—the imitation of Greek being almost implied in the excellence of any work. And when Europe woke again from the long sleep which followed on the dissolution of the Roman Empire, it was on the translation and imitation of Greek and Latin authors that its energies were employed. Is there no imitation in Dante himself? It may seem improbable that European ideas will ever really be assimilated by the people of India—that all we can effect here is a superficial varnish of sham intelligence. But everything cannot come in a day, and there was a time when it would have seemed almost equally improbable that the little remnant of intelligence preserved in the Latin Church, and the study of classical antiquity, would have grown into what we now see among the Celtic and Teutonic peoples of the West. The Bengalis may not seem to have the fibre for doing much in the way of real thought any more than of vigorous action; but it was chiefly among the supple and pliant Italians that the revival of learning in Europe began; and it is possible to imagine that the Bengalis—the Italians of Asia, as the *Spectator* has called them—are now doing a great work, by, so to speak, acclimatising European ideas and fitting them for reception hereafter by the hardier and more original races of Northern India.

The "Manchester Guardian" on Indian Federation Problems

The "Manchester Guardian" writes in the course of a leading article:

"Not for the first time there are rumours of some action by the British Government to clear up the obscurities in India's political future. Many of the sanest observers in India believe that there will be an opportunity this summer, such as has not been since the War and may not be again, to settle the relations between India and Britain in a peaceful and profitable manner."

"It is believed that Indian leaders are prepared to negotiate with regard to the Federal side of the Government of India Act, that there are suitable grounds for negotiations and that such negotiations stand a reasonable chance of success.

"This optimism is still tentative. It has received no official encouragement and it has been damped, if not drowned, by Lord Zetland's Bombay Dinner speech. There is a feeling that Lord Zetland was unnecessarily brusque. If Lord Zetland's statement means "take or leave it", India will certainly leave it.

"Lord Zetland and the Viceroy have to decide whether some radically new approach to the problems of Federation—new discussions and new understandings—are not immediately necessary. If they decide that there is no such need the whole Act may crumble and nobody would care to say what the state of things in India will then be.

"There is plenty of evidence from India that it will be worth England's while to reconsider Federation. It may be said that to suggest negotiations now ignores the rights and susceptibilities of the Princes. The future, however unpalatable it may be to some people and however the

circumstances may be used to avoid admitting it, must be thought of in terms of a self-governing India and immediately that means free and equal discussions of the difficulties."

Perhaps Lord Zetland's brusque tone was adopted deliberately in order that Indian leaders might not demand any radical changes in the government scheme of federation. He seemed just to give a condescending hint that suggestions for slight alterations in it within the framework of the government scheme might be considered. Whatever the real belief of British statesmen may be, they give themselves airs of being complete masters of the situation so far as India is concerned. They would have Indians believe that they (Indians) are completely at their mercy and that the federal scheme may or may not be changed just as suits the convenience of the British people and parliament. But Indians have been seeing Britain bending the knee again and again before non-Indian armed might. It may be that is just because Britain is not yet ready for a big fight. But her possible enemies, too, are not idle. They are keeping pace with Britain or perhaps outstripping her in the race for increased armaments.

Indians and the Government Scheme of Federation

As in the last great war, so in any future one, Britain must depend to a considerable extent on India's help. In the last war India helped Britain depending on the latter's good faith. In and after the hour of victory India found that she had been deceived. She is not going to be deceived again.

But the success of India's plans for winning the kind of federation she wants and freedom through or along with it, does not depend on the breaking out of a war of some great power or powers with Britain. In times of peace and by thoroughly peaceful means India can have her way. Not that Indians are spoiling for a fray, however peaceful, with Britain. They should know—many do—that they must be cautious, not over-confident, and must not indulge in bluff. But their leaders know India's great strength, too. And they will undoubtedly use it at the right time.

In the last resort, India may have recourse to civil disobedience; and it is not unthinkable that, when she does it next, the Indian sections of the services may adopt a helpful attitude, if not one of active participation.

But though we are not in the secrets of the Congress leaders, we have reasons to think that they are not at present thinking of the last re-

source. If the British Government do not modify their federal scheme in the way the Congress may suggest, the seven Congress cabinets in seven provinces and their adherents in the provincial legislatures may adopt means to make federation impracticable or at least very difficult to work. Such means are to be found in the Government of India Act itself. The Congress party in the remaining four provincial legislatures may co-operate with their fellows in the other seven, as far as they can.

Changes in the Federal Scheme to be Demanded

In the meantime, as early as possible, all parties in the country should formally inform the Secretary of State for India what changes they want in the federal scheme.

Who are the parties who should do it?

There are those who will work or may feel obliged to work—however reluctantly—the federal scheme even if no change in it be made. But that does not certainly mean that they are satisfied with it. So they also should tell Lord Zetland what changes they want.

It will not do to think or say that this has been done repeatedly before. No. Repetition is the soul of agitation. The Secretary of State is not going to turn research scholar or employ research scholars to ransack the files of Indian newspapers or even the files of the India Office to find out what changes in the federal scheme this Indian party or that may have suggested in the past. So they should tell him again what they want.

The Congress or a section of it may have already informally told him through Mr. Bhulabhai Desai. And Congress may say that they are not going to petition the British Government. But it will do, if after consultation with Gandhiji, a statement of the changes demanded be published in the press.

The other parties in the country, who will not care if they be accused of pursuing a "mendicant policy," may communicate to the Secretary of State the changes which they want. To name some of them—

The All-India Women's Conference; the Indian National Liberal Federation; the Hindu Mahasabha with its branches; the Sanatan Dharma Mahamandal; the Varnashram Swarajya Sangha; and other Hindu bodies; the Muslim League and other Muslim organizations; the All-India and Provincial Christian Associations; the Siromani Gurudwara Prabandhak Committee and other Sikh organizations, may

NOTES

place their suggestions before the Secretary of State. The various commercial, industrial, Labour and Peasants' organizations may similarly make their suggestions known.

The British Government will not accept any suggestion which runs counter to British policy, or unless driven to a corner, as it were. But that is no reason why we should moderate our demands or why the world should not be apprised of any particular demand. Attention is drawn below to a few important probable ones.

The Communal Decision must be scrapped, if Indians are to live as a nation and to govern themselves according to the principles of democratic self-rule. We have repeatedly stated our objections to it from the date of its publication, and notably in our presidential address at the All-India Anti-Communal Award Conference in Bombay, and need not repeat them. Congress has declared it anti-national and anti-democratic, and should feel bound to work for its scrapping if it wants its practice to be in consonance with its profession. It got a very good opportunity for getting it substantially altered, if not altogether scrapped, when it was called upon to consider if it would accept office in the Congress majority provinces. At that time Congress ought to have made the scrapping or substantial alteration of the Communal Decision one of the conditions on which it would be prepared to accept office.

Another opportunity has now come to demand a similar change. Congress should seize it.

It is owing chiefly, if not solely, to the Communal Decision that the political unity of India under British rule has been destroyed to a great extent. The *form* of government in all the provinces may at present be the same, but the spirit is of one kind in some and of the opposite or at least a different kind in the rest. Some are governed, as far as the law permits, according to Congress principles; others according to a different policy.

Therefore, if Congress principles are to triumph in the governance of the whole of at least British India, if all the provinces are to be Congress-ruled provinces, and if the political unification of the whole country is to be completed instead of being destroyed or retarded, Congress ought to work for the scrapping of the Communal Decision. With reference to it, scrapping is the maximum demand. **The minimum is that provincial minorities must be given the advantages which all-India minorities enjoy under it.**

.. Some of the other changes which should be

made in the British-made federal scheme are that there should be no dyarchy at the Centre, all subjects—including defence, foreign affairs, and the like, being placed under the charge of Ministers; that all items in the Budget should be votable; that the Chapter on Discrimination in the Government of India Act should be deleted; that the representation given to the Indian States should be proportionate to their population; that the members of the federal legislature representing the States should be elected by the people of the States, not nominated by their Rulers; that the Railways and other means of transport should be under the control of the legislature; and that the elections to the federal legislature should be direct but not through the provincial legislature.

Japan Fights China with Narcotics

It was reported some time ago that Japan intended to use poison gas in her war with China, and there were some wordy Occidental protests or rumours of protests, to which Japan was not likely to attach any importance. Meanwhile another kind of poison is being used by Japan in order to unman and dehumanise the Chinese. The following account of it is given by the No-Frontier New Service of America:

London (NNS).

....For many months reports have been coming from China that the narcotics situation in China is becoming steadily worse, due to the sale of poisonous drugs by Japanese and Korean traders protected by extraterritoriality. Muriel Lester, well-known British crusader for peace and social justice, thereupon went to China to investigate a situation which she had previously studied in China. Her report of conditions is, to say the least, alarming.

The Nanking Government had ordered a vigorous fight against the traffickers and users of heroin and morphine by fixing the death penalty for salesmen and incurable addicts. All of this work has now being nullified by the Japanese, apparently for the purpose of demoralizing the Chinese population and making it unfit to fight the Japanese invaders.

The Japanese themselves no longer carry on this trade but have transferred it to Korean agents who operate under Japanese protection. These drug salesmen operate openly through countless "joints" and Muriel Lester encountered no difficulty whatever in purchasing the demoralizing narcotics in a dozen different places.

In Peking many small clinics have been opened by the Japanese which advertise the various diseases which they cure. These are nothing but drug dispensaries which take this way of operating since the "joints" were closed up. At village fairs similar clinics have been set up which promise to cure tuberculosis and other diseases. They dispense nothing but heroin and morphine and when the patient returns feeling worse after his first treatment he is told to persist in the use of the "medicines" sold to him.

Drug pedlars in large numbers follow the Japanese

armies and go to work on the Chinese population in the conquered territory. A foreign Christian remonstrated with Korean drug runners and asked them: "Why do you come to China?" "We were sent here", was the reply. "Why do you ply this trade?" "That was the part assigned to us", they explained.

Insulting and Humiliating China's Womanhood

Japan has bombed many places in China from the air, killing thousands of women, children and non-combatant men and wounding, maiming and disabling larger numbers of the civilian population. China is a vast and densely populated country. The death of even a few millions will not depopulate it. Yet, massacre is massacre everywhere, and cannot but be felt as a cruel blow.

But worse far than the slaughter of innocents are the outrage and humiliation, worse than death, to which girls and women are being subjected in some areas in China. They are being stripped naked and compelled to expose themselves while being photographed by Japanese cameramen in this condition. We have received photographs from a reliable source, showing girls and women in this condition. They are not fit for reproduction, nor have they been sent to us for that purpose. They were meant to be seen by the Congress President, to whose Calcutta address we sent them on June 11 from Ghatsila in a registered closed cover, containing a covering letter and some appeals for help on behalf of China.

Appeals For Help to China

China stands sorely in need of medical and other help, as the documents sent through us to the Congress President show. Other documents are expected early and will be forwarded to him as soon as received.

Disastrous Floods in China

Coming on top of the destructive war waged by Japan in China, the recent floods have caused a havoc which is staggering in its immensity. More than a hundred thousand have been swept off and many times that huge number have been thrown into dire distress. Chiang Kai-shek and other Chinese leaders remain undaunted in the face of this calamity. If the floods have in any way embarrassed the Japanese armies, they may be considered as a kind of natural help received unexpectedly by the Chinese.

Their patriotism and firm resolve are beyond all praise.

Pandit Jawaharlal Nehru in Spain

As one who has been thrice president of the Indian National Congress and who throughout his political career, whether in office or not, has been enthusiastically active in the cause of India's freedom and independence, Pandit Jawaharlal Nehru is sure to be accorded a very warm reception by all lovers of liberty wherever he may go. Such has been his reception in Spain. He has been quite close to the front in that country. He has been struck by the calm fortitude of the people and the regular and methodical way in which they have been going about their daily work though exposed to imminent danger. The republican government of Spain appeared to be sure of ultimate victory, and he shares their confidence. The Spanish Government, he thinks, has now a better army than at the beginning of the war.

Gandhi-Jinnah Correspondence

The Gandhi-Jinnah correspondence has been published. We have read all the letters, but now know no more of what Mr. Jinnah wants for the Muslim community than we did before we read them. What he wants for himself and the Moslem League, we could guess before reading these letters, and the correspondence confirms that guess. He wants the Moslem League to be considered the sole representative organization of the whole Mussalman community and to be considered equal to the Congress. He wants himself to be recognized as *at least* as great a leader as any other Indian leader.

Gandhiji's letters make distressing reading.

Jinnah-Nehru Correspondence

The letters which have passed between Mr. Jinnah and Pandit Jawaharlal Nehru in connection with what has come to be known as Unity Talks, have been published in the press. Their publication has been pronounced unauthorized by Sardar Ballabhbhai Patel and Maulana Abul Kalam Azad. The News Agency which was responsible for their publication has offered a public apology for their publication and explained how it came about. Mr. Jinnah has characterized it as a breach of confidence. Technically, perhaps, all these three politicians may be right. But we do not see what harm

NOTES

has been done by the public coming to know what actually passed between Mr. Jinnah and Pandit Jawaharlal. On the contrary, the correspondence must have led even many Congressmen to wonder why after the receipt of so many non-committal letters from Mr. Jinnah, the Congress High Command continued to cherish any hope of a settlement with the Moslem League, or, what is the same thing, with Mr. Jinnah. Those whose attitude towards the Congress is friendly admire the optimism of the Congress High Command. What critics of the Congress think need not be investigated by us. We have been struck by Pandit Jawaharlal Nehru's extreme courtesy and his continued effort not only not to give offence to Mr. Jinnah but also to be as forbearing and accommodating as possible. He was also able to suppress the least inclination to take offence even when it would not have been unnatural or unjustifiable to do so.

Mr. Nehru's observations on Mr. Jinnah's fourteen points are fair, clear and convincing.

Sardar Ballabhbhai Patel has expressed the view that the Congress High Command know best when to publish documents of public interest. Certainly, when they are in exclusive possession of such documents, they are the best judges when and how to publish them. But all newspaper editors are not to be presumed to be irresponsible men, not competent to decide what ought or ought not to be published in the public interest. Any correspondence of Congress leaders relating to public matters, not marked confidential, may be published in newspapers without any reference to the Congress High Command; if the editors think such publication to be in the public interest, or at least not likely to affect such interest prejudicially. None of the letters included in the Nehru-Jinnah correspondence was marked confidential.

Many influential and respectable newspapers have published even confidential state documents and have sometimes rendered public service thereby. And sometimes these newspapers have not been very scrupulous as to the means adopted for getting hold of these documents.

The Gandhi-Jinnah and Jinnah-Nehru letters were not state documents and were not marked confidential. Nor were they of a private or personal character.

We think their publication has promoted the interest of the country, though the time and energy spent on them could have been used to better purpose.

A Suggested Preliminary to Unity Talks

In the current number of *Prabasi*, published on the 15th June last, we have suggested that instead of allowing Mr. Jinnah to press the Congress to recognize the Moslem League as the sole Moslem organization representative of the entire Mussalman community, Congress might and should have asked all Moslem representative bodies, including the Moslem League, to settle among themselves first which Moslem body, if any, was to be considered as representative of the whole community. But if they thought that no single body represented the whole community, then the next thing for the Congress to do would have been to ask all these Moslem bodies to choose their representatives—one each, and Congress could have carried on negotiations with these representative Mussalmans.

Mr. Jinnah's and Moslem League's Representative Character

Congress could not have recognized the Moslem League as a body and the only body representing the entire Muhammadan community. Such recognition would have been based on an obvious falsehood, and it would have been suicidal on the part of Congress. It is a national, not a communal, organization. Its recognition of the Moslem League as the sole representative of the entire Muslim community of India would have meant that it had no right to enrol Moslem members and consequently that the Moslem members already on its rolls had no business to be there. This would have gone against the national character of Congress. It would have been reduced to the position of an organization of a somewhat communal character entitled to have only Hindu and other non-Moslem members. But its right to enlist even these latter was subject to Mr. Jinnah's challenge; for he wanted Congress to declare that it was negotiating with him on behalf of the Hindu community.

As a matter of fact many Moslem bodies and many notable Mussalmans have denied the Moslem League's sole representative character.

Equality of Congress and Moslem League

Mr. Jinnah has all along been insisting that Congress should always carry on conversations with the Moslem League on a footing of equality. It can be treated as a just demand if it means that Congress was not to dictate to the Moslem League, that the latter would be perfectly free

to offer any terms of settlement it liked, and that it would also be perfectly free to accept or reject any terms offered by Congress. But it is not true in the ordinary sense or senses that the Moslem League as an organization is equal to Congress as an organization.

Congress is a national, non-communal organization, drawing its members from all the races and religious communities inhabiting India and from all classes of them. The Moslem League is a communal organization, enrolling only Moslems as members.

Congress can enrol members from the more than 350 million inhabitants of India. The Moslem League can enlist members only from the Indian Muslim community some 80 millions strong.

Congress claims to have more than 30 lakhs of members. The Moslem League has not perhaps as many hundred members, and certainly not as many thousand. It is said the Moslem members of Congress alone number more than a lakh.

Congress has from the very beginning striven for the good of all Indians and for the freedom of the whole of India—of all Indians. Its political goal was for long freedom of the kind enjoyed by the British Dominions, but latterly it has been independence. The Moslem League has only recently verbally accepted India's independence as its goal.

Numerous members of Congress have made great sacrifices and undergone great sufferings, many dying in the process, in order to bring India nearer the goal of independence. The Moslem League has done nothing of the kind.

Congress has set its heart particularly on the economic and other welfare of the masses of India, irrespective of their creed and caste, and the Congress ministries in the seven provinces under their charge have been striving by legislation and other means to further this object. The Moslem League has not identified itself either in word or deed even with the Moslem masses—not to speak of the Indian masses in general.

The difference between Congress and the Moslem League can be further elaborated. But more need not be said to show the utter absurdity of Mr. Jinnah's demand that the Moslem League should be recognized as equal to Congress—except, of course, in the limited sense explained in the first few lines of this note.

No organization which is communal, in any sense, can be treated on a footing of equality by Congress except in that sense.

Mr. Subhas Bose's Reaction to "Manchester Guardian's" Comments

Mr. Subhas Chandra Bose, Congress President, said in the course of an interview with a press representative on the 22nd June last in connection with the comments of the *Manchester Guardian* on the problems of Indian Federation:

"India will never accept any ties with Great Britain which may be forced on her against her will. But she may contemplate friendly and cordial relations with the latter through a treaty voluntarily signed by her."

He continued:

"I must say at the very outset that I do not know of any Indian leaders being prepared to negotiate with regard to the federal side of the Government of India Act. I had made it clear more than once that mere amendments of the Government of India Act will not meet the demands of the Indian people. What they stand for is the substitution of the Act by a constitution framed by the Indian people through their representatives.

"The framing of such a constitution need not be such a difficult task as some may be disposed to think. To use the words of the *Manchester Guardian*, what is wanted on the British side is a 'radically new approach'—not merely to the problems of federation but to the problem of India as a whole. That radically new approach will consist, as suggested by the *Guardian*, in visualising the future in terms of a self-governing India by which I mean free India. If the British Government can treat the Indian people as a free nation, it should not take more than 24 hours to settle the outstanding differences between India and Great Britain.

"I do not say this in a light-hearted manner. I am fully conscious of the many thorns in the path of Indo-British conciliation, but what I am urging is that once the Indian people acquire the status of a free nation, they or their representatives will not take long to make any adjustments which may be found necessary to establish a lasting peace and good-will between the two countries.

"As I have made it clear before I am not opposed to the idea of federation as such; rather I believe that free India will have a constitution that will be federal in character. But that federation cannot grow out of the present federal scheme. It must be an entirely new constitution to replace the latter."—(A. P. I.)

Mr. Bose has said that he does not know of "any Indian leaders (he meant, most probably, of the Congress party) being prepared to negotiate with regard to the federal side of the Government of India Act." We cannot pretend to know more. Whether he has come to know of any such leaders during his recent visit to Segaon and Wardha after his East Bengal tour, has not yet been published. What we presume is that the resolution passed some time ago by the Madras Assembly suggesting that the Government of India Act should be amended in consultation with Indian leaders to make federation workable, taken with Mr. Bhulabhai Desai's recent visit to England, makes it probable that there are leaders who may not be

unwilling to take part in the kind of negotiations referred to by Mr. Bose.

He has spoken as a thoroughgoing nationalist and independentist. We quite appreciate his point of view. The principles underlying his observations should not be lost sight of. Their repetition is necessary to gain his object. But in practical politics the point of view of those who may be for a temporary compromise with the upholders of imperialism requires also to be taken into consideration. What we mean is that just as there are numerous Congressmen (not to speak of others) who are entirely against the Communal Decision but who have nevertheless acquiesced in its practical temporary acceptance by Congress, and just as there are members of Congress who were and still are opposed in theory to the acceptance of office but who have ceased to oppose it in practice and are directly or indirectly working the provincial part of the Constitution on certain conditions, so there may be those who may agree to the working of the federal part of the constitution for the time being, if certain changes in the Government scheme were made.

This may be "reformism". But as Congress has adopted reformist strategy with regard to so-called "provincial autonomy", it may adopt that sort of tactics with regard to federation also. Gandhiji's declaration that the parliamentary mentality has come to stay, may smack of reformism, but his political goal remains the same as it was when he was an active leader of civil disobedience in practice.

Mr. De Valera followed revolutionary methods when they were practicable. He has been following reformist methods since some time past. But his goal, his ideal, remains unchanged.

The Defence of India

The Guardian of Madras is right in observing:

At no time in the history of the British connection with India has the defence problem assumed such importance as today. In the past it was assumed that the arm of the British Navy was long enough and strong enough to protect her shores. But in a modern war, as it will be waged, the Navy's strength has been very largely discounted by aircraft. Many Indians are asking the question whether India can defend herself in the event of a war say by Japan against Britain. The answer cannot be doubtful for a moment. She is absolutely helpless and the British Navy will find itself fully occupied in the European waters. Every Indian politician is conscious of this dreadful possibility but thinks that Providence will interfere on her behalf. The Hon. Mr. Srinivasa Sastri had this desperate position of India in mind when in his concluding speech after Mr. F. E. James' platitudes,

he reproached Great Britain for her neglect of India's defence. Britain's want of confidence in Indian nationalists is likely to take not only India but herself to the verge of disaster, if not irremediable ruin.

The New-Old Bengal Cabinet

Mr. Fazlul Huq, Bengal's chief minister, wanted to get rid of Mr. Nausher Ali, one of his colleagues, and in this he had the support of his other colleagues. He called upon Mr. Nausher Ali to resign. This the latter refused to do. So the device was adopted of the chief minister and nine of his colleagues resigning in a body. Then Mr. Nausher Ali, too, resigned. The resignations were accepted, and the Governor of Bengal (Lord Brabourne, at present officiating Governor-General) now asked Mr. Fazlul Huq to form a cabinet. He, of course, formed it with his faithful nine.

The correspondence between the chief minister and Mr. Nausher Ali has been published in the press. There are also additional statements and counter-statements, and that not by these men alone. We do not want to discuss who was wrong or who was right, or whether all were to blame. It is not necessary in the public interest to do so.

The work of the Bengal Cabinet has not given the least satisfaction to the **Bengal public**. Mr. Fazlul Huq's outbursts have evoked comments which need not be repeated. In calling upon the same Mr. Fazlul Huq to form a cabinet, Lord Brabourne has shown that he does not care a straw for public opinion. Or perhaps he was nonplussed by the situation and in his hurry to take charge of his new (temporary) office, he had recourse to the easiest device. We cannot, of course, suggest the name of any person whom he might have asked to form a cabinet. But he had an opportunity to at least try to give Bengal a better ministry. He failed to avail himself of it.

Mahatma Gandhi's Suggested Peace Brigade

Mahatma Gandhi has contributed to *Harijan* an article on "A Peace Brigade" whose members would be expected to risk their lives in dealing with riots, especially those of a communal character. His idea is that this brigade should be a substitute for the police and even for the military. "This reads ambitious. The achievement may prove impossible." "Yet," says he, "if the Congress is to succeed in its non-violent struggle, it must develop the power to deal peacefully with such situations."

Communal riots are engineered by politically-minded men. Many of those who take part in them are under the influence of the latter. Surely it should not be beyond the wit of Congressmen to devise a method or methods of avoiding ugly communal situations by peaceful means.

I say this irrespective of whether there is or there is not a communal pact. It cannot be that any party seeks to force a pact by violent means. Even if such a pact were a possibility, it would not be worth the paper on which it might be written. For, behind such a pact, there will be no common understanding. What is more, even after a pact is arrived at, it would be too much to expect that there would never be any communal riots.

Gandhiji states the qualifications a member of the contemplated Peace Brigade should possess.

(1) He or she must have a living faith in non-violence. This is impossible without a living faith in God. A non-violent man can do nothing save by the power and grace of God. Without it, he will not have the courage to die without anger, without fear, and without retaliation. Such courage comes from the belief that God sits in the hearts of all and that there should be no fear in the presence of God.

The knowledge of the omnipresence of God also means respect for the lives of even those who may be called opponents or *goondas*. This contemplated intervention is a process of stilling the fury of man when the brute in him gets the mastery over him.

(2) This messenger of peace must have equal regard for all the principal religions of the earth. Thus, if he is a Hindu he will respect the other faiths current in India. He must, therefore, possess a knowledge of the general principles of the different faiths professed in the country.

(3) Generally speaking, this work of peace can only be done by local men in their own localities.

(4) The work can be done singly or in groups. Therefore, no one need wait for companions. Nevertheless, one would naturally seek companions in one's own locality and form a local brigade.

(5) This messenger of peace will cultivate through personal service contacts with the people in his locality or chosen circle, so that when he appears to deal with ugly situations he does not descend upon the members of a riotous assembly as an utter stranger liable to be looked upon as a suspect or an unwelcome visitor.

(6) Needless to say, a peace bringer must have a character beyond reproach and must be known for his strict impartiality.

(7) Generally, there are previous warnings of coming storms. If these are known the Peace Brigade will not wait till the anticipated conflagration breaks out.

(8) Whilst, if the movement spreads, it might be well if there are some wholtime workers, it is not absolutely necessary that there should be. The idea is to have as many good and true men and women as possible. These can be had only if volunteers are drawn from those who are engaged in various walks of life but have leisure enough to cultivate friendly relations with the people living in their circle and otherwise possess the qualifications required of a member of the Peace Brigade.

(9) There should be a distinctive dress worn by the members of the contemplated Brigade so that in course of time they will be recognised without the slightest difficulty.

These are Gandhiji's general suggestions. He thinks each centre can work out its own constitution on the basis suggested in the article.

He adds a few words of warning:

Lest false hopes should be raised, I must warn workers against entertaining the hope that I can play any active part in the formation of Peace Brigades. I have not the health, energy or time for it. I find it hard enough to cope with the tasks I dare not shirk. I can only guide and make suggestions through correspondence or through these columns. Therefore, let those who appreciate the idea and feel they have the ability, take the initiative themselves. I know that the proposed Brigade has great possibilities and that the idea behind it is quite capable of being worked out in practice.

Non-violence as a Weapon of Defence

Dr Kalidas Nag on his way back from Poona to Calcutta last month broke journey at Wardha to see Mahatma Gandhi. In the course of the conversation the question was asked whether non-violence could be used as a weapon of defence. Dr. Nag wished some day Gandhiji could work out the formula of non-violence as a means of defence. Mr. Mahadev Desai has given an account of the interview in *Harijan*. He writes:

"What, for instance, can China do?" he asked. I ventured to reply that the answer had already been given. I said he would offer the same advice as he had offered to Abyssinia and that whereas it seemed impossible for Abyssinia to accept the advice, it should not seem impossible in case of China. For China could afford to sacrifice a few million people on the altar of non-violence. Flood and famine periodically decimate vast tracts of China. Why not offer a voluntary sacrifice of millions? That would stagger even the violence-ridden humanity.

Mr. Desai has given an extract from what Gandhiji wrote in *The Cosmopolitan* of New York three years ago, concluding with the sentence:

"If one great nation were unconditionally to perform the supreme act of renunciation, many of us would see in our life-time visible peace established on earth."

With every desire to believe that it is possible to have universal peace on earth and freedom for all countries we want light to see whether this supreme act of renunciation would enable the nation to keep its freedom.

Without knowing what Gandhiji wrote in *The Cosmopolitan* we could imagine that it was possible for some great nation to perform this great act of sacrifice. We wrote in our notes in the last May number, page 601:

"We can imagine that for the promotion and realization of the ideal of non-violence by nations in their collective capacity, some nation may have to risk its independence and even lose it. But such supreme sacrifice, to be genuine and effective, must be made by a powerful and brave nation."

The Will to Violence

While Gandhiji has been trying to convince people that non-violence is desirable and

possible in all intra-national and international relations and affairs, there are influences and forces in India making for violence.

For example, at a recent conference of political workers in Jessore, so much violence was used that, not to speak of those who sustained more or less serious injuries, a boy of 15 or 16 actually died in hospital in consequence of *lathi*-blows received on his head.

In the *Pioneer* of June 4 last there is a report of the proceedings of a Youth Conference at Unao, U.P. There an ex-Kakori case prisoner, in the course of a speech "condemned the Congress ministries and strongly criticized the policy of non-violence, as he thought that Swarajya could not be attained by that method." We had read in the papers that the Kakori prisoners had been released on the understanding that they had become disbelievers in violence—that in any case they would not preach violence. Is the *Pioneer's* report correct? Here is an extract from that report.

From early morning *kisans* armed with lathies and red flags began to pour into the city in pursuance of the declaration of the conveners of the Conference that prizes would be given for the best lathies.

Inflammatory speeches condemning Congress ministries and criticizing Mahatma Gandhi's policy of non-violence, were delivered.

The report adds that a big procession, in which communist leaders with red flags took the lead, "paraded the streets of the city with slogans," and the slogans were, *lathi zindabad* ("Long live *lathi* or cudgel"), *sircar ka nash ho* ("May Government perish"), etc.

"Progress of the Sino-Japanese Conflict"

The mid-May number of *Foreign Policy Reports* concludes with the following paragraph:

Notwithstanding the possibility of a sudden collapse of organized Chinese resistance, the prospects for a stalemate appear to be increasing. Even if the Chinese Government should be driven back from the coast and from Hankow, it may conceivably succeed in organizing an almost self-sufficient semi-military state in the unconquered interior which would be an important source of resistance to Japan. And whatever the fate of the Chiang Kai-shek regime, Japan's civilian and military leaders openly state that it will be years before Chinese opposition can be completely eradicated from the areas now held by its armies. Meanwhile, the first flush of war enthusiasm in Japan is being displaced by the grim realization that the nation faces a period of extreme economic and political strain. The local incident of July 7, 1937, has thus become the prelude to a fateful war in the Far East.

Muslim Marriage Law

Sadhana of Cocanada, writes:

A Bill to consolidate the provisions of the Muslim Law relating to suits by married Muslim women for

dissolution of marriage and to remove doubts as to the effect of apostasy of a married Muslim woman on her marriage was discussed before the Central Legislative Assembly at the instance of Mr. Kazim whose motion for circulation of the Bill received Government support. But the Hon'ble Sir N. N. Sircar, the Law Member of the Government of India, while according his support for the motion for circulation pointed out the serious aspect of the Bill.

He said that the position, if the Bill became law, would be "to enable a Muslim woman to retain the marital tie with her husband. It has been held by High Courts that if a Hindu wife became a Muslim she was entitled to call on her Hindu husband to embrace Islam and if he refused, she could get the marriage dissolved. But if she married a Muslim husband and then reconverted herself to Hinduism, then according to the Bill, she had no right to dissolve the marriage with the Muslim husband. The Muslims thus would have it both ways and it might be regarded as a hardship by other communities." We hope that if the Bill is to be finally passed into law, it would be relieved of such objectionable features as would be felt as hardships in the practical working of it, by one community or the other.

"Vive la roti" or "Roti Zindabad"

The *Living Age* for June gives a translation of an article in *Vendredi*, a Paris weekly, on the writings on the walls of the public buildings and subways of Paris. These are written by street urchins, soldiers off duty, etc. A passage is quoted below.

Godfrey and I made a little survey of the Parisian inscriptions. 'What can be the meaning,' Godfrey asked me, stopping before the Pavilion of Flowers, 'of *Vive le roti*, (Long live the roast)? I have read this inscription very often and I must confess that I don't understand this culinary enthusiasm.'

'It is only a *Vive le Roi*, the slogan of the French Royalists, which has been tampered with slightly,' I explained. 'The *i* has been made into *t* and another *i* has been added. Almost all the *Rois* in France have been changed into *Rotis*.'

"Roti" in Hindi, "Ruti" in Bengali, means bread. So in our country the hungry masses may adopt the slogan, "Roti Zindabad" or "Long live bread"!

Rabindranath Tagore's Message to China

The following is the full text of Rabindranath Tagore's message to the people of China, which was sent to them through Professor Tan Yuan-Shan, Director of the Sino-Indian Cultural Society, at Visvabharati, and which has been recently handed to Marshal Chiang Kai-shek and broadcast all over China at his desire:

"Your neighbouring nation, which is largely indebted to you for the gift of your cultural wealth and therefore should naturally cultivate your comradeship for its own ultimate benefit, has suddenly developed a virulent infection of imperialistic rapacity imported from the West and turned the great chance of building the bulwark of a noble destiny in the East into a dismal disaster. Its

loud bluster of power, its ruthless orgy of indiscriminate massacre of life, demolition of education centres, its callous defiance of all civilised codes of humanity, has brought humiliation upon the modern spirit of Asia that is struggling to find its honoured place in the forefront of the modern age. It is all the more unfortunate, because some of the proud powers of the West, tottering under the burden of their bloated prosperity, are timidly condoning the blood-shedden politics of the standard-bearers of their own highly reputed civilization, humbly bending their knees at the altar of indecent success that has blasted some time-honoured citadels of sacred human rights.

"At this desperate age of moral upset it is only natural for us to hope that the Continent which has produced the two greatest men, Buddha and Christ, in the whole course of human events, must still fulfil its responsibility to maintain the purest expression of character in the teeth of the scientific effrontery of the evil genius of man. Has not that expectation already shown its first luminous streak of fulfilment in the person of Gandhi in a historical horizon obscured by centuries of indignity? However, Japan has cynically refused its own great possibility, its noble heritage of 'bushido' and has offered a most painful disillusionment to us in an unholy adventure, which through even some apparent success of hers is sure to bend her down to the dust, loaded with a fatal burden of failure.

"Our only consolation lies in the hope that the deliberate aggression of violence that has assailed your country will bear a sublime meaning in the heroic suffering it causes in a promise of the birth of a new soul of the nation. You are the only great people in the world who never had the snobishness of extolling the military power as one of the glorious characteristics of national spirit, and when the same brute force of militarism with its hideous efficiency has overtaken your country, we pray with all our heart that you may come out of this trial once again to be able to justify your trust in the true heroism of higher humanity in this cowardly world ready to prove traitor to its own best ideals. Even if a mere physical success be immediately missed by you, yet your moral gain will never be lost and the seeds of victory that are being sown through this terrible struggle in the depth of your being will over and over again prove their deathlessness."—(*United Press*.)

King Farouq To Be Caliph ?

Since the overthrow of the Sultanate of Turkey the Islamic world has had no Caliph. The problem of the Caliphate has been revived in Egypt. King Farouq of that country is an aspirant to that high office. It is said that Turkey, Iran, Iraq, Yemen and other Arabian States have no objection to recognize him as Caliph and that Afghanistan and some other Muslim states are to be shortly consulted. We are under the impression that it is only a fully independent and very powerful Mussalman monarch who can be Caliph. If this impression be correct, does the young Egyptian King answer to this description?

Hindu Women's Right of Divorce Bill

Dr. Deshmukh has given notice of introducing his Hindu Women's Right of Divorce Bill in the Central Legislature. It reads as follows:

PREAMBLE

Whereas it is expedient to give a Right of Divorce to Hindu women under certain circumstances, it is enacted as follows :—

This Act may be called the Hindu Women's Right of Divorce Act of 1938.

It shall apply to the whole of India (British). It shall come into force on—.

RIGHT OF DIVORCE

Notwithstanding any custom or law to the contrary a married Hindu woman shall be entitled to claim a Divorce from her husband under the following circumstances :—

If her husband acquires impotency, any time after the marriage, which is incurable;

or, If her husband changes his religion;

or, If her husband marries a woman, while the first marriage is in force;

or, If her husband has deserted her for a continuous period of three years.

AIMS AND OBJECTS

Cases are occurring frequently in India in which a married Hindu woman's life is made unbearable under circumstances brought about by her husband. The Bill aims at removing some of these, recognising that a Hindu wife has a human personality.

Some bigamous or polygamous husbands may be only too eager to get rid of their first wife or wives. So, the Bill should provide that, until and unless a wife who has obtained a divorce under the proposed law actually remarries after divorce, the husband shall remain liable to maintain her according to his pecuniary position.

Hindu Monogamy Bill

Seth Govindlal S. Motilal intends to introduce the following Bill in the Central Council of State:

Whereas it is expedient to forbid and declare illegal a marriage contracted by a Hindu with another woman in the lifetime of his wife, it is hereby enacted as follows :—

1. (i) This Act may be called the Hindu Monogamous Act of 1938.

(ii) It extends to the whole of British India and shall come into force on such date as it receives the assent of the Governor-General.

2. Notwithstanding any rule of Hindu Law or custom, contrary to or inconsistent with this Act, a marriage contracted by a Hindu with another woman in the lifetime of his wife, shall be void and the provisions of Section 494 and 495 of the Indian Penal Code shall apply to such a marriage.

Provided that this section shall not apply to a marriage contracted by a Hindu, where, by law or custom, dissolution of marriage is permissible and has been granted by competent authority.

3. The provisions of this Act shall apply to a Hindu even after his conversion to another religion.

STATEMENT OF OBJECTS AND REASONS

Although polygamy has been looked upon with disfavour by Hindu jurists and society, the Hindu Law does not prevent male persons from marrying any number of wives irrespective of their having one or more wives alive.

Flagrant cases of the abuse of this liberty given to men under the Hindu Law have come to light during recent years. In order to prevent the growth of such an evil, it is desirable to restrain polygamous marriages among Hindus by law.

Mr. Nehru at British House of Commons

At a reception given to Pandit Jawaharlal Nehru at the House of Commons, London, on June 23, he emphasized that there was a great development in India's interest in foreign affairs, and said that India had come to realize that Indian problems were part of world affairs and much that happened abroad had reactions in India.

The feeling in England two and a half years ago was that the Indian question had been settled. That feeling was based on an erroneous conception, because the Indian question to-day was bigger than it had been at any time in the past. There were at the moment enormous potentialities for good or evil. India was passing through a period in which the forces of conflict were not obvious—there was no civil disobedience, etc.,—but beneath the surface there was great tension and the feeling that great changes must come.

India was not opposed to Federation on principle, but only to the type of Federation envisaged in the Government of India Act.

Replying to questions Mr. Nehru insisted that he was not in England on any special mission.—*Reuter*.

No Peace Yet in Palestine

Palestine is still far from being quiet.

Jerusalem, June 24.

A sudden clash of Jews and Arabs occurred last night on the borders of Jaffa and Tel-Aviv. The official estimate of casualties is that two Arabs were killed and five others wounded. One Jew was dangerously wounded, and three others were seriously injured.

Both sides accuse each other of provocative attack in a busy market. A street fight ensued in which revolvers and daggers were freely used. A Jewish settler was seriously wounded at night time, while helping to defend a Jewish village near Jordan.

Three Jews were kidnapped by a large Arab gang while returning home after hay-making near a village in south Haifa.—*Reuter*.

Congress and the Zamindari System

During his tour in East Bengal one of the questions which Mr. Subhas Chandra Bose, Congress President, had to answer was whether Congress would abolish the zamindari system. He said that no decision to abolish it had been arrived at.

The other day at a meeting of the Congress party of United Provinces Legislature, held at the committee room of the secretariat at Lucknow the same question was raised. Pandit Govind Ballabh Pant, the Chief Minister, presided. The majority of the members of the party

were against the abolition of the zamindari system.

C. P. Government to Restore 60 Per Cent Wage-Cut

The C. P. Government have announced their decision on the recommendations of the C. P. Textile Labour Enquiry Committee.

The Government have accepted the recommendation for a 60 per cent uniform restoration in the wage-cuts of textile workers, which has been in force since 1934 and have commended to the employers and the workers for acceptance of the same.

This recommendation, which the Government has accepted, was made by the majority of the Labour Enquiry Committee.

The Labour Committee was unanimous in recommending that an increase should be introduced with reference to wages earned from May 1 last, except in the case of Empress Mills, Nagpur, the management of which is committed to grant increases with effect from February last.

Labour Strikes in Various Places

While the Labour strike at Cawnpore has received the largest amount of public attention, there are serious strikes in other places in other provinces, too. Everywhere the condition of the workers admits of great improvement. This nobody will deny. To what extent the wages of the labourers can be raised without decreasing the profits of the employers to such an extent as to leave no incentive for investing capital and facing risk of loss, cannot be decided in the lump for all industries in all places. The circumstances relating to each particular industry in different localities must be taken into consideration. As there is no state socialism or any other kind of socialism in the industrial sphere in India, the profit motive cannot be eliminated if the country is to be industrialized.

While capitalists must be prevailed upon or obliged by law to raise the material condition of their employees as much as practicable, the advocates of Labour and the Labourers themselves must bear in mind the comparatively low level of the material condition of the mass of the population in the country. However poor the remuneration of workers in mills and factories, their income is generally higher than that of our peasants, as no doubt it ought to be. So the return of the mill and factory hands to their villages owing to the closing of any mill

or factory because of strikes cannot lead to any improvement in their material condition but rather to its deterioration.

We do not write in this vein to even indirectly wink at sweating and profiteering, but only to induce in the minds of both capital and labour a reasonable spirit of compromise—of give and take, it being understood that generally speaking it is capital which is in a position to give.

Romain Rolland on India's Role in The World Crisis

About the beginning of this year Mr. Syamaprasad Mukherjee, Vice-Chancellor of the Calcutta University, sent an invitation to M. Romain Rolland on behalf of the University to give a series of lectures in Calcutta under its auspices. Mr. Mukherjee has received the following reply from the great French novelist, idealist and intellectual:

"I am grateful for the honour the University of Calcutta has done by inviting me through you to deliver lectures at Calcutta. I am so very pleased to get the invitation, which means visiting your dear country, which I love and honour. Unfortunately, as my present state of health cannot stand the long voyage and the sudden climatic change, I cannot accept your invitation. I am really very sorry for this.

"In the world crisis, it is in India I repose my absolute faith for the emancipation of the human race, and the thought of her awakening fills me with delight. Please convey to the Syndicate of the University my gratitude and my regret for inability to accept the invitation."

In times past India produced men and women fit to take a leading part in the world's emancipation. Their spirit is still an inspiration to Indians and others who know them. In our times also there have been and still are a few persons who belong to this band of emancipators.

But if India is to effectively play the part which M. Romain Rolland expects her to play, she must herself be emancipated not only politically but also in spirit. Her children must purge themselves of sectarianism, fanaticism and provincial narrowness, as well as of crass materialism and lust of the flesh.

India's Role in World Politics

This issue of *The Modern Review* contains an article on "Present Trend of British Foreign Policy" by Dr. Taraknath Das, who is considered an authority on world politics. In the *New York Sun*, of March 8, 1938, Mr. Lemuel F. Paston, a well-known American journalist, wrote to the effect that about a year ago Dr. Das prophesied the inevitability of an Anglo-Italian pact. More than a year before the out-

break of the present Sino-Japanese war, Dr. Das, in his article on "Peace or War in the Far East" published in the *Calcutta Review* for January 1937 predicted the possible development of the present unfortunate situation between Japan and China. Now Dr. Das presents a picture of British foreign policy which may surprise many people. Britain is following a policy which would lead to a Russo-Japanese and a Russo-German war, and at the same time Britain is trying to use Italy, Germany and Japan at the present time to further the interests of British Imperialism in Asia, Africa and Europe.

At the present time the duty of Indian statesmen is to establish international friendship with potential rivals of British Imperialism as well as with the States which are equal partners in the British Commonwealth of Nations, if the latter aim is attainable.

One practical (not ideal) issue should be considered by Indian statesmen: If Britain with her might (the largest navy, a powerful air force and army) with her alliance with France and with the support of the United States, feels it to be unwise to court the antagonism of Italy, Germany and Japan, would it be wise for weak nationalist India to antagonise these powers?

Of course we are for China's freedom and also we are for freedom and justice for all peoples. We are opposed to all forms of dictatorships. But should we advocate a policy which will make Russia, Italy, Germany, Japan and other countries enemies of India?

What can India do to check the march of dictatorships all over the world, when the Indian people cannot free themselves in India itself? Any policy that will create opposition to Indian freedom in Italy, Germany, Japan and other lands will be detrimental to Indian interests and strengthen British hold on India. Should Indian statesmen pursue any policy which will bring about comparative isolation of India in world politics? India needs allies in world politics. India requires statesmen who will work for a new alignment of Powers in which India will play her part and thus further the cause of Indian freedom and world freedom. Have our leaders any real programme to strengthen India's position in world politics? Are they working to make India a deciding factor in future developments in world politics?—If they are, then what is their programme to increase the (military) power of nationalist India?

EDITOR'S COMMENT

India ought certainly to try her utmost to enlist the sympathies of freedom-loving persons of all nations. Even in countries which are dominated by militarist and imperialist dictators or by imperialist and militarist parties, there must be at least small groups of persons who sympathize with India's aspirations and the spirit of her culture and civilization. It may not be possible to win the friendship of the whole body of the people of every country; but Indians in general, and particularly Indian leaders, journalists and other publicists, should be on their guard against passing sweeping adverse judgments upon the whole body of the people of even aggressive predatory countries.

It is not possible perhaps not to incur the displeasure of some foreign dictators. But even in their case, only their policies and pronouncements need be criticized. Personalities should be avoided.

As for India pursuing a policy which may win for her allies among foreign nations—whether rivals of Britain or not, unhappily Indian statesmen have at present only very limited powers in provincial affairs alone. Even when the federal part of the constitution comes into operation, Indian leaders and members of the federal legislature will not have any control over foreign affairs—unless, of course, the Government of India Act be suitably amended, which does not seem likely. All that Indian leaders can do is to influence world political thought by means of the spoken and the written word.

As regards increasing India's military power for *National* purposes, Indian leaders can do nothing in the matter. For half a century or more, Indian leaders have carried on agitation for Indianizing the army and making the Indian section of the army more efficient and representative of all the provinces of the country. But the British Government have practically turned a deaf ear to Indian public opinion. British imperialists do not want to have an efficient and all-India army manned and officered by Indians, even on the condition that it is to be completely under the control of the British executive government in India. Hence in India's present political status, the increase of Indian *Nationalist* military strength is out of the question.

Whether India should at all have a land army, a navy and an air force, or bend all her energies to the raising of a Peace Brigade (as Gandhiji suggests), we do not try to discuss here.

Message Sent to Prague P.E.N. Congress By Srimati Sophia Wadia

Srimati Sophia Wadia, who founded the P.E.N. India Centre in 1933 and represented India at the International Congress held in Barcelona and Buenos Aires in 1935 and 1936, respectively, cabled from Ootacamund the following message to the 16th International Congress of the P.E.N. Clubs of the leading writers of the world, meeting in Prague, Czechoslovakia, from the 26th to the 30th of June:—

"May the Congress radiate good will for the healing of the nations and uphold freedom as the inspiration of creative expression."

"Indiana"

The Indian P.E.N. writes :

The Editor of *Indiana*, Sjt. S. C. Guha of Benares, makes a strong point in his March issue for the establishment of "copyright deposit" libraries in India. Even the Imperial Library at Calcutta, he claims, has not a set of all copyright publications. He suggests that if matters cannot be mended at present through official channels, the proposal originally made in 1922 for a "Library of Congress" should be considered. The latter suggestion has much to commend it. That proposal involved the Congress's requesting all printing presses to submit three copies of each new publication to the local Congress office, one to be retained there, one to go to the Provincial Congress office and one to the Central Library of Congress at the A. I. C. C. Office. It ought never to be necessary to go to London to consult the British Museum copy of a publication issued in this country.

We may mention incidentally that *Indiana* itself, a current index to periodicals other than daily papers, represents a valuable bibliographic service of which every Indian library and every Indian scholar should take advantage. We understand that it is published at considerable financial loss to its well-qualified and able editor. It is of considerable present and potentially greater value and a subsidy from some Indian philanthropist to insure its continuance and growth would be a service to Indian education and Indian culture.

We fully support this observation.

President Masaryk on the Ethical Basis of Politics

According to the late President Masaryk, the maker of the Czechoslovakian republic:

"No state or policy can prosper unless the groundwork is moral. The ethical basis of all politics is humanity, and humanity is an international programme. It is a new word for the old love of our fellow-men.

"No state can be managed without recognition of the ethical basis of politics, and no state can long stand if it infringes the broad rules of human morality. The Greeks and Romans declared justice to be the foundation of states; and justice is the arithmetic of love."

No political party or religious community in India is as yet at the helm of the State. But

Indian political leaders of some party or other are expected at no distant date to guide the destiny of India—humanly speaking. Hence all our political parties and politicians should pay great attention to the ethical basis of politics.

Communal riots and political rowdiness at meetings show that the men responsible for them have no regard for "humanity."

State patronage influenced by communal or provincial considerations show that the dispensers of such patronage have little regard for "justice".

Educational facilities extended or withheld on provincial or communal considerations betray the same lack of a sense of justice.

The relations between the sexes form a notable part of ethics. Unhappily even matters of sexual morals are in India considered from communal or political party points of view. Some rightly condemn abduction, kidnapping and other offences against women, others appear to hold a different kind of opinion. For this reason crimes against women, traffic in women and children and commercialized vice, far from being put a stop to, cannot even be checked.

The party spirit—whether communal or political, betrayed in the C. P. minister's case and the N.-W. F. abductor teacher's case, is a deplorable instance in point.

Coming nearer home, the Calcutta Corporation lady teacher scandal indicates the presence of degraded and degrading party spirit.

A Fallacy of Karl Marx

Professor Gilbert Murray observes in his lectures on "Liberality and Civilization" that "perhaps the greatest and the most infectious of all the fallacies of Karl Marx" is "the theory that all human action, or at any rate all collective action, is based on the pursuit of direct material interest." The Professor gives his reasons for this opinion.

"It is an idea which, like many others widely current at the present day, owes its success not to its truth, not even to its appearance of truth when exposed to criticism, but to two particular plausibilities. In the first place, it fulfils a wish, in the second, it is supported by crowds and crowds of instances in ordinary life. I should compare it with Christian Science or with Anti-Semitism. Christian Science tells us that all illness is imaginary and unreal. Well, we should love to think so, and we all of us have met with people who spend their time worrying over their various complaints, but recover rapidly if they get busy about something else and cease to

think of themselves. So much human illness is unreal that, by a pleasing jump, one can maintain that it is all unreal."

As regards the animosity against Jews the Professor says:—

"The same with Anti-Semitism; attribute all human ills to the greed and sensuality of the Jews, and since those faults are common to most of humanity, you will find hundreds of Jews who are good instances of your theory."

Returning to the point, Dr. Murray says :

"Similarly, all history and all contemporary social life teems with instances of persons and classes who are influenced, in whole or in part, openly or secretly, by the desire for their own material advantage. In ordinary commercial dealings this is admitted; a man seeks a higher salary or a higher price for his goods without further excuse. But Marx points out, in social and political matters, when a man wants something that is to his own advantage but cannot get it unless other people are persuaded to agree with him, he naturally has to find some other considerations which are likely to move them. He tries to persuade them—and constantly succeeds in persuading himself—that the action which happens to increase his profit is only desired by him because it is just, because it is moral or religious, because it is for the good of the country."

"No doubt this dash of humbug occurs extremely often; and it is easy enough to make the jump and say that it occurs always; that people are always actuated by their material economic advantage and that, when they put forward any other motive, they are lying. Such a doctrine is of enormous convenience to a certain type of political agitator. Yet it is obviously untrue."

The author proves its obvious untruth from the life of Karl Marx himself.

"Karl Marx himself showed remarkable indifference to his own economic interest when he lived for years in great poverty writing an immense book for which no publisher was likely to pay him. Study his life and you can see that he was moved by all sorts of motives, by vanity, by ambition, by jealousy and ill temper, by intellectual interest, and by a magnificent unselfish idealism. Economic considerations were seldom present to Marx, except when the pinch of poverty became really painful and in a burst of irritation he insisted, unreasonably enough, that someone else should pay for him."

Magnificent unselfish idealism as motivating conduct is to be found in the life, not of Marx alone, but in the lives of numerous other persons.

"Think of any of the great individuals who have moved mankind during the last century : Darwin, Wilberforce, John Stuart Mill, Einstein; no doubt you will find in them here and there beliefs or ways of thought due to their class or nationality or to mere tradition, but in their main activities you will find scarcely a trace of the economic motive. Think of the people we know personally; do we not know many who are guided, when occasion arises, to say nothing of worse motives, by a disinterested hatred of injustice and cruelty, by religious and non-religious idealism, or by mere goodwill and humanity ?

"And if we turn from individuals to communities, and consider the national passions which are devastating the present world, is it not mere wilful blindness to ignore the motives of revenge, inherited prejudice, national ambition and vanity; to suppose that it is an economic motive which makes Germans prefer guns to butter, or Arabs to hate the Jews whose presence in Palestine has increased their wages and improved the value of their estates?"

"I should be more inclined to think that, as a matter of psychology, we overrate the element of pure material selfishness in determining public policy. All sorts of sentimental elements play their part."

Professor Gilbert Murray explains why he has taken pains to elaborately expose the Marxian fallacy:

"I dwell at some length on the faleness of this delusive Marxian prejudice, not merely because I think it is as a matter of fact untrue, but because if accepted and really believed it would undermine our whole faith in ethical values and the possibility of justice and charity between man and man."

Forgotten Fighters

"Battles once won lose their interest: the result is accepted as a matter of course and the long struggle which led to it forgotten." So says Professor Gilbert Murray. These words of his reminded us of those who had to struggle hard and suffer bitter persecution and calumny to abolish the purdah, win for women the right to receive higher education and raise the age of marriage of girls. Girls and women who at present enjoy the fruits of these struggles do not know, do not care to know, the men and women who fought and suffered for them.

First Peace Brigade in India

Karachi, June 27.

The decision to establish the first peace brigade in India in pursuance of Mr. Gandhi's appeal was taken at a two-hour meeting of the leading citizens, convened by the Mayor this evening at the Municipal Corporation.

The meeting appointed a provisional committee of 24, holding various shades of opinion and including Rev. Thompson.

The Mayor is the Chief of the Brigade with three Secretaries, namely, Dr. Tarachand Lalwani, Moulvi Mohammad Usman and Mr. Bhadrashankar Bhatt.

The speakers, including Mr. M. H. Gazdar and Miss Jethi Sipahimalani, M.L.A.'s, dwelt at length on the horrors of war and communal riots and characterised Mr. Gandhi as an apostle of world peace.

The Mayor observed that the idea occurred to him many years ago while he was travelling by sea in a steamer and saw a victim of the Balkan War.

He concluded: "Let us form a brigade and settle the disputes between nations and communities."—(A. P.)

Congress President Appeals for China

The Congress President has fixed July 7, 8 and 9 to be observed as China Fund Days for collecting funds for the Medical Mission of the Congress in China.

In a statement to the *Associated Press* in this connection, S. J. Subhas Chandra Bose said, "I have been informed by the Chinese Consulate in India that the Chinese Government have accepted the offer of the Congress Working Committee to send an ambulance unit to China. It now behoves us to push on with our arrangements and send out the Medical Mission as early as possible."

"All-India China Day was successfully observed throughout the country on the 12th June. I am grateful to the public for their splendid response on that day. It is, however, to be regretted that collections could not be made satisfactorily on that occasion owing to shortness of notice. It has been suggested by friends in different parts of the country that some day or days be fixed in July, exclusively, for collecting funds for our Medical Mission."

"I heartily approve of the idea and fix the 7th, 8th and 9th July as China Fund Days. The dates 7th and 9th July are of great historical importance so far as the Chinese people are concerned. I request Congress organisations all over the country to make an intensive drive on these days, for collecting funds. All sums collected should be sent to the All-India Congress Committee office at Allahabad. Let us not forget that we must collect a sum of Rs. 22,000 on this occasion."

"It would be a token of our regard for the Chinese people and would also help considerably to collect funds if miniature Chinese flags are sold on these days. This device should prove useful in the big cities and I hope that wherever possible these three days will also be observed as China Flag Days."

"I do hope that our collection will be enough to keep our Medical Mission at work for at least one year."

"In conclusion, I should like to inform the public that orders have already been placed with Fords for a fully equipped ambulance which will be sent by them straight to Hongkong. The ambulance, together with the medical staff, will be a living emblem of India's sympathy and goodwill for the great Chinese people in the darkest hour in their history. I earnestly hope and trust that the response of the public will be worthy of the Congress and of the Indian nation."

Conference of Manufacturers of Bengal

An appeal for co-ordinated efforts on the part of indigenous industrial units in Bengal was made at the first session of the Indigenous Manufacturers' Conference held on 26th June at Albert Hall under the presidency of Acharya Praphulla Chandra Ray. It was organized by the Commercial Museum of the Calcutta Corporation.

The following resolutions were passed:

Resolved that in consideration of the fact that only a combined and co-ordinated effort of the different indigenous industrial units, handicapped as they are, can withstand foreign and unfair competition and difficult of marketing, it is decided to organise from time to time conferences and social gatherings to develop mutual acquaintance and intimacy among the manufacturers of the different kinds of indigenous industries and to establish a stronger link among the manufacturers to enable them to protect their interest and to take advantage of corporate and co-ordinated sale-publicity organisations and programmes organised either by the Commercial Museum or any auxiliary organisation under its guidance.

Resolved that the signatories as conveners to the Manufacturers' Conference do form themselves into

Committee, with right to co-opt, to co-operate with the Officer-in-charge of the Commercial Museum, to make the Museum more useful and helpful and to foster the interest of the indigenous manufacturers.

Resolved that this Conference request the Government, public bodies and public utility services to use indigenous products.

The Committee deserve all success and ought to receive the full co-operation of the public.

Result of Eleven Months' Ministerial Experience

Bombay, June 5.

"It is not enough that an individual wrong be righted, or that a few laws be changed. Congress seeks to right the national wrong. I can see no prospect of this through the medium of the Congress Ministries functioning under the Government of India Act," stated Mrs. Vijaylaxmi Pandit, Minister for Local Self-Government, United Provinces, in an interview with the *Associated Press*.

She added: "My eleven months' experience as a Minister has confirmed all doubts I had as to the wisdom of the Congress accepting office; the difficulties that I merely imagined have materialised and daily I am confronted with them.

"It is true the Congress ministries have been able to accomplish a measure of good. A certain amount of confidence has been created in the minds of those who had lost all hopes of a fair deal in the past, but the fundamentals have not changed."—(A.P.)

Mansa State Peasants' Successful Satyagraha

The peasantry of Mansa State, both men and women had been engaged in a non-violent struggle, under great sufferings and privations, to better their material condition. They have achieved success.

Ahmedabad, June 18.

A public meeting of the farmers of all twelve villages in Mansa State was held yesterday in Mansa at which Raolji (Prince) Mansa as well as Ahmedabad Congress workers were present. After the settlement reached on the intervention of Sardar Vallabhbhai Patel was explained Raolji said they had been able to settle amicably their differences. He hoped no such differences would arise in future.—(A.P.)

Ahmedabad, June 23.

The peasants of Mansa State have begun paying 35 per cent reduced land revenue in accordance with the settlement brought about by Sardar Vallabhbhai Patel whom they have invited to attend the 1st session of the Khedut Panchayat to be held next month. Preparations are being made to accord a fitting reception to him by the peasants of Mansa State.—(A.P.)

Principal Satish Chandra Chatterjee

By the death of Principal Satish Chandra Chatterjee of Barisal the cause of education in Bengal has suffered a great loss. Those who have seen his robust manly frame could never apprehend that he would die at 65. We had not the pleasure of meeting him recently, and so

cannot say whether he had latterly aged distinctly. But even a few years back he looked quite young for his age. His amiable, cheerful countenance always gave him a youthful appearance. That pleasant exterior concealed a stern, unbending spirit, a soul always hopefully devoted to the cause of freedom. As a young man, when employed in Brajamohan College as a professor, he was an indefatigable and undaunted lieutenant of Aswini Kumar Datta in promoting the Swadeshi movement and in the boycott of foreign salt and cloth, thus furthering the cause of freedom. He had his reward in being deported under Regulation III of 1818 along with Aswini Kumar Datta, Krishna Kumar Mitra and others. He was very strong both in mind and body. But he always remained non-violent even under grave provocation. So, if any police spy or informer had misled the government of those days into imagining that his presence anywhere as a free man would provoke a breach of the peace, he certainly lied. On being released from prison, he worked as a professor in Ripon College and City College, Calcutta, and finally as principal, Brajamohan College, Barisal.

He was a man of exemplary character and a very efficient teacher. His students could become not only learned, but better men, too, morally and spiritually under the inspiration of his example—if they had the right stuff and the inclination in them. He was a devout worshipper of God and an attractive speaker. He was of a charitable disposition and would help others—particularly, political sufferers—not only with money but in other ways, too. We remember, on one occasion while staying at his home in Barisal a few years ago, he used to be roused from sleep at intervals throughout the night by the police patrol, because he had given shelter to a political suspect, and the police wanted to make sure that the latter had not gone out prowling—perhaps with Principal Chatterjee himself! He had put himself to this indignity and trouble, because otherwise the suspected young man would not have been released from confinement.

80th Death Anniversary of Maharani Lakshmi Bai of Jhansi

It is in Gwalior that "the last remains of the illustrious Maharani Lakshmi Bai of Jhansi lie scattered and mixed up in the soil and her last ambition and aspirations are afloat in the ether." So this year Gwalior celebrated the 80th anniversary of the day of martyrdom of the Maharani on the 18th June last.

"The name and memory of the great Maharani calls back those stirring days of the latter half of the 19th century when conditions in the country were no doubt unsettled but the spirit of resistance was still alive and the native heroism in men and women had not resigned itself to complete prostration and self-surrender as inevitable. She flashed through history without regard for consequences and left behind nothing but an undying name, which for all time will ennoble and inspire the lives of posterity for greater deeds and sacrifices."

Present-day Indians cannot follow her example literally—some because of changed external conditions and others because of faith in the spiritual excellence of a different method. But her absolutely heroic spirit and devotion to the motherland should inspire and be imbibed by all. She declared she would never surrender her Jhansi. May we all resolve never to surrender our Bharatavarsha, all external appearances to the contrary notwithstanding.

Years ago, we used to witness the annual Rām-līlā procession in Allahabad. What an inspiration it was to see the boy dressed as Maharani Lakshmi Bai riding a white horse drawn sword in hand! What enthusiasm it aroused!

Santiniketan Ashramika Sangha Art Exhibition

Some of our colleges annually celebrate their Founder's Day or Foundation Day, when the Old Boys and the present-day alumni meet and have a good day. Some Women's Colleges, too, have such celebrations.

The Santiniketan Ashramika Sangha is an association which seeks to bind together all teachers and alumni of Santiniketan, past and present, in a homelike fraternity and sorority. It has its meetings like other associations. This year it attempted something more substantial. It held an exhibition of the works of art produced by teachers and students of Santiniketan. Sriyut Kshitish Chandra Ray, sculptor, lent his studio rooms in British Indian Street for the purpose. The works exhibited were considerable in number and varied in range and character. Some of the drawings of Rabindranath Tagore were there. And then from Nanda Lal Bose downwards many artists, too numerous to remember or mention, contributed their quota. We could spend only a few minutes at the exhibition, but were impressed with the excellence or the promise and the joy-giving power of many a thing of beauty. There was one thing notable about this show—some of the earliest works of Nanda Lal Bose along with some of his latest were there. Among the latter, we remember the vigour and beauty of one of his Haripura pictures—a village damsel

grinding corn. We were not surprised to learn that the exhibition drew larger crowds than the promoters had expected. The Congress President opened it.

The Great Usefulness of "Indiana"

Books are many and of the making of books there is no end. And without bibliographies and accurate and full indexes, scholars, would-be scholars and all other seekers after knowledge cannot take advantage of the treasures hoarded in books. But books are not the only repositories of knowledge. Periodicals, and even newspapers, contain much intellectual wealth which may never be collected in the form of books. It is only a bibliographical periodical which can make these available to students in the most inclusive sense. Sriyut Satis Chandra Guha of Benares has undertaken this task in the form of his monthly, *Indiana*. It is literally a selfless task. It can never make him rich; it can never even be barely remunerative or self-sufficing in a country like India. He, not blessed with this world's goods, is in fact losing money over it. It cannot make him famous. He will not receive plaudits. He cannot have the joy of creation of poets and artists. The only satisfaction which he can have is to know that he is doing work which is indispensably necessary for thorough-going scholarship.

The Current Contents Subjects Index, a feature which he has recently introduced, should appeal to editors, journalists and other publicists.

He has been indexing not only the leading English periodicals of India but also those in her principal modern languages.

Indiana should receive practical encouragement from the Government, the educated public, universities, all higher educational institutions and libraries.

Mineral Wealth of Two Indian States

Many Indian States contain much mineral wealth—some, in immense quantities. News of such wealth in two of them has appeared in the press in recent weeks.

Tripura has been known all along to contain many mineral deposits. Perhaps, this State has not yet been geologically explored to the fullest extent. But it has become known that it contains natural gas, mineral oil and deposits of coal. Bauxite and other minerals have also been found. The forest wealth and the potentialities of Tripura as a producer of tea are also known. Some Maharajas of Tripura have also been known as patrons of literature and art. But

because the British Government does not recruit soldiers from it, the outside world hears much less of Tripura than of many Panjab States—some smaller than it.

Mayurbhanj has been long known for its mineral wealth. The mines which are the principal feeders of the Tata Iron and Steel Works at Jamshedpur are in Mayurbhanj. But there are various other valuable minerals in this State.

Baripada, June 18.

The Geological Survey of India in 1936 recorded the presence of vanadium bearing titaniferous magnetite in Singhbhum and Mayurbhanj. Kumardhubi deposit in Mayurbhanj, according to Dr. Dunn, is at least one million ton. The presence of vanadium in Mayurbhanj had been known long before to one Mr. S. Ghosh, M.Sc., Chemist (who is perhaps the discoverer) and Tata Iron and Steel Company Ltd. The mining and prospecting department of Mayurbhanj State during the last two years has discovered many similar large titaniferous vanadium ore deposits along foot hills of north and west Similipal in a length of over 50 miles. More of such deposits are expected to be found in the near future.

Mayurbhanj vanadium deposit may be considered as one of the largest and richest in the world.

In spite of its great mineral and forest wealth, and also its population, it has not been perhaps given the status given to many Panjab and Rajputana States, because perhaps soldiers are not recruited in it.

But official recognition does not really matter. What is of intrinsic importance is that the natural resources of the states should be developed. Mayurbhanj and Tripura are not lacking in alertness in this regard. Perhaps it would be best if the states themselves could exploit their resources. Failing that, Indian experts and Indian capitalists should be allowed to exploit them for the benefit of the states as well as for their own advantage.

Educational Enterprise in Mayurbhanj

Greater than vegetable and mineral wealth is the wealth of personality of the men and women inhabiting a region. It is, therefore, welcome news that Mayurbhanj has taken steps in the direction of the liquidation of illiteracy by the establishment of new schools. Moreover, several scholarships for general and technical education, to be given to the aboriginal boys and "Aryan" students, have been announced in the *Mayurbhanj State Gazette*.

"Financial Bankruptcy in Bengal"

Professor Dr. Radha Kumud Mookerji, leader of the Congress party in the Bengal Council of State, spoke on the 26th June last at a meeting of the Indian Journalists' Association on the subject of Financial Bankruptcy

in Bengal. He gave definite statistics in support of his conclusions. These conclusions cannot be assailed unless his figures can be shown to be wrong. This is not the first time that he has placed these figures before the public, and, so far as we are aware, nobody has pointed out any errors in them. His case, which is Bengal's case, is strong. And, for years, we have also occasionally placed the relevant facts and figures before the public. But where is the remedy?

Haile Selassie's Declaration to the Council of the League of Nations

We have received from our representative at Geneva a copy of the statement which His Majesty Haile Selassie, Emperor of Ethiopia, made to the Council of the League of Nations, together with its annexes. We quote three passages from this pathetically forcible document, of which no one can impugn the truth.

The statement begins:

"The Ethiopian people to whom all assistance was refused, are alone climbing their path to calvary. No humiliation has been spared to the victim, of aggression. All resources and procedures have been tried with a view to excluding Ethiopia from the League of Nations, as the aggressor demands. Thus for three years, there has been before the world and before the League, a problem of international order: will law win the game as against force, or force as against law?"

Referring to an observation made by the British representative, His Majesty stated:

"Yes, the League has as its essential object the maintenance of peace. But there are different ways to maintain peace; there is the maintenance of peace through right, and there is peace at any cost. Ethiopia firmly believes that the League of Nations has no freedom of choice in this matter. It would be committing suicide if after having been created to maintain peace through right, it were to abandon that principle and adopt instead the principle of peace at any price, even the price of the immolation of a State Member at the feet of its aggressor."

His Majesty concluded his statement by declaring:

"As the Emperor of Ethiopia, basing myself on the faithful devotion of my chiefs, my warriors, on the affection of my people, being desirous of putting an end if possible to their sufferings, I repeat the declaration that I have already made in the League of Nations. I am prepared now, as I was previously, to discuss any proposal for a solution which even at the cost of sacrifice would ensure to my people the free development of their civilization and of their independence. But should this appeal remain without response, war against Italy will be continued, whatever happens, until the triumph of right and justice has been won. I ask the League of Nations to refuse to make any effort that may be asked of it with a view to encouraging the Italian aggressor by sacrificing his victim to him."

Bengali Learners Outside Bengal

That the mother-tongue is the best medium of instruction for the young is an admitted principle. Therefore, for them, it is also the best medium for answering examination questions. But owing to certain decisions of the governments in Assam, Bihar, U.P., and Orissa, Bengali pupils are liable to lose the benefit of this principle. As the recognition of this principle in the case of Bengali learners in those provinces will not injure the cause of the Assamese, Hindi and Oriya languages or add in the least to the difficulties of those pupils whose mother-tongue these are, and as the financial difficulty, if raised, is either imaginary or can be easily overcome, we appeal to the ministries in these provinces to consider the question in a statesmanlike and sympathetic spirit, with a view to furthering the cause of national unification. We remind them of the linguistic liberality of the Calcutta University and Visvabharati.

Panjab Premier Responds to Public Opinion

The decision of Sir Sikandar Hyat Khan not to proceed further with his government's intended Press Bill after its introduction, at least for the present, is a statesmanlike response to journalistic and other public opinion.

Separation of Chota Nagpur

As the Congress Working Committee has approved of the idea of separating the Bengali-speaking areas in Bihar Province from it, and as many of these areas are included in the sub-province of Chota Nagpur, no Congress minister or other Congress man can consider the separation of Chota Nagpur from Bihar as an altogether novel proposition, nor should the Bihar Congress ministry oppose it *in toto*, if party discipline has any meaning. If Manbhum Bengalis are asking for this separation, it is because Manbhum, though a part of geographical Bengal, is officially reckoned a part of Chota Nagpur and because the Bengalis of Manbhum are as much natives of its soil as Biharis are of Bihar proper.

A Bihar paper calls the Chota Nagpur separation movement a conspiracy in a minatory tone. Well, it is an "open conspiracy", as Pandit Jawaharlal Nehru called the Congress movement in his Lahore presidential speech in 1929.

The historic argument that Chota Nagpur has been a part of Bihar-province for a long time, can be met with the similar arguments that Bihar, Orissa, and Assam were for long parts of Bengal-Province, that N.-W. F. P. was for long

part of the Punjab-Province, that Sindh was for long part of Bombay-Province, that Andhra is still a part from long ago of Madras-Province, and that Karnataka is still a part of Bombay and Madras Provinces from long ago. But Assam, N.-W. F. P., Bihar, Orissa and Sindh are now separate Provinces, and Congress does not oppose the separation of Andhra and Karnataka. Congress has declared itself in favour of linguistic provinces. The periods during which Assam, N.-W. F. P., Bihar, Sindh, and Orissa were parts of other provinces or during which up till now Andhra and Karnataka have been such, are different in length. In spite of this difference, some of them have already become separate provinces, and Congress has approved of the rest being made such. If it could be shown that the whole of Chota Nagpur is a part of Linguistic-Bihar, as for example Allahabad Division is that of U. P., that would be a strong argument from the Congress point of view, but it cannot. The languages of the Mundas, Oraons and other aborigines of the region, or Bengali, which is the mother-tongue of the *native* Bengalis of Chota Nagpur, are mother-tongues of the people of Chota Nagpur.

The financial objection may be and has been trotted out. But the financial resources of Chota Nagpur have not yet been carefully and accurately investigated by any impartial authority, opinions differing about it. And the N.-W. F. Province, Sindh and Orissa have been constituted into separate provinces in spite of their deficits. If a linguistic region be a deficit region, at least for the time being, and if in spite of that fact it be decided to constitute it into a separate province, it would be for the Government of India to meet the deficit, as it does in other cases. No *province* need bother about it.

And if Chota Nagpur be really destined to remain for ever a deficit region, why does not Bihar decide to part with it at once? Why insist upon *charitably* going on meeting its deficits? Why this philanthropic zeal to do good to this sub-province? The selfish motive of exploitation of its natural resources is being ascribed to those who demand its separation. But, though we do not want to ascribe it to Biharis, is it impossible that they also are consciously or unconsciously actuated by the same motive?

The permanent Bengali inhabitants and settlers of Chota Nagpur have as much right to voice the wants of the region as anybody else. But it is not Bengalis alone who are speaking for Chota Nagpur. Some aboriginal leaders, too, waited upon Gandhiji some time ago..

The Bihar Government cannot say that it is paying due attention to the uplift of the aboriginal population in the province. A writer in the *Chota Nagpur Samachar* points out that it made no special provision in its 1937-38 budget for their education. In the present year's budget the provision is as follows:

| | Literate | Educational |
|---------------------|-----------|-------------|
| Community Number | Per cent. | Grant. |
| Aborigines 32 lakhs | 53 to 1 | Rs. 3,000 |
| Momins 10 lakhs | 3.6 | Rs. 7,000 |
| (Native Moslems) | | |

If these figures be correct, the Bihar ministers have provided Rs. 3,000 for the education of 32 lakhs of aborigines whose percentage of literacy ranges from 53 to 1, but it has provided Rs. 7,000 (which also is inadequate) for another community of 10 lakhs whose percentage of literacy is 3.6! Yet the Bihar ministers will not allow these aborigines to pass out of their guardianship.

China Information Committee's "News Releases"

We cordially thank the China Information Committee for the "News Releases" sent to us by air mail. They enable one to realize the situation in China to a far greater extent than the news sent by *Reuter*. We are only sorry that *The Modern Review*, not being a daily, is unable to publish them. But they will nevertheless be utilized. The numbers, up to June 7, so far received, contain the following articles:

Singapore Scouts And Guides Die For China, The Last Train From Hsuechow, Compulsory Adult Education In China, Library Of War-time Literature, West China Abreast Of World Affairs, China's Juliet In Her Last Tragedy, Wuhan—Graveyard Of Japanese Airmen, China Still Making China, Cholera Epidemic In Central China Checked, No Festivals While China Fights, Japan Monopolizes North China Trade, American Women's Way Of Aiding China War, Simpler Living Urged By Dr. Kung, All Trade Unions In China United Against Japan, What I. S. S. Money Is Doing In China, North China Facing Economic Disaster, Wife of Kwangsi Commander Mobilizing China's Women, Furthering China's State Medicine Movement, War Correspondents In Epic Retreat From Hsuechow, Graveyard For Japanese Planes, Pushing Highway Construction In West China, China's Fight Against Opium, China's Spoils Of War, Free Schooling For China's Soldiers, China's Financial Conditions Stable Dr. Kung Says, War Accelerates Social Reform In China, Dual War Against Japanese And Opium, Administrative Reforms In Kiangsi Province, The Fighting Spirit In China, Thrice Under Japanese Occupation, China Biding Her Time, Kwantung's Food Shortage Solved, Relief For China's Front-line Refugees.

Mr. Nehru As India's Unofficial Ambassador

That, besides receiving very enthusiastic receptions and making speeches wherever he is

going, Mr. Nehru will be able unofficially to do some important ambassadorial work also will appear from the following message:

London, June 29.

It is confirmed that Pandit Nehru is meeting Lord Zetland and Lord Halifax on Thursday and Friday. He intimated to *Reuter* that the invitations had been extended to him personally.

"If," said Pandit Nehru, "Lord Zetland and Lord Halifax want to know Congress views regarding Federation and India's reaction respecting international developments, I am prepared to express them forcibly."—*Reuter*.

Calcutta Town Hall Labour Demonstration

An assurance that the Indian National Congress would stand up by the side of labour and give them full sympathy and support in their struggle for securing their just and legitimate rights was given by S. Subhas Chandra Bose, Congress President, presiding over a huge demonstration of workers consisting of members of various labour unions at the Town Hall on the 29th June.

Resolutions condemning the callousness of the Bengal Ministry towards the grievances of the workers and appointing a committee to unearth the real nature of their 'sinister' move against the workers as also to secure protection to distressed workers were passed. Other resolutions passed touched upon the grave situation which had arisen out of the dispute between the Calcutta Electric Supply Corporation and its workers, condemned the Bengal Government for their repressive measures against leaders and prominent workers of the Seamen's Union, and sympathised with Cawnpore textile workers and strikers at Kulti, Hirapur and other places. The meeting broke up at 10-30 p.m.—*Amrita Bazar Patrika*.

Subhas Bose's Experience in East Bengal

Brahmanbaria, June 16.

Nearly 15 persons, including S. Subhas Chandra Bose, Congress President, and Maulvi Asrafuddin Ahmed Choudhury, Secretary, B. P. C. C., received injuries following what the Congress President, in the course of a statement issued through the *United Press* characterised as—"hooliganism on the part of Moslem Leaguers", who threw brickbats on the procession organised in honour of the Rastrapati on his arrival here this morning.

Similar feats stand to the credit of some Moslem League "tigers and lions" in the United Provinces.

"The response I received from the Muslim public exceeded my fondest hopes and I have come back with the confidence and certainty that the Muslims of Bengal will, before long, be all inside the Congress", said the Congress President, Mr. Subhas Chandra Bose, interviewed by the *Associated Press* as regards the impressions of his East Bengal tour.

Calcutta Corporation Lady Teacher Incident

What the Calcutta Corporation has done in relation to the lady teacher incident is not at all satisfactory. The disclosures made in the police officer's report and in the minute of dissent of Councillor Phapindranath Brahma,

have not been dealt with, perhaps some of the greatest scoundrels have been left untouched, and the Education Officer has been dealt with too severely, even if what the Corporation say of him be held true. What is worse, nothing has been done to convince and assure the public that the Corporation schools are fit for pure-minded women to serve in and innocent boys and girls to receive education in. We hope they are.

An attempt was made to re-open the question, but it was frustrated. In consequence Congress President Subhas Chandra Bose has severed his connection with the Corporation and the Congress Municipal Association. That is a sufficient condemnation of the Corporation's action and inaction.

Labour Picketing and Linguistic Picketing

Picketing in connection with labour strikes is an ordinary procedure. The linguistic picketing in Madras in connection with the Anti-Hindi agitation is a new departure. So there is picketing and picketing. Hence whilst the U. P. Ministry have allowed picketing at the Cawnpore mills, the Madras Ministry have taken legal steps against the linguistic picketers—though both are Congress ministries. But even at Madras the ministers have not been treating the picketers exactly as the bureaucratic government dealt with the Congress picketers during civil disobedience. The latter set in motion both Lathi and Law, whereas the former have set in motion only the Law—thus keeping non-violence intact to the letter.

India's Urgent Need of Organizing Large and Key Industries

The Hon'ble Dr. Syed Mahmud, Minister for Education and Development, Bihar, has addressed a circular letter to all Provincial Ministers in charge of Industries, inviting them to meet at Simla on the 2nd and 3rd of July next to discuss in an informal meeting the development of large and key industries. A timely move.

It was on the 16th September last year that Acharya Praphulla Chandra Ray contributed an article to the *Amrita Bazar Patrika* on the Menace to the Indigenous Chemical Industries, quoting passages from some letters of Prof. Ruchi Ram Sahni, President of the Northern India Chemical Manufacturers' Association, and indirectly suggesting what should be done to meet the menace.

Under India's new British-made constitution, her industries lie completely at the mercy of the British Government and the Government of India. But the Provincial Governments can perhaps do a little to save them and start new ones. Let us wait and see what they do.

E. I. Railway Disaster Again

In the course of some months there was a third serious disaster in the E. I. R. line. This time it was at Madhupur. Is this line very much worse managed than the other lines in the country?

New Constitution For Cochin

The new Cochin constitution inaugurated on the 17th June last associates the people to some extent directly with the Maharaja's government through the Legislative Council and a responsible minister. Though not a full measure of self-government, it is a forward move.

Bihar Anti-Dowry Bill

Whether the dowry evil, which has brought about the decrease in numbers of some Hindu castes and caused much immorality, caused great hardship to poor parents, and led many a girl to commit suicide, can be remedied by legislation is not certain. But it should be fought by every available weapon. It is good that Bihar proposes to arm itself with a legislative weapon to fight it.

Rt. Hon. Srinivasa Sastri on Universities In India

The Right Honourable V. S. Srinivasa Sastri's broadcast talk on universities in India on the 18th June last was a very important pronouncement. Among other points he discussed Mahatma Gandhi's remark that universities had no claim on State funds. He had no difficulty in showing that Gandhiji's opinion was not correct.

Power Alcohol From Molasses

A joint committee was appointed in January last by the Governments of U. P. and Bihar, consisting of Mr. Padampat Singhanian, Mr. M. P. Gandhi, Mr. Anantasubramaniam, Dr. S. S. Bhatnagar, Mr. G. H. Dickson, Dr. N. R. Dhar, Mr. P. S. Maker and Dr. N. G. Chatterjee, "to report on the best method of manufacture and of mixing power alcohol with petrol and to examine the possible uses of molasses and their practical application." The committee has

come to the conclusion that power alcohol can be manufactured economically from molasses in the U. P. and Bihar, which are advantageously situated for such manufacture, and it can be marketed at substantially the same price at which petrol is now being sold.

A very distinguished scientist supplied us with the information and we published it on page 597 of *The Modern Review* for November, 1937, that "Mr. N. G. Chatterjee of the Harcourt Butler

Technological Institute, Cawnpore, has actually demonstrated that molasses can be easily converted into power alcohol and placed in the market at competitive rates. His report was submitted to the U. P. Government (not the Congress Government.—Ed., *M. R.*), but was suppressed, and he was not permitted to publish it."

It was some time after the publication by us of this information that the U. P. and Bihar Joint Committee was appointed.

for his fishing in troubled waters so that if he can delay a Franco victory by helping Republican Spain it all fits in with his plans.

But Germany now is setting her alliances in order. And is there anything that we can

do about it? Can indeed anything be placed in the scales that can weigh against the prospect of world hegemony?

London,
28th May, 1938.

PRESENT TREND OF BRITISH POLICY

By DR. TARAKNATH DAS

*Special Lecturer on Oriental History & World Politics
The College of the City of New York*

THE conclusion of the Anglo-Italian Pact, by the Chamberlain Government, gives a clearer indication of the present trend of British Foreign Policy. One thing is certain that the British Government is not concerned about the so-called *United Front of the Great Democracies against the Fascist States*. In fact at no time has the foreign policy of any State been primarily determined by ideological considerations. This has been the case with the Government of Great Britain more than any other State; because of the necessity of preservation of its worldwide empire. Common interests against a common enemy and conflicting interests between states have been the causes of alliances and wars. In the arena of international politics, an imperialist democracy like Great Britain formed alliances with autocratic Japanese Imperialism (the Anglo-Japanese Alliance) and the Czarist Imperialism (The Triple Entente) as well as Republican France. Now we see that British Imperialism is at the threshold of forming an understanding, verging on an alliance with Fascist Italy.

None should be surprised at the conclusion of the Anglo-Italian understanding, because it was evident to all far-sighted students of international affairs some three years ago that ultimately, three great colonial imperial powers Great Britain, France and Italy—must co-operate to preserve their interests in Africa; otherwise conflicts among these nations would lead to the loss of their imperial possessions. Therefore three years ago, when the League of Nations, led by Great Britain and supported by France and other states, used economic sanctions against Italy, I predicted that such activities on the part of the British and French Governments

would fail; because among other things they could not afford to see Italy defeated by Abyssinia. Such a defeat would have undermined British supremacy in India, in the Near East and Egypt. It would have ultimately destroyed French authority in Morocco, Algeria and Tunis. This being the case, while Mr. Anthony Eden, on behalf of England, was working for coercion of Italy through economic sanctions, it was the British Government controlled Anglo-Persian Oil Company which supplied oil to Il Duce's Air Force and mechanised army to crush Haile Selassie's ill-equipped forces. It was not only England which indirectly aided Italy, but Soviet Russia also supplied oil to Italy and the United States oil concerns and Rumanian companies did their share. Let this be noted that neither Japan nor Germany invoked sanctions against Italy in the days of her trial and this was the real foundation of Italy's policy of co-operation with Japan and Germany.

From the published text of the Anglo-Italian Pact, signed on the 16th of April, 1938, it becomes evident that the policy of Sir Samuel Hoare, who as British Foreign Minister advocated Anglo-French-Italian understanding through the defunct Hoare-Laval Pact, against which Anthony Eden and others raised so much objection and which was the cause of Sir Samuel's resignation from the position of British Foreign Secretaryship, has triumphed against the policy of coercion of Italy by Britain. It is evident that Great Britain would not only acknowledge Italian sovereignty over Abyssinia, but would use her full influence over the League of Nations, so that other League members might extend their blessings on Italian Imperialism in

Abyssinia. On the other hand Anglo-Italian rivalry in the Mediterranean, Africa, the Near East and Arabia would take the form of recognition of mutual interests by these Powers, which would really mean co-operation between them to further their interests.

In Great Britain two groups of statesmen were advocating two different courses of action to gain the same end of maintaining the British Empire from any possible menace in Europe, Africa and Asia. One group—headed by Tories of the type of Mr. Eden supported by some liberals and laborites—was following the course of Anglo-French-Russian understanding against German-Italian-Japanese groups of Powers; and they of course counted on active support of the United States in their fight against the Fascist States. The other group of British statesmen—Tories of the type of Mr. Chamberlain, Sir Samuel Hoare, Sir John Simon (a liberal Tory!), Lord Halifax (the former Viceroy of India Lord Irwin) and other lesser lights—advocated the idea that they should come to an understanding with France and Italy first and thus maintain their mutual interests in the Mediterranean, Africa and the Near East and thus check increase of Russian and German influence in these regions. Furthermore they felt that, the conclusion of an Anglo-French-Italian understanding on the basis of co-operation would be the first step for a Pact in which Germany would be invited to participate; and thus it would guarantee peace in Western Europe. Thus the signing of the Anglo-Italian Pact is the first step towards re-alignment of Powers under British leadership, which would revolutionize the course of international relations during the coming years.

II

The next development in World Politics in line with British Foreign Policy, is the possibility of an Anglo-French-Italian understanding. In fact before this article may be published, this may be accomplished. It must be accomplished in fact, if not by signing a pact before the visit of Herr Hitler at Rome on the 3rd of May. The first step towards the conclusion of an Anglo-French-Italian understanding was completed when the second popular front government by M. Blum was overthrown and the present Daladier government came into power. The Popular Front government in France, like all other French governments, was committed to the policy of Anglo-French co-operation; but at the same time it was anti-Fascist and pro-Russian. When Mr. Eden was relieved of his

post in the British Foreign Office then it was decided that Britain would prefer an Anglo-French-Italian understanding to an Anglo-French-Russian understanding. A British Government seeking an understanding with Italy could not whole-heartedly co-operate with a French Government headed by M. Blum or some of the Popular Front leaders committed to anti-Italian policy. Thus Blum Government could not get the full support of the British Government and it had to go.

It has been reported from London that Premier Daladier and Foreign Minister Bonner of France are to visit Prime Minister Chamberlain and Foreign Secretary Lord Halifax for a conversation strengthening Anglo-French co-operation in World Politics. It is needless to point out that, after the signing of an Anglo-Italian Pact, one of the prime requisites for whole-hearted Anglo-French co-operation would be Franco-Italian understanding. It is also significant that it has been reported from Paris that the Government of France would recognise Italian supremacy over Abyssinia and thus follow the policy of Franco-Italian co-operation as established by Leval-Mussolini Pact of Rome (1933). It is also well-known that M. Daladier is a disciple of M. Callieux, who is an advocate of Franco-German understanding and not in favour of Franco-Russian understanding which has strained Franco-German and Franco-Italian relations. Therefore we may expect that Anglo-French relations would be regulated on the basis of Anglo-Italian understanding and there will develop Anglo-French-Italian understanding which would safeguard British interests in the Mediterranean, Africa, the Near East and even in India.

III

Settlement of Spanish Civil War has been taken into consideration in concluding the Anglo-Italian Pact. It has been agreed that Italy would withdraw her forces from Spain only after the conclusion of the Civil War in Spain, and Italy would not disturb territorial *status quo* of the Spanish republic. This means that the British Government has agreed with Signor Mussolini that it would support Franco regime and thus help Signor Mussolini in upholding his Spanish policy. This would not only help Italy in strengthening her position in the Western Mediterranean, but it would help increasing prestige of Herr Hitler in Germany.

Thus the French Government will have to modify its Spanish policy and in order to cement Anglo-French-Italian solidarity, France will

have to follow Great Britain and Italy in Spain and have to recognise Franco regime; and this may result in Anglo-French-Italian-Spanish understanding on the basis of *status quo* with increased prestige for Signor Mussolini and full justification of the policies inaugurated by Signor Mussolini, M. Leval and Sir Samuel Hoare.

IV

To be sure, with the annexation of Austria by Germany, Nazi Germany has become the strongest military power in Central Europe. It has virtually broken up the Little Entente. It has shaken the foundation of Franco-Czechoslovakian Alliance as well as Russo-Czechoslovakian Alliance. It has paved the way for further extension of German power and influence in Central Europe. Germany annexed Austria with the tacit consent of, if not with direct encouragement from the rulers of Great Britain—Chamberlain-Halifax-Simon-Hoare section of the British cabinet,—Germany would not have dared to annex Austria in direct opposition of Britain, Italy and France, not to speak of Russia and other Powers. When Herr Hitler was in the process of annexing Austria, the French Government appealed to Signor Mussolini to take decisive action against the German menace; but he refused to do so, because he wished to force the British and the French governments to realise the importance of Italian co-operation in world politics. It is significant that after Herr Hitler's annexation of Austria, the British and the Italian Governments showed their determination to come to an understanding in which they have so admirably succeeded. None should forget that Herr Hitler undertook his Austrian adventure, after he made sure of the support of Signor Mussolini in this matter. To be sure the appearance of Germany at the Brenner Pass may be a source of apprehension for Italy, but the growth of German power has forced the British and the French to settle their disputes with Italy.

Signor Mussolini and Count Ciano are honest and sincere in their declarations that while they have signed the Anglo-Italian Agreement, it did not mean a break in the Rome-Berlin axis. If Italy would have given up her close relations with Germany and Japan, in order to win the goodwill of Britain and France, then Italy's influence in world politics would have been considerably reduced and she might have been at the mercy of Anglo-French pressure. Therefore Signor Mussolini will continue to be on the very best terms with Herr Hitler; and this will

be a factor in forcing Anglo-French Powers to respect Italy's wishes. On the other hand Italy's closer co-operation with Anglo-French Powers will force Herr Hitler to court Il Duce's goodwill.

Under the circumstances what would be the policy of Great Britain regarding Germany? Great Britain would try to come to an understanding with Germany directly or through the co-operation of Il Duce. Great Britain would not make any serious objection to German expansion in Eastern Europe; because it would serve two definite purposes—(a) increase of German power and influence in Hungary and Rumania would increase Russo-German tension, which will be an asset for Great Britain and (b) any move for Germany to increase its influence in the Balkans might hurt Italian interests; and such a possibility would solidify Anglo-Italian co-operation. Thus it is expected that after the Anglo-Italian understanding, Anglo-French understanding and Franco-Italian understanding, British statesmen would encourage a move for a general Western European Pact in which Great Britain, France, Italy and Germany will be the principal participants while Belgium, Poland and Spain may be invited to co-operate. It may also encourage a pact among Danubian Powers for the purpose of maintenance of peace. Then it may even take steps for reconstruction of the League of Nations, which may allow Italy and Germany to re-enter the League on their own terms.

It means that the present trend of British Foreign Policy would be to have an understanding with Italy and Germany without sacrificing Anglo-French understanding. In order to accomplish this, if it be necessary to induce France to give up her Russian alliance, Britain will use full pressure on France dependent upon British goodwill. The net result of such a policy would mean isolation of Soviet Russia in European politics, at least temporarily. *This policy of weakening Russia would be agreeable to Britain, because Soviet Russia's increased influence in the Moslem bloc of Powers—Turkey-Persia-Afghanistan—and in China, through increasing penetration in Shinkiang is decidedly opposed to British imperial interests in Asia.*

In spite of much anti-Japanese demonstration among the masses of Britain, the group of statesmen who favour an understanding with France, Italy as well as Germany, recognise the fact that while Italy and Germany are willing to co-operate with Britain, they may not be willing

to sacrifice Japan to win British friendship. None should misunderstand the motive behind Germany's understanding with Japan and Italy's friendliness with the Empire of the Rising Sun. Herr Hitler is committed to anti-Soviet Russian Foreign Policy and, if possible, acquisition of at least a part of Russian territory for German expansion. This cannot be accomplished without Japanese pressure against Russia as well as British, French and Italian neutrality in case of a Russo-German conflict. German-Japanese co-operation then is a weapon against Russia and a means of pressure against Britain. Signor Mussolini has taken up the side of Japan, because in case of an Anglo-Italian conflict, Italo-Japanese co-operation would split British navy at least in three sections—one for the North Sea to watch over the German menace, one for the Mediterranean and one for the Pacific against the Japanese march to South Pacific. It is conceivable that both Italy and Germany would refuse to adopt a policy which will reduce Japan to impotency and thus increase British naval power proportionately in the North Sea region and the Mediterranean. Furthermore, if British statesmen are really opposed to increase of Soviet Russian influence in Asia, then it would be the height of folly for Britain to weaken Japan to such an extent that Soviet Russia would feel free to carry out her designs in Asia through a Sino-Russian combination.

Thus if Herr Hitler and Signor Mussolini be determined to maintain the Rome-Berlin axis and also maintain their agreements with Japan (German - Japanese - Italian anti - communist Pact), then it is conceivable that Great Britain would be willing to come to an understanding with Japan, on the basis of recognition of mutual spheres of interest in the Far East. It might lead to formation of some form of Anglo-Japanese understanding to check any increase of Russian influence in China and other parts of Asia, at the cost of British influence.

Furthermore, one must not forget that if Japan be defeated by China, primarily through Russian aid, then its effect would be increase of Russian influence not only in China, but in India also, where men like Mr. Nehru and others are professedly pro-Russian. It is clear that neither Lord Halifax (former Viceroy of India), nor Sir Samuel Hoare, Sir John Simon and Mr. Chamberlain would adopt a policy which would undermine the prestige of Japanese imperialism, rouse Chinese and Indian nationalism to assert their powers against British and other (French) interests in Eastern Asia and serve the cause

of Soviet Russia. It is expected that unless Signor Mussolini and Herr Hitler show shortsightedness in their policy towards Japan, they will use their influence with British statesmen (Chamberlain-Hoare-Simon-Halifax group) to have an understanding with Japan; and France which has already an alliance with Japan would support such a move. Under these circumstances, one is inclined to think that there is much truth in the reports of conversation between Mr. Tani, the Japanese Ambassador at large in China and the British Ambassador in China, Sir Archibald Kerr for a possible Anglo-Japanese rapprochement on the basis of respecting British sphere of influence in Southern China and Great Britain recognising Manchukuo. (This will be in line with the Anglo-Italian Pact, which is based upon British recognition of Italian supremacy in Abyssinia).

British support to Japan will inevitably lead to Japan's aggressive attitude towards Soviet Russia. Thus, a Russo-Japanese rivalry in the Far East will be an asset to Britain in Asia, as a German-Russian rivalry is an asset to Britain in Europe and the Near East.

VI

If the above calculations be accurate, it becomes clear that Great Britain will be maintaining her interests in Asia, Europe and Africa by coming to an understanding with Italy, Germany and Japan and thus isolating Russia. This policy may result in a Russo-German war or a Russo-Japanese War, which would be welcome! by Britain, because it would weaken her three potential enemies—Germany, Russia and Japan.

It may be argued that in making these calculations we have not taken the United States into consideration. It was not necessary to say that Great Britain would not follow anti-American foreign policy; and at the same time it is beyond dispute that the American Government would adopt the policy of "parallel action" with Great Britain to maintain peace and aid the British Empire. Just as Great Britain did not take any objection to German annexation of Austria, similarly the United States also has followed Great Britain on the Austrian question. It is well understood that in the near future the United States will recognise the Italian conquest of Abyssinia. If Britain pursues a policy of consolidating Anglo-French-Italian-German understanding which might adversely affect Soviet Russia but would promote British interests, the government at Washington would not act adversely to the British programme. If Britain decides to act in the Far East as a mediator in

the Sino-Japanese conflict and thus act to curb the increase of Soviet Russian influence in China, in spite of genuine anti-Japanese feeling in certain influential quarters of the United States, the Government of the United States would never align itself with Russia and China against Great Britain, France, Italy, Germany and Japan.

In conclusion, I wish to make it clear that British statesmen who are directing the Foreign Policy are neither Fascists nor anti-Fascists in principle. They have only one principle and aim—preservation and extension of the British Empire—and they feel that Britain has no reason to take the burden of fighting Germany, Italy and Japan. Such a struggle would materially benefit Russia and France and not Britain. Therefore they are at present interested in consolidating British interests by securing French, Italian, German and Japanese co-operation and thus weakening Soviet Russia as well as Germany and Japan through adopting a policy which would make a Russo-Japanese War or a Russo-German War inevitable.

April 17, 1938.

New York.

**Annexes to the Anglo-Italian Treaty of
April 16, 1938.***

ANNEX ONE

Reaffirmation of the Declaration of January 2, 1937, regarding the Mediterranean, and of Notes exchanged on December 31, 1936.

The Government of the United Kingdom and the Italian Government hereby reaffirm the declaration signed at Rome on January 2, 1937, regarding the Mediterranean and notes exchanged between the two governments on December 31, 1936, regarding the status quo in the Western Mediterranean.

Done at Rome, etc.

(Signed) PERTH, CIANO.

ANNEX TWO

Agreement regarding the Exchange of Military Information.

The government of the United Kingdom and the Italian Government agree that in the month of January each year a reciprocal exchange of information shall take place through naval, military and air attaches in London and Rome regarding any major prospective administration movements or redistribution of their respective naval, military and air forces. This exchange of information will take place in respect of such forces stationed in or based on:

1—Overseas possessions of either party (which phrase shall for this purpose be deemed to include protectorates and mandated territories) in or with seaboard on the Mediterranean, Red Sea or Gulf of Aden, and

2—Territories in Africa other than those referred to in paragraph 1 above, and lying in the area bounded on the west by Long. 20 E. and on the south by Lat. 7 S.

Such exchanges of information will not necessarily preclude occasional communication of supplementary

military information, should either party consider that political circumstances of the moment make it desirable.

The two governments further agree to notify each other in advance of any decision to provide new naval or air bases in the Mediterranean east of Long. 19 degrees E., and in the Red Sea or approaches thereto.

Done at Rome, etc.

(Signed) PERTH, CIANO.

ANNEX THREE

Anglo-Italian Agreement regarding certain areas in the Middle East.

The Government of the United Kingdom and the Italian Government,

Being desirous of insuring that there shall be no conflict between their respective policies in regard to areas of the Middle East referred to in the present agreement,

Being desirous, moreover, that the same friendly spirit which has attended the signing of to-day's protocol and of the documents annexed thereto should also animate their relations in regard to those areas,

Have agreed as follows:

Article I. Neither party will conclude any agreement or take any action which might in any way impair the independence or integrity of Saudi Arabia or Yemen.

Article II. Neither party will obtain or seek to obtain a privileged position of political character in any territory which at present belongs to Saudi Arabia or to Yemen or in any territory which either of those States may hereafter acquire.

Article III. The two parties recognize that in addition to the obligations incumbent on each of them in Articles I and II hereof it is in the common interest of both of them that no other power should acquire or seek to acquire sovereignty or any privileged position of a political character in any territory which at present belongs to Saudi Arabia or Yemen, or which either of these States may hereafter acquire, including any islands in the Red Sea belonging to either of those States, or in any islands of the Red Sea to which Turkey renounced her rights by Article XVI of the treaty of peace signed at Lausanne July 24, 1923.

WOULD CURB OTHER POWERS

In particular they regard it as an essential interest of each of them that no other power should acquire sovereignty or any privileged position on any part of the coast of the Red Sea which at present belongs to Saudi Arabia or Yemen or in any of the aforesaid islands.

Articles IV. As regards those islands in the Red Sea to which Turkey renounced her rights by Article XVI of the treaty of peace signed at Lausanne July 24, 1923, and which are not comprised in the territory of Saudi Arabia or Yemen neither party will in regard to any such island firstly, establish its sovereignty or secondly, erect fortifications or defences.

It is agreed that neither party will object to: Firstly, the presence of British officials at Kamaran for the purpose of securing sanitary service of the pilgrimage to Mecca in accordance with the provisions of the agreement concluded in Paris on June 19, 1926, between the Governments of Great Britain, North Ireland and of India on the one part and the Government of The Netherlands on the other; it is also understood that the Italian Government may appoint an Italian medical officer to be stationed there on the same conditions as The Netherlands medical officer under the said agreement; secondly, the presence of Italian officials at Great Hanish, Little Hanish and Jebel Zukur for the purpose of protecting fishermen who resort to those islands; thirdly, the presence at Abu Ali, Centre

*Reproduced from *The New York Times* of April 17, 1938.

Peak and Jebel Teir of such persons as are required for the maintenance of lights on those islands.

Article V. The two parties agree it is in the common interest of both of them that there shall be peace between Saudi Arabia and Yemen and within the territories of those States. But while they will at all times exert their good offices in the cause of peace they will not intervene in any conflict which despite their good offices may break out between or within those States.

The two parties also recognize that it is in the common interest of both of them that no other power should intervene in any such conflict.

ARABIAN ZONE CITED

Article VI. As regards the zone of Arabia lying to the east and south of the present boundaries of Saudi Arabia and Yemen or of any of the future boundaries which may be established by agreement between the Government of the United Kingdom on the one hand and the Governments of Saudi Arabia or Yemen on the other: 1—The Government of the United Kingdom declare that in the territories of the Arab rulers under their protection within this zone:

No action shall be taken by the Government of the United Kingdom which shall be such as to prejudice in any way the independence or integrity of Saudi Arabia or Yemen (which both parties have undertaken to respect in Article I hereof) within any territory at present belonging to those States or within any additional territory which may be recognized by the Government of the United Kingdom as belonging to either of those States as the result of any agreement which may hereafter be concluded between the Government of the United Kingdom and the government of either of them;

The Government of the United Kingdom will not undertake or cause to be undertaken any military preparations or works other than military preparations or works of purely defensive character for the defense of said territories or of communications between the different parts of the British Empire. Furthermore, the Government of the United Kingdom will not enroll inhabitants of any of these territories or cause them to be enrolled in any military forces other than forces designed and suited solely for the preservation of order and for local defense;

While the Government of the United Kingdom reserve the liberty to take in these territories such steps as may be necessary for the preservation of order and the development of the country, they intend to maintain the autonomy of the Arab rulers under their protection.

2—The Italian Government declare they will not seek to acquire any political influence in this zone.

Article VII. The Government of the United Kingdom declare that within the limits of the Aden protectorate as defined in the Aden protectorate order of 1937 Italian citizens and subjects (including Italian companies) shall have liberty to come with their ships and goods to all places and ports and they shall have freedom of entry to travel and residence and the right to exercise there any description of business, profession, occupation or industry as long as they satisfy and observe the conditions and regulations from time to time applicable in the protectorate to citizens, subjects and ships of any country not being a territory under the sovereignty, suzerainty, protection or mandate of His Majesty the King of Great Britain, Ireland and the British Dominions Beyond the Seas, Emperor of India.

NEGOTIATIONS PROVIDED FOR

Article VIII. Should either party at the time give notice to the other that they consider that a change has taken place in the circumstances obtaining at the time

of entry into force of the present agreement such as to necessitate modification of the provisions of the agreement, the two parties will enter into negotiations with view to revision or amendment of any of the provisions of the agreement.

At any time after the expiration of a period of ten years from the entry into force of this agreement either party may notify the other of its intention to terminate the agreement. Any such notification shall take effect three months after it is made.

Done at Rome, etc.

(Signed) PERTH, CIANO.

ANNEX FOUR

Declaration regarding Propaganda.

The two governments welcome the opportunity afforded by the present occasion to place on record their agreement that any attempt by either of them to employ methods of publicity or propaganda at its disposal in order to injure the interests of the other would be inconsistent with the good relations which it is the object of the present agreement to establish and maintain between the two governments and peoples of their respective countries.

Done at Rome, etc.

(Signed) PERTH, CIANO.

ANNEX FIVE

Declaration regarding Lake Tsana.

The Italian Government confirms the government of the United Kingdom the assurance given by them to the government of the United Kingdom on April 3, 1936, and reiterated by the Italian Minister for Foreign Affairs to His Majesty's Ambassador at Rome on December 31, 1936, to the effect that the Italian Government were fully conscious of their obligations towards the government of the United Kingdom in the matter of Lake Tsana and had no intention whatever of overlooking or repudiating them.

Done at Rome, etc.

(Signed) PERTH, CIANO.

ANNEX SIX

Declaration regarding Military Duties of Natives of Italian East Africa.

The Italian Government reaffirm the assurance that they gave in their note to the League of Nations on June 29, 1936, that Italy on her side was willing to accept the principle that natives of Italian East Africa should not be compelled to undertake military duties other than local policing and territorial defense.

Done at Rome, etc.

(Signed) PERTH, CIANO.

ANNEX SEVEN

Declaration regarding Free Exercise of Religion and Treatment—British Religious Bodies in Italian East Africa.

Without prejudice to any treaty engagements which may be applicable, the Italian Government declare they intend to assure to British nationals in Italian East Africa free exercise of all cults compatible with public order and good morals; and in this spirit they will examine favorably any request which may reach them from the British side to assure Italian East Africa religious assistance to British nationals; and that as regards other activities of British religious bodies in Italian East Africa in the humanitarian and benevolent spheres such requests as may reach the Italian Government will be examined, the general lines

of policy of the royal government in this matter and the principles of legislation in force in Italian East Africa being borne in mind.

Done at Rome, etc.

(Signed) PERTH, CIANO.

ANNEX EIGHT

Declaration regarding Suez Canal.

The Government of the United Kingdom and the Italian Government hereby reaffirm their intention always to respect and to abide by the provisions of the convention signed at Constantinople October 29, 1888, which guarantees at all times for all powers free use of the Suez Canal.

Done at Rome, etc.

(Signed) PERTH, CIANO.

LETTERS ON LIBYA

The Italian Minister for Foreign Affairs to His Majesty's Ambassador at Rome.

Rome, April 16, 1938.

Your Excellency,

During our recent conversations Your Excellency referred to the question of the strength of Italian forces in Libya.

I have the honor to inform Your Excellency that the head of the government has given orders for the diminution of these forces. Withdrawals already have begun at the rate of 1,000 a week and will be continued at not less than this rate until Italian Libyan effectives reach peace strength. This will constitute an ultimate diminution of these effectives by not less than half the numbers present in Libya when our conversations commenced.

I avail myself of this opportunity to convey to Your Excellency expression of my highest consideration.

(Signed) CIANO.

Lord Perth to Count Ciano.

Rome, April 16, 1938.

Your Excellency,

I honor and acknowledge receipt of Your Excellency's note of today's date wherein Your Excellency informed me of the intentions of the head of the Italian Government with regard to the progressive diminution of Italian forces in Libya.

I shall have the pleasure of communicating this information to His Majesty's Government.

I avail myself, etc.,

(Signed) PERTH.

LETTERS ON NAVAL TREATY

Count Ciano to Lord Perth.

Rome, April 16, 1938.

Your Excellency,

I have the honor to inform Your Excellency that the Italian Government has decided to accede to the naval treaty signed at London on the 25th of March, 1936, in accordance with procedure laid down in Article XXXI of that treaty. This accession will take place as soon as the instruments annexed to the protocol signed this day come into force.

In advising Your Excellency of the foregoing I desire to add that the Italian Government intend in the meantime

to act in conformity with the provisions of the aforesaid treaty.

I avail myself of this opportunity, etc.

(Signed) PERTH.

Lord Perth to Count Ciano.

Rome, April 16, 1938.

Your Excellency,

I have the honor to acknowledge receipt of Your Excellency's note of today's date which Your Excellency informed me of the decision of the Italian Government to accede to the naval treaty signed in London on the 25th of March, 1936, as soon as the instruments annexed to the protocol signed this day come into force, and in the meantime to act in conformity with the provisions of the aforesaid treaty.

I shall have the pleasure of communicating this decision to His Majesty's Government of the United Kingdom.

I avail myself, etc.

(Signed) PERTH.

The Bon Voisinage agreement between the Government of the United Kingdom, the Egyptian Government and the Italian Government.

The Italian Government on the one hand and, on the other hand, in respect to Kenya and British Somaliland, the Government of the United Kingdom of Great Britain and Northern Ireland and, in respect to Sudan, the Government of the United Kingdom and the Egyptian Government;

Desiring to provide for friendly relations in East Africa:

Undertake, in addition to proceeding with due course to the discussion of detailed questions connected with frontiers between Italian East Africa and Sudan, Kenya and British Somaliland as provided in the protocol signed today by the Government of the United Kingdom and the Italian Government, at all times to co-operate for the preservation of good neighborly relations between the said territories and to endeavor by every means in their power to prevent raids or other unlawful acts of violence from being carried out across the frontiers of any of the above-mentioned territories;

Agree that in view of the fact that by virtue of the Italian decree of the 12th of April, 1936, slavery was prohibited in Ethiopia, as it had already been abolished in other above-mentioned territories, the good neighborly relations referred to above shall include co-operation to prevent evasion of anti-slavery laws of the respective territories;

Agree that the nationals of the other party shall not be enrolled in native troops, bands or formations of a military nature maintained in the above-mentioned territories, including in particular any such nationals who are deserters from troops, bands or formations maintained in or refugees from territories of the other party.

In witness whereof the undersigned, duly authorized thereto by their respective governments, have signed the present agreement.

Done at Rome in triplicate on the 16th of April, 1938, in the English and Italian languages, both of which have equal force.

(Signed) PERTH,
MUSTAFA EL SADEK,
CIANO.

COLLECTIONS OF CHINESE ART AND ARCHAEOLOGY

By DR. KALIDAS NAG, D. Litt. (Paris)

To prepare a mere inventory of Chinese manuscripts and art treasures removed from China and sequestered in the various public and private collections of Europe and America is a task of international significance. It should have been taken up by the National Government of China in collaboration with the International Institute of Intellectual Co-operation, which has a special division known as the International Office of Museums. But it is a matter of deep regret that while China like India paid enormous subsidies as subscription to the coffers of the League of Nations, it has done very little by way of such useful surveys, if the restoration and conservation work proved too heavy for the League experts. Consequently, a scholar interested in tracing the valuable Chinese works of art abroad must have the rare leisure and financial resources to travel all over the Occident and study the exhibits in the public museums as well as in private collections. The British Museum, London, the Louvre, the Musée Guimet, the Musée Cernusky of Paris, the State Museum and the Folk Museum of Berlin, together with the smaller, yet none the less important Chinese collections in Holland, Italy and other countries, go to demonstrate how many of the national artistic patrimony of China lie scattered in foreign lands. The New World also, specially Canada and the United States, have developed Chinese collections of outstanding merit, specially in Toronto and in the McGill University, Canada, in the Boston Museum of Fine Arts, in the Metropolitan Museum of New York and other places. Benjamin Marsh has rendered a real service by compiling a short yet useful list of the Chinese and Japanese collections in the American Museums. For the present, we shall indicate some of the important museums and research institutions which have been functioning with more or less efficiency in the various cultural centres of the Chinese Republic.

PALACE MUSEUM OF PEKING

Privileged to accompany Dr. Rabindranath Tagore in his cultural mission to China, I visited the splendid museum in 1924 when the last Manchu Emperor, Hsuan Tung, invited us to the historic palace in the Forbidden City. H. R.

Johnston, private tutor to the Emperor, was all courtesy to us and I could see some of the rarest treasures of Chinese art in the historical setting of the Palace which very soon after changed its complexion with the flight of the Emperor who emerged in history as Emperor Pu Yi of Manchukuo. After his departure, the Palace Museum was formally inaugurated (Oct. 1925) and for the benefit of the public a detailed inventory of the valuable palace collection was made, each article being numbered, labelled and recorded and according to importance photographed. Thus the contents of each room of the palace were made known to the public for the first time. Since 1914, the Ministry of the Interior was maintaining the Peking Museum of Antiquities occupying the Outer Court of the Forbidden City. In the Outer Court we find the three great Throne Halls. Tai Ho Tien or the Hall of Supreme Harmony was the centre of ceremonial life where the most important state functions were formally held with great pomp and splendour. It is the most impressive of all the imperial structures, 200 ft. long, 100 ft. wide and 110 ft. high. Five richly carved marble steps lead to lofty terraces where we find wonderful bronze cisterns, incense-burners, the sun and moon dials and other treasures removed to Peking in 1914 from the former Imperial Palaces at Mukden and Jehol. The exhibits number over 200,000 articles and 10 volumes were necessary to complete its catalogue of paintings and calligraphy. This museum in the Outer Court came in November, 1930 under the jurisdiction of the National Palace Museum, occupying the Inner Courts or the Northern section of the former Imperial Palace. It is divided into five sections, the most important being the Chien Ching Kung or the Hall of Resplendent Brilliancy. Behind it are the halls of Imperial Wedding and the Throne Hall of the Empress, beyond which is the wonderful imperial garden where the young Emperor with his two beautiful queens received the Indian Poet and his party. Many large pavilions in the palace have been turned into exhibition rooms, some always open to the public and the remainder open on special occasions. From nowhere could we form a better idea of Chinese court life, its gorgeous architecture and wonderful furniture and

Ancient Chinese Landscapes in the Collection of the Palace Museum of Peking

Ancient Chinese Landscapes in the Collection of the Palace Museum of Peking

interior decorations as from our visit to the palaces of the Forbidden City.

IMPORTANT COLLECTIONS OF THE PEKING MUSEUM

From the point of view of antiquity, the bronzes are the finest things in the Museum dating from 1500 to 1000 B.C., coming from the Shang and the Chou dynasty. Next in importance come the objects of jade and other precious stones. A rock-shaped jade block is named "the mountain of longevity" and the wonderful jade basin representing a lake is called "the sea of happiness." The ivory collection is no less remarkable, and to form an idea of the historical value of these objects of art, one has only to consult the learned monographs of Dr. B. Laufer of the Field Museum of Chicago, on *Jade* (1912) and *Ivory in China* (1925).

More than 6,000 specimens of Chinese porcelain come from the various famous kilns from the Sung to the Ming dynasty. In modelling, design and colouring, they mark the apogee of Chinese art. The earliest Chinese painting has unfortunately been lost to China, as it now decorates the British Museum. The oldest in the Palace Museum come from the Tsin dynasty (265-419 A.D.). I saw one or two small sketches of remarkable vigour attributed to the Tang dynasty. Thence the pictorial documents become more copious, for we find over 8,000 scrolls from the Sung, Yuan and Ming epochs. The museum authorities have already published several volumes of reproductions of selected paintings and four volumes of portraits of Manchu Emperors and Empresses.

Amongst the miscellaneous collections we find real gems of minor arts in ancient bronze mirrors, ivory fans, snuff bottles, paintings and writing materials, carved bamboos, brocades, tapestries, carved lacquer, cloisonne enamels, etc. Students of Indian art also will find valuable materials in the statues, paintings and religious relics of Buddhism from India, Nepal and Tibet. I was agreeably surprised to find several apparently diplomatic documents written in Nagri or derivatives of Nagri script, possibly from Nepal, which might have sent embassies to the Chinese Court.

That reminds us of the fact that the Palace Museum is also the depository of the largest collection of ancient manuscripts, books, and historical records. According to the statistics of 1931, there were about 370,000 volumes and many of them were the only copies in existence. The famous Chinese Encyclopaedia (5,000 vols.) printed in 1724 on *Kaihua* paper from movable blocks is there. So many original editions of

books printed during the Sung, Yuan and Ming dynasties are deposited together with about 36,000 manuscript volumes from the Imperial Library of Emperor Chien Lung. A great number of unpublished edicts, memorials and historical maps is kept, together with imperial robes, shields, ornaments and various other objects of historical or literary value.

The annual budget of the museum amounts to \$432,000 plus \$123,312 for special expenses during 1934-35. The museum, amongst other publications, issues an illustrated bi-weekly and also the Palace Museum monthly. Peking is also proud of its National Library, which contains rare documents of artistic and historical value. It has more than 15,000 sets of rubbings of bronzes and stone tablets and many Mongolian and Tibetan books together with Manchu translations of Chinese works. In 1929, the library purchased a unique collection of 99 volumes of printed Buddhist Sutras in the Hsi Hsia (Tangut) language and some Buddhist paintings. Moreover, the library has a good collection of Buddhist texts from the 8,500 manuscripts discovered in Tun Huang caves mostly from the Tang dynasty.

The private library of over 41,000 volumes of our noble host Liang Chi Chao with his own manuscripts have been deposited by his heirs in the National Library. It started operating in 1910 and was reorganised in 1925 when the Ministry of Education agreed to co-operate with the China Foundation for the Promotion of Education and Culture which paid in 1934-35 \$275,000.

In 1933, the National Library possessed 500,000 volumes of Chinese works and about 85,000 volumes in European languages as well as works in Arabic, Hebrew, Turkish, Persian and other Asiatic languages—a veritable museum of Oriental culture.

Before the transference of political power to Nanking, the cultural capital of China was undoubtedly Peking, which alone had nine universities which were amalgamated (1927) to form the National University of Peiping. These universities, of course, are so many colleges and the earliest, the Metropolitan University, was started in 1898. In 1908 the American Government returned to China a portion of the Boxer indemnity which went to the foundation of a splendid college which we visited in 1924 and which developed into the Tsing Hua University in 1925. It takes interest in ancient culture publishing *A Commentary to the Kacyapa-parivarta* in Chinese and Tibetan, as well as a study on *The Prehistoric Relics of Hsi Yin*

Tsun. Dr. P. C. Chang, an authority on Chinese drama, was the Dean of the University, who showed us its splendid library and other departments.

Invited by the National University of Peking to deliver lectures on Indian Art which were interpreted in Chinese by our esteemed friend Dr. Hu Shih, I came in touch with many outstanding art-critics and antiquarians who were deeply interested in Indian art and archaeology. Dr. Hu Shih, one of the leading spirit of the Chinese renaissance in the Republican epoch and who introduced John Dewey, Bertrand Russel and other celebrities to the Chinese public, not only introduced me and S. J. Nandalal Bose to the artistic circles of the metropolis but, in consultation with Liang Chi Chao, secured for us the co-operation of eminent scholars like Liang-Su-Ming, the philosopher and Dr. Li Chi, the archaeologist, who guided my steps (1924) through the historical sites and relics of China.

Nandalal's masterly brush-work was keenly appreciated by the expert painters of Peking. Some of them worked in their private studios, while others helped in the establishment (1918) of the Peking Art School which developed into the National Academy of Fine Arts. Between 1928-34, the Academy operated as the College of Fine Arts of the National University. It attained independent status with the annual subsidy of \$120,000 from the Ministry of Education. It offers three years' courses in painting, sculpture, industrial and decorative arts. The Peiping School of Fine Arts is an independent non-official organisation which was founded in the year of our visit (1924). It was maintained by an income from private sources amounting to \$24,000 per annum.

Three major American learned societies contributed to build research centres in China. In 1906, was founded the Union Medical College which was maintained by a joint English and American mission board until July, 1915, when Rockefeller Foundation assumed the full financial support and developed it into the now famous Peiping Union Medical College whose Prof. Davidson Black contributed so much to the scientific evaluation of the Peking Man.

The Yale University also finances many projects under its Yale-in-China programme and the University of Harvard was entrusted to administer a trust under the Will of the late Charles M. Hall to "conduct and provide research instruction and publication in the culture of China." The Harvard University entered into an agreement with the Yen Ching University

which was created in 1917 and which grew out of an institution founded as early as 1867 by the American mission board. It started the Women's College in 1905 and in 1934-35 showed the total student roll of 250 women and 550 men. Its annual budget is met by the American trustees. The Harvard-Yenching Institute, for the last ten years (1928 onwards) is promoting researches in the fields of Chinese philology, history, literature, philosophy, religion, art and archaeology. In 1929, the Sino-Indian Institute of Peiping was merged through the co-operation of Alexander von Stael-Holstein who so kindly guided us in 1924 and who is now the Professor of Sanskrit of the Harvard University, resident in Peking. He tried for years together to train advanced scholars in Sanskrit, Tibetan and Mongolian. A profound student of the history of Buddhism, Baron Stael-Holstein recited to me some of the forgotten hymns of Asvaghosa which he has recovered. He also kindly presented me, before my departure, with a copy of Chinese-Buddhist iconographical texts which I handed over to my friend Dr. P. C. Bagchi and I was glad to find later on that the text was utilized by my colleague Prof. Jitendranath Bannerji co-operating with Dr. Bagchi. Another fellow-student of mine at the classes of Prof. Paul Pelliot (College de France) was Prof. Serge Elliseiff, an authority on Japanese art who is now one of the directors of the Yenching Research faculty.

The second portion of the American Boxer indemnity amounting to 12,545,000 gold dollars came to be returned to China in the year of our visit (1924) when it was decided that the fund would be paid in twenty annual instalments, up to 1945, and was to be devoted to the development of scientific knowledge and technical training. This was the history of the China Foundation for the Promotion of Education and Culture which maintains several scientific researches fellowships and professorships, also giving subsidies to several cultural institutions.

CULTURAL INSTITUTES OF NANKING

With the formation of the National Government in the spring of 1927, the Central Political Council of Nanking took a momentous step by authorising the establishment of Academia Sinica, advocated long ago by the late Dr. Sun Yat Sen. Starting work in June, 1928, the Academy began to attend to (a) pursuit of scientific research and (b) promotion and co-ordination of scientific studies in China through international conferences, lectures, broadcasting, etc. The Academy maintains a National Research Coun-

cil, composed of thirty members selected from the experts of the Country. It maintains ten institutions devoted to Astronomy, Biology, Chemistry, Engineering, Geology, History and Philology, Meteorology, Psychology, Physics and Social Sciences. Most of them are located in Nanking but some are in Shanghai and Peking.

For the students of cultural history, the Institute of History and Philology is of special interest. At the time of its inception in 1928, it was located in Canton. Later on, removed to Peking, the Institute was again removed to Shanghai after the Manchurian incident of 1932 and finally established in Nanking (1934). Its section of historical studies continues to function from Peking where alone one could find rare original texts, specially the archives of the Ming and the Ching dynasties. This section attends to the textual criticism of ancient classics, the study of bronze and stone inscription and other problems of Chinese history.*

The section of linguistics promotes researches on experimental phonetics, on general linguistics, on Chinese dialects and borderland languages. It organised sound archives and studies on Hsi-Hsia texts as well as comparative studies on English and Chinese intonation. Its section of Anthropology undertook the study of ancient Chinese skulls, correlation of cranial indices and of Chinese finger-prints. It also organised systematic anthropological and ethnological surveys of the Provinces of Szechwan and Yunnan.

Last, though not the least, is the section of archaeology which, as we have noted above, has gathered a wonderfully rich harvest within a very short time. Among other things it has initiated a survey of the Painted Pottery sites in Honan, and researches on pre-historic remains in Manchuria and Jehol. Excavations of Black Pottery sites in Honan and Shantung have been conducted. A happy collaboration between the Institute and the Freer Gallery of Washington led to the financing of the momentous excavations at Anyang under Dr. Li Chi leading to extraordinary discoveries of Shang culture of 2nd millennium B.C.

When we visited Nanking, it still looked like a provincial capital but within the last ten years it has undergone a phenomenal growth. Quite apart from its being the headquarters of Academia Sinica, Nanking established in March,

1938, the Institute of Chinese Cultural Studies in the University of Nanking. Its annual revenue of \$32,000 (1934-35) came from the American Hall Fund administered by the Harvard-Yenching Institute. The Institute has to its credit important publications like "*A Catalogue of the Recorded Paintings of Successive Dynasties*, (6 Vols.); *Bronzes from 12 Peiping Collections* (2 Vols.); *A Survey of Contemporary Japanese Sinology*, and several studies on the Oracle Bone inscriptions."

Nanking Museum of Antiquities founded in 1915 was taken over by the Ministry of Education in 1928. The Ministry grants annual subsidy of about \$4,000 helping the museum to exhibit, for the benefit of the public education, its valuable collection of paintings, rubbings and other antiquities in its six Exhibition Halls. In 1933, a preparatory committee was entrusted with the task of organising the National Central Museum. The Ministry of Finance sanctioned annual grant of \$24,000 to the committee which started its work under the Chairmanship of Dr. Li Chi.

A most interesting branch of applied arts was developed in 1928 in the form of the Ceramic Laboratory administered by the Academia Sinica and the National Central University of Nanking. It not only undertakes researches contributing to the further development of ceramic industry but also applies itself to the study of ancient Chinese ceramics analysing the bodies and the glazes of the wares so that we may understand the composition of Chinese porcelain and the method of its manufacture in ancient days.

From Canton and Amoy to Keifeng and Sinan there are innumerable centres showing collections of art and archaeology which have not yet been satisfactorily catalogued and which, let us hope, the Museum Association of China would co-ordinate for the benefit of the outside public. The Archaeological Society of Honan (Keifeng), and the Archaeological Museum of the West China University (Chengt'u), among others, are discovering and developing valuable collections. China, as we all know, co-operated with other Asiatic nations mainly through her North-Western provinces which, owing to later political disturbances, were neglected although they were on the life-lines of the Han Empire.

Recently a scientific mission to North-Western China was organised (1927) by the Federation of Scientific Institutions of China. It started a systematic archaeological exploration in collaboration with the Swedish explorer Dr. Sven Hedin, well-known in India as the

* The Peking Committee started excavation works (1930) at I-Hsien in the Hupeh Province. It also started excavating (1933) in Sian-Fu and other parts of Shensi in co-operation with the archaeological society of Shensi.

author of *The Trans-Himalaya*. The Han archaeological finds of Dr. F. Bergman were turned over to the scholars of this society who also undertook the study of the Han dynasty manuscripts on wooden strips. The archaeological finds of the Tang Dynasty made by Mr. Huang Wen-Pi are also being studied. During 1932-33 over 90 wall-paintings and 50 clay-figures were repaired and an illustrated monograph on the Kaochang Pottery was compiled. Annual grant of \$15,000 comes from the China Foundation for the Promotinn of Education and Culture.

Shanghai, although a modern city compared with Peking, enjoys the benefit of some progressive and well-equipped scientific institutions, the most outstanding being the Royal Asiatic Society, North China Branch. It was established in 1857 under the name of the Shanghai Literary and Scientific Society. It was affiliated in 1858 to the Royal Asiatic Society of Great Britain. The British Government made a gift in 1871 of a fine building at 20, Museum Road, which is the Society's headquarters. An entirely new building was added in 1933 and the Society is proud to show a membership of 719 members of all nationalities. Its annual budget (1933-34)

amounts to \$20,000, out of which \$6,000 come as grant from the Shanghai Municipal Council. Apart from the Journal, the Society has other valuable publications. Amongst its many learned office-bearers I had the privilege of meeting (1924) Mr. A. de C. Sowerby, the learned editor of the *China Journal of Science and Arts*, who very kindly helped me with the latest bulletins, reports and above all, with the splendid Guide, *The Shanghai Museum*, which he published in 1936 when he was the honorary director. The Society founded its Museum in 1874 and it has grown to be one of the best arranged and scientifically treated collections on China which no scholar can afford to ignore. Prehistoric arrow-heads, stone-carvings, ancient bronzes, tomb-figures, pottery, porcelain, coins and precious stones are exhibited with sedulous care. The mammals, birds and fishes of China together with the life-like reconstruction of the Peking Man are all scenically mounted. Its sections on Natural History, Zoology, Botany, Geology, etc. are object-lessons for museum workers. Of special interest are the remains of extinct animals, such as the Mastodon, Stegodon and Hyperion or three-toed horse, most of them coming probably from the Szechwan province.

INDIA IN FISHER'S HISTORY OF EUROPE

By RAMMANOHAR LOHIA

THE Rt. Hon. H. A. L. Fisher, P.C., D.C.L., F.B.A., F.R.S., Warden of the New College, Oxford, has written a History of Europe. Prof. Earnest Barker has described it as a 'triumph of historic art.' The Rt. Hon. Stanley Baldwin (now Earl Baldwin) called it 'a great work.' The reviewer of *The Manchester Guardian* discerned in it 'wisdom, detachment and serenity.' All these highly flattering and ennobling opinions are carried on the dust cover of the Rt. Hon. H. A. L. Fisher's book. They are very impressive and it is not surprising that some Indian Universities and Colleges should have recommended this History of Europe to their students.

Fisher's book carries a chapter on British rule in India. My knowledge of the book is limited to this chapter. It made a strangely disgusting impression on me. It is mean and

unhistoric and is certainly as far removed from detachment and serenity as any of Churchill's or Joynson-Hick's speeches on India. No decent-minded University or College in India and outside has, I hope, recommended Churchill's or Joynson-Hick's utterances on India as text-books or as triumphs of historic art.

Fisher begins his study with the histology of the British conquest of India. "The English succeeded in conquering India because they brought peace and deliverance from oppression," "Such measure of intellectual and political unity as may now be found in India is due to the English conquest and administration,"—describe Fisher's diagnosis of reasons of the Englishman's success and of his achievements. There is no qualifying clause, no cautious hesitation, nothing of the historical

spirit which trembles to straighten out in a single thread the tangled skein of human events.

There have been many conquests in human history and there is hardly a race which has not some time been the conquered and at another time the conqueror. The reasons of a successful conquest have lain in the military organization, the civilization and, infrequently, the culture of the conquerors on the one hand and in the disunity and softer life of the conquered on the other. At the time of the British conquest, India was politically disunited and her civilization was based on the comparatively self-sufficient economy of the village. England, on the contrary, was realising national unity through the industrial revolution and her military machine carried with it the advantages of a capitalist civilization. The British conquest of India was thus the victory of a better-organised civilization over a looser and softer life. I might also be prepared to admit that, around the time of the British conquest, Indian culture and character were temporarily eclipsed and, so, inferior to Britain's, but there will be qualifying clauses and a lot of cautious hesitation. That is however beside the point. The English succeeded in conquering India because their muskets were loaded with a better-organized gun-powder. Besides being untrue, it is incoherent and unhistorical to say that the cause of their success lay in the peace and freedom that they brought to India. Only an incoherent mind or one gifted to receive divine revelations can describe the effect of an event as its cause. That might be the triumph of theology or of irrelevance but, hardly, that of historic art.

Did British conquest and administration bring into India peace and freedom or intellectual and political unity? A punch on the jaw of a weakly boy some times results in a sturdy manhood, but, even in that sense, India has received far too many punches to profit from the British conquest. Fisher, however, is clear in his own mind that the British administration of India has directly worked for freedom, peace and unity. The mind of a historian is commonly supposed to feed on events, but Fisher has obviously cultivated a preference for fancies and wishful thinking. No amount of fanciful thinking can, however, blot out the memory of unceasing wars, famines, pestilence and the entire disorganization of the nation's economy which the British conquest and rule has meant to

India. The hundred years between the first successful battle of the British and their final conquest of India were a state of permanent wars; disorganization of systems of land tenure, destruction of industries and famines went alongside. The eighty years since have known such political evils and economic poverty and famines that the balance of the results of British administration in India is frankly not in its favour.

It is said that the greatest good that could be done to India was the benefit of unity, peace and security and that is exactly what the British have done. They have given India the peace of a Central Government. Almost at once two questions arise: what was the cost of achieving this peace and what is its exact nature. No historian dare forget that it cost India a whole hundred years of continuing wars and destruction to achieve the peace of the last eighty years. At any rate, the background of war against the present state of peace is so far of a longer duration that history must make a clear record of it. Moreover, the peace of the last eighty years that has fallen upon India is the forced apathy of foreign rule and not the peace of creative effort. It has not activated India's population to an increasing sense of its human dignity; it has not generated that noble sensitiveness which is the prelude to great national achievements. If the Indian peasant and worker and intellectual are at last awakening, it is very much inspite of the British rule. The other much trumpeted achievements of Britain in India, the railways, irrigation canals, hospitals and the like must similarly be studied in the background of the general political and social conditions in the country and of the growth and development during the same period in the free countries of the world. India has continued to be a prey to under-nourishment, preventible diseases, premature death, widespread ignorance and political evils, while the free nations have sped very much ahead of her. There can be no doubt that, had she been free, India would have been a far happier nation today. If contemporary historians must needs draw the balance of British rule in India and credit it with the achieving of peace and security, they must at the same time declare the cost of this achievement and its exact nature.

Fisher has singled out the achievements of the English educational system and the public services for specific praise. "The fruit of Macaulay's famous minute on Indian

Education is the development in India not only of an excellent official class some 2 million in number but of a body of educated politicians who have been taught out of English books to admire liberty," is Fisher's verdict on British Indian education. The Oxford Warden does not seem to be conversant with the newer trends and beliefs of the British ruling classes themselves, for even they would regard his opinion as rather antiquated, one-sided and demonstrably rhetorical. British education has sought to denationalise India and, though happily it failed to achieve its purpose finally, it has made of learning a very rare and special privilege. Fisher has tried to explain away the widespread illiteracy in India as a necessary consequence of the Indian social conditions. Extraordinary diversity of creeds and languages, prevalence of child marriage and non-use of unmarried women teachers in elementary schools are the three reasons which he ascribes to India's illiteracy. The British administration's utter disregard of primary and secondary education, its insistence on English as the medium of instruction, the poverty of the vast masses and the entire detachment of the educational system from the country's economic and social life have with Fisher faded away into nothingness. The Congress provincial administrations, despite their many shackles, are bringing them back into our memories and Free India will most surely prove that, more than anything else, the fact of British rule was responsible for the country's widespread illiteracy.

"The British members of the Indian Public Services have perhaps more nearly than any other ruling class realised the ideal of disinterested government which Plato thought could be secured only if the Guardians of the State were shielded from the temptations of ownership and family."

It must gladden every student of history to come across even an inadequate approximation to the Platonic ideal in human flesh and I do not grudge Fisher his joy in the discovery. He further describes his Platonic statesmen as being actuated with "a certain contemptuous indifference natural to the agents of a benevolent power which has long usurped the role of Providence" in their relations to "the effervescent nationalism of the young." Prejudiced pamphleteering alone can so definitely decide as to which is effervescent, the nationalism of the young or the contempt of the public servant. In any case, the gods of Fisher are, in his own language, a modern edition of the unicorn, one-half of whose face bears the gentle suffering of Platonic statesman-

ship and the other the disfiguring contempt of an effervescent tingod. That the gentle suffering of the British public servant is not in every case quite so disinterested has recently been disclosed by an Indian who had self-respect enough to change over from the clerkship of the civil service to the Indian National Congress.

"I know of a European officer who about 3 years ago removed some silverware which was being disposed of as unclaimed property. My knowledge of law is not profound but I am not sure that ordinarily such conduct would not have amounted to misappropriation or theft.... Even when the matter was reported to a superior officer, unfortunately an European, he ordered that the property should be struck off the register."

This charge of vile theft against two of Fisher's British tingods has been made by a former insider so late as April, 1938. It is of course not my intention to suggest that petty larceny is a universal practice with the British public servant in India; disinterested service to imperial Britain is perhaps quite as frequent. History may not shut its eyes to the petty and gross misdeeds and glorify the petty and big services of the British public servant in India, but that is exactly what Fisher has attempted to do. The British civil servant has at the same time been both good and evil. History can give only one estimate of his role. He was the agent of British rule in India; as such, he was, to Indians themselves, a balance of disadvantages.

Britain's government in India is theoretically based on a series of Acts and Charters and Royal Proclamations. On the basis of a study of these, Fisher concludes that an essentially liberal faith has guided Britain's task in India; Britain has not interfered with the liberties, firstly, of Princes and, secondly, of Religion and, thirdly, has granted equality to all without distinction of colour and creed in respect of public services.* How far a historian is justified in relying on professions and proclamations for the discovery of practices and actual conditions is another matter. In effect, the liberty of the Indian Princes is the pomp of a most dutiful feudal vassal. The ecclesiastical department of the government favours Christianity at the expense of the other Indian religions. The competitive examinations to the civil service had once favoured the English and, now that Indian competitors are beating the English students in their own language, the plan to retain the British civil servant through nomination is being put through.* Still, it is no

*Is it "equality to all" to lay down the percentage of appointments which must be bestowed on various non-

doubt true that, in respect of freedom of religious faith and, partly, of public appointments, Britain has followed a comparatively liberal policy. Incidentally it has paid Britain to do so. Moreover, the absence of freedom of religious faith and equality in respect of public appointments may, no doubt, prove galling, but their presence, in itself, is no mark of good government. Should they be the chief pillars on which a government rest, it is sure to be dull, inert and insipid. In respect of freedom of the more active political and social thought and of the cultural and material achievements of the State, the Indian Government has no doubt been thoroughly insipid and reactionary. But Fisher is slightly unjust to his countrymen's work in India; the Indian Government has not been so colourless in other spheres. It has rested predominantly on the pillar of making India profitable for British trade and capital. With that hangs the colourful tale of the unification of the Indian market, the commercialisation of agriculture, the investment of British capital and the like. As the story unrolls, there is a lot of interesting detail and, even while it frequently resulted in great injury to the Indian masses, it is at least not insipid.

The final stage of British rule in India is now completing and Fisher has also attempted to describe it. According to him there are two dominant patterns in Indian nationalism; the one is western and constitutional and the other eastern and revolutionary. Incidentally, Fisher has, through this description, given expression to his social philosophy; it is unhistorical, jejune and philistine. That a historian of modern Europe can forget the Cromwellian Revolution, the French Revolution, the Central European Revolts, the Italian War of Independence and a host of other rebellions and call the West constitutional and the East revolutionary is not so much the result of his ignorance as of his distorted social vision. He is so much embedded in the security and comfort of the present that he would prefer to deny his parentage and blot out the memory of his revolutionary ancestors. This unhistorical social philosophy of Fisher has inevitably resulted in his complete misunderstanding of the aims of British rule in India and of the character of those who oppose it.

"So far and so fast has Britain been prepared to advance along this perilous road guided by the two load-stars of the Anglo-Saxon race, of which the first is that all government must rest upon consent and second that it is the office of statesmanship to avert revolution by reform."

Hindu communities, irrespective of merit, at the expense of the Hindus?—Ed., M. R.

Fisher has thus summed up the various measures of self-government granted to the Indian people. I will first take up the element of popular consent on which the Indian Government is supposed to rest. The verification of this popular consent lies in two directions. How else would an army of 60,000 Englishmen rule a 350 million people? How else do we explain that India did not seize Britain's peril in the last world war as her opportunity? The answer is simple enough. Between the two extremes of government based on popular consent and of revolution, there is a vast middle field stretching from apathy and indifference to hostility. During the eighty years of British rule, the Indian people had first been brought into a state of submissive apathy and have then slowly awakened into that of definite hostility. At the time of the last world war, they were not yet actively hostile. It is the last seventeen years of the non-violent revolt that have given the Indian people the adequate consciousness and organisation to seize Britain's peril as India's opportunity. History is always in the making; it is never a final product. From the day a people is conquered starts a whole process of consent and apathy and hostility to the conquerer's rule and the various trends of the process are of different duration. To Fisher, however, there is just one long and unending period of popular consent up to the point that a government is actually overthrown. This attitude results in much misunderstanding and bitterness in the relations between a government and its people and among the different peoples of the world. A naive belief that all is right up to the point when all is wrong does not produce the atmosphere in which the aspirations of a people unsupported by acts of violence may be understood. It is also an unhistorical belief.

India has developed a new way of the struggle for freedom. It is the way of non-violence. How far the non-violent way was the result of India's weakness and how far it was a resolute effort to introduce a new era of human relationships will not be an easy discovery even in the distant future, much less so is it today. In its immediate consequences, the non-violent struggle of the Indian people has not yet effectively challenged the British military machine, but it has already demanded deaths by the thousand and imprisonings by the hundred-thousand. It may yet succeed in crippling and destroying the British military power in India. This valiant struggle of the Indian people has not even been mentioned and, in the absence of an armed rebellion, Fisher has concluded that

the Indian government rests upon popular consent. That this is no objective history is plain enough, but it might as well be a clumsy attempt to mislead the British people and other peoples of the world into supporting a government that has no basis in justice or reason.

The statement that the British in India have tried to avert revolution by reform is both untrue and likely to awaken false notions about their generosity and broad-mindedness. Respectable historians often forget the Chartist revolutionaries when they describe the first measure of parliamentary reform in England or the Tolpuddle martyrs when they dwell upon the generous concession to the working-class to form trade unions. Naturally enough, Fisher forgets the brave sufferings of the Indian people which precede every measure of reform. British rule over India, like any other foreign rule, will not voluntarily cease but will be overthrown by the organised power of the Indian people; its striking proof is the divergent history of British promises and practice. British imperialist technique, however, has known how to avoid friction within a narrow range. It has tolerated criticism upto a limit and kept up the comparative independence of the judiciary. How far is this the outcome of a genuine democratic impulse and how far that of a cool calculation as to long-run results is difficult to decide. In any case, the capacity of British imperialism to work for justice and the avoidance of friction is very greatly limited; it snaps as soon as an attack starts on its fundamentals. Self-interest kills the democratic impulse.

In his anxiety to prove that the British rule is both democratic and progressive, Fisher does not hesitate to resort to gross untruths to prove Indian nationalism as reactionary. Mahatma Gandhi is in Fisher's words "an indubitable saint, yet as a member of the money-lending caste a friend to usury, an ardent patriot yet as a politician the beneficiary of the worst slum properties in India". I have tried to interpret this description literally and as a figure of speech; it has made no sense to me which I can square up with facts. Unless usury stands for interest and worst slum properties for capitalist ownership and unless all notion that the Mahatma himself benefits from the institution of capitalist interest is ruled out, Fisher's des-

cription is not only merely an error of interpretation but is a lie in point of fact. Fisher has perhaps lied with the calculated intent to glorify British imperialism at the expense of Indian nationalism. We may not forget that he is an Oxford Warden and, as such, engaged in training up colonial administrators to adopt "contemptuous indifference" in their relations with "effervescent nationalism". He must invent Mahatma Gandhi's friendship to usury and the worst slum properties. Fisher is no historian; he is a low pamphleteer of the British Empire.

Fisher's book is huge; I have read only a single small chapter. I cannot help feeling that the rest of the book must be as poorly unhistorical, its chief interest being the elevation of British character and the singing of British glories. In different measures, it must have done injustice to the history of France, Russia, Germany, Spain, Italy and other European countries. It must be altogether a distorted picture of European humanity.

How a book such as this could ever have been recommended for use in Indian colleges and universities is difficult to understand except on the basis of the opinions on its dust-cover. We may not however forget that imperialism is a fraternity and mutual adoration is its chief cultural weapon. The exclusion of this book from the curriculum of our Universities is the least that we can do in the interests of truthful history. We may also expect our historians and research students to undertake a thorough enquiry into the vicious imperialist propaganda of the history books now in use in our schools and universities and make known the results of their labour to the country. It is time they began writing histories of the world and its various areas.

Beyond our shores our voice of protest may come back to us as an empty echo. Still, the mass of the peoples all over the world is fundamentally honest and there are large sections who believe that the study of history should result not in bitterness and conflicts but in international reconciliation and co-operation. May we hope that they will associate with us in the condemnation of low imperialist pamphleteering that passes as the triumph of historic art?

Allahabad,
May 9, 1938.

A YEAR OF PROVINCIAL AUTONOMY

By PROFESSOR SRI RAM SHARMA

ON March 31 1938, the Provincial Autonomy completed the first year of its eventful life. It is yet a babe in arms, but it has already proved a changeling. It is possible, however, to discern clearly much that was dim at its birth. Let us try to take stock of the situation and see in what variegated hues it presents itself today.

We have to start with the Provincial Autonomy as it was conceived by its authors and as they presented it to the Indian world on April 1, 1937. For that the Government of India Act alone is not our guide, nor does the Instrument of Instruction to the Governors complete the picture. The most authoritative picture of the Provincial Autonomy as it was intended to work is to be found in the evidence of the Secretary of State before the Joint Parliamentary Committee and a briefer outline thereof is to be discovered in the correspondence (kept confidential so far) that was carried on between the Governors-in-Council, the Government of India, and the Secretary of State on the subject of the Rules of Business of the Provincial Cabinets and the Rules governing the submission of papers by the Provincial Cabinets and the Secretariat to the Governors.

Taking all these four sources together, we can draw up a tolerably clear picture of what Provincial Autonomy meant to its friends and foes alike on April 1, 1937. Here we first notice that between the first session of the Round Table Conference and the Report of the Joint Committee the definition of the Provincial Autonomy had undergone a change. To understand the fact clearly, it is necessary to quote both the definitions. The Prime Minister speaking at the end of the First Round Table Conference thus outlined the policy of His Majesty's Government :

"Responsibility for the Government of India should be placed upon *Legislatures*, Central and Provincial, with such provisions as may be necessary. . . . 'The Governors' Provinces will be constituted on a basis of full responsibility. Their ministers will be taken from the Legislature and will be jointly responsible to it. . . .

"There will be reserved to the Governors that minimum of special powers which is required in order to secure, in *exceptional circumstances*, the preservation of tranquillity, and to guarantee the maintenance of rights provided by *statute* for the Public Services and minorities."

Place this beside the definition of Provincial Autonomy given by the Joint Committee.

"Each of Governors' Provinces will possess an Executive and a Legislature having exclusive authority within the Province in a precisely defined sphere."

Now while in the Prime Minister's statement emphasis was placed on the fact that the Provincial Government will be responsible to the Provincial Legislature, with some reservation of powers to the Governors in *exceptional circumstances*, the Joint Committee cut the matter short by investing the Provincial Legislature and the Executive with exclusive authority within the province. Unlike the scheme visualized by the Prime Minister, which recognized the reservation of powers to the Governors as an inroad upon Provincial Autonomy, the Joint Committee by extending the authority in the provinces to the Executive as well made of exceptional circumstances a normal feature. The Provincial Executives and Legislatures were to be independent, not Provincial Legislatures holding the Executive responsible to themselves.

The position on April 1, 1937, then, was that the Government in the provinces was to be carried on jointly by the Governor and the Provincial Legislature. The Governor was, under the Rules of Business, the President of the Council of Ministers, settling its agenda, fixing its time and place of meeting and otherwise performing other functions ancillary to his position as the presiding officer. He was not a Minister without portfolio, but a Minister Extraordinary. In this capacity he administered the Excluded Areas, settled all questions concerning the organization and discipline of police, took action when crimes of violence intended to overthrow the government threatened the province, and could make rules to secure that police officers were not obliged to disclose the sources of their information to persons other than those authorised by him. He was also in charge of all questions concerning the posting, transfers, promotions of officers of the All-India Service. In his third capacity he acted as an examiner of ministerial conduct, and prevented them from doing wrong in certain spheres by stepping into the administrative arena himself

when their action or inaction threatened communal interests, statutory rights and legitimate interests of the services, and produced grave menace to the peace and tranquillity of the province or a part thereof. In what was left to the ministers as their sphere of action after all these deductions had been made, he was to work as a constitutional head of his Government, offering advice, but leaving the decision to the Council of Ministers, of course, meeting under his presidency and amenable to his influence therein as well.

The Ministers who accepted office on April 1, 1937 knew these limitations and agreed to abide by them. The Secretary of State had spoken of the 'two sides of the administration' in the provinces in his evidence before the Joint Committee. He had been driven to admit that the ministers would be allowed to work during the pleasure of the Governor and only so long as he was convinced that the ministers were neither endangering the peace of the province, treating the minorities unfairly, or jeopardizing the good government of the province by threatening the peace and tranquillity of the province.

The essence of the scheme as outlined in the Act was that the Ministers were not to be really responsible either for their actions politically or held responsible for the entire administration of the province while in office. If the action or inaction of a Ministry, for example, created a grave menace to the tranquillity or the peace of the province, it could go on functioning merrily in other departments of the administration, the Governor taking upon himself the task of doing all that was necessary for removing such a danger. He could make laws for the purpose, he could spend money for the furtherance of his ideas on the subject, and he could issue orders, if necessary, over the heads of the Ministry to permanent civil servants. All that was done by the Governors in the discharge of their special responsibilities, or in their individual judgment or discretion, was beyond effective criticism by the Legislature.

Or to put it in another way, the Act started with the suspicion that the Provincial Ministers would know their business so little as to act in ways that might endanger public peace, attack the statutory rights and legitimate interests of the services and be unfair to the minorities. Not content with that it went further. It assumed that even when a Governor censured a Ministry by declaring that its action or inaction had endangered, for example, public

peace, the ministers would be shame-faced enough after that certificate of good (?) conduct to cling to their office.

Thus the Governor was the pivot on which the Provincial Government was to turn. The Government of India Act, 1935, was not intended to confer 'responsible government' on the provinces. When the Governor took action either in his discretion or exercising his individual judgment, he acted under the instructions of the Governor-General who in his own turn had to look to the Secretary of State for guidance.

But April 1, is an All Fools' Day. Though the Governors succeeded in persuading the majority parties (or rather the coalitions) in the Panjab, Bengal, Sind, Assam and the North-Western Frontier Provinces to accept office under the limitations set down by the Act, the Congress majorities in the United Provinces, Bihar, Orissa, the Central Provinces, Bombay, and Madras refused to take office under those circumstances. Obliging friends, however, jumped into the fray and rushed in where Congress angels feared to tread. The Interim Ministries of the 'King's Friends'—or were they the Governor's Friends?—were formed in the hope of bringing about demoralization in the ranks of the elected members. Followed the 'Assurances Controversy' which ended in an amendment of the Government of India Act by conventions which the Governors undertook to set up in the provinces where the Congress accepted office.

What did the 'Assurance Controversy' do? It set up in India two types of Provincial Governments. The coalition ministries had taken office with their eyes open, they had accepted office under the limitations which the framers of the Act and actual constitutional documents had placed on them. They had by a miracle, which probably the theory of relativity even cannot explain, accepted Rules of Business and Rules for the submission of cases to the Governors,—printed in March, even before they had been appointed Ministers,—as binding on themselves, even though the Act had laid down that these rules were to be made by the Governors after consultation with their Ministers. Not only that, in one Province (Panjab) the Provincial Premier proclaimed to the entire world that he and his colleagues found it very useful to them to have the Governor preside at the Cabinet meetings, because they knew far less about some matters on the agenda than did the Governor! Further, most of these ministries were coalition minis-

tries. They had started on the assumption that the communal interests could only be safeguarded by the inclusion in the Cabinets of members drawn from the minority communities, whatever their politics. Thus in the Panjab, Bengal and Sind, Hindu Ministers had been appointed, drawn from parties which had hitherto opposed the Muslim parties that had majorities in these provinces. They had thus slightly invaded the principle of Joint Responsibility of Ministers. The Hindu Ministers of these Cabinets were supposed to represent the Hindus; as was the case in the Panjab, the Sikh Minister represented a group of Sikh M.L.A's. It is doubtful whether the assurance which the several Governors gave in the Congress provinces affected very much the relations of the Governors and Cabinets in the Non-Congress Provinces. Thus two types of provincial Governments came to be established in India.

We can understand it better if we were to cite and attempt to understand certain things that happened last year in the non-Congress provinces. Take Assam for example. There the Governor used his special powers the other day for certifying as essential expenditure salaries of the establishments of Commissioners, money for which had been refused by the Provincial Legislature. When the trouble over the release of the Political prisoners in the United Provinces and Bihar precipitated a crisis in the two provinces, the Governor-General declared that he refused to allow the Ministers in the Congress provinces to do this because it would have a serious effect on the peace of Bengal and the Panjab. The Panjab Premier on being heckled in the Panjab Assembly admitted that the Provincial Cabinet had never been consulted as to what effect the release of these prisoners would have on the situation in the Panjab. The Premier, however, forgot to add that a grave menace to the peace of the province is a special responsibility of the Governor and that therefore it is possible that the Governor of the Panjab and the Governor-General may have corresponded on the matter. Here are then two sides of the Government functioning: the Governor communicating to the Governor-General that the release of Political prisoners in U. P. and Bihar would be dangerous to the peace of the Panjab and the Premier declaring to the Assembly that he did not believe so. Such a thing could not have happened in the Congress provinces.

Or, take a recent case in the Panjab. A Muslim M.L.A. gave notice of a bill by which certain properties now in the possession of the

Sikhs would have passed into the hands of the Muslims without any compensation. This required the previous consent of the Governor acting in his own discretion. Refusal of the assent was an interference with the sovereign(?) rights of the Panjab Assembly to deal with problems relegated to its care. The Governor refused to give its assent to the introduction of the measure after formally consulting the Ministry. Now the Ministry could have achieved the same end by requesting the Governor to give his assent to the introduction of the measure so that this restriction on the authority of the legislature should not remain operative, and then used its majority to refuse permission to introduce the measure. Instead of that the Panjab Ministry advised the Governor to refuse his assent—or was it the Governor who advised the Ministry to advise him to that effect?

On the other side, there are the Congress provinces now seven in number. There the Councils of Ministers have taken the sensible view that if the Governors ever feel called upon to exercise their special responsibilities, they should better inform the Ministers who would tender their resignations thereon. This was exactly what Sir Samuel Hoare had said would not be allowed to happen. The two sides of the Government were to be free to function within their respective spheres. Further, the Congress started on the assumption that in order to safeguard the interest of minorities, it was not necessary to have their representatives in the Ministry. Their ministers are political in complexion. The Congress is in power and not coalitions. There are Muslim ministers in most of the Congress ministries just as there are Hindu ministers. The religion of the various members has less to do with their being there than their political principles. When no Congressite Muslim minister could be found for Orissa, the Governor assured a Muslim deputation that he was sure that the interest of all minorities were safe in the hands of the Congress ministers. There are no two sides of the administration in these provinces.

Much has been made, sometimes, of the fact that under the existing Rules of Business even in the Congress Provinces, Governors preside over the meetings of the Cabinets. Such criticism loses sight of the very important fact that the Congress policy in the provinces is settled not in these cabinet meetings but in the meetings of the Congress Working Committee now at Wardha, now in Calcutta and now elsewhere. Still further, these meetings of

the Cabinet are more in the nature of formal ratification of the decisions, almost always, already arrived at. The Secretary of State had this in his mind when in his correspondence with the Local Governments on the subject of draft Rules of Business for the Provincial Governments, he suggested that the provision that the Governor must always preside at the meeting of the Provincial Cabinets would render those meetings unreal.

It is not only in their attitude towards the Governors that the Congress conception of Provincial Autonomy differs from the non-Congress one. The difference is also visible in their attitude towards fundamental assumption of democratic government. The Congress ministries have realized that democratic government presumes freedom of speech and the liberty of the press. The Government of the North-Western Frontier Province has repealed Section 124-A, thus making the bringing of the government established by law into contempt and hatred legal. The other Governments have almost everywhere refused to prosecute for sedition. In a recent Bombay case, though the Government prosecuted a speaker under this section because he was alleged to have advocated violence, they released him after his appeal in the High Court had failed. The Government of Bombay has repealed the Emergency Power Act of 1932 which is one of the instruments, invented at the time, for fighting the Congress. With regard to the press, the different attitude of the two types of governments can be well illustrated by a recent case. Security was demanded from a Socialist paper in the Panjab, the other day. Rather than pay, it shifted its place of publication to the neighbouring province of the U. P. No security was demanded from its publishers there. No action has been taken against it so far in that province. The Panjab Police, however, seized upon the copies of the paper meant for the Panjab, first of all as unauthorised news-sheets and later on as containing objectionable matter. As the matters stand at present, the U. P. Government is either of opinion that it contains no objectionable matter, even according to the emergency laws that were passed several years ago, or that, even if it does offend against those emergency laws, they should not use the powers conferred upon them under those undemocratic and arbitrary laws. The Panjab Government, however, holds otherwise. It is using to the full its armoury of emergency powers conferred on the irresponsible government of the province in the old days.

It is not a question of party politics. Liberty of the press and of individuals is too important a matter to form a question of party warfare. As the dissenting judgment of Hon'ble Mr. Justice Tek Chand of the Lahore High Court held the other day, and as even the majority judgment seemed to suggest, the new constitution cannot be worked unless the section 124-A is radically altered, if not altogether repealed. The non-Congress provinces are carrying on in the traditions of the pre-Provincial Autonomy governments in their attitude towards popular liberties.

Assam has furnished an example of the difficulties which, it was suggested variously, Provincial Governments might have to face. In order to escape the fundamental postulates of responsible government in the provinces, it had been suggested that the Provincial ministries need not take their defeat on every question as indicating loss of confidence by the legislature. In Assam, the Government has been defeated several times on many important questions. The only visible result has been formal resignation of the Ministry and its re-emergence with a slightly modified personnel. One need not go to the length of saying that every defeat of a ministry should lead to resignation. But in India there is the danger of the ministers clinging to office at all costs for the sake of drawing the fat salaries that have been provided for in the non-Congress provinces. There is the further danger that the flouting of the vote of the legislature by a ministry might lead to dictatorial tendencies making the working of democratic institutions difficult. When a ministry seems to be clinging to authority despite repeated defeats in the legislature, it lowers the power and the prestige of the legislature thereby. That this has happened in Assam one need not deny. The lower salaries—I was going to say the ridiculously low salaries—of the Congress Ministers make it impossible, ordinarily, for ministers to cling to power after it becomes impossible for them to remain in office with honour.

The Joint Committee had refused to include the principle of joint responsibility in the Statute because it asserted wrongly, that it was too subtle a thing to figure in a written constitution. The Governors were instructed to promote it, but they were also instructed to see that there were representatives of the Minorities as well in the Cabinet. The non-Congress ministries started a little handicapped in the matter. But the insistence of the Congress party to include only Congressmen in the

Ministries led both to the homogeneity in views as well as the prevalence of the principle of joint responsibility. Other provinces have not been slow in taking advantage of the fact. It can be said that joint responsibility has now become an actual fact rather than a distant vision.

The second chambers were designed to act as a bulwark of vested interests. No one had, however, visualized that the Governmental majorities in the lower chambers would be as large as they are now. These large majorities have rendered the second chambers instruments of delay only. Their membership is so small in comparison with that of the lower chambers that the large majorities which the present Governments enjoy there have rendered differences between the two houses, more or less, a question of recounting votes only.

A very serious situation seems to have arisen all over the country with regard to the roll of the permanent services in the various provinces. The new popular Governments resent all bonds. The problem of reorganizing the entire administrative machinery so that it might suit the new conditions better, has nowhere received that attention which was its due. Even though the Secretary of State impressed upon the Provincial Governments the necessity of so reorganizing their secretariat as to secure efficient control by ministers over various departments, no provincial government has yet undertaken the task in hand. The existing machinery in some places ill suits the exigencies of a popular government. As a result, sometimes small matters have revealed tendencies that might one day become dangerous. There was that violent clash between the Services mentality and the loose thinking in our Provincial Governments in a Congress province the other day, when the Chief Secretary addressed a circular letter to various officers telling them that the only valid official orders to them would be those signed by the Secretaries. If the Interim Ministry in the United Provinces called the Divisional Commissioners in conference to help them devise means for fighting their political opponents, the Congressites in power have not improved matters by using their local party offices as a part of the Governmental machinery. Non-Congress ministers are doing no better. In most cases questions of politics and of administration have got mixed up together. The ministers are nowhere content with directing policy, they have been publicly poking their noses into small administrative matters. Sometimes this is due to nepotism,

sometimes to a desire for nursing their constituencies; but usually it is due to the failure of those concerned to realize, either, the limitation of their office, or, the implications of their action. A Minister in the Panjab, while presiding at a prize-giving ceremony in a school, so far forgot himself that he publicly assured the school authorities that he would pass certain orders if they would renew their application which had not been favourably received earlier. Here the absence of traditions favouring 'the Rule of law' and a legalistic spirit has been increasing our difficulties further. We, and therefore our ministers, love to pass individual orders rather than define general policy. This has further complicated matters. Unfortunately, sometimes even the Services shut their eyes to these difficulties. They are—most of them I should say—more intent on safeguarding their statutory rights and legitimate interests. Most of them do not know where they stand and are content with marking time. The introduction of communal principle in the recruitment to the Services, coupled with the existence of communal Governments, in certain provinces had made the matters worse.

As regards party organization under the new scheme of things, it can be said with truth that parties, sharply differing in their outlook on various matters of Provincial interest, have yet to be born. So much has to be done on common lines that serious criticism of the parties in power, except by vested interests or communal organizations, has not been much in evidence. Parties differ more in the communal outlook, in their attitude towards the Federation, and in their belief or disbelief in democracy. The existence of the Congress Parliamentary High Command, holding to its allegiance the Provincial Governments in seven provinces, has further cut at the root of purely provincial parties, while the Muslim League has been struggling hard to bring within its fold the Provincial Governments in the Panjab, Bengal and Sind. In the last province, a coalition government is now in power during the pleasure of the Congress Party. The non-Congress ministries in the Panjab, Bengal and elsewhere have, often, prided themselves on following the best part of the Congress programme.

But more serious is the development of the relations between party organizations and parties in power. Here the Congress has exhibited many deplorable features. It tried to force its own national song, the *Bande Matram* on all, it treated its own flag as a national

emblem and thus raised many thorny problems, and it tried to force its own office-bearers on the various administration, sometimes as experts and sometimes as arbitrators. The too close identification of the party outside the legislature with the government in power has raised difficulties which the Congress is slowly realizing. The attempt to use the office-bearers of a party as parts of the administrative machinery cannot be too strongly condemned. The worst example of this kind has been the recent appointment by the Working Committee of an outsider to decide the purely administrative questions of the alleged miscarriage of justice involved in the release of prisoners, guilty of heinous offences in the Central Provinces. The Unionists in the Panjab as well have not done much better. They have often treated attacks on the party as attacks on the Government of the Panjab and have been going about trying to link up fortunes of the two together. This

may be a passing phase. As soon as the question of the Indian Federation is settled, we may discover party organization of the Congress relax a little thus allowing the development of normal relations between governments and party organizations.

Such, in broad outline, is our first year's profit and loss account. That we have done much better than either our friends hoped for, or our enemies feared, is abundantly clear. For the first time we have become masters in our home, though after a pitched, yet peaceful fight. As time goes on the non-Congress provinces would share to a larger extent in the victory won by the Congress. The dictatorial and undemocratic tendencies present a more complex problem. But Provincial Autonomy would become real only when the problems of the Federation and the organization of the Central Government have been satisfactorily solved.

GOLD AND ITS FUTURE

BY PROF. H. L. DEY, M.A., D.Sc. ECON (London)

Head of the Department of Economics, University of Dacca

GOLD has been known to mankind since the dawn of history. The sage-poets of the Rig-Veda sang some of their most beautiful hymns in praise of gold. And from very early times down to our own age, India has shown her admiration of gold by attracting and accumulating the yellow metal in various forms. She has been, therefore, called the Eastern sink of gold. It is also well known that it was her fame as a gold-hoarder that tempted a succession of adventurers like Mahmud of Ghazni (1026), Timur Lane (1398) and Nadir Shah (1739) to invade India.

But, important as was the part played by gold in the early history of India and the rest of the world, it rose to the position of a World Dictator during the half century that preceded the Great War. It was during this period that the steam engine and the telegraph were rapidly reducing time and space and bringing the different parts of the world nearer and nearer to each other. And these unifying influences were greatly assisted by the emergence of gold as the international monetary

standard, so that the whole civilized world was soon converted into one, single economic unit. Epoch-making inventions, growth of trade and industry, increase of population, and development of virgin areas in North and South America, Oceania and Africa proceeded apace. And the human race as a whole secured a tremendous increase in material wealth and moral well-being, which is without a parallel in the recorded history of mankind.

Now, under the laws and conventions of the gold standard adopted by the entire civilized world during that period, the international distribution and movements of gold determined what the price levels in different countries were to be. Changing price levels in their turn governed production, employment, income and governmental revenues—in short, economic progress and retrogression. This is how gold became the absolute dictator of the world's economic system.

Like all dictators, gold, too, in the early part of its career, exercised its powers in the manner of a benevolent despot. But, in the

post-war period, its tyranny caused an international financial and banking crisis of the first magnitude and brought about the World Economic Depression which, in terms of loss of employment and income, physical and mental pain and moral degradation, inflicted an amount of suffering on mankind which far exceeded what had been caused by the war. In consequence, all nations rebelled against gold and overthrew its sovereignty, and assumed national autonomy in currency matters, free from the domination of gold. And free and autonomous national currencies have enabled most nations to achieve a large measure of recovery from the depression.

The position of gold at present is that it is no longer the monetary standard. It has become merely a valuable commodity like other valuable commodities, though, doubtless, it retains that mysterious power over governments and peoples, which is possibly based on a Freudian complex. In the meantime, however, the supply of gold has increased enormously, and people are seriously debating whether the price of gold would not be going down in the near future.

The most curious thing about gold is that while the prices of most other things have gone down, the price of gold has gone up to the extent of 67 p.c., and that this high price of gold has continued in spite of a large increase in its supply. The principal reason why the price of gold has gone up during the last few years is the devaluation of national currencies. Before the Depression, the British pound, for instance, under the law of the land, was equal to and freely exchangeable for 113 grains of gold. But, when England, due to shortage of gold, gave up the gold standard, the English pound was no longer convertible into that fixed quantity of 113 grains of gold. It became an inconvertible paper money, which rapidly depreciated in terms of gold till today it is only equal to about 68 grains of gold. In consequence of this depreciation of the paper pound, one ounce of gold is now equal to £7, whereas in the pre-depression period it was equal to £44. Exactly the same thing has happened in the rest of the world—a decline in the gold value of national currencies and a consequent increase in the price of gold in terms of national currencies. The U. S. A. dollar, the French franc, the Indian rupee, the Japanese yen, etc., are all in the same case as the British pound.

As a result of this big rise in the price of gold, its supply has increased enormously.

Its annual production from the mines was 35·3 million ozs. in 1936 as against 19·7 million ozs. in 1929. Besides, due to economic distress and the temptation of the higher price of gold, India dishoarded 35·4 million ozs. and China and Hongkong about 6 million ozs. of gold by the end of 1936. The quantity of gold in the world has increased by 21 p.c., while due to devaluation of currencies, its monetary value has increased by 100 p.c. The stocks of gold held by Central Banks and Treasuries have increased in value from 2,580 crores to 7,419 crores of rupees. Again, whereas in 1929 the excess gold reserves over the legal minimum held by Central Banks were 600 crores, they now amount to 4,700 crores of rupees. But, in the meantime, the value of international trade which provides the main demand for gold now-a-days has gone down by 42 p.c. By all accounts, therefore, the present supply of gold is far in excess of present demand. And, since in the face of militant nationalism and talk of wars all the world over, international trade is bound to remain at a low level, the demand for gold for international payments is not likely to increase.

On the other hand, the supply of gold is bound to be large so long as its price is high. Consequently, in so far as the demand and supply of gold were concerned, there should have been a great fall in the price of gold. But, the Big Three, the U. S. A., Britain, and France, who hold over 75 p.c. of the entire monetary gold stocks of the world, are keeping up its price by buying it in large quantities only in order to bury it in the vaults of their Central Banks. The reasons for this rather foolish and extravagant policy of buying unwanted gold with borrowed money are as follows:—

Firstly, they are unable to make up their minds as to how best they could retrace their steps. If they did not buy the gold, its value would fall, and the gold value of their national currencies would rise. This would mean a rise in the ratios of their respective currencies. And unless all nations were prepared to allow the gold values of their currencies and their ratios of exchange to rise simultaneously and in the same degree, there would be competitive inequalities in international trade.

Secondly, a fall in the price of gold would mean a reduction in the monetary values of the gold reserves of their Central Banks and Treasuries, and thus wipe out at one stroke the enormous paper profits they have made due to the rise in the price of gold.

Thirdly, California, South Africa, Canada and Australia are all big gold-producers. Consequently, neither the U. S. A., nor Great Britain is willing to allow the price of gold to fall precipitously.

Fourthly, there is also a vague talk of a return to the international gold standard and a revival of international trade, when the demand for gold would increase and all the gold would be equitably redistributed in a friendly manner among all the nations of the world.

But, most of these arguments are due to false hopes and confusion of ideas. The outstanding facts of the situation are that the supply of gold is enormously excessive in relation to possible demand at its present price. The question is not so much whether the price of gold would or would not fall as whether the fall should be sudden or gradual. In view of the confusion that would result from a sudden reversal of relations between gold and currency values, it is desirable that the fall should be

made gradual. And this could be done by deliberate adjustments of the buying and selling prices of the Big Three in respect of gold. It is, therefore, highly probable that the recent tendency of the price of gold to fall slowly and irregularly would continue for many years to come. And, with this progressive fall, there should be a gradual increase in the demand for gold for jewelry and other industrial uses on the one hand, and a decline in new production and dishoarding on the other, till at last there came a sort of equilibrium between demand and supply. A greater and more rapid fall in the price of gold, which is warranted by the present state of demand and supply, cannot take place because of uncertainties regarding the future of peace. And should a European War break out in the near future, all economic values would again be thrown into the melting pot, and all reasonable calculations about the future price of gold would be thoroughly upset.

THE ANDHRA MOVEMENT TAKES A SERIOUS TURN

Appeal to the Congress to Avert Crisis

UNDER the auspices of Tadepalligudem "Andhra Mandali", a public meeting was held on 3rd June, 1938, at Tadepalligudem, under the presidency of the renowned journalist Mr. Y. Venkataratnam Pantulu. The meeting was well attended by merchants, doctors, vakils, students, ryots, Congressmen and members of the youth league, library association and other associations. Great enthusiasm prevailed, throughout the proceedings and the young men have pledged themselves to undergo any length of sacrifice for achieving their object of getting a separate province for the Andhras.

The Presidential Address dealt in detail with the history of the Andhra movement since the advent of the Congress, the present issues which confronted the movement and the remedies for the same. Messrs. K. Kistamaraju, B.A., LL.B., P. Satyanarayana, B.A., K. Rama Sastry, B.A. and T. Venkataraju spoke vehemently on the subject. The following resolutions were passed:

1. This Conference is of opinion that the views expressed by the President and members of the All-India Congress Committee on the question of Andhra Province are the result of ignorance and error of judgment and requests them to reconsider their opinion to give immediate effect to the resolutions passed by the Andhra Provincial Congress Committee.

2. This Conference requests the Congress President to tour the Andhra districts to gain first-hand knowledge on the gravity of the problem.

3. This Conference requests the Andhra Provincial Congress Committee to send a deputation to Mahatmaji to explain to him the full details of the situation.

4. This Conference warns the Congress Working Committee that a grave situation worse than that in the Central Province is fast developing and requests that prompt measures may be taken immediately, before it is too late.

5. This Conference appeals to the Andhra Maha Sabha Standing Committee that if the Congress still objects to send a Congress deputation to England a non-Congress deputation consisting of eminent nationalists like Mr. C. Ramalinga Reddy, the Raja of Challapalli and others, may be sent, to educate the Secretary of State and the Parliamentary members.

6. This Conference is of opinion that Andhra language should be introduced forthwith, in the Courts, District Boards, Municipalities, Legislative Assembly Council, and the Andhra University.

7. This Conference appeals to the Andhra journalists to start an English Daily for carrying on propaganda work and to send frequent articles to the various periodicals in other Provinces on the question of "Andhra Province."

8. This Conference demands from the Madras Premier, the publication of the details of the Madras Government's recommendations to the India and British Governments on the resolutions passed by the Madras Council and Assembly, regarding the formation of Andhra Province.

K. KRISHNAM RAJU, B.A., LL.B.,
President, Andhra Mandali

HALBI FOLK-SONGS COME NEARER

By DEVENDRA SATYARTHI

"WOULDN'T you like to add some Halbi songs, too, to your collection, when they are so near," remarked Mr. Pooran Singh at Jagdalpur in C. P. And he gave me his book *An Introduction to the Halbi Language*. It proved to be of genuine help to me in feeling at home with this new language. "Halbi is a language of no less than 1,74,681 people of whom 1,71,293 souls live in Bastar State alone," he went on to say. "It is my mother-tongue and I am proud of it."

Halbi is originally the language of the Halba people. The word Halba must be an abridged form of Sanskrit Halbaha (lit. peasant), and almost all the Halbas today are tillers of the soil. Some other castes, however, have also

Mr. Pooran Singh.

He lives at Jagdalpur in Bastar State, the land of Halbi folk-songs. The writer describes him as his collaborator.

Copyright: Author.

adopted it as their mother-tongue. Day by day it is acquiring the character of a *lingua franca* throughout the length and breadth of Bastar State—a veritable mine of dialects. Even amongst the Gondi-speaking Marias it is Halbi that at once becomes the second language for the local interpreters. "A valuable means of inter-communication", declares Mr. Hyde, the present Administrator of Bastar.

But the Halbi language failed to charm a great linguistic scholar like Sir George Grierson. "It is a mechanical mixture of bad Marathi, bad Oriya, and bad Chhattisgarhi", he declared. Conceivably, my friend Pooran Singh is not

willing to accept this criticism. "Sandwiched between the Marathi, Oriya, and Chhattisgarhi speaking areas, it is only natural that Halbi should be under their mixed influence," he says, "but it is rather sad that Sir George Grierson calls it a mechanical mixture of merely the bad elements of three languages."

I had gone to Bastar State to study the songs of the Marias, but then I had to attend to the Halbi songs first, for they happened to be much nearer to me than the Maria songs.

And I found a regular collaborator in my friend Pooran Singh. Every day I would go to the countryside and would return with the text of scores of folk-songs. In the evening, he would come to my residence to offer cordial help for their translation. At every typical word he would stop and give along with the literal meaning its whole background and purpose. Proverbs, riddles, and folk-tales—all came as toys in his hands, and he used them freely to make the illustrations all the more interesting and alive. Of course, he was not capable of reproducing the beautiful and thrilling tunes of the Halbi songs. Always he took me into the deep linguistic details; a sweet labour of love, he called it. "I should call you an encyclopedia of the Halbi language", one evening I remarked in a flattering tone. "Don't you say so", he returned humbly. "I know very little."

One remarkable type of Halbi folk-song is *Rilo**. It draws its strength from the everyday life of the people. Occasionally it is followed by a full-blooded romance giving birth to many a new song in its turn. Every young man must respond to the call of *Rilo* songs as the bees do to the flowers of the new season. I remember a party of tall well-built youths. All of them solemnly agreed to sing to me their favourite *Rilo*. And their glorious voices put life into the song:

The Girl:

Blossoming in the forest-side
You are my *Rosona* flower
And the singer of *Rilo* songs you are!

* In some parts it is known as *Liro* as well.

The Boy:

You say that you'll come to me
 And who'll give me money?
 O wherefrom shall I pay the price
 In cash to your husband?
 I would prefer to be without a girl.
 And then I know
 What an average woman is like—
 For her husband she serves gruel,
 And the cooked rice she keeps for herself.

The Girl:

Well, I too know
 The men of Kal Yug.
 Today they get rich
 Tomorrow they drive away their poor wives.

The Boy:

Your comment I understand
 My *Rosona* flower!
 But it is like the noise
 That comes up while you pound the *Chivra*.

The Girl:

O I fail to compete with you,
 My dearest love!
 Now go on singing *Rilo*
 And I'll be but a calm listener.

The Boy:

For six months or one full year
 I'll keep my eye on you.
 I want you to be a girl serene.
 Not stupid like a buffalo.

The Girl:

Around a jar of *Landa*
 The boys of Tekragura village have assembled.
 Water is served from the spring of Singanpur village
Landa, the rice beer, comes from Lamker.

Some of the words of this song were very obscure, and, to make a very close and literal translation for me, my friend, Pooran Singh, had to spend more than half an hour. When, depending upon his translation, I prepared a revised version, trying my best not to go away from the original spirit, he looked very eager to listen to it. And, to my joy, he approved of it. "The very first *Rilo* must have been sung by a girl", he observed. I agreed and quickly quoted to him Ananda Coomaraswamy's words: "If we study the folk speech anywhere in the world, we shall see that it reveals woman, and not the man, as typically the lover."* "By the same common pulse is timed our *Rilo* song," he said, "bringing love close to us. The end of the present *Rilo* is very suggestive. You can imagine the girl offering a cup of *Landa* to her beloved who sits amidst his friends, her winning smile lending a unique meaning to the *Lilo* song which is in itself more than an institution". He also told me the full story of the *Rosona*

flower. The *Rilo* singers, nurtured in a tradition of long standing, compare each other with the yellow *Rosona* (also known as *Rachna*) flower. Now *Mari Rosona*, or the *Rosona* flower of the plain, is the name of a kind of friendship between boys and girls, and they commence it by taking a sacred vow of faithfulness and symbolically offering the *Rosona* flowers to one another.

The Halbi-speaking Maria youths, with whom the *Rilo* is an everlasting favourite, may sometimes be seen dancing against one another trying to sing unanswerable pieces. On any occasion, they may begin to sing it, sitting round the camp-fire winter nights, resting under the shade on summer noons, working in the fields, or with a comparatively stronger impetus during a wedding. Once, I remember, I heard a wedding *Rilo*:

On the way-side mango
 The peacock goes to roost—
 His moustaches are growing!

Thus went the bride's piece, celebrating the moustaches of her own groom, who soon replied rather dictatorially:

Yes, my *Rosona* flower,
 The peacock's moustaches are growing.
 But who'll hear you at length?
 Make haste and be brief.

The bridegroom was rather in a hurry to take his bride home. No time should be wasted on formal jokes, he thought. Another piece caught a note of realism:

Dadak, dadak, water is falling,
 My *Rosona* flower!
 Peep into your mind
 And just see
 If you can accept my love.

Thus sang the girl and the boy replied:

Well, you ask me
 To peep into my mind
 Just take this *Keora* flower
 From my hands, my love.

Again the girl came out with:

I should have your *Keora* flower, you say.
 And I have it with love and care.
 When you leave me now
 Don't forget me altogether.

Here the song ended, for the boy did not perhaps want to give a promise always to remember his sweetheart, a young village girl with sleek black well-combed hair, and eyes thirsty for a love response.

So far, so good. Further investigations enlarged and enriched and beautified my studies. Songs, facile in expression and vividly telling the life of the people, were pouring in. And Pooran Singh sat with me every evening to help me.

*Ananda Coomaraswamy: *The Dance of Siva*, p. 96.

I would often fail to grasp a certain picture, and he would bring home the whole background, saving me from any sort of mistake.

So we came one day to a *Rilo*, redolent of the fun and satire of peasant life:

Husband:

This painted basket has been brought
From the village of Chingpal;
And the Aud boy who made it
Belongs to Neganar.
No plough, nor bullocks
Have I, ah me!
Unavailing goes the wetness of the fields!

Wife:

Unavailing is the wetness
Of the fields, you say.
Why not ask your village friends
To come to your help*
If you have neither plough nor bullocks,
My *Rosona* flower?

Husband:

You suggest help, my love,
From my village friends.
I was teasing you—
The plough and bullocks are there.
But, alas, there is no strength
In my body at all, my love,
The sun is setting.

Wife:

Yes, my *Rosona* flower,
The sun is setting, as you say.
But, like the naked roots of a Jamala tree
That stands on the river bank
Your moustaches are growing
Strong and unruly.
If not *Body* and *Mehar*,†
Cultivate the *Goindi* rice,
A very rich harvest you'll have
And in a circle of forty sheaves
You'll place the harvest, my *Rosona* flower.

Husband:

Keep up your blessed speech,
Patiently I hear, my love,
But, how much longer
Will you go on?
My soul belongs to *Jama*, the God of death,
And this my body will go to dust.
My days are numbered
I'll bend to the hill-breeze,
Today I talk to you
Tomorrow, I shall not.

Wife:

To talk to me tomorrow
You wouldn't be here, you say.

* *Bethia* is the original name of the time-honoured system of co-operation when the village folks, turn by turn, join in groups to help weak and poor friends, not necessarily relations, in the field work. The people who come to do this work are called *Bethias*.

† Coarse varieties of rice, cultivated on slopes where very little water is required: pronounced locally as *Wori* and *Mehar*.

O name to me your gods,
My *Rosona* flower!
For your safety I'll pray to them.

Sometimes even the best part of a *Rilo* remains but a solo song. Of course, after every few lines in this case the *Rilo* singer repeats the last item of the preceding line. Given to the use of satire, the monologue grows up in everyday village life. Bhikari, a sunburnt peasant of Bilchur village, sang to me a *Rilo* of this type:

Now my heart is glad, my *Rosona* flower,
Harvesting and threshing, all over;
O I am at my leisure now.
At leisure, my wife.
Spread the mat, for my eyes are heavy with sleep.
Eyes heavy with sleep, my wife,
The child weeps and disturbs me.
The child weeps, my wife,
I, your husband, feel tired of quietening him.
"Whither have you been?" I ask;
And it makes you lose your temper.
Lose your temper, my wife,
In the forest reserve of Titargaon a leopardess roars,
The leopard roars, my wife,
What is the effect of it on your heart?
On your heart, my wife?
Bhaen, *Bhaen*, *Bhaen*, it fills my heart with fear†

Bhikari's wife, Jhumri, must have appreciated in her heart of hearts the song of her husband. He had sung it laying stress on the interesting parts of the song. "I would like to

The Parjas
They have their own dances
Copyright: Mrs. O. M. Auner

hear one song from your wife, Bhikari," I said with a growing sense of urgency. I felt hopeful, for I thought that she would certainly sing if her husband advocated my case. "No, no", Bhikari came out with, "my wife is very shy and she won't sing. However, I'll give you one more *Rilo*." And he sang:

‡ *Bhaen* pronounced nasally is a sound symbolical of the lonely forest spaces.

The *mahua* oil you apply to your hair.
 And sitting on an old *machi* *
 You comb your shining hair.
 Comb your shining hair, my love,
 Quarrelling with your husband,
 You run away to your mother, my love,
 "What makes you come, daughter?" asks your mother
 "My husband, that black-faced one, has beaten me,"
 you cry,
 "Has beaten me, my love",
 "Get out, you black-faced one," you shout,
 As your husband approaches you to be reconciled.

Everybody laughed as the song closed.
 "Don't you think, Jhumri darling, that it is to you that I have addressed this song", Bhikari went on to say. "You are never so, you are my good wife". But Jhumri, his wife, had understood the hit. Laughter lurking in her eyes, she had the look of a smart modern woman.

Over and over again, the *Rilo* song titillated my interest in Halbi folk-poetry. Then I reached another type, the *Chait-Parab* song. "Here is a song, originally sung in the month of *Chait*", remarked Pooran Singh, "so you see that it is sung in the Spring, but then it is necessarily a love-song rather than a new season song".

As regards the language of the *Chait-Parab* song, it is not essentially Halbi. Originally a favourite song among the Bhatras, who speak a mixed dialect of Oriya, it is almost Oriya-like in sound and colour. But its popularity is wide among Halbi-speaking people as well.

The *Chait-Parab* singer would like to commence his song with a sort of prayer to *Mahamai*, *Kalika* and more often *Danteshwari*—the local goddesses, the last being the tutelary goddess of the present Raj family in Bastar State. "Victory to you, *Mahamai*. Victory to you, *Kalika*. In your names I commence my song. Be kind and make my throat your abode", sings the *Chait-Parab* singer, suggesting that the sipritual touch of the goddesses can enhance the beauty of this song. And when the village boys and girls enter a competition, even the goddesses are expected to take sides. "The goddess *Ranokasini* is worthy of my salute. In her name I begin my song, success must be mine everywhere. In the temple, the drum-play goes on. My salute be to the God of Battle", sings the leader of one party. And the rival leader returns, "You saluted your God and Goddess. To whom should go my salute? In the name of Mother Maoli I sing, and to her goes my salute. On the temple door, the parched rice is spread. Be kind, Mother, make my voice like a Koel's".

* A stool of wood and string.

On the first day of the *Chiat-Parab* festival they go from door to door in the village collecting small coins. This money is spent on liquor they share together. And the whole night long the songs go on before the goddess—songs every now and then enlivened by a little dancing. Next morning finds them starting for the neighbouring villages; before every door they sing, dance and collect money that is spent on a good public dinner towards the last evening of the festival. It is primarily the festival of full-blooded boys and girls who are not yet married. However, the newly-married boys and girls, too, in their respective villages cannot resist joining in this celebration of love, beauty, and youth. The party of boys and girls that goes ahead singing, takes along a few elderly persons, too, to see that it does not go astray. Throughout the month of *Chait* these song-feasts go on. Under the strong influence of overwhelming competition, the girl members of the party challenge the boys of the village and its boys sit to compete with the boys of that village separately. It is, of course, always a treat to attend these song-contests. And the songs are both old and new, most of them sung extempore. The party that wins charges little presents of flowers—the rose, champa, jasmine and *hazariphul*—or even of parched rice and molasses from the defeated boys and girls, who, as tradition has taught them, never again in their life sit in contest with any winning member individually. Just after the result of a contest, a defeated girl may spontaneously begin to love the boy who wins; they may even, with mutual consent, run away to some forest glade from where their parents may bring them after having given final consent to the marriage. Such a marriage is known as *Paisa Mundi*. In olden days, the boys and girls used to begin the song contest with a definite promise that the defeated girl will marry the boy who surpasses her. One thing is clear even today; a girl defeated in a contest, possesses a life-long admiration for the winning boy and whenever he comes to see her at her father-in-law's place after her marriage, she offers him cordial hospitality and nobody can object to it.

Apart from the actual festival in the month of *Chait*, the *Chait-Parab* songs may be sung on other occasions as well, especially during the wedding feasts when it gets a new name, *Munhi Mangto*, or "the asking for the ring." The defeated boy is forced by the winning girl to present a ring to her.

This *Mundi Mangto* developed into a popular institution. Whenever the village girls

The *Mahavat*
As the elephant drinks water, the
Mahavat starts singing.

Awaiting the season of the
Chait Parab song

A Peasant Family

come to know of the arrival of a guest in the village, they assemble before him at night with a challenge to fight a contest. Even a State official, on his visit to a village, at once becomes an object of attraction to the *Mundi Mangto* girls of the village.

Opening a chapter of *Raso Rang Git*, the songs of love and beauty, the *Chait-Parab* singer comes forward :

The coloured earth is of various hues.
Lo! The black crow has taken wing.
Now, no more salutes to the Goddess.
Come on with your songs of love and beauty.

The village youth admires the beauty of his sweetheart:

Come on, dearest,
My heart swells with delight.
Every night, my fair-faced singer,
I have been seeing you in my dreams.

She gets annoyed at this invitation:

You have sung your song
And it has gone astray,
You cannot compose a song serene!
Yours is like picking up
The remains of other's meals.

However, the village youth sticks to his theme :

Dark like a cloud
Your fanciful *sari*
You have thrown over your shoulders!
It is by the grace of God, my love,
That we meet today.

Then she surrenders, so to speak, and sings of the *Champa* flower as the symbol of love :

At a full day's distance on foot
Is the village of Maidapur from here,
O buy me some molasses, my love,
Offer me also a home-pun kerchief,
A *champa* flower
That will remain fresh throughout the year.

This brings a further note of joy in the boy's song:

Breakable is the dry *Sal* leaf,
Not so the *Bodal* leaf.
Both your cheeks, my love,
Are beautifully tattooed.
O sing me dear, dear songs.

And she sings symbolically, comparing herself to a doe:

The weekly *Hat* market
Got late by one week.
And our meeting is late
By full one month.
Lo! the running doe is caught
Even in a snare
Of weak paddy straw rope.

The boy sings more lovingly:

I love you, sweet darling,
Be my life companion,
In the *Madhuban*, the forest of love,
I have long been searching for you.

Readily she returns:

Heavily it rained this year,
And a boisterous flood followed.
Come away with me, you say,
But I cannot, my youthful boy,
My home is far away!

Now the boy assures her of a new home:

Unploughed for long eighty year-
Lies yon field, my love.
The shade is sweet
Under the plantain grove.
Like a hard worker
I'll labour and feed you,
But you won't yield, my love!

She too reveals her innermost heart:

I digged deep and made a tank.
I also planted a garden.
Sweet and clear and dear
The water of my tank here!
But away from me my darling
Who should drink this water?

Then the boy's song describes his desire for marriage:

The Cobra crept along the *Salpi* tree!
With a jar of liquor on my head
I approached your father,
Alas! he refused to give me your hand.

This long contest ends with the girl's song that wins the day:

Heavily blows the wind,
Everywhere the sky seems cloudy.
Here is a Cobra, my love,
From the grip of a she-Cobra like me.
How will he come out victorious?

Often the *Chait-Parab* song makes direct references to everyday village life, and it at once becomes of great picture-value. You can actually see the workers in the fields:

We, the labourers, have come—
And in a row we stand.
Come on, singer dear,
Say "yes" and sing your song.

The song of the widow has a great sadness about it:

Alas! there is nothing to be cooked
In the widow's house.
Like a servant, she works hard
To fill her belly which is of a hand's breadth.
Whatever she gets, be it half-cooked or rotten
She jumps to eat and starves!

Another song shows the contrast between the life of the Bhatra peasants and the Mahras:

Poor Bhatras live upon
The fruits of *Sal* and *Stume*—
The Mahras are happier.
As long as the *Kawri** is on your shoulders
You cannot die of hunger, my love.

* *Kawri* is a bamboo pole from which baskets hang on both sides. It is carried on the shoulders.

Having studied the *Rilo* and *Chait-Parab*, I came to the *Leja* song. In Kokhapal, Bilchur, and Dharampur—the surrounding villages of Jagdalpur—I found out many specimens of the *Leja* song. It had more than two varieties and enjoyed the goodwill of the Mirgans, the Mahras, and the Ghasis.

"Why do they call it *Leja*," I enquired from Pooran Singh with a depth of feeling. "It is not very easy to trace the significance of the name," he remarked, "but *Leja* is the same as the Hindi *le ja* (lit. take it)." Perhaps this song was originally sung by the village folks giving a send-off to some dear one, I thought. Everyone who joined in the chorus said to the departing person, "Take these good wishes and love of ours along with you." And as time passed, there remained only *Leja* (take it) as a relic of the original wish. And to my joy, Pooran Singh came half-way and approved of my idea.

The Mahras repeat *Leja* thrice or more at the beginning of every song, while the Mirgans prefer to close with *Leja, Leja, Leja, Re Leja*! In the village of Kokhapal, a young Mahra boy sang to me a *Leja* of unusual length. It was composed of a long fragment, meant for a rhythmic recital in the beginning, and the usual short piece in the end. And it described love for Koeli, some bright-eyed village girl:

"Hurriedly come to me, my Koeli,
Give me a sweet embrace.
The *Mandia* corn I have is good
And smoothly runs the millstone.
My name is *Haria*.
O how I wish to live with Koeli,
You look like a sugarcane!
Search for you I must.
Leja, Leja, Leja,
It is not merely a *Leja* song,
It brings the actual news from Benta Bheja village.

There was a note of advice from the *Leja* singer to the village flirt:

Leja, Leja, Leja,
The road is full of sharp bends;
Don't you walk
Over the clods, my girl,
You'll fall down.

And a bashful girl's lover had his own *Leja*:

Leja, Leja, Leja,
Behold the *Amarbel* creeper.
O what makes you hide and be busy inside?
Just come out and play with me.

Another *Leja* compared the sweetheart's face to the slender new moon:

Leja, Leja, Leja,
The new moon has risen.
Even if you are as big as a mountain
I cannot be satisfied
If I look at you for a short while.

Here Pooran Singh disagreed with me. "Don't you connect the new-moon of the first line with the later portion", he said, "in the *Leja* song there is very seldom an affinity between the first line and the later portion, its significance is only limited to its last word, for, according to the original verse scheme, it rhymes with the ending word of the song. The moon in the present song appears only by accident. Don't you think that the face of the beloved is compared to it. At the most you may make the first line a simple description taking into consideration that in the later portion the singer shows his urge for a full and long view of his beloved's face. So my full vote cannot go for your interpretation." But to me the first line of the *Leja* song appeared to be like the meditative brow of a person, suggestive and serene. "If the *Leja* song is a snapshot," I argued, "the first line must be taken as a close background, enhancing the form and texture of the song." And it was after a long discussion with Pooran Singh and some other scholars of Halhi that I won their votes of confidence for my view.

Coming a step nearer the *Leja* song, I got a considerable number of specimens. The words of a summer song ran rapidly:

Leja, Leja, Leja,
Behold the *Anvari* and *Jam* trees
That stand together.
Wear your shady hat
Made of bamboo and leaf, my prince,
The sun burns your face!

Then followed a rain song:

Leja, Leja, Leja,
It rained in showers.
My song went along with it
And it ended not all night long.

Even a harvest song was near at hand:

Leja, Leja, Leja,
Behold the leaves of the *Anvari* and the plantain
Behold also the plants of the *Goidi Lakro* paddy
Bent down with grain in the sloping field.

The grievance of a village dandy had its own note:

The house with its roof supported
By nine pillars and eight beams
Belongs to your father, my dear girl.
And I have been a servant with him
Since my tender days.
Alas! no sign of success so far
In winning your hand.
Leja, Leja, Leja, Re Leja.

And the wife of a morose husband appeared with her deep grief:

On yon berry tree
Speaks the bird *Gundlu*.
With a thorny stick

He beats me, sister.
My leg below the knee is badly swollen.
Leja, Leja, Leja, Re Leja.

Then there came satires. The false show
of a marriage in the village found a good
spokesman in the *Leja* singer:

Turbud, turbud, beats the *tudbudi*
And the *Nisan* drum, too, beats apace.
But look at the marriage-feast,
Everyone is served on leaves
With the poor curry made of *pipal* sprouts,
And that, too, in small quantity.
But big leaf-cups full of rice gruel
Are served all right,
For it does not cost much.
Leja, Leja, Leja, Re Leja.

The next hit was on a loose woman:

A *Koel* here and the other one
Cooing on the yonder side of the river.
For God's sake leave me now.
Disaster you have brought on all sides,
You husband-eater widow!
Leja, Leja, Leja, Re Leja.

The *Leja* singer caught sight of the old
firt, too:

Bamboos I brought
And made a bundle.
O mother of five children,
You are getting your second youth.
Leja, Leja, Leja, Re Leja.

And he denounced her poverty:

Your face is like a *Sal* leaf!
Combing and braiding your hair
You have coiled your pigtail at the back,
But your ears are unadorned.
Leja, Leja, Leja, Re Leja.

The peasant under debt had his own satire
on life:

Leja, Leja, Leja,
Dying of labour I raise the harvest.
How terrible to pay the *Dedha* corn†
To the *Saukar*, the village money-lender.

In the end I got a contemporary satire on
the police:

Leja, Leja, Leja,
I will prepare a pickle
And if it goes wrong
I'll report it to the police.

Apart from the *Rilo*, the *Chait-Parab*, and
the *Leja*, some minor types of Halbi songs may
be mentioned as well. The *Chherta* is the song
of the boys' festival of the same name.
Celebrated every year in *Pus*, it goes on for
three days ending as a rule on full-moon day.
The leader of the party, playing the role of
Nakta, a noseless fellow, and making a
peculiar hollow sound from a hollow gourd, goes

about with his friends from door to door, singing,
dancing, and collecting paddy or money for a
dinner. Run separately by the girls the *Tara*
song is the Left-Wing of the *Chherta*; the role
of *Nakta* has long been censured by them and
when they go from door to door at night they
carry an earthen lamp in a basket. Addressing
the housewife at every door, they join in chorus:

Behold yon star in the sky!
O we'll make a move
Towards our huts
If you are miserly
Even about a handful of rice,
Behold the broken axe!
Welcome us with your door, wide open,
No matter, if you give us rice or not.
Behold the four-cornered leaf-cup!
The girls so fond of parched rice
Go about from street to street.
Behold the weak straw rope!
In this month of *Pus* we meet
And the next month of *Magh*
Will find us separated.

Another noteworthy type is *Dhankul*. It is
a religious song and is sung by men and women,
assembled separately, to invoke a goddess.

The Halbi folk-song is, moreover, a living
institution, giving birth to contemporary songs.
One of the modern songs I got from Bhikari,
the sunburnt peasant of Bilchur. It is a remark-
able specimen, impregnated with symbolical
poetry:

In a meadow beyond the teak trees,
My Rosona flower, dear Rosona flower,
Behold the grazing spotted deer.
Holding the *Chakmaki* rifle in his hands
The hunter goes on and on
To raise the rifle stand.
The rifle stand, my Rosona flower, dear Rosona flower,
Whether he aims correctly or misses
The fearsome sound, the dangerous sound
Must come out of his *Chakmaki* rifle.
The fearsome sound, my Rosona flower, dear Rosona
flower.
Owardly he is sweet, and good and dear,
Within he shakes our self-pride!
Shakes the self-pride, my Rosona flower, dear Rosona
flower.
The kingdom of *Firangi* has reached here*
And his thorns prick even those
Who walk with every care.
The thorns prick, my Rosona flower, dear Rosona
flower,
Behold he throws away the small fish
And catches the bigger one.
Catches the bigger fish, my Rosona flower.
Every day he forces us for *Begar*†
Every day my heart trembles, my life sinks!

Bhikari's song was an indication of growing
self-consciousness in the voice of the people.
There must be more songs like this, I thought.

† The corn taken as seed from the shopkeeper is often
paid back with heavy interest—1½ times—at the harvest.
It is called *Dedha*.

*The Britisher.

† Forced labour, taken without pay from the villager.

And there must be many more Bhikaris to sing them. They would not let the Halbi song go into oblivion. They would rather bring new currents to the song of the soil.

Once again, on my way, back to Jagdalpur from the Maria villages, I visited Kokhapal and Bilchur and collected some more Halbi songs. Then it was high time for me to leave for Raipur. "You mustn't forget me," Pooran Singh said,

remembering the days we spent together. And when I told him that his name would remain fresh in my memory as long as the Halbi songs lasted, he felt delighted.

The home of Halbi songs, Bastar State, is now far away, but in the world of remembrance Halbi songs are ever with me, never at a great distance. And when I look back into my memory, I find them coming nearer and nearer.

SYSTEM OF WORKING OF THE GHEE SOCIETY

By ABANI NATH SANYAL

Inspector of Co-operative Societies, Etawah.

GHEE is one of the most important article of food in Indian dietary and it is consumed in large quantities on account of its suitability for cooking. It is generally prepared in U. P. by curdling milk, churning the curd and then heating the butter-fat thus obtained in an earthen or metal vessel on an open fire, and finally cooling and straining it after the removal of water by decantation.

Ghee-making is an important supplementary industry to agriculture and is essentially a cottage vocation. Its organisation on sound lines is bound to improve the economic position of the agriculturists in substantial measure. In the western districts of U. P. ghee-making, as cottage vocation is of such importance that ghee merchants of Calcutta and Rangoon find it necessary to open branches or keep special representatives in some of the important ghee centres to ensure a regular and sufficient supply of the article and we find a "Ghee chain" (if the expression may be used) stretching from Meerut right up to Cawnpore with important centres at Khurja, Chandausi, Hathras, Aligarh, Shikohabad, Sirsaganj, Etawah, Bharthana and Auraiya with offshoots in Gwalior State and adjoining districts. The importance of ghee trade of this tract can be judged from the fact that Etawah alone sends out something like 40,000 mds. of ghee annually from its *mandi* and a substantial portion of this go to Calcutta and Rangoon markets.

The Ghee Society is an attempt to organise this village industry on a co-operative basis, so that the producers may derive the maximum

of profit out of this business. Though in an experimental stage, it is pregnant with immense possibilities for the benefit not only of the producers, but of the consumers as well and would have far-reaching effects in ameliorating the condition of the agriculturists who form the backbone of this country. For the first time organisation of Ghee Society was taken up in 1929 and the first society was registered on 8th October 1929 at Chaubankapura in Tahsil Bah District, Agra. Upto 30th June 1935, the organisation of the Ghee Society was confined to Bah Tahsil where there are 66 societies and occupies the whole of the Tahsil bordering Etawah District. It has now been extended to Etawah District where there are now 45 societies and has tapped the most important ghee producing tract.

MEMBERSHIP OF SOCIETIES

| Years. | No. of societies. | No of members. | Quantity contracted in maunds. |
|---------|-------------------|----------------|--------------------------------|
| 1929-30 | 1 | 16 | 25 |
| 1930-31 | 11 | 200 | 216 |
| 1931-32 | 19 | 310 | 417 |
| 1932-33 | 23 | 516 | 550 |
| 1933-34 | 29 | 660 | 800 |
| 1934-35 | 36 | 977 | 1182 |
| 1935-36 | 47 | 1397 | 1362 |
| 1936-37 | 111 | 3600 | 2800 |

The nature of business of Ghee Societies is such and the conveyances used (bullock carts or horses) are so slow that it is always convenient to have the Societies within a radius of 10 miles of the centre to be created.

NATURE OF BUSINESS

The nature of business of the societies is collection and joint sale. For this purpose, a *Co-operative Ghee Union* is created to which all the Ghee Societies are affiliated and which works as an agent for the societies for collection and joint sale. The ghee is brought from all the societies to the union office in their canister either in carts (bullock) or pack horses and the ghee from each society is weighed and entered into the account books of the ghee union. If the sale of ghee is to be effected in Etawah ghee *mandi*, then it is graded. If orders from consumers are in hand then the ghee is heated and cleaned by decantation and tested and then tinned which are also sealed. When a large number of tins are ready, they are sent in bullock carts to the Railway station and despatched to the buyers.

CONSTITUTION, MEMBERSHIP AND COMMITTEE

The society is organised on the basis of "one village, one society." According to the usual rules, more than ten owners of milch cattle (preferably buffaloes) join to form a society which is registered under "Co-operative Societies Act II of 1912". There is no share system, but every person joining the society has to pay an entrance fee of rupee one. The society elects their own panchayets (the Executive Committee) from amongst its members consisting of 3 or 5 members—one of whom is elected the Sarpanch (President or Chairman) and another is elected a Khanzanchi (Treasurer). A Secretary is also elected from amongst the members by the Panchayet (Executive Committee) whose duty is to maintain all the accounts of the society. The panchayet manages the internal affairs of the society and are responsible for the maintenance of proper accounts. The committee is removable by the votes of the members in a general meeting and it has also power to fill up vacancies falling within the year. The Committee is elected every year in the Annual general meeting of the society and the retiring members are eligible for re-election.

The membership of the society is confined to one village. Any adult possessing milch cattle and residing in the village and conforming to the rules and regulation of the society can become a member without any restriction for castes and creeds and it would not be out of place to mention that members enlisted from depressed classes (such as Chamars etc.) are the best re-payers of ghee.

STAFF, PREMISES

The societies have no paid staff. The Sarpanches and Treasurers are honorary workers. The member secretaries are also honorary workers but they may be paid some small honorariums. The members of the panchayet who do the work of weighmen of their societies throughout the year are also given small honorariums and it has been generally found that the sarpanches of the societies take up the work of weighmen of the society. They are also the most active persons to bring round the villagers to enter into contracts with their societies.

The individual ghee society is affiliated to the Co-operative Ghee Union and it is this ghee union that has to employ staff for handling the ghee contracted by the members of the societies. The premises of the ghee union is generally stationed at a central place within easy reach where the ghee is assembled and treated. It has godown for storage of the ghee received from the societies and other stocks of the union. The premises have got stables for keeping the pack horses and the bullocks and a pucca oven for the purpose of heating the ghee. Ghee union gets the services of supervisors of the Co-operative Department. (The Ghee work in this district received Rs. 6,000 from Government of India for pay of staff last year.) But it has to employ several permanent hands throughout the year and a few temporary hands during the busy season from November to March. In order to manage the works of the societies, the Ghee Union maintains pack horses and bullock carts with bullocks. The expenses are met out of contribution from the societies as the union is not a financing agency and it has no funds of its own. The contribution is charged at so much per maund of ghee contracted by the societies (with their members).

All these duties are performed by the Ghee Union, but the preliminary work of entering into ghee contracts with the members is done by the society itself. Ghee is weighed out every fortnight and weighing days have been fixed for each society. On that date the weighman of the Ghee Union goes to the society with his tin containers and pack-horses of the cart. The ghee is weighed out by each member and put into the containers and after the weighing out by each member has been finished, the whole quantity is weighed again, put on the cart or pack horse and taken to the Ghee Union godown. In this way the ghee from each society is assembled. Then comes the

question of treatment of the ghee thus assembled. If the ghee is sent to Etawah mandi for sale, *Kachcha* (that is untreated and raw) ghee is sent to the market for which no other treatment is given except that of mixing up the graded Ghee to make it uniform. It may be mentioned here that grading does not pay in Etawah mandi as no consideration is given to higher grade of ghee. In case the ghee is meant for supply direct to private persons or small merchants, for supply to consumers, the ghee is heated in big open iron pans directly over fire, and then put into the decanter where it is allowed to cool down when the water and other impurities settle down in the bottom. The clean ghee is taken out through the stop cock at the side of the decanter and the impurities through the stop cock at the bottom. The ghee is tinned directly from the decanter which are then weighed and made into uniform weight and then sealed. They are then ready for despatch to the various buyers from different places. The ghee is sent to the railway station in the bullock cart belonging to the Union.

MARKETING AND PRICE FIXING ARRANGEMENT

As has already been said above *kachcha* (raw) ghee is sent to Etawah mandi and the ghee sale there has to confirm to the rules of the mandi. The ghee is sent to the Arhatia (Commission agent) of the Union in the mandi. The ghee merchants of Etawah or the agents of ghee merchants of other places generally buy up the ghee. They visit all the shops of the Arahatis in the mandi and buy the commodity according to their requirements and fix the prices on the basis of Calcutta quotations which are obtained daily. After the ghee has been bought by the merchant, it is sent to his godown and from there the sample from each tin is sent to the Ghee Testing Laboratory where it is thoroughly tested and it is finally purchased if it passes the test. The ghee is then weighed in the godown of the merchant and after making various deductions for expenses, concessions, etc., the price of the ghee is paid to the Ghee Union through the Arahatia. The various expenses in Etawah mandi comes to about Rs. 2 per maund of ghee sold.

As for the prices fixed for supplying ghee direct to the consumers, the rates are same as that of Etawah mandi for equal weights plus Re. 1 to meet the cost of heating and classifying it (making free from all impurities, water, etc.) A small cartage is charged for transportation to the Railway station.

EXTENT DEALING WITH NON-MEMBERS AND MEMBERS

There is no dealing in the matter of contract with the non-members. As there are no consumers' society, the dealings have to be maintained with non-members for ghee sales.

FINANCES AND FINANCIAL RESULTS

The Co-operative Ghee Union is not a financing agency. The societies are financed by the Central Co-operative Bank of the District. The money is advanced to societies on pronotes at an interest of 10 to 12 per cent per annum. Sometimes societies have raised small deposits for capital. The societies in their turn finances their own members. With money taken from the Co-operative Bank, the societies enter into contract with their members for a fixed quantity of ghee supply, generally from one to two maunds per buffalo and the rate is fixed @ Rs. 10 to Rs. 12 per maund of 50 seers less than the Etawah rate. It is instructive to note that the *beoparis* (small ghee merchants) contract @ Rs. 15 to Rs. 25 per maund less than the Etawah rates. Again unlike the *beoparis* the contract money is given in lump sum and not in dribbles which is seldom of any real use to the indigent kisan. There is no joint liability and the personal liability is limited to Rs. 50 only for outside debts. Sureties are taken to safeguard the money advanced.

No interest is charged for the advances to the members. The difference of Rs. 10 to Rs. 12 per maund between the market rate and the rate at which the societies contract with their members covers the interest charges on the money laid out, the management expenses and the creation of reserve and other funds and if after all this there is any saving, a small amount of "patronage refund" is given to members as an encouragement if they have honoured their contracts in its entirety. The financial results of the working of the societies may be put down in the following chart.

| Year. | No. of societies. | Quantity of ghee contracted in maunds. | Amount advanced for contracts. | Profit |
|---------|-------------------|--|--------------------------------|--------|
| 1930-31 | 11 | 216 | 14692 | 172 |
| 1931-32 | 19 | 417 | 16524 | 2213 |

ADVANTAGES TO PRODUCERS

The advantages to the producers on account of which the Ghee Societies are a success in contrast to the ways of the *beoparies* (small ghee merchants) may be summed up as follows :

(1) All the members are accorded square dealing and equal treatment in the matter of Ghee contracts, irrespective of caste or creed as is never done by the *Beoparies*.

(2) Its democratic management. All have got one vote each. The elected panchayets manage the affairs of the societies and every member can have his say in the affairs of his society.

(3) Payment of contract and feed money in lump sums and in cash which enable the kisans to meet their obligations.

(4) "Patronage Refund" for the full delivery of the Ghee contracted. It is one of the most important factors for success.

(5) Reasonable rates of contract and correct weighments.

(6) All transactions are made in the villages itself of the members and none have to go out to other villages.

ADVANTAGES TO CONSUMERS

1. Heated and clarified ghee (i.e., free from water and other impurities) is supplied to the consumers.

2. Unadulterated and pure ghee of high quality at reasonable rates is supplied in properly soldered tins direct from the Ghee Union office thus eliminating all middlemen profits.

BUSINESS ASPECT—PROFIT AND LOSS

The result of the working of the Ghee Societies during the last six years has conclusively shown that there cannot be any financial loss if they are worked with a little care and if there is no mismanagement or theft. In the year 1932-33, there had been an abnormal drop in ghee prices and even then the net profit was Rs. 243. With a little more caution in the matter of ghee contracts, it can be made a safe business for the kisan. The advent of the Ghee Societies in Bah and in Etawah has given an invisible profit to the cultivators in the shape of higher contract rates which are now being offered even by the *Beoparies* (ghee merchants) in order to compete with the societies which generally offer better rates for ghee contracts. In 1929 the difference between the rates of ghee contracts offered by the *Beoparies* used to be Rs. 15 to Rs. 25 less than the Etawah mandi rates. Since then the difference has come down to Rs. 8 to Rs. 10 per Bengal maund of ghee contracted.

Then there is the "Patronage Refund" for the members which is an extra income for them

which previously used to go to the pockets of the *Beoparies*. Except for the year 1932-33 the societies had been steadily giving "Patronage refund" to their members at the rate of Rs. 2 to Rs. 5 per md. of ghee repayment which works upto 5 to 12 p.c. rebate when the rate of contract was Rs. 40 per md. (Bengal).

OTHER WORKS DONE BY THE GHEE SOCIETIES

The first work that was taken up by the Ghee Union was the supply of feeds to the milch cattle. Besides paying them in cash, cotton seed and oil cake were supplied to the members for the feeds of their milch cattle. Arrangements have also been done in taking a census of milch cattle yielding milk seven seers or more per day with a view to introduce cattle breeding by selection and elimination of poor milk yielders. Introduction of better breeds of buffaloes has also been taken up and some buffaloes of Dhoolpur Breed have been obtained and given to best members. They have been kept under observation and if they prove suitable for the tract, more would be obtained and given to the members.

The Ghee Union also maintains buffalo bulls of better breed for breeding purpose. It may be mentioned here that a former Murrah-buffalo bull did not serve the buffaloes of this tract well and it seems that Murrah-buffaloe bulls are not very suitable for the she-buffaloes of the local breed.

OTHER WORKS PROPOSED TO BE TAKEN UP BY THE GHEE UNION

It has been proposed that the following works should be taken up by the Ghee Union:

1. Introduction of silage and (2) arrangements for veterinary assistance. For the latter proper authorities have already been moved. It would not be out of place to mention that establishment of a Veterinary hospital or the services of a Veterinary Assistant cannot be secured without financial aid either from the Government or from the District Board.

DESCRIPTION OF THE WORKING OF A GHEE SOCIETY

The system of working of the Ghee societies is simple. The society is organised on the system of "one village, one society." According to the usual rules more than 10 members who keep milch cattle (mostly buffaloes here) join to form a society. There is no share system, but any person joining the society has to pay an entrance fee of rupee one. The society elects its own panchayet (the Executive Com-

mittee) from amongst its members which manages the affairs of the society with the help of the Supervisor in charge. As soon as a member's milch cattle calves, the society enters into contract with the member for a fixed quantity of ghee supply, generally from 1 to 2 maunds per buffalo. The rate is fixed at Rs. 10 to Rs. 12 per 50 srs. maund less than the Etawah market rate, in contract to Rs. 15 to Rs. 25 per maund less given by the Beoparis (small ghee marchants of the villages). The margin (of Rs. 10 to Rs. 12) covers the interest charges on the money laid out, the management expenses and the creation of Reserve and other funds. A small patronage refund is also given to the members, if there is a saving after meeting all the obligations of the society. The whole of the contract money is paid to the member in a lump sum which is very much appreciated by them as the Beoparis pay them in driblets or in kind much to the loss of the members. The society is financed by the Central Co-operative Bank of the locality of which the societies purchase one share each to confirm to their rules. The money is borrowed by the societies from the Bank by the execution of the usual co-operative societies pro-note like that of the credit societies and pay an interest of 10 to 12% p.a. Sometimes societies have raised small deposits for capital. The members on their part execute an agreement in favour of the society for payment of ghee after they have received the contract money. In this agreement mention is made of particulars of the contract as to the quantity and rate of ghee and the amount of money paid, and penalty for non-delivery or adulteration of ghee. The milch cattle, the ghee yield of which is contracted, is hypothecated with this society and the agreement gives full description and particulars of the animal in questions. There is no joint liability for the members for outside debts of the society and the personal liability of the individual is limited to Rs. 50 only for such debts. Sureties are taken in these contracts. The members go on weighing out ghee for the whole of the milking period of the milch cattle but the contract period is generally limited to a period of one year. There is no time limit for contracts and it goes on all the year round though the greater portion of the contracts are entered into between the months of August and January. The rate of contract varies with the day-to-day rate in Etawah market. Sometimes the indigent members have not enough to feed their milch cattle and the society accommodates them with small loans for feed money,

limited to Rs. 8 to Rs. 10 per maund of ghee contract. On this interest at the rate of 15 per cent. per annum is charged. At the time of next contract this loan together with the interest is deducted from the contract money and the remainder paid. Contrast this with the method of the Beoparis who pay in kind charging any rate they like for the article supplied. If any member fails to deliver the whole quantity of ghee contracted, Sawai of ghee (i.e., 25 p.c. more) is charged and is added to the demand and remains unaffected by the changes in the market rates whereas the Beoparis sometimes charge Sawai of the price then prevailing and sometimes the actual price of ghee at the cessation of weighing plus 24 per cent. interest whichever suits them best and which vary according to the market rates.

Besides the Central Co-operative Bank, which acts as the financing agency, the societies have federated themselves into a *Central Co-operative Ghee Union* to which they contribute a small amount per maund of ghee contract. The chief functions of this union are to arrange for collection and sale of the ghee of the societies and to consolidate and unify their working. This contribution from societies goes towards defraying the expenses of the staff employed by the union for collecting ghee from the societies and for blending, grading, heating, clarifying and transporting the same.

The actual working of these societies has also the merit of being very simple. The ghee is weighed out every fortnight by a member of the panchayet, usually the Sarpanch, and there are fixed dates for each society. The members gather, bringing their ghee with them, in the chaupal (sitting room) of the Sarpanch of their society with the weighman of the Central Co-operative Union in attendance with his tin containers and pack horse or cart. The weighing is a full-dress affair. One of the members of the Panchayet, usually the Sarpanch, weighs out the ghee of each member and puts it in the tin containers brought from the union, and the ghee account of the members are made up then and there and verified by oral questioning, and entered in his pass book. The weighman and members keep an eye on the balance and the panchayet is not neglectful of its duty of seeing that correct measure is given and that the ghee is of proper standard and is not adulterated. If it is of very low standard or adulterated, it is rejected. If it is not up to the standard it is heated and decanted and clean ghee taken. The co-operative influence coupled with the panchayet's

watchfulness is responsible for the surprising fact that in all these years there had been no instance of adulteration with any foreign matter (such as margarine or lard). There were one or two instances of adulteration with milk or whey but deterrent punishment put a stop to all that. When all the ghee has thus been weighed it is handed over to the weighman of the union who weighs it again and signs the proceeding of the society by way of giving receipt. The weighman then takes it to the godown of the union where it is weighed over again and a receipt given to the society duly signed by the supervisor who is also the honorary secretary of the Ghee Union. All the ghee thus gathered in the union godown is graded as soon as sufficient quantity is collected and despatched to Etawah mandi (as kachcha ghee) in the Union's own bullock carts. If it is to be sold to the consumers direct, or to such small traders as deal directly with the consumers, it is heated, clarified, tinned and sealed before being despatched. This is also transported in Union's bullock cart to Railway station. Hired carts are very seldom used.

At the end of the year, the balance sheet for each society is drawn up. If there is profit, it is divided according to the byelaws: $\frac{1}{4}$ of the total profits goes to the Reserve Fund, $\frac{1}{4}$ of the remainder to the Bad Debt Fund and $\frac{1}{2}$ of the remainder to "Patronage refund" and the remaining as honorarium to those members who have worked for the society, to member Secretaries and towards the creation of other funds, such as charity fund, village improvement fund, cattle improvement fund, etc.

The byelaws provide for the creation of the post of member secretaries for each society to maintain its accounts but it has not worked well as the accounts of the ghee societies are fairly complicated and the number of transactions fairly large for a member secretary to manage. Necessity for appointment of separate accountants for the societies was felt more and more and now the Ghee Union appoints the accountants for the societies.

A glance of the profits made by the societies, their membership and the quantity of ghee contracted mentioned under the head, Finances and Financial results, clearly reveals that the societies are quite successful. So far only three societies are unsuccessful, and it was due to the opposition of the more influential

Beoparies of the locality as well as due to indifference of the members who were afterwards found to be small ghee dealers or those who sell their ghee for cash. Success of the ghee societies can also be gauged from the fact that more and more villages are approaching the authorities to open new societies.

SUMMARY AND OBSERVATION

The working of the Ghee Societies clearly prove that the production and sale of ghee can be modernised and established as a cottage industry and is a practical scheme. There is enough scope of expansion and the work of the ghee societies should be pursued to obtain tangible results. Though these societies cannot claim to have achieved much, they have paved the way to greater expansion and has already shown that it can add a few more rupees to the meagre income of the kisan.

There is so much yet to be done. Take the example of ghee heating. The present system of heating is unscientific, a little inattention and it spoils the flavour and affects the vitamins and it is time that some research workers were to evolve a system of scientific heating to keep the flavour and the vitamins of the ghee intact.

Another work that has to be done is to evolve a system of working these societies which will enable them to reach the ghee direct to the consumers.

Side by side with the Co-operative Ghee Societies, the work of milk testing combined with cattle breeding to improve not only the milk yield but also the breed of cattle can be taken up. Experiments about tinning require attention.

In order to protect the ghee industry, it is urgently necessary that some law should be passed to prevent adulteration. The verdict of the Legislature of the country is against the stoppage of import of margarine or fish oil, but it can at least pass a law making it incumbent for all imports of fish oil and other adulterants of ghee to be coloured with a different colour from that of ghee.

It may also be mentioned here that the ghee societies should be organised far away from large cities in order to make them a success and this would give the distant village folks an occupation and a source of income.

INDIAN NAVY

By GAGANVIHARI L. MEHTA

It is surprising that public opinion in India has hitherto not paid adequate attention to an important frontier of the country, namely, the sea frontier and those responsible for the defence policy of the country have been so absorbed in the question of the North-Western Frontier that they have tended to neglect a vital sphere of national defence, namely, naval defence. India has a long coastline of over 4,000 miles and while it is bounded by land frontiers, it is almost entirely dependent on sea-communications for its external trade. India has been and can be invaded from the sea so that the control of maritime power is fundamental in any scheme of national defence. Nevertheless, few persons are perhaps aware of the existence of a Royal Indian Navy which is an annual charge on the Indian Budget and which was converted, or rather reconverted, into a Navy from a Royal Indian Marine only four years ago.

India has had a long and proud record of maritime activities from ancient times. Over two thousand years ago, Emperor Chandra Gupta, for example, had an elaborate organisation of the Naval Department and the Admiralty. During medieval times, the Indian Naval Force was highly developed and well-organised under the Moguls and especially under Akbar, while the growth of the Maharatta power was accompanied by the formation of a formidable Naval Fleet which received a great impetus under Shivaji, in whose time Kanohji Angria became the Admiral of the Fleet, when the Maharatta naval power reached its high watermark.

The sea-fighting service existing in India at present dates back to the earliest days of the East India Company which established a Marine in 1612 for the protection of the Company's trading ships and its factory at Surat. Since then, with different titles and under varying conditions, there has always been a Sea Service under the British Government in India for three hundred and twenty-five years. From 1830 to 1863, it was, in fact, called the "Indian Navy" and from 1892, it enjoyed the description of the "Royal Indian Marine" upto 1934. From 1612 to 1863, i.e., for 250 years of its history, the Service was a combatant force but since 1863, it was a non-combatant Service until

1934. Its main functions have been the defence of Indian seas, coasts and harbours, but it is also liable for service elsewhere as part of the Naval Forces of the British Empire. It is interesting to recall in tracing the history of this Service that many of the ships belonging not only to the Indian Fleet but to the British Navy were built in the dockyard in Bombay. It is recorded that in 1802, the British Admiralty ordered men-of-war for the King's Navy to be constructed at Bombay. They intended to have sent out a European builder but the merits of Jamshedji being made known to their Lordships, they ordered him to continue as the master-builder. Capt. Sir Edward Headlam, the late Director of the R. I. M., stated in an article in the *London Times* in 1931 :

"The success of the shipbuilding was due to the discovery of the value of teak as a substitute for oak and to the skill of the Wadia family as constructors who, for over a century, were in charge of the building of naval and other vessels in the Government Dockyard."

The India-built ships were superior to those built elsewhere not only in point of durability but also of cheapness and Bombay became "the grand naval arsenal" while Calcutta was the centre of merchant shipbuilding. In all, 115 War vessels and 144 Merchant of Government vessels were built in the Government Dockyard at Bombay, one of which, the "Ganges," afterwards served as the flagship of Sir Edward Codrington at the battle of Navarino. A French traveller, Baltazar Solvyns, writing in 1811, paid a warm tribute to Indian shipbuilding:

"In ancient times, the Indians excelled in the art of constructing vessels, and the present Hindus can in this respect still offer models to Europe—so much so that the English, attentive to everything which relates to naval architecture, have borrowed from the Hindus many improvements which they have adopted with success to their own shipping.....The Indian vessels unite elegance and utility, and are models of patience and fine workmanship."

The question of reorganising the Royal Indian Marine as a combatant force was under the consideration of the British Admiralty ever since the last War. In 1919, the British Government appointed two Committees, one under Lord Esher for the reorganisation of the Army and the other under Lord Jellicoe for the reorganisation of the Navy. The Jellicoe Committee held that the Imperial Navy should be:

established only as a unit of the British Navy to whose cost India would make a contribution. But while Lord Esher's Report was placed before the Legislative Assembly which passed a series of Resolutions about it, the Jellicoe Report was never placed before the Assembly. In accordance with the Report of the Rawlinson Committee, however, the Viceroy announced in February, 1926, that the Government had decided with the concurrence of the Secretary of State and the Admiralty that a Royal Indian Navy should be established. Accordingly, in 1927, a Bill was passed in Parliament amending Section 66 of the old Government of India Act, which made provision for the bringing into existence of the Royal Indian Navy. This amending Act provided, among other things, that the Indian Legislature would have power to apply, with necessary modifications, the British Naval Discipline Act to the proposed Indian Navy. Consequential legislation was, therefore, necessary in the Indian Legislature to apply the Naval Discipline Act to the Indian Navy and a Bill was introduced in the Legislative Assembly in February, 1928. It was, however, opposed by the non-official members and was rejected by one vote. But the same Bill was re-introduced in the Assembly in 1934, when it was passed as the Congress had not re-entered the Legislature.

In his last Budget speech, the Finance Member of the Government of India made an important announcement regarding the agreement concluded by the Government of India with the British Government on the subject of Naval Expenditure and Naval Defence of India. Under long-standing arrangements, India pays a direct contribution of £100,000 a year to His Majesty's Government in the United Kingdom towards the Naval Defence of India and the protection of trade in alien waters and also defrays various miscellaneous charges amounting to Rs. 2 or 3 lakhs a year on behalf of the vessels of the Royal Navy. In view of the conversion of the Indian Navy into a combatant service and the measures proposed to be taken by the Government of India to build up their local Naval Defence, the question of development of the Indian Navy had been under the consideration of the Government of India in conjunction with the Admiralty. The agreement which Sir James Grigg announced and which was subsequently confirmed in a *communiqué* issued by the India Office in London stated that the British Government would forego the annual payment hitherto made on condition that the Government of India maintain a sea-going fleet of not less than six modern escort

vessels which will be free to co-operate with the Royal Navy for the Defence of India and in addition fulfil their responsibility for local Naval Defence of Indian ports. The announcement evoked widespread interest as well as considerable criticism because it was presented as a *fait accompli* to the Legislature and the public and did not disclose what these escort vessels would cost in capital and running expenditure and whether such vessels would be the maximum required for the Defence of India. In other words, the agreement did not make clear the full implications of the arrangement, including the present and future liabilities of the Indian Exchequer in this respect. The public are not aware of the reasons for the termination of the arrangements prevailing until April last nor of the terms and conditions on which the arrangements have been revised. Unless naval expenditure is votable by the Indian Legislature, no revision of the long-standing arrangements with His Majesty's Government involving increased charges on the Indian revenues would be acceptable to the public in this country.

But the emergence of new forces in the oceans which are the principal trade routes of the British Commonwealth has altered the entire balance of sea-power. Imperial naval policy now demands the creation of an ancillary combatant force as an adjunct to the British Navy in Indian waters. When the Bill on this subject came up before Parliament in 1927, Mr. Lansbury suggested that the British Government desired to create an Indian Navy for the purpose of the defence of the Pacific while another Labour member, Mr. Barker, stated that the Government should honestly tell the House that "they are creating this Navy to supplement the Base at Singapore." He added :

"It is an insult to the Indian people to say that we are creating this Navy for the purpose of giving prestige to India. It is sheer humbug and the Government know it very well."

The Indian Navy, as constituted at present, consists of 5 sloops, 1 survey ship, 1 depot ship, 1 patrol vessel as well as a target towing trawler and a number of small vessels, tugs, etc., employed in harbour service. The functions of the Navy in peace time are to train personnel for service at sea in War, to organise the Naval Defence of Indian coasts and harbours for the protection of trade in Indian waters in time of War, to carry on marine survey work in Indian waters and to carry on sea transport work for the Government of India in respect of conveyance of troops, stores, etc. The Indian Navy maintains a Dockyard at Bombay to deal with all work in

connection with the repair, maintenance and refit of vessels. The nett annual expenditure on the Indian Navy amounts to about Rs. 60 lakhs which is increased to about Rs. 73 lakhs in the Budget estimate of 1938-39.

What are the principal tests to be applied to any scheme of an Indian Navy? They are, broadly speaking, three: who will bear the cost of the Navy; who will officer it; and who will control it? To take the question of cost first. It is well-known that the Defence Budget of the Central Government has always been the subject of public criticism on the ground that it is a heavy burden for a poor country like India. On the other hand, there has been a feeling of late, especially in view of the present international situation, that the Defence of India on Land, Sea and Air should be adequate to protect the country in case of an outbreak of war. It has been suggested that the Defence expenditure might be redistributed so as to concentrate more on the development of Sea and Air Defences. Pandit Kunzru suggested in the Council of State last March that

"the Indian Navy should be equipped with cheaper types of vessels like the surface torpedo craft and the submarine, on which increasing reliance is being placed even by first class powers. For, the need of strengthening the Naval Defences of India has been recognised by the Government."

The question of Defence expenditure is, however, closely inter-linked with the question of control and manning of the forces as also with the question of direction of the foreign policy of the country. Once the question of control is solved satisfactorily and the national feelings of the youth of the country elicited for national service, the question of cost, although undoubtedly important, would not be an insuperable difficulty in building up an efficient Indian Navy. The question of control is, therefore, fundamental. This was one of the grounds on which the Indian Navy (Discipline) Bill was opposed by Labour members in the House of Commons in 1927 and was rejected by the Legislative Assembly in 1928. For, it was felt that the supreme control of an Indian Navy should be vested in the Indian Legislature. The Commander-in-Chief stated last year in the Council of State that

"if we do start a regular organisation for local naval defence, it should be placed as far as possible in the hands of Indians themselves."

The Resolutions passed at the Imperial Conferences of 1923 and 1926 explicitly stated that "the naval forces of each Dominion will be used for local purposes" and it

should, therefore, be made clear that the Indian naval forces should not be used for any purpose other than that of the defence of India and if so used, it should be done with the consent of the Indian Legislature. In fact, the recent agreement mentions that these escort vessels will be "free to co-operate with the Royal Navy" and from our experience of the use of Indian troops outside India, we know the significance and implication of this phrase. The Indian Navy is, of course, not on the same basis as the Navies of the Dominions which are under their control, apart from the fact that the Dominions have a maritime status and powers to legislate in regard to shipping which are denied to India.

Not less important is the question of the manning of the Navy. There are 127 officers in the Indian Navy, of whom 13 are Indians. Every year 9 officers are recruited to the Navy, of whom 3 are Indians. Indians not only excelled in seamanship and navigation in the past but have also proved their worth in the Indian Navy and in the mercantile marine at present. Sir Humphrey Walwyn, the late Director of the Royal Indian Marine, stated that "if there is anyone who says Indians cannot make very good seamen, give him my name and address". Lieut.-Col. Lumby declared in the Legislative Assembly when the Navy Bill was being considered that the cadets from the "Dufferin" were excellent and did very well as officers of the Indian Navy. The present Commander-in-Chief has also acknowledged that there will be no difficulty in finding suitable men. It is, therefore, essential that the Indian personnel in the Indian Navy should be speedily increased.

It must, however, be pointed out that the main ground of recruitment for naval officers in other countries is the mercantile marine. For example, the Commander-in-Chief observed in the Council of State last year that

"in setting up an organisation of the kind I refer to (*i.e.*, a Naval Force), most other countries depend largely on their Mercantile Marine and on Volunteer Naval Reserves"

and that

"in India at present we have no Naval Reserves and our Mercantile Marine is still, so to speak, in its infancy."

The Indian Mercantile Marine Committee stated that it was almost the unanimous desire of all Indian witnesses who appeared before it that

"the creation of an Indian Navy capable of defending the coasts, harbours and commerce of India should proceed hand in hand with the development of an Indian Mercantile Marine."

In March last, Mr. Ogilvie, Army Secretary, replying to an interpellation in the Central Assembly stated that

"the Government of India are very well aware that the existence of an Indian Mercantile Marine would be a great assistance to the Defence Department"

and that

"the Defence Department would very much like to see a flourishing Indian Mercantile Marine."

The merchant fleet is an element in the sea power of a nation and is essential to the security of a maritime country. Admiral Mahan who wrote on the influence of sea-power upon history held that the fundamental need of a maritime country was a merchant navy. It is difficult, indeed, to have a fighting navy without a merchant navy; Mahan, for example, considers that the French Navy in the time of Louis XIV withered away because it had no roots in a healthy merchant marine. What Lord Craigmylre recently described as "the Navy of supply" is as vital as the Navy of defence. The last war showed the preponderant influence of a merchant fleet and of sea power. Sir Arthur Salter, in his *Allied Shipping Control*, shows how during the last war shipping became the very centre of the Allied problem and shipping control the centre of its organisation. He observes:

"Certainly the supplies of the Allied Forces could not have been maintained without the Naval protection of Merchant Ships, particularly without the amazingly successful systems of convoy. It is equally certain that no system of Naval protection would have been sufficient without the continuous and unfailing skill and courage of the officers and men of the Mercantile Marine."

A merchant marine is not only a training ground and feeder of a Navy but a reserve and second line of defence. Even a well-organised Navy with its battleships and cruisers, its destroyers and submarines would be seriously handicapped if it were not adequately supported by the mercantile fleet providing transport for troops, munitions and hospital ships, auxiliary cruisers mine-sweepers, submarine chasers and

other vital necessities of naval warfare. It would serve to protect the flow of commerce, both coastal and overseas, from interruption as well as to prevent a blockade of ports. Nor has the development of air power rendered useless sea power as a means of defence. In several respects, aircraft has tended to modify the conduct of operations at sea but it has not supplanted naval power. As Mr. Shakespeare, the Secretary to the British Admiralty, declared recently, "air power by itself is unlikely to win wars: the main burden falls on the Navy." Even apart from the length of India's coastline as a criterion of the need of naval strength, the flow of India's commerce depends upon the freedom of entry and departure at a few great routes of sea-borne commerce. It is owing to a recognition of this vital importance of the strength and efficiency of a mercantile marine as the complementary agent to a Navy and as a means of national defence that the development of shipping has become an instrument of national policy in every important maritime country of the world since the war. The British budget, for instance, annually provides for special appropriations for naval reserves such as retainers which assist manning of the merchant fleet. The British Admiralty has also paid from time to time subventions to certain lines with a view to utilize their vessels as auxiliary naval cruisers or transports in times of war. If India is to be a strong maritime unit of the Commonwealth contributing its share for the maintenance of sea communications and holding its place in the maritime trade of the world, it is essential that India should build up a system of coastal defence maintained by a Naval Force of its own. But it is not possible to build up a genuine national Navy without the development of national mercantile marine. And for the development of India's national shipping, it is essential for the public to appreciate our dependence on the sea and for the Government to have a positive mercantile marine policy.

PORTUGAL'S NEW CONSTITUTION

By A. C. FERNANDEZ.

Professor of Politics and Economics

THE remarkable financial achievements of Portugal under the New State have created world-wide interests in the political and diplomatic life of the nation which for a long time, prior to 1926, was known on both sides of the Atlantic as the 'sick man of Europe.' This interest of the world in Portugal's New State is manifested not only in the frequent articles on Portugal in the European and American Press, but also by a number of books on the corporative state which have appeared in English, in French and even in German.

The strategic importance of Portugal under the new conditions created by developments in the air defences has intensified this interest. The Belgian King will shortly pay an official visit to Portugal's embassy and important problems dealing with the foreign policy and defence and colonies are expected to be discussed in the Belgian metropolis.

Recently Portuguese waters were honoured by visits of naval divisions from England and Germany which remained in Lisbon for a considerable time. Just at present there is an important British military mission in Lisbon in deep consultation with Portuguese High Command. It is expected that at this meeting between naval and military experts of England and of Portugal a large number of moot points relating to the defence programme in the case of a European war will be threshed out in detail. Even America is showing its interest for the purpose of using the Portuguese colony of Azores and Lisbon itself as important stages in her services across the Atlantic between Europe and America.

The Catholic world has also evinced special interest in Portugal's recent political, financial and economic renaissance, since all these have been based on such principles as have the sanction and support of Catholic ethics and religion. The contribution of Portuguese clergy to the country's moral and economic regeneration has not at all been inconsiderable. In fact it has been doubted in many well-informed quarters whether Dr. Salazar could ever have been able to achieve his remarkable national reconstruction if he had not the continuous and

loyal support of the whole Catholic clergy of Portugal.

The new Constitution of Portugal which has recently been amended is, in many respects, a unique document of peculiar political and constitutional interests. It is based on the corporative principle and shows many special features which deserve study and consideration.

The Constitution is neither parliamentary nor presidential, neither unitary nor federal, neither completely democratic nor essentially despotic. It has for its basis the principle that Government are ultimately responsible to the people from whom they derive their power and their sovereignty. At the same time, the principles of parliamentary government and liberal technique have been profoundly modified in their application to the reorganization of the leading organs of the State. The Constitution is a semi-rigid document, fully written, but, its amendment does not require any special constitutional machinery or any kind of excessive formalities. Even recently it was amended with the same ease with which the Portuguese Parliament passes any ordinary legislative enactment.

In the opening part of the Constitution are mentioned the rights of the Portuguese citizens. These rights follow the lines of enunciation of the civic rights as you find them in the constitutions of liberal democracies like France, Switzerland and Belgium. The right of life, to reputation, to liberty, to the free expression of thought, to contract, to property, to public meeting, to associations and worship are points which the Portuguese constitution has in common with every written constitution of democratic countries. What is peculiar in the new corporative constitution of Portugal is the importance which section 4 gives to the family. The Constitution says:

"The state shall ensure the constitution and protection of the family as the source of the maintenance and development of the race, the parliamentary basis of education, discipline and social harmony, and by its association and representation in the parish and the town, the foundation of all political and administrative order."

The rights of the family which have been given a definite and distinct political, juridical,

and even economic status in the new Constitution consist of the rights for marriage and legitimate offspring, equality of the rights and duties of husband and wife between themselves and towards the legitimate children and such protection in the civil and criminal law of the country as is essential for the healthy growth of family life throughout the nation based on the principle of service to the country and nursed by the ideals of Catholic religion.

The Constitution undertakes:

(1) To encourage the establishment of separate homes under healthy conditions, and the institution of the family household;

(2) To protect maternity;

(3) To adjust taxation in accordance with legitimate family obligations and to promote the adoption of the family wage;

(4) To assist parents in the discharge of their duties of instructing and educating their children, and to co-operate with them by means of public institutions for education and correction, or by encouraging private establishments destined for the same purpose;

(5) To take all precautions likely to avert the corruption of morals.

In one of his memorable speeches Dr. Salazar explaining the basis of the new Constitution and its moral and social background, its hinterland, vigorously attacked the myth of the citizen as an obstruction on which political liberalism of the 19th century had been based with such disastrous consequences to the moral and political heritage of the world. 'The citizen,' he said, 'wrested away from his family, from his class, profession and from his life, is an enormous fiction, an unfortunate myth.' On the contrary, the living reality, the eternal verity is the *family* which is not only the cell of the social organization, but also the original nucleus of the parish, of the district and therefore, of the nation itself. 'It is for this reason,' said Salazar, 'that the Constitution must guarantee the effective formation, the full preservation and complete right of all the members of the family as a distinct unit on which the very nation is based.'

The next important unit to which the new Portuguese constitution devotes considerable attention is the corporative organization of the group as a distinct, independent, complete and co-ordinate organ of federal society which is a great human reality as opposed to the abstract general will on which the whole of political Rousseauism has been based. The new Portuguese State revolves round the recognition of the group organizations. The meaning of

the corporative system given by the Catholic Union of Freiburg in 1884, when the corporative system was defined as,

"a regime of social organization having for its basis groups of men and women held together by the natural and common interest, by their social functions and, therefore, having as a natural corollary the right for public representation in the different political and other organs of the State."

Article 16 of the Constitution states that it shall be the duty of the State to authorise corporative organizations for intellectual, social and economic purposes and to promote and assist their formation. Such organizations may have for their object scientific, literary, artistic or physical activities, relief work, charity, technical improvement, trade union spirit or other common interests in which groups of citizens are involved in their legitimate and proper social functions.

Several decrees passed either by the Portuguese executive or the legislature have implemented this article of the Constitution by elaborate rules and regulations governing labour organizations, national syndicates, people's houses, importers' and exporters' organizations, fishermen's houses, social insurance and other forms of group-life to which at one time Follett had given significant importance in her philosophical and political criticisms of liberal democracies.

Dr. Salazar in commenting upon this principle of corporative organization of the New State makes it clear that Portugal was exceedingly backward in her group-life and in her trade unions. This was so, because the economic conditions of the country were almost primitive whereas, therefore, in Germany and Italy corporative organization aims at the suppression of trade union feeling and at the removal of unfriendly and hostile relations between capital and labour, the Portuguese constitution seeks to build up what was not at all existing and to base social and economic functions of the State on the creation of a strong, healthy, autonomous groups working harmoniously together for the purpose of common weal. "The thought" stated Salazar, "which should dominate the corporative organization is to co-ordinate the corporations, unions and federations of an economic character both of labour and of capital existing either spontaneously or created by the State so as to remove them from the slippery path of internal competition and struggle and to harness them to the higher and nobler interests and services of the State."

At the same time it is necessary that the

State should protect the moral and material rights of the working classes and should recognise that labour is a great factor in the creation of wealth and therefore, has a right to be associated with all wealth-creating activities. It is on the realization of this principle that progress and social peace will depend. But the State reserves to itself the right to regulate in the way it best thinks fit not only the inter-relations among the different groups but also the relations between capital and labour and these two to society. But it does not interfere with normal economic activities of the citizens unless they are of a dangerous or excessively acquisitive character. 'As long as' says Article 35 of the Constitution, 'property, capital and labour fulfil a social duty in a system of economic co-operation and in accordance with the natural interests, the State will leave them alone.' But any exploitation of one by the other will call forth the State's active interference so as to redress a grievance or injustice. Collective labour contracts with a minimum wage have also a place in the Constitution. The system of compensatory economy is the case of the economic policy of the State.

Section 10 of the Constitution determines the relations between the Church and State. After guaranteeing the Catholic religion the right for public and private practice and for its own organization, discipline and association, the Constitution states that the State shall maintain the regime of separation in relations to the Catholic Church and any religion or cult, and practice within Portuguese territory. It also adds that Portugal shall maintain regular diplomatic relations with the Holy See, and grants to the Church the right to acquire, hold, sell or dispose of any type of private property. The old Constitution had withheld these rights from any religious associations. They have now been fully restored.

The second part of the Constitution deals with the political structure and organs of the State. The form of the executive is semi-presidential with a president elected by direct suffrage for a period of seven years. He is directly and exclusively responsible to the nation for actions and policies pursued in the discharge of his duties. The National Assembly has no control over the presidential powers and cannot compel him to resign his mandate by any kind of tactics, legislative or financial, much less by vote of no-confidence. The President selects ministers, dismisses them, opens, adjourns, prorogues and dissolves the National Assembly, orders general elections and

by-elections. In this respect the powers of the President under the New State come very close to the powers of the American President. His privilege to represent the nation, to direct the foreign policy of the country, to conclude international treaties and allowances, commercial treaties, the privilege to grant pardon and commute punishment and to promulgate decree-laws and decrees resemble him to the Viceroy of India, except for the fact that all his acts must be counter-signed by the President of the Council and by the Minister to whose department the particular act has a reference. Since the President himself selects the Prime-Minister as well as the other ministers his executive and even legislative powers are not only extensive, but even effective, provided he is a strong man, capable of guiding, inspiring and supervising the whole Portuguese executive. At present General Carmona, the President of the Portuguese Republic has allowed his ministers complete executive autonomy and has shown no inclination whatever to interfere in any way with the policy, programme and administrative methods of Dr. Salazar.

With a view to enable the President to discharge his responsible duties adequately, he is surrounded by a Council of State which is different from the Cabinet. This Council is made up of the Prime Minister, the President of the National Assembly, President of the Corporative Chamber, President of the Supreme Court of Justice and of the Attorney-General together with five eminent men of outstanding ability appointed for life by the President himself. According to the spirit of the Constitution the head of the Portuguese State has to exercise his more important political, legislative and executive powers in consultation with his Council of State, which must compulsorily be convened before he interferes, in any way, with the National Assembly or shapes his Foreign policy. The legislative organ of the State consists of the National Assembly which is the Upper Chamber together with an expert body called the Corporative Chamber which has important advisory functions of an expert and technical character. The National Assembly consists of 90 deputies elected by the heads of families. It has wide legislative powers like the making and suspension of laws, the passing of the budget, the grant of credit, sanction of laws, approval of treaties and international conventions and other functions like those dealing with currency, exchange, banking, defence, education and other national subjects. It has been the practice under the

new Constitution for Government to introduce most of the legislation after the model of parliamentary democracy and of cabinet government as is found working in France and in England. The legislature has, so far, introduced very few of its own bills but has passed a very large number of those that have been submitted for its approval by the executive. The members of the Assembly all belong to the National Union and in the last elections no candidate from any opposition party, open or secret, was admitted by the polling officers. The Government organised a single list of deputies which was voted upon not only in Portugal but throughout the Portuguese Empire. This is a very novel electoral method. It consists in confining the candidates to the members of a single party and in considering the whole country together with all the colonies as one single electoral college voting for the totality of the members of the legislature. As there was no chance whatsoever for non-members of the National Union to put up their candidates, elections of the Government candidates had a smooth and easy passage and secured a very large, almost universal support.

The National Assembly is assisted in its legislative tasks by the Corporative Chambers composed of representatives of local autonomous bodies and of all social, economic and cultural interests. Members of the Corporative Chambers are themselves elected by different groups, institutions, associations, universities and labour unions. The main function of this Chamber is to report on all motions, bills and other subjects including treaties placed before the National Assembly either by its individual members or by Government. The Chamber is divided into about 16 important Committees, each section specialising itself in one kind of work. The National Assembly does not embark on any of its more important work before it has in its possession the views and reports of the Corporative Chamber on subjects on the anvil of the Assembly.

The President of the Republic in spite of his extensive powers is after all the titular head of the State. His legal powers are generally latent, a kind of a fiction, but they may spring into activity in times of crisis. Ordinarily the executive is under the control of the Cabinet consisting of about 10 ministers responsible to the President and cultivating a system of collective responsibility. The executive not only discharges its ordinary administrative and fiscal right to draw up decree-laws on questions of urgent public interest. It has also large powers for making

rules and regulations which really mean legislation. But any law which affects revenue or expenditure must have the counter-signature of the Minister for Finance. All laws made by the executive have to be submitted to the National Assembly for its ratification. The executive also appoints the judiciary and controls the whole of the defence and diplomatic services of the Empire. Though the Cabinet has very large powers it derives the breath of its life from the President and therefore, it is subject to the dismissal by the President. At the same time every minister is personally responsible for his actions both to the President and the legislature.

It is difficult to compare the Portuguese legislature and executive with those of the presidential or parliamentary forms of Governments. The Constitution seeks to make an ingenious compromise between these two forms of Government by subordinating the legislature to the position of an inferior political and legislative status. The President is given ample powers which at present are exercised on his behalf by the Prime Minister Dr. O. Salazar. The National Union itself is a large one-party organization which is supporting him in all his activities. Such a constitution will work well as long as the element of personal leadership is accepted by the nation and its legislature, but the system does not promise any smooth working the moment a multiple party system springs into existence. The whole Constitution at present revolves round and is dominated by one single, strong, powerful personality. The centrifugal tendencies are decisive and Dr. Salazar has behind him the support of the army. The Portuguese Parliament has, under the new Constitution, played a very insignificant part in shaping National policies.

The judicial organization of the State is a somewhat complex and incoherent one. There are in the first place, ordinary courts of law, the Supreme Court of Justice forming the apex of the pyramid. It interprets, applies and enforces all ordinary laws regulating the relations between citizens and citizens. All disputes between the public servant and public citizens are decided by a special set of laws and courts, called Administrative Courts. These courts enjoy very wide and ample jurisdiction over all institutions, organizations and all activities of the public servants in their relations with the citizens. Neither the ordinary nor the Administrative Courts have any constitutional jurisdiction over laws made by the National Assembly or by the Cabinet. The legality of this can be questioned

only by the Parliament. But all the administrative actions and decisions including those of the Cabinet ministers are subjects which may form the basis of law-suits in the Administrative Courts by private citizens or by corporations. Thus the executive is deprived of arbitrary powers and of the discharge of arbitrary functions. The personal equation, the individual prejudice and political passion are in this way considerably reduced by granting to the Administrative Courts considerable jurisdiction over the legality of the decisions of the executive.

Portugal is the fourth largest colonial power of the world. Three hefty slices of Africa, a colonial population of over 10 millions encompassing an area of about a million square miles form the Portuguese Colonial Empire. She has important colonies in East and West Africa in addition to the smaller ones in India, the Atlantic Ocean, and in China. These colonies have been attached to Portugal for several hundreds of years and have formed part of the Portuguese Empire more or less as equal members, since Portugal, a little over a hundred years ago, liberalised her constitution and introduced parliamentary institutions. The establishment of the Portuguese Republic in 1910 saw the development of semi-parliamentary institutions in the colonies with considerable administrative and financial decentralization. Unfortunately the New Corporative State of Portugal has reversed in a great measure, the traditions of liberal government which had been pursued by Portugal in the last hundred years. There is now a very close financial and administrative control. Previous to the establishment of the Portuguese dictatorship, Portuguese finances in the colonies were in a perilous condition. Financial disruption, administrative inefficiency, the system of spoils, political jobbery and corruption, recurring deficits, inefficient and dishonest financial administration were the features since the end of the last War and the rise of dictatorship. Salazar's administration selected Dr. Armindo Monteiro, the present Portuguese ambassador at St. James, as the first Colonial Minister who even visited the colonies to personally supervise the financial reforms which he decreed and

which were designed to meet the colonial deficits and to purge the administration of its most obvious defects. Unfortunately these measures of financial hygiene and sanitation were followed by colonial legislation of a racial type based on the principle of superiority-complex and of unequal treatment. The Colonial Act tore away the fine tradition of Portuguese liberalism and promised to Portuguese colonies a perpetual tutelage under guidance and control of Portugal. It also invented a number of citizenships, thus creating two broad distinctions between what had always been considered as citizens of the same empire—continental citizenship of Portugal and Colonial citizenship of the Empire. In addition to that the military law and organisation have given a subordinate place to the inhabitants of the colonies whether they are descendants from Portuguese families or are the indigenous inhabitants of the country. In Portugal itself the atmosphere in political and administrative circles has not been quite friendly to such peoples of the colonies who in virtue of their education, industry and activity are able to compete successfully with the Portuguese in their own home-land. The local administration in the colonies is excessively centralised and the Colonial Councils of Government have very few legislative functions. They are advisory bodies that have got restricted legislative powers subject in the first instance to the veto of the Governor and then to the veto of the Colonial Minister.

Such political situation which has for its basis and inferior status even to those colonies which like Portuguese India compare very favourably not only with other colonies of Portugal but with Portugal herself, has created naturally widespread discontent which has manifested itself in slender enthusiasm to the great achievement of the Portuguese dictatorship in the mother-country. Corporative principles of economic organization have not at all been in any way implemented in the Portuguese legislation dealing with the colonies. And thus it happens that though the colonies have achieved financial equilibrium, their economic progress has been insignificant and their colonial status has suffered a decline.

12th March, 1938.

WHY KARNATAK SHOULD BE SEPARATED

By V. B. KULKARNI

"The creation of Karnatak as a separate province cannot be resisted on merits."—M. K. GANDHI.

SINCE I last wrote in *The Modern Review*¹ emphasizing the necessity for creating Karnatak into a separate province, the march of events during the past few months has taken us nearer the goal of realization. Apart from the intrinsic value of unanimous popular demand, as manifested in the resolutions recently passed in the legislatures of Madras and Bombay, the recognition of the claims of Karnatak by the Governments of these Provinces has indubitably elevated our case for separation from the plane of mere desire and demand to one of practical politics. It is true that similar resolutions were adopted in the legislatures of the Southern Presidency on previous occasions, but under the diarchic system of Government, popular demand however decisive, had slender chances of becoming effective. Karnatak's claims for separation were pigeon-holed every time they were urged. The resolutions of March and April last and the *imprimatur* they have received at the hands of the Congress Governments of Madras and Bombay are, therefore, in our view a milestone in the history of our struggle for self-determination.

While the recent happenings have proven remarkably helpful to our demand becoming a *fait accompli*, they have at the same time not failed to cause needless disquiet in quarters opposed to separation. The debates and discussions that followed the resolutions on separation, betrayed a singular lack of understanding of the real import and implications of the demand. Karnatak has made out a strong and unassailable case for reversing the existing order of things and for remoulding her destiny in a manner best suited to her interests and well-being. She is satisfied and is prepared to convince honest doubters that she has with her in plenitude all the material necessary for rearing up a provincial edifice. In short, she advances her claim with a full sense of responsibility and does not seek the authorities to become guilty of any sort of political enormity by conceding her demand.

The sponsors of the unification movement

have drawn up their demand on the basis of certain data which in their view are unchallengeable. They have placed their cards on the table and invite criticism from those who are opposed to a reversal of the *status quo*. It is significant that this challenge remains yet unaccepted, although we have had no dearth of unreasoned criticism reinforced by sentiment, passion and prejudice. Nevertheless, we might assume, if only to make our case the stronger, that there cannot be more formidable objections to the creation of a new province than on the following issues:—

- (i) Is separation financially feasible?
- (ii) What are the disadvantages under the present arrangement and what benefits accrue from a reversal of it?
- (iii) Does not the creation of a new unit tend to retard the forces of nationalism?

For purposes of convenience, I shall take up the second objection first, namely, "what is our grouse under the present arrangement?" To a casual observer from outside, the spectacle of the Karnatak community remaining under the protective wings of powerful provinces like Madras and Bombay, not to speak of the tutelage of numerous States big as well as petty, is apt to look like a desirable consummation. But, like the toad under the harrow, we alone know where exactly the tooth-point goes. Nothing could be more intolerable and suicidal for a homogenous and culturally and historically conscious people, who in their own time played a significant part in building up the civilization of their country, to be wantonly cut into mincemeat and thrown away only to be grabbed by no less than twenty-two different administrative units.

Without burdening the reader with needless historical detail, I might at once state that Karnatak's history dates back to the 2nd century B.C. and its people held their hegemony in the Deccan with more or less continuity until the dissolution of the mighty Vijayanagar Empire in the Battle of Talikot. The dismemberment of Vijayanagar conduced to the setting up of numerous petty principalities all over Karnatak, which, despite its great mutilations, was able to conserve its cultural and linguistic individu-

¹ See my article, IS KARNATAK UNIFICATION FEASIBLE?, in *The Modern Review* of November, 1937.

ality as best as it could till the advent of the East India Company on the scene. With consummate skill the Company Sarkar introduced an era of "divide and rule" and finally succeeded in establishing its unrivalled sway in the Deccan by dislodging Tippu from the throne of Mysore. With the fall of this valiant soldier in the Battle of Serirangapatam, all hopes of reviving Karnatak's glory were shattered. Then followed the heart-rending spectacle of Karnatak being torn limb by limb and annexed by a multiplicity of States as the spoils of war. Thus we see today Karnatak obliged to bow its head to its masters who are more than 20 in number!² We are, however, told to take comfort in the knowledge that our dismemberment was undertaken with a view to reconstruct a brighter and better political map of India!

I shall now illustrate what this dissection means to the people of Karnatak. Thrown into the midst of a plethora of States and Provinces, each in differing stages of evolution, from medieval despotism to farcical provincial autonomy, the Kannada population is nowhere in a majority, the exceptions being Mysore and Coorg.³ The genius of Karnatak has been dealt a severe blow by the dispersal of its population, which, in the absence of a common unifying force, has lost its community of interest and the consciousness of its cultural and historical greatness. Instead of enriching and ennobling her own heritage and transmitting it to posterity, Karnatak has entered into a long spell of stupor, content to play the role of a camp follower and make votive offerings to the greatness of others. Her numerical inferiority and inertia have hushed her voice and nearly strangled her distinctive existence under every administration.

Apart from our cultural conquest, even our own language was until recent years, under a ban.⁴ Most of us had our schooling in languages other than our own mother tongue, Kannada. Till about 1923 Bellary, which, even according to that unsatisfactory and unacceptable Kelkar Award, belongs to Karnatak, had no High

Schools where Kannada was taught. The position of Belgaum, the northern border district of Karnatak, was much worse. So overwhelming is the influence of Marathi over the Kannada population here, that even today the trading class of this community maintains its accounts in Modi, a kind of Marathi script, which has much likeness to Kannada, as the Chinese script has to English. Even today non-Karnatak institutions in Karnatak refuse platform to Kannada in their activities. The wholesale "conversion" of hundreds of Karnatak families into Marathi-speaking families is carried on with a vigour which should make the missionary blush. It has been estimated that in one census alone about 2 lakhs of Kannada population was absorbed by others.

Here are some interesting facts, unearthed from old archives. Schools were opened in the Bombay Carnatak early in 1856 and Marathi was taught in them. Not until 1865 could the Bombay Department of Public Instruction come to know that the language of Karnatak was not Marathi but Kannada! Describing the situation Mr. Russel, an Educational Officer in the Southern Division, wrote in 1865 thus:

"The Deputy Inspectors and English Masters in this Division are none of them Kanarese and there are very few Kanarese men even among the vernacular schoolmasters in the Districts. *The Kanarese language has never been taught or cultivated in this Division as the Gujarathi or Marathi in theirs.* Therefore, the indifference of the Kanarese people in general to schools in which the books and teachers are mostly Marathi can hardly be wondered at."

Nobody took notice of this anomaly till the coming of Mr. Russel. Referring to this Mr. V. R. Katti then wrote thus:

"Before Mr. Russel's appointment, the Division possessed no Kanarese books of its own excepting the first three reading books of questionable utility.....A translation exhibitioner-ship was transferred from Poona to this Division at the time of Major Waddington, and it was held at the time of Mr. Russel's arrival by a Maratha man who was to prepare Kanarese books for Government Schools."

Further on we come across the most interesting statement that a non-Kannada knowing man was deputed to write Kannada books for use in Government Schools!

This is an old story, but even today the position is not much better. Except for a second grade College at Mangalore, Madras Karnatak has no College of its own, while in Bombay Karnatak, with four big Districts, there are only two Colleges. Small wonder therefore, that many of our young men who can afford, emigrate to places outside Karnatak where they could obtain better education. Again, Andhra has her own University and even Travancore will soon

²Karnatak of today is divided as follows: Bombay Karnatak, Madras Karnatak, Cantonment Karnatak, Coorg, Hyderabad (Dn.) Karnatak, Karnatak Jagirs in Hyderabad (Dn.), Mysore, Kolhapur, Karnatak Jagirs in Kolhapur, Sangli, some portions of Aundh, Miraj (Senior), Miraj (Jr.), Kurundwad (Sr.), Kurundwad (Jr.), Jamkhandi, Mudhol, Ramdurg, Akalkot, Jath, Savanur and Sandur.

³The populations of Mysore and Coorg are 6,557,302 and 1,63,327, respectively, out of a total population of 11,206,380.

⁴Even today in many Southern Mahratta States which are an integral part of Karnatak the medium of instruction is Marathi.

have one. But who is to listen to the cry of Karnatak? Our representation in the Senates of the Bombay and Madras Universities is negligible. Despite all these obvious disadvantages, we are told that our "partnership" with the premier presidencies of Bombay and Madras is of incalculable benefit to us, which we are advised not to lose in a fit of emotional enthusiasm for separation.

Being condemned to a position of permanent minority, Karnatak has scarcely any share in the governance of the Presidencies of Madras and Bombay, although she makes substantial contributions to the Provincial revenues. Even under the new dispensation her representation in the legislatures of these Provinces is utterly inadequate. It is significant that there is not a single Karnatak Member in the Cabinets of either Madras or Bombay even under the Congress regime.⁵ With her dismembered territories tacked on to inland and far-flung regions, Karnatak is denied those advantages which proximity to seats of Governments usually brings.

There are no industries worth the name in Karnatak, although it abounds in raw materials.⁶ Even its mineral wealth remains yet unexploited, as local private enterprise is almost non-existent. There are many States in Karnatak but their resources are utilized by their non-Karnatak rulers for purposes in which it is little interested. We are poorly served with rail and road communications, thus seriously hampering our trade and commerce. From 1818 to date Bombay has spent nearly 55 crores on irrigation works, out of which a paltry sum of Rs. 8-10 lakhs has been spent in Karnatak.⁷ Famine conditions in the Districts of Bellary and Bijapur are almost chronic. Tinkering with the problem is all that has been done so far.

We are cautioned against the guilt of impeding the forces of nationalism by seeking "needless" divisions. This is a poser which will deceive none. Let us not forget that the creation of the N.-W. F., Sind and Orissa into separate provinces was not considered unnecessary nor as calculated to dry up the fountain of nationalism. We refuse to be singled out for these sanctimonious homilies. Karnatak has always remained a redoubtable champion of the

Congress cause and her eulogy is best recorded in the words of Mr. Vallabhbhai Patel. Says the Sardar:

"The brave peasants of Karnatak have vied with you in their sacrifices, in the loss of their lands and property and in their privations and suffering. The tales of their bravery and their sacrifices have filled me with admiration and pride, and the news of their sufferings sometimes untinged me."

This is the record of a Karnatak chained to a multiplicity of masters. None can doubt that she will play a nobler part when she becomes the mistress of her own house. This is a consummation which both Madras and Bombay should endorse in their own interests, for, a weak divided Karnatak as their partner adds to their heterogeneity and complicates their problems. By ridding themselves of their unwieldiness they can fight their battles more effectively than at present. Let us not miss the significance of recent events in Orissa and the C.P.

"Is the separation of Karnatak feasible financially?" Before I answer in the affirmative I quote here what Mr. Gladstone said about needed reforms, although I shall certainly not take shelter behind his observation. Says Mr. Gladstone:

"Gentlemen, you need not give yourselves any trouble about the revenue. The question of revenue must never stand in the way of needed reforms; besides, with a sober population not wasting their earnings, I shall know where to obtain the revenue."

Our claim for separation is the outcome of unanimous popular demand, and if it is found that until the resources of Karnatak are fully tapped, additional taxation has to be borne, this will be done most cheerfully. But even as matters stand, Karnatak's financial position is sound.

The total revenue of a separately constituted Karnatak from its eight districts and five talukas⁸ will be 260 lakhs, and after deducting Rs. 210 lakhs for running a provincial Government we have a clear balance of Rs. 50 lakhs,—a position which compares more favourably than in the Provinces of Assam, N.-W. F., Orissa and Sind. It is worthy of remark that the last-named Provinces cannot balance their Budgets without heavy subventions. Again, but for its share of Rs. 40 lakhs from Income-tax, even Bombay cannot balance its Budget.

The indebtedness of the Bombay Government is advanced as an argument against our separation. We refuse to submit to the sins

⁵ The Hon'ble Mr. A. B. Lathe, the Bombay Finance Minister, is claimed by the Maharastrians as belonging to them although he hails from Belgaum. What exactly is his attitude to this claim is not clear.

⁶ See Prof. B. H. Yelburgi's article "Karnatak Occupations" in *Karnatak Darshan*.

⁷ Vide *Karnatak Darshan*.

⁸ See sketch map showing the area comprising the new Province of Karnatak.

of others being visited upon our heads. The mad scheme of Backbay Reclamation and such others are not of our making. Bombay Karnatak's population is 12% of the Presidency's total population, and it is worth scrutinizing what proportion of the Presidency's revenue has been spent on Karnatak tax-payers. Any future financial adjustment should be on the basis of this scrutiny.

We have no minority problem, as the minority communities are equally enthusiastic

over separation. With such a strong case to support her claim Karnatak is determined to march to her chosen goal. At the 7th Unification Conference held in May 1938 under the presidency of Mr. K. R. Karant, a Parliamentary Secretary of the Madras Government, it was resolved to resort to direct action if such a course was deemed necessary. Karnatak will not stop with mere prayer and petition.

The claim of Andhra is equally just and must be considered along with that of Karnatak.

NEPOTISM

By M. F. SOONAWALA

THE public of C. P. has of late been scandalised by the prevalence on a large scale of Nepotism on the part of some members of the Ministry, a charge now admitted by them before Sardar Vallabhbhai Patel. Their action has already been questioned and criticised by the Press in unequivocal terms.

The very word "Nepotism" seems to be in bad odour with all and sundry. But it loses much of its obnoxiousness if it is viewed from a different perspective.

Nepotism when practised with due circumspection and discretion justifying the peculiar circumstances of the cases involved, would rather produce beneficial effects. It is no sin for a person in high position, if convinced of the ability and integrity of some relative of his, to have him appointed to a responsible post. The service concerned also thereby gets the benefit of the personal security of the high personage in case the appointee goes wayward, which is hardly the case if the personage has exercised sound judgment in his selection. Human nature being what it is dictates this policy in every walk of life. Private businesses and enterprises are not devoid of this age-old practice and certain families acquire hoary traditions of founders, promoters and custodians of vast interests with which their names are indissolubly bound up. The goodwill thus attached to firms commands values at times fabulous.

From time immemorial in all lands officials administering State affairs have been exercising their prerogative by conferring favours on their own kith and kin while making responsible appointments. It is true that under democratic

regime public vigilance is too sharp to prevent abuse of such a prerogative. Pitts and Chamberlains and MacDonalds and Butlers have illuminated the dry pages of history of even democratic countries.

Mussolini has his sons and sons-in-law placed in high command and Hitler is wise enough to connive at such weaknesses displayed by his immediate underlings. But Stalin had the rare courage of peremptorily ordering his son to leave for his home-town forthwith and pursue the calling of a cobbler as he was found incompetent to learn any art of diplomacy or industry. The Japanese Cabinet is dominated by either the Aristocracy or War Lords mostly connected by family ties.

The story goes, though I cannot vouch for its authenticity, that when once the eminent versatile genius, the late Sir Asutosh Mookerjee was taunted for having succumbed to the weakness, *viz.*, Nepotism, his critic was immediately cowed down by the snub administered to him, "Well, my friend, I plead guilty of the offence of putting the right man in the right place. Hang me!"

Far from merely trotting forth an apology for a practice whose obnoxious character could hardly be mitigated or condoned, this is an attempt to show that it does also present an obverse side, the savoury aspect of which it is desirable to uphold in the best interests of society in general.

The tendency to raise the slogan of "Down with Nepotism" indiscriminately is to be deprecated. Let us be frank and stop the parrot-cry.

INDIA'S SENSE OF HONOUR AND LORD BADEN-POWELL

BY V. M. KAIKINI, B.A., F.R.C.S. (Edin.)

"We put a premium on tyranny by submitting meekly to tyranny", says the poet Tagore. According to Webster, tyranny is synonymous with cruelty, or causing hurt to others, without proper justification. Cruelty may be practised as much in word as in deed. Lord Baden-Powell's remark against Indians made from the high pedestal of an exalted position protected by the privileges of a ruling race, is a type of tyranny practised in word. The gallant gentleman makes an attempt to hurt the feelings of a whole nation by making assertions for which there is no justification. He manifests an ignorance of the simple and elementary words in the Hindustani language when he authoritatively says before the world, that Hindustani does not possess a word equivalent to the English word honour. Of course it is difficult to say that these remarks form a part of imperialistic propaganda carried on, on similar lines, by Mr. Archer in his book *Is India Civilised?*, or by our friend, the notorious Miss Mayo in her book *Mother India*. According to the saying of our great poet-philosopher, the ideal procedure for Indians is to treat these tyrannies in word, with the contempt that they deserve, as thereby we desist from putting a premium on them. One wonders how these imperialistic propagandists do not still realise that false propaganda after all does not serve the cause for which it is meant. On the other hand the effect they produce is quite the opposite. Sir John Woodroff's book in reply to the writings of Mr. Archer put before the world the merits of India more elaborately than they would have been, had not Mr. Archer written his book in that manner. Miss Mayo need not be specially reminded that India has now advanced much nearer the goal of Swaraj, than she was when her book was written, notwithstanding her propaganda. One need not be accused of exaggeration if it is asserted that such anti-Indian propaganda has helped to stir up the dormant qualities of Indians and accelerated their pace toward their desired goal. "Always have a calumniator as your neighbour. Calumniator's mouth is like a soap-cake, it helps to cleanse one's mind," says a poet-saint of Maharashtra.

If one looks back over the pages of ancient history, one finds that when nations start a

campaign of blind hatred against other nations, they usually show a tendency towards decline. By looking at the drawbacks only of the other nations, instead of trying to assimilate their good points, these nations isolate themselves from the rest of the world. "The fate of India was sealed when the word 'Mlechcha' was invented," says Swami Vivekananda. The downfall of India began when she started looking down upon other nations and thus isolated herself practically from the rest of the world. The same thing happened to the Chinese, when they started calling the other nations foreign devils and their own country "The Celestial Empire". One wonders if history is repeating itself in the West in this respect. Only a few months back, American tourists visiting Federated Malay States flashed news through Reuter, to the four corners of the globe that they had seen Mickey Mouse being worshipped by the Tamil coolies in a temple at Singapore. Naturally the "Mickey Mouse" was nobody else than the ubiquitous village deity Hanuman, who is worshipped by Hindu villagers in the temple of God Rama. What the American tourists gained by publishing this ludicrous news one fails to imagine. Instead of trying to know that the Tamil coolies worshipped "Mickey Mouse", if they had made an attempt to learn from these heathens that cleaning one's teeth before having a bedside cup of morning tea, and having a regular daily bath are very hygienic, they would have derived some benefit from their visit to the Tamil cooly lines during their tour in the Federated Malay States.

However, Lord Baden-Powell may be reminded that the equivalent for the English word honour, exists in many words in Hindustani out of which "Izzat" is the most commonly known to and used by the man in the street. Edmund Candler, the well known war correspondent, says in his book *The Sepoy*, "The words Izzat and Jiwan, are constantly in the mouths of officer and sepoy. 'Izzat' is best rendered by honour or prestige". As it is difficult to estimate the comparative value of the words, honour and Izzat, it is better to quote examples which will give an idea as to what value is allotted to the word 'Izzat' by the Indians. Lord Baden-Powell being an army man and a Britisher, anecdotes

are quoted here from the Indian army narrated by the gallant soldier's own countrymen.

The historian James Grant, in Cassell's *History of India*, quoting Sir John Malcolm says:

"Neither the Hindoo nor the Mahomedan sepoy could be deemed of revengeful nature, though both were prone to deeds of extreme violence, especially in points where they deemed their honour—of which they have a very keen sense—lighted or insulted or their character stained. Of this spirit two or three examples may be given. In 1772, a sepoy of the 10th Native Bengal Infantry, supposing himself injured quitted the ranks and approaching Capt. Ewens commanding, with 'recovered arms,' as if to make some request, shot him dead, and then quietly awaited the death he merited. Captain Cook of the Madras Cavalry once struck a sentry for allowing a water bullock to enter his tent. The man waited calmly till relieved from his post and then seeking the Captain, shot him dead with his carbine. He made no attempt to escape. He had avenged his honour thus terribly for a blow given.

"A sepoy of the Bengal Native Infantry was accused by one of his comrades of having stolen a rupee and a pair of trousers. The Sergeant-Major before whom the charge was brought was both unable and unwilling to give it credence, as the sepoy had always been remarkably conspicuous for his bravery and upright conduct. But investigations had to be carried out. On examining the knapsack to the utter astonishment and regret of the whole regiment the stolen property was discovered. None however, looked more thunderstruck than the sepoy himself. The Colonel told him that though the circumstances were so fearfully against him he would not yet pronounce him guilty, as it was not impossible he might be the victim of some malignant design. In a few hours, the sepoy was found to leave his little hut and walk with hurried steps to a neighbouring field. Suspecting the purpose of his present visit to so retired a spot, a comrade followed him, but unfortunately too late to arrest the hand of the determined suicide. The poor fellow lay stretched on the ground, with his head hanging back and the blood gushing from open throat. He was taken to the hospital and carefully tended. He lingered on for fifteen days till he died of starvation. Two days before he died, it was discovered that a low class servant had placed the stolen goods in the sepoy's bundle and then urged its owner to accuse him of the theft. The disclosure of this circumstance appeared to give infinite satisfaction to the dying soldier."

Edmund Candler, in his interesting book *The Sepoy*, quotes the following incident which occurred during the last World War in the trenches in France.

"Rajput pride 'Izzat' is at the bottom of the saddest story of a sepoy, I have ever heard. The man was a hillman of Rajput descent. After two days of incessant fighting with minimum of rest at night he fell asleep at his post. On account of his splendid service and his exhaustion at the time which was after all the tax of gallantry, the death penalty was commuted, and the man was sentenced to thirty lashes. He would have much preferred death. However, he took his lashes well. He went about his work as usual and was in two or three more actions in which he acquitted himself well. After a complete year in France and five months in Egypt came the welcome news that they were returning home. On the afternoon, the day he disembarked at Bombay, the

Rajput shot himself. He had chosen to live when there was work to do. . . . And when he was a bare three days from his family and home he chose to die. Was English 'Honour' or Indian 'Izzat' at the bottom of this tragedy?"

Below are given a few incidents which are quoted not from any book on history but which actually took place in some of the military stations in India in recent times. They may give an idea as to what comparative value is allotted to the English word 'honour' and the Hindustani word 'Izzat' by the respective users of the two languages.

The first incident to be quoted happened in Kohat in the summer of 1919. Cholera had suddenly appeared in an epidemic form in Kohat and three I. M. S. officers and a military assistant surgeon had been hurriedly summoned from Peshawar for cholera duty. They were staying in the Kohat traveller's bungalow and it was the second day of their arrival there. A few yards to the north-western side of the bungalow was the post office, and the front courtyard was occupied by the staff of the brigade headquarters. Two of the I. M. S. officers and the Assistant surgeon were occupying the rear portion of the bungalow. It was a hot stuffy night typical of the Frontier summer, and the doctors were sleeping in the courtyard. Just after midnight they were roused from their sleep by loud screams mixed with moans, coming from somewhere near the bungalow. They hurried back to the verandah of the bungalow, to await developments. However the confusion soon ceased and the doctors went to bed, thinking that the disturbance was due to some Pathan thieves having entered the post office. Next day it was found that a Pathan raider had entered the Signal company's tent in the brigade headquarters camp, and snatched the rifles from two British signallers. The two Tommies getting frightened had run out of the tent and in doing so had trodden over the bodies of the servants of a Royal Engineers officer, as they were sleeping in the open. The Pathan next entered the tent of the Gurkha guard, and grabbed at the rifle of a sleeping Gurkha sepoy, who had kept it slung on his arm. The Gurkha felt the jerk and finding that a Pathan robber was trying to snatch away his rifle grappled with the Pathan in his half sleepy condition. Both of them stumbled out of the tent and before the Gurkha could take out his Kukri to hit the Pathan the Pathan stabbed him with his dagger and leaving him badly wounded in the chest bolted with the three rifles. The Indian Gurkha sacrificed his life for the sake of his 'Izzat', as losing a rifle

by a soldier is considered a dishonour in the army.

The second incident happened also in Kohat in the same year, but a couple of months later in the cholera camp. Cholera had taken a terrible toll of the sepoy and camp followers in the regiments stationed at Kohat. The mortality was appalling in the hastily improvised cholera hospital conducted by the three I. M. S. officers assisted by about four military sub-assistant surgeons and about half a dozen military ward orderlies, and some sweepers. Gradually the epidemic subsided and the hospital workers had some respite. The ward orderlies consisted of Sepoy Laxman Pawar, a Deccani Maratha from 128th Pioneers, Sawar Yakub Khan, a Hindustani Mussalman from Skinner's Horse, Sepoy Tiwari, a U. P. Brahmin from the 3rd Brahmin Regiment, and Sepoys Dularam and Narsoo Singh, Rajputana Gujars, from the 43rd Deoli Regiment, all under the command of Havildar Darveza Khan, a Sagri Khatak Pathan from Bannu. In a hastily improvised military unit, especially a hospital with patients dying of a disease where treatment was not of much avail and a lower staff selected at random from different regiments, discipline could not be expected to be perfect. There was reason to believe that the relations between the non-commissioned officer Darveza Khan, and the other five sepoy were far from cordial, and Sawar Yakub Khan, (who was nicknamed Bewakoof Khan by the Havildar), was supposed to be at the root of this internecine trouble. One afternoon the ward orderlies were unloading the Supply and Transport cart containing the provisions for the hospital. Some sort of wordy warfare started between Sepoy Dularam and Havildar Darveza Khan, which culminated in Dularam throwing down the Pathan Havildar on the ground and trying to hit him with the handle of a shovel. Naturally young Dularam was hauled up next day before the officer commanding the hospital, Major B. A court of inquiry was held and he was tried for assaulting his superior officer while on duty. He was found guilty and was sentenced to one month's imprisonment. The poor lad half sob-

bing shouted out, "Nobody listens to what I say. What have I done? I was first assaulted by the Havildar; so I hit him back. Why should I be sent to prison?" He was kept as a prisoner in the guard room, before the armed guard from the headquarters came next day to take him to the prison. As soon as he noticed the sepoy guard of a Punjabi regiment coming to take him away, from a distance, he snatched the rifle from the hands of sepoy Narsoo Singh, and ran out in the open shouting. He was seen by the two I. M. S. officers kneeling down in front of their tent and adjusting the bolt of the rifle. It was later on found that he wanted to shoot the I. M. S. officer who gave the prosecution evidence against him and the Havildar Darveza Khan, who was responsible for his prosecution. Narsoo Singh noticing this ran after Dularam, but before he could snatch the rifle away from him, he turned it toward his own face and pulled the trigger. Luckily it was loaded not with the usual service cartridge, but with game shooting cartridge containing small shot as is usually done on the Frontier where the army sentries guarding camps have to deal with Pathan marauders who crawl into the camp under the cover of darkness. So the shot did not kill him but tore off the skin of his face and shattered his jaw bone. The fair and handsome looking young lad's face mangled and covered with blood presented a hideous and distorted appearance. The poor lad made an attempt to kill himself to save his 'Izzat', which would have been damaged by his being sent to prison.

Finally it may be said that it is high time that Britishers of the type of Lord Baden-Powell realised that they are not enhancing the prestige of Great Britain by running down Indians and their country. Indians have long ago ceased to give any importance to the patronizing opinions about them or their country by foreigners, and have realised that the future of their country depends upon their own achievements, and not on the few favours bestowed on them with a condescending smile by those who have taken on themselves the laborious task of bearing the "White man's burden" for the salvation of the human race.

Book Reviews

Books in the principal European and Indian languages are reviewed in THE MODERN REVIEW. But reviews of all books sent cannot be guaranteed. Newspapers, periodicals, school and college text-books, pamphlets, reprints of magazine articles, addresses, etc., are not noticed. The receipt of books received for review cannot be acknowledged, nor can any enquiries relating thereto answered. No criticism of book-reviews and notices is published.—Editor, THE MODERN REVIEW.

ENGLISH

LIBERALITY AND CIVILIZATION: By Gilbert Murray, D.C.L., LL.D., Litt.D. George Allen and Unwin Ltd., Museum Street, London. 2s. 6d.

This book contains two lectures given by Professor Gilbert Murray at the invitation of the Hibbert Trustees in the Universities of Bristol, Glasgow, and Birmingham in October and November, 1937. They are informative, and also thought-provoking, as the phrase goes. In the first lecture the Professor explains what he means by liberality. It is not Liberalism in the sense in which that word is used in party politics. He goes on to show the interdependence of liberality and civilization. In the second lecture he considers the problem of keeping alive liberal thought and feeling in a world which seems to have turned anti-liberal. "Civilized thinking means liberal thinking. Liberality is the inner content of civilization."

Readers of *The Modern Review* have already got some idea of the contents of the book from the extracts from it given in the Notes in the last June number under the captions, "Liberality and Free Speech", and "The Path of Madness and of War and the Paths of Peace". pp. 703-704.

D.

HIND SWARAJ OR INDIAN HOME RULE: By M. K. Gandhi. Printed at the Vithal Mudranalaya, Congress Camp, Vithal Nagar. Paper Cover, Pp. 183, xii. Price As. 4 (1938).

In a short foreword Mr. Mahadev Desai tells us how this little book which was out of print came to be reprinted. Lord Lothian, when on a visit to Gandhiji wanted a copy of it and at the same time Madame Sophia Wadia, the well known Bombay Theosophist did so. It was written in Gujarati in 1908 in South Africa and then proscribed in India. Translated into English for Mr. Kallenbach it has, continued to attract attention. In it lies in the germ of all that Gandhiji is preaching now. The booklet is worth reading, re-reading, as it shows the Mahatmaji at his best.

THE POWER OF NON-VIOLENCE: By Richard B. Gregg. Printed at the Navjivan Printing Press, Ahmedabad. Thick card board. Pp. 398 with an index. (1938.) Price Rs. 2.

This is an Indian Edition of Mr. Gregg's work. He writes from South Natick, Massachusetts, U. S. A., and has fitly dedicated the book to Mahatma Gandhi. In sixteen chapters the whole subject of Non-Violence is discussed in detail from an Indian as well as the Western point of view and the author tells us that it is not a history of the Indian struggle for independence only, but

of such struggles elsewhere. The notes to the chapters bear this out as reference is made therein to the works of various world writers. The idea of non-violence is tested with recent findings of psychology, military and political strategy, political theory, economics, physiology, biology, ethics, penology, and education. It has thus embraced a wider scope for the propaganda of Ahimsa than that found in Gandhiji's writings and utterances. The conclusion reached, however, is identical and confirms in soundness of Gandhiji's preachings. It is a scholarly and learned work and deserves to be studied by all, pacifists as well as non-pacifists. Mr. Gregg is a lawyer and has considered the pros as well as the cons of the subject. He is an industrialist also and has stayed in India pretty long. He is thus qualified to speak on Indian conditions too.

X.

HISTORY OF KANAUJ—TO THE MOSLEM CONQUEST: By Rama Shankar Tripathi, M.A., Ph.D. Indian Book Shop, Benares City. 1937. Pp. XX+420. Price Rs. 7.

The history of Kanauj is a worthy subject of study for every student of Indian History. With the single exception of Pataliputra, Kanauj may justly be regarded as the greatest imperial city in ancient India. In point of antiquity and length of life Kanauj beats hollow even its proud rival. It was a royal capital for many centuries while the site of Pataliputra was marked by a petty village, and it continued to flourish as an imperial capital nearly six centuries after the glory of Pataliputra had vanished for ever.

During these six centuries Kanauj saw the rise and fall of five empires, those of the Maukharis, the Pratiharas and the Cahadavalas, and of Harshavardhan and Yasovarman. During the same period it was ruthlessly trampled under feet by no less than four powerful hostile armies, viz., the Karnatas, Kashmiras, Ghaznivides and Tursushkas, and its age-long duel with Bengal culminated in the complete triumph of the rival king Dharmapala who had his coronation performed in the eternal city in the presence of all the powerful chiefs of Northern India.

Against this background of political upheavals Kanauj witnessed an outburst of literary activity to which there is hardly any parallel with the exception of the legendary court of Vikramaditya at Ujjain. For few cities can boast of a galaxy of such renowned masters of literary art as Vakpatiraja, Bhababhuti, Banabhatta and Rajasekhara—not to mention lesser names—who have left a permanent mark on Sanskrit and Prakrit literature. As a seat of orthodox Brahmanical culture the fame of Kanauj spread to the furthest corner of Northern India,

and even today all the high class Brahmins and Kayasthas of Bengal look upon Kanauj as their ancestral and spiritual home.

This wonderful story of political and cultural greatness is told by Dr. Tripathi in the book before us. It is a scholarly work, marked by accuracy, precision, and sound judgment. The author has carefully examined all the sources and placed before his readers an interesting but unvarnished account of the memorable events that centred around Kanauj. His style is condensed and elegant and his criticism is always dispassionate and to the point. He has differed from previous writers on many points, but has referred to their views in moderate and temperate language. He has studiously avoided dogmatic expressions and an acrimonious tone which are unfortunately only too common in modern historical writings. On the whole the author is to be congratulated on the fine piece of work which he has produced.

It is inevitable that there should be room for difference of opinion on many points in a work comprising the history of so many dynasties. But it is very seldom that we can regard the author's standpoint as definitely untenable. In a few instances, however, the author seems to have departed from his usual caution in forming an unbiased judgment of available historical materials. We shall cite two examples.

The first refers to the coronation ceremony of Dharmapala at Kanauj, referred to in verse 12 of the Khalimpur copper-plate. The meaning of the entire verse is not quite clear. According to Kielhorn's translation, unhesitatingly accepted by the author (p. 216), the main fact referred to in the verse is the installation of the illustrious king of Kanyakubja, presumably Cakrayudha. This is, however, not so clear, and is merely an inference drawn from emended text of the verse. There is, however, no doubt that the verse contains a clear reference to the coronation of Dharmapala himself, a ceremony in which the golden pitcher was held over his head by the elders of Kanauj, and the host of kings—of Bhoja, Matsya, Madra, Kuru, Yadu, Yavana, Avanti, Kira, and Gandhara—had to nod their heads in hearty approval under the frowning looks of Dharmapala. Leaving aside the disputed question whether the ceremony also included the installation of Cakrayudha, a nominee and protégé of Dharmapala, on the throne of Kanauj, which is in any case a subsidiary issue, the presence of the kings in the coronation ceremony and their approval of it, under compulsion, leaves no doubt that they recognised Dharmapala as their suzerain. The author seems to have missed the real issue in his discussion of the topic on pp. 216-17 and p. 230. He thinks that the main object of the assembly was a "settlement of the affairs of Kanauj" to which the assembled monarchs gave their approval. He admits that the incidents described in the verse "indicates the power and position of Dharmapala who seems to have attained in his day the rank of the premier king of the North", but he fights shy of the natural conclusion that Dharmapala conquered those states. It is of course quite possible that some of these states submitted without any actual fight, but there can be hardly any doubt, that the main object of the verse is to indicate that Dharmapala's suzerainty was acknowledged by the states named therein. It is difficult, therefore, to agree with the author that "the passage in question only gives us a list of the principal kingdoms that had dealings with Kanauj, and the assumption that they were subject to it seems altogether fantastic and wide of the mark" (p. 217). Of course the subjection was to Dharmapala and not to Kanauj, which was itself a dependency of the Pala empire. Still more open to objection is the author's view that the approval of the ruler of Avanti was a mere "diplomatic gesture" (p. 239).

The second instance refers to the fact, specifically mentioned in an inscription of Lakshmanasena and two inscriptions of his two sons, that he defeated the king of Benares and erected pillars of victories in Benares and Allahabad. The author summarily dismisses this claim with the following remark:

"But in view of the position of Benares in the Gahadavala realm, and Lakshmanasena's (*sic*) craven flight without offering any resistance to the small force led by Bakhtyar Khilji, we may unhesitatingly say that 'the monuments of his greatness, never existed elsewhere than in the poet's imagination.'" (p. 325).

It is evident that the author has never cared to read the history of Minhaj on which the tale of "craven flight" is based. Perhaps it would be interesting to him to know that Minhaj himself has paid the highest tribute to Lakshmanasena and referred to him as the greatest king of Hind; and further that no unbiased reader of Minhaj's narrative would choose to brand Lakshmanasena as a coward. Besides, while the author puts so much stress on the successful raid on Nadia, he conveniently forgets that Lakshmanasena and his successors maintained the independence of the greater part of Bengal by a stubborn resistance to the Muslim invaders for nearly half a century after nearly all the other powerful kingdoms of Northern India, including Kanauj, had been conquered by them.

But even granting that Lakshmanasena was disastrously routed by the Muslims in his old age and fled from Nadia, is it reasonable to infer that the stories of his conquest in earlier days were all imaginary? By a similar reasoning one would be inclined to discredit the story of Yasovarman's victories in Bengal because he was so disastrously defeated later by Lalitaditya. Indeed we have no ground to disbelieve the specific references to Lakshmanasena's conquests in contemporary inscriptions, if we accept as true similar references in contemporary inscriptions in the case of other kings.

I am afraid this long discussion would lead one to suppose that the age-long duel between Gauda and Kanauj is still in progress, only with the exchange of pen for the sword. I therefore conclude with the remark that such blemishes as I have indicated above do not take away from the real merit of the book. We have every right to expect more scholarly works from the young author.

R. C. MAJUMDAR

THE POSITIVE BACKGROUND OF HINDU SOCIOLOGY. BOOK I: INTRODUCTION TO HINDU POSITIVISM: By Benoy Kumar Sarkar. *The Sacred Books of the Hindus Series*, vol. XXXII. Panini Office, Allahabad 1937. Royal 8vo. Pp. 71+697. Price Rs. 16.

This stupendous volume of 700 pages was originally written as an introduction to the author's English translation of the *Sukra-niti*, but considering its size and its very wide range of interest, it is, without doubt, a *magnum opus*. The main object of the first volume, as its title indicates, is to consider the manifestation of the "positivist" spirit of ancient India in its various forms, and the author has collected together a great mass of material from multifarious sources; but it is in reality a veritable encyclopaedic *vide-mecum* of hundreds of things connected with India and the world at large, from the pre-historic Mahenjo-daro to the historic Prof. Benoy Kumar Sarkar himself, to the last (but not the least) of which interesting topic a Preface of 57 pages is devoted! The reader, however, will find very little of the *Sukra-niti* itself, which is professedly the starting point of the work, even within the capacious limits of the present volume, although there is a great deal of infor-

mation of diverse kind on Niti-sastra, Kautilya and connected topics, and the name of Positivist India is not taken in vain! The author, to judge from his profuse references to works in various Western and Eastern languages, is a well-read man; and nothing escapes his notice, specially, from China to Peru and, temporally, from the Assyro-Babylonian to the modern "Indo-Euro-American" milieu, whether it be Literature, Culture, Sociology, Politics, History or Philosophy. The Professor has a wonderful facility of diction, and a marvelous gift of coining words, phrases and formulas, such as Vertical Mobilities, Buddha-Kautilya complex, Geometry of Between-Man Relations; but one wonders if it is really necessary to sacrifice lucidity and revel in an imposing array of verbal profundity. In his impatience of scholastic limits our author appears to have a dislike for what he calls "Traditional Indology"; but it is doubtful how far this work of facile copiousness, as a specimen of neo-Indology, will really appeal to a critical and scholastic reader. Let us hope that the general reader will have the time and patience (which the poor reviewer must needs have) to benefit from his well-meant, if somewhat diffuse, popularisation of a difficult and interesting subject.

S. K. DE

SIKHISM : By Professor Teja Singh. Published by Longmans Green and Co. Rs. 2.

The problem for strife-torn humanity today is not in finding ideals and visions of the perfect, but in forging the missing links between the outer and inner aspects of behaviour. Spiritual wisdom lies enshrined in civilisation, but our conduct follows prehistoric fear and unreason: precipitation of moral law in terms of human relationship has yet to meet the modern demand. We need a technique—call it a technique of good life—not only for individuals, but for organised living; tribal sanctions seeking relief in fratricide can no longer satisfy an age in which wars, holy or unholy, are apt to end in wholesale extermination, and muddling through means sure domination by powerfully planned barbarism. Individuals, in many countries, recognise the world-situation, and would serve the higher conscience—which paradoxically enough, is wider awake today than before—by closing the dangerous gap that exists between hoarded ideals and instinctual living. Societies spring up, menaced by wide-spread atavism, but determined to supply nation and group with an actional basis of humanity.

Professor Teja Singh's book deals with eternal problems but it is also a timely publication. With rare charm and scrutiny he reveals the dual aspect of Sikhism—"the Ideals and Institutions"—and takes us to the borderland where the spirit and the material organisation of life are recognised together in the evolution of a religious community.

Sikhism—as a synthesising order—had to face from its inception the pressure of majority religions; spiritual light had to be given a container which would protect it from the blasts of communal rivalry, and guide followers in the *Panth*, the path of righteous living. Problems of initiation and practice, of attitude towards religious bodies and traditions had to be defined; as a reformist movement, Sikhism had to offer an uncompromising front to harmful social usage, to caste and sectarianism, while accepting the concept of spiritual democracy in which religions meet. The *Guru* gave the Laws, in spheres of conduct and contemplation, and recorded in the *Holy Granth*, the sacred book of the Sikhs, they bear witness to the structural catholicity of Sikhism which made it incorporate truths from diverse religious sources without affecting its original character. Devotion and Service,

in each religion, have gone together: true spiritual freedom must lie in accepting the bondage—not bondage any more to a freed soul—of welfare work, but the peculiar contribution of Sikhism is that it insisted on inter-communal service, amidst difficult and dangerous circumstance, as part of the daily work without promising extra-spiritual felicities as reward. Luring recruits by prospects of easeful shelter could hardly be possible in a community which for the greater part of its history has had to struggle for bare existence. Territorial acquisitiveness sanctified by spiritual dispensation could not form the policy of a community schooled by service and sacrifice; this holds true even of the days of Sikh prosperity. At the time of the tenth *Guru*, the *Khalsa* idea was formed; the idea of a purified soul taking up life's duties, undeterred by suffering or persecution.

How did Sikhism organise service? What was the secret of the unitary existence of the community, even though dispersed over a wide area; how to interpret the ideological entity which lies behind the vows and rituals and signs? Professor Teja Singh's book answers many questions and provides a background to which such questions could be referred; he can be critical and yet his writings are saturated with the imperishable traditions of his faith. He tells us how the Sikh Order has saved itself from sectarianism and while he warns his community against fissiparous tendencies, he has no difficulty in tracing the unshakable loyalty to the *Guru* and the *Granth* which has welded the brotherhood into one and made it assert its principles in face of adversity. When one remembers how in recent times the *Akalis* suffered without retaliation, accepting the highest form of Gandhian non-violence and resisting opponents with untarnished spiritual fortitude, one realises what wealth of sensitiveness and power of discipline this heroic community carries within itself.

Professor Teja Singh gives us history, and with admirable economy, presents the essential features of the Sikh religion; he describes the rites and ceremonies, always noting their significance; takes us on pilgrimage to the *Takhts*, deals with the constitution of the *Sangat*, giving us details of the disciplinary organization. *Gurumattas* are explained,—he has some pertinent things to say on their political bearings—and much light is thrown on the nature of decisions thus made by the Executive on problems affecting the whole community. At the end of the book and running right through its pages occur lucid translations of Sikh prayers and devotional songs.

On problems of war-mindedness, and some vestigial forms of caste in the lower strata of the Sikh community one might need further elucidation; on the nature of the political institutions and of the external signs—the five *K's*—one would welcome examination in the light of modern standards, but the adequacy of the book as a guide to Sikhism evokes admiration. The organisational side of this welfare-working community demands the attention of a generation baffled by the ethics of "Ends and Means"—Huxley's book is the most significant contribution of our times—and Sikhism, as depicted in this monograph, challenges universal interest.

Reading this book one sees the completeness of Guru Nanak's preaching, as expressed by Guru Arjan, "Without pleasing God all actions are worthless." And again, in the same hymn, "I say, Nanak, if you exert yourself in action, you will be saved." (*Gauri Mala*.)

AMIYA CHAKRAVARTY

SWAMI RAMA : HIS LIFE & LEGACY : By P. Brijnath Sharga, M.A., LL.B. Published by The Rama Tirtha Publication League, Lucknow.

It is an account of the life and teachings of one who was born in poor circumstances, strove to acquire learning by fighting against odds, completed a University career and became a Professor of Mathematics; but who later renounced the world, became a preacher and teacher and ultimately a recluse and died an accidental death at the early age of 33. The story is told in an attractive, though somewhat diffused, style.

THE STORY OF SWAMI RAMA : *By Mr. Puran Singh. Published by The Rama Tirtha Publication League, Lucknow.*

This is another biography of Swami Rama. The difference in authorship has been responsible for a difference in outlook and mode of narration also. Besides, this book has aspired to be a little more critical than ordinary biographies of saints.

THE PASSING OF THE GODS : *By V. F. Calverton. Published by George Allen & Unwin, Ltd., Museum Street, London. Pp. 326. Price 10s. 6d. net.*

This is a remarkable book—remarkable both for the courage with which the author treats his subject and also for the equally bold conclusions that he draws. The author's main theses are : (i) Religion is a "social compulsion" or a social force, and, as such, should be studied sociologically. Hitherto, the approach to the study of religion has been mainly psychological, treating it as an individual reality only. (ii) The influence of religion has depended on the fact that it promised not other-worldly benefits so much as fulfilment of this-worldly interests. (iii) And the classes in society whose interests it served have been the staunchest advocates of it. (iv) In a classless society which appears to be the eventual aim of mankind, religion will have out-lived its usefulness and will be there no more. "Religion is dying today, and the gods are passing, not so much because the human race has no more need of the function they served, but because it has built up superior substitutes for them" (p. 320). The future, therefore, belongs not to religion but to science, not to the gods but to men. Obviously, it is taken as an indisputable fact that the gods are passing.

The writer supports his conclusions with a wealth of information and an array of arguments which are bound to compel attention. All his facts are perhaps not accurately stated. For instance, when he says (p. 58) that "among the Brahmans, the King is considered the Creator of the Gods," or that "in Bengal, they openly spoke of *Tshanda Gosain* as a God who could be approached only by the wealthy" (p. 78), he is treading on uncertain ground. But such small inaccuracies do not materially affect his main interpretation of history.

It is not difficult to imagine that many will not accept his conclusions or his interpretation of history. But all his facts are not open to challenge. His chapter on American Culture is particularly illuminating. It gives a vivid picture of how 'God and Christ had become open allies of wealth and station' (p. 259) and 'how the Prince of Peace had been converted into a War Lord' (p. 260).

The book is a Marxist broad-side on organised religion. Guardians of religion in all lands ought to take note of it; and instead of pretending to condemn it in a superior fashion, ought to see if there is no real force behind the attack. Books of this kind are a special need for India where the old fabrics of religion still refuse to be reshaped and where still the cry of "religion in danger" can easily collect a motley crowd of men.

U. C. BHATTACHARJEE

THE ECONOMICS OF CORPORATE SAVING : *By J. Ellwood Amos. The University of Illinois Press, Urbana, Illinois, 1937. Pages 136. Price \$1.50.*

The importance of 'saving' as an economic category has increased remarkably in recent years. The writings of the recent employment-economists have made expressions like 'positive saving,' 'negative saving,' 'forced saving' greatly significant in different branches of economic study. A book professing to deal with the *economics* of corporate saving should, therefore, be a welcome addition to the increasing volume of literature on the subject.

In fact, however, Mr. Amos has not discussed so much the purely economic aspects of corporate saving as the statistical difficulties of arriving at a correct measure of the saving practised by business corporations. His analysis of the motives for, and the effects of corporate saving is almost elementary. The chapter on 'some theoretical considerations' will disappoint the reader who will expect a logical discussion after a brilliant exposition of the statistical problems.

The value of the book lies in the descriptive chapters. The author has analysed carefully the policies adopted by different types of business corporations as regards saving, and the devices that very often obscure the real saving or 'de-saving' policy of particular types of business. There is a valuable chapter on the effects of the surtax imposed in the U. S. A. on the undistributed profits of corporations under the Revenue Act of 1936. The readers of Mr. Amos' book will be grateful to him at least for the mass of information he has so carefully brought together.

BIABYTOSH DATTA

MATHEMATICS FOR THE MILLION : A POPULAR SELF-EDUCATOR : *By Laurelot Hogben. Published by George Allen & Unwin, London. Pp. 648. Price 12s. 6d. net.*

Many people leave school with an inferiority complex about mathematics, feeling that it is a 'subject' they cannot just grasp. But modern civilisation is based on science, and mathematics is the language of science. No one can become an intelligent citizen unless he can understand the language of experts. Without this understanding he is at their mercy. The author has an amazing gift of clarity; his exposition is not only brilliant but popular; with sound simplifications he has made things which usually bring despair intelligible to the average citizen. In helping the average citizen to become the intelligent one, he has helped the progress of democracy.

The book teaches mathematics as it grew as man's instrument to understand and master his environment; for building, navigation, surveying, mining, manufacturing and exploration. It becomes an extraordinarily vivid history of science as it grew in its social uses. The author has established beyond dispute the existence of a relationship though it may be, between the growth of mathematical facts and the severely practical problems of the society that gave them birth. This is in itself a significant contribution towards the history of science,—and a scientific advance in itself. The author makes the hesitant reader at once an actor and spectator in a social pageant, leading him from the Pyramids to polar exploration, from camel caravan to the steamships crossing the oceans.

The best thing we can do to the reader is to recommend this remarkable book to him. This is one of the indispensable works of popularisation we have come across since we left college. For example, the author's treatment of Statistics or the Arithmetic of Human Welfare is so lucid and elegant that it can be readily understood and appreciated by one who has forgotten his college

mathematics. It reminds the Bengali reader of the late venerable Ramendra Sundar Trivedi and of his popular philosophical and mathematical essays. And we make no apologies for our enthusiasm for the entire 648 pages of the book.

J. M. DATTA

COMMERCIAL RELATIONS BETWEEN INDIA AND JAPAN : By C. N. Vakil and D. N. Malusta. Published by Longmans, Green and Co., Ltd., 1937. Price Rs. 5.

Professor C. N. Vakil, University Professor of Economics, Bombay, has inaugurated a very useful series of handbooks on the economic problems of modern India and under his able editorship twelve valuable volumes have already been published. The present study is the 12th in this series entitled "Studies in Indian Economics" and published by Longmans, Green and Co., Ltd.

The volume under review deals with a subject of great practical importance to the economic life and prosperity of India. It describes the transformation of Japan from a poor, feudal, backward, weak nation to a modern, advanced, prosperous, industrialised, strong and great power. It points out the chief factors which are responsible for the amazing progress achieved during the last 70 years and discusses both the elements of strength and weakness in the economic position of Japan. It clearly brings out the significance of foreign trade for Japan and the consequent importance attached to the subject by the government and the steps taken by it to ensure its stability and progress.

The authors then carefully analyse the trade between Japan and India and discuss the problem of Japanese competition in India. They examine the conditions which necessitated the conclusion of the Indo-Japanese Trade Agreement, first in 1934 and again in 1937, and the provisions of the two agreements and they state their criticisms and conclusions. And the whole work is carried out by the two authors in a scientific spirit and judicious manner and the volume is eminently readable and interesting. It should prove very useful to the commercial and industrial community, the members of the central legislature and to the students of Economics and Commerce in the country.

The main defect of this valuable study is its brevity. For instance the whole subject of financing the economic reconstruction and modernisation of Japan has been dealt with in less than two pages of the book. Similarly, the working of the 1934 Trade Agreement has been examined and discussed in less than 4 pages. Both these subjects are of tremendous practical importance to the government and the people in this country at the present juncture and a comprehensive discussion of them would have greatly added to the value of the book. I feel sure that the provincial governments would have been particularly grateful to the authors, if from their study of reconstruction and modernisation in Japan, they had pointed out ways and means of financing the programmes of economics and educational reconstruction in Indian provinces. In my opinion, the utility of the book would have also been greatly augmented if the authors had given their suggestions in a concluding chapter for meeting the terribly serious competition of Japan to Indian industry and trade. However, the book as it is, is an important and a very useful publication, and will go a long way in promoting the understanding of the problem of Japanese competition and trade relationship with India. It deserves to be read widely.

GURMUKH N. SINGH

HOW SHALL WE DEFINE LUXURY : By C. R. Agaskar, B.A., LL.B. Published by the author at Saraswati Bag, Jogestwari. Pp. 157. Price Rs. 4-4.

The author in this monograph discusses the problem of unemployment. There is a number of suggestions for the removal of the evils of unemployment, but mostly divorced from economic laws and facts. The author's advocacy for free higher education to all, is not a practical one. He remarked that "the cry of the unemployed is nothing but a cry for luxuries" and that a revert to old plain and simple living will end all evils. Is denying the hard facts when bare necessities of life for the vast number of the population is wanting. The question of unemployment is baffling the best brains of the world and is certainly not so easy solution. Unemployment and maldistribution of wealth stand at the very root of the economy of a nation and is a subject which needs more sound and serious treatment.

NIHAR RANJAN MUKHERJEE

A TREATISE ON INDIAN INCOME-TAX LAW AND ACCOUNTS : By Mr. B. N. Das-Gupta, B.A., A.S.A.A. (London), R.A., Incorporated Accountant, Head of the Department of Commerce, Lucknow University. Published by The Indian Press, Ltd., Allahabad, Benares, Calcutta. Price Rs. 5.

In this book the learned author has very thoroughly and carefully discussed the Income-tax Law as it is, analysing the Sections into their essential elements and indicating some of the points where changes in the law seem desirable.

Although in this book exhaustive citations of numerous case laws and Judicial decisions, departmental Rules and Instructions have not been included but still it has included therein all the typical cases. The author has been forced to adopt this method in view of the forthcoming amendment of the Act. The author places before the public an unbiassed interpretation of the Income-tax law as it is at present.

It is a neat handy book showing the practical working of the Income-tax Law, useful both for the busy Lawyer, as well as Accountants, Businessmen and Assessors generally.

The book presents several special features, viz., the present law has been discussed by way of elucidating the provisions of law by applying them to concrete cases, complicated points of law have been explained by illustrations, several suggestions have been put forward for consideration of the public as well as the Legislators and all the important provisions of the law have been collected together for ready reference by all the assessors.

Further, many practical problems relating to Insurance Companies, Bank, Share-broker and Partnership have been worked out in this book.

The book contains a Foreword by the Hon'ble Sir N. N. Sircar, K.C.S.J., the Law Member of the Government of India and an exhaustive Index which enhances the value of the book.

JITENDRA NATH BOSE

VILLAGE THEATRES : THE FOUNDATIONS OF THE INDIAN NATIONAL THEATRE : By Tandra Devi. With a Foreword by Nandalal Bose. Tandra Devi Publications. Tandrashram, Srinagar, Kashmir. Price As. 10. Post-paid As. 12.

Srijit Nandalal Bose writes in his foreword :

"There was a time when this art (of puppet or marionette shows) was very popular in our villages, for it is simple, cheap and amusing and makes a ready appeal to the imagination. The author indicates that the Doll

Theatre may reach also to a high level of artistic beauty and educational value. Every province in India had, in olden days, developed an individual style of this art, suited to the genius of the people. Even now, in a lingering form, it is to be found almost all over India. Lack of sympathy of the educated classes, who import their standards of taste from abroad (unfortunately, not the best Western standards either) has undermined the prestige of this art, as it has done of many indigenous culture...."

The author (well known to many as Mrs. Maude MacCarthy) deserves our gratitude for her efforts to revive this art and everyone will agree with her when she says that "this (puppet) theatre should be brought back in villages and small towns, not merely by reviving the ancient doll-shows, but by the re-birth of the ancient spirit in modern forms of puppetry". But it is difficult to agree with her when she, in her great enthusiasm, observes: "I believe that the National awakening should bring forth the National Theatre, and I hold that that theatre is the Puppet Theatre." It is hard to believe that the highest dramatic and histrionic aspirations of a nation should be asked to find their fulfilment in puppet shows. She commits the same mistake as some other enthusiasts of our country commit when they claim that the folk-art as practised by the *patuas* of Bengal represents Art of Paintings in its best.

PULINBIHARI SEN

PROCEEDINGS AND TRANSACTIONS OF THE EIGHTH ALL-INDIA ORIENTAL CONFERENCE. Mysore, December 1935, Bangalore, 1938.

We have here a big volume consisting of two parts. Part One in 152 pages gives a complete report of the Conference, while in Part Two are published the Presidential Addresses of the different sections and about seventy articles—less than one-third the number submitted before and accepted by the sections. Some of the papers published here are highly interesting and useful though many that are left out appear to have been equally so, if not more. It is to be regretted that no indication has been given as to the principle, if any, that has been followed in selecting the papers for publication. This kind of publication of selected articles to the exclusion of others, however, naturally implies, if nothing else to the contrary is definitely indicated, the inferiority and unfitness of the latter, which, however is not generally the case. As a matter of fact, the practice of making room for only selected articles in a volume like this will be always open to criticism, not necessarily unjustified and unreasonable. Several alternatives may be possible under the circumstances. If funds permit space should be made available for all the articles read or taken as read in the Conference. If this is found to be impossible in consideration of the smallness of the funds, as is generally the case, specially in the case of the volume under review, the summaries of the papers along with the Presidential Addresses may be published as is done by the Indian Science Congress Association. If only the names of the papers read in each section are printed referring, as far as possible, to the journals where some of these may have been published, as was done in the proceedings of the International Congress of Orientalists at Oxford, this will be of considerable use and interest to scholars. Further, this will not only save money but serve to strengthen the various Oriental journals and help to secure wider publicity for the papers as some of these journals reach more people than copies of the proceedings are expected to do.

CHINTAHARAN CHAKRAVARTI

SANSKRIT

TANDYAMAHABRAHMANA WITH SAYANA'S COMMENTARY: Edited in two volumes by Pandit A. Chinnaswami Sastri, Professor, Benares Hindu University. Pp. 494+46+612+31, Kashi Sanskrit Series, Chaukhamba Sanskrit Series Office, Benares.

We had much pleasure in noticing the *Baudhayana Dharmasutra* edited by Pandit Chinnaswami Sastri, the well-known professor of Mimamsa in the Benares Hindu University. Today we are equally very glad to have from him a new edition of the *Tandyamahabrahmana* 'the great Brahmana taught by one Tandin'. It is also called *Praudhabrahmana* or 'Great Brahmana', and *Pancavimsa-brahmana* as it consists of twenty-five chapters (*adhyayas*). For the first time and with Sayana's commentary it was edited in Calcutta (Bibliotheca Indica in 1870—1874) and translated into English by Caland (1931). It is to be regretted there is not yet any translation in any Indian vernacular.

The present edition is based not only on that of Calcutta, but also on two MSS. in Grantha script and three in Nagari collected from different parts of the country. That this edition is far better than the first is quite clear. Here a large number of quotations in the text and commentary is traced to their sources and various readings are noticed in the footnotes. Yet there is room for further improvement in this respect. For instance, the Calcutta edition reads (XXII. 18.7)—

“एतेन वे जेम भृत्वा पौगडरीक इष्ट्वा”

The present edition has *Paundarikam* for *Paundarika*. But in fact the reading should be जेमभृत्वा पौगडरीकम्. Here the base is *Kshemadhrivan*, a proper name. (See Caland's tr.). The Calcutta edition seems to have led the authors of the *Vedic Index* to interpret the word *Paundarika* as 'descendent of Pundarika'. But in fact *Pundarika* is here a kind of soma sacrifice lasting eleven days. In his index Pandit Chinnaswami has given its right meaning. His introduction is learned discussing different points regarding the text and showing the relationship between the text and the *Srantasutras* of Katyana and Apistambha. There are different indexes enhancing the value of the book.

VIDHUSEKHARA BHATTACHARYA

DHARMA-KOSA: Edited by Lakshman Shastri Joshi, with an Editorial Board. Vol. I, pt. i. Vyavahara-khanda: Vyavahara-matrika. Published by the Prajna-Pratistha-Mandala, Wai, Satara, 1937.

This ambitious publication, which includes in its scope the comprehensive and critical compilation of the entire material found in Sanskrit texts, with regard to the history of Hindu legal, political and social institutions, from the works comprised in Vedic literature down to late commentaries and treatises composed towards the end of the 18th century. The stupendous mass of material, culled not only from printed literature but also from unpublished manuscripts, is classified and arranged, according to general and special headings, in chronological order as far as possible, and presented as an exposition of the historical conclusions that may be gleaned from it. No important text is omitted or ignored, and the extracts are so digested here in their original words that the reader will find in orderly sequence the evolution of a particular idea or institution relating to Hindu religious and customary law and usage. In the words of the Editor, the work to be completed in several volumes, will include a detailed study "of the family rites and religious usages, of the expiatory rites, of the sacrifices, of the festivities and modes of

BOOK REVIEWS

worship. of the fasts and the pilgrimages, of the religious faiths and of the Gods, of metaphysical speculations and philosophies, of the rules governing the individual conduct towards the family, the caste, or society, of ethics, law and politics, and of all social institutions of the Hindus." The work is, thus, not a mere laborious compilation of the mechanical kind, but, essentially, a study in cultural evolution, for which the learned Editor and his Board of Assistants and Advisers appear to be fully competent. The work, when completed, will form a monument of patient and critical learning, indispensable to all who are interested in the social and religious institutions of ancient India. The present volume consists of more than 700 quarto pages but deals only with a part of Vyavahara or legal procedure. It is noteworthy that not only printed texts are utilised and quoted, but sometimes their incorrect and doubtful readings are amended. Also, the very large number of quotations, found in the commentaries and digests, from Smṛiti works which are now lost, is collected together; and in this way, half a dozen or more old works are partially restored from citations. The work was started in 1925 by Narayan Shastri Marathe, but on his retirement from Garhasthyasrama, his worthy disciple, the present editor, is carrying it on with unabated zeal and energy. The first volume augurs well for the volumes to follow, and the enterprise certainly deserves wide sympathy and encouragement, as being at once a popularly useful as well as a strictly scholarly work.

S. K. DE

SANSKRIT-ENGLISH

SVETASVATARA UPANISHAD: *Translated by Swami Tyajisananda. Published by Sri Ramkrishna Math, Mysore, Madras. Pp. 131. Price Rs. 12.*

Although Svetasvatara Upanishad is not one of the ten Upanishads of which Sankaracharya wrote commentaries, yet it is none the less important as is evident from the references made to it by the commentators in their commentaries of the Brahma-sutras. The book contains the Sanskrit text and its English translation together with explanatory notes. The intrinsic value of the book is further enhanced by the separate rendering of each and every textual word into English. The book, we hope, will be of much use to those who are not well conversant with Sanskrit.

ANANGA MOHAN SAHA

BENGALI

SVARA-BITAN: *Part 3. By Rabindranath Tagore. First edition. Visva-bharati Bookshop, 210, Cornwallis Street, Calcutta. Price Re. 1-8.*

This book contains fifty of Rabindranath Tagore's songs, with their musical notations by the late Dinendranath Tagore, the poet's grandnephew, who was a distinguished musician. It has been edited by Sailaja-ranjan Majumdar, a noted musician of Santiniketan. Lovers of Bengali songs will appreciate this publication very much.

SAMAJ OR SOCIETY: *By Rabindranath Tagore. Fifth edition. Visva-bharati Bookshop, 210, Cornwallis Street, Calcutta. Price Re. 1-8.*

This is a collection of fourteen essays or articles by the poet and some imaginary correspondence between an imaginary grandfather and an imaginary grandson.

The fourteen papers are on the following subjects: The course of History in India, Miserliness in Giving, Indian Marriage, Woman's Education, Woman's Humanness, Unity of Hindus, Tyranny of Custom, Sea Voyage, Noose of Luxury, Oriental and Occidental, Reference for

the Undeserving, East and West. What to Call Oneself, Hindu Marriage.

All the essays and the letters are noted for their distinction in style, power of original thinking, and occasional unexpected humour. They should be widely read by both men and women, young and old, all over India.

KSHANIKA: *By Rabindranath Tagore. Third edition. Visva-bharati Bookshop. Price Re. 1.*

This is a well-known book of poems by the author. The poems are written in a playful, half-humorous half-serious vein in light measures, but are not on that account devoid of serious import. Their re-issue in a handy volume printed in big type will be much appreciated.

RABI-RASHMI, or SUN'S RAYS: Part I. *By Professor Charu Chandra Bandyopadhyaya, M.A. Published by the Calcutta University. Price not mentioned.*

The meaning of the name of this welcome bulky volume will be easily understood. Rabi, the name of Bengal's poet, means the Sun. His poems are styled his rays by the author.

Professor Bandyopadhyaya's two volumes, of which the present work is the first, are a study of and commentary on the poet's poems and plays. This, the first part, deals with those which were written up to some 40 years ago. The second part will bring the study up to date. It is in the hands of the printer.

The work will be of great help to the general reader in understanding and appreciating the poet's works. In it the author has given the reader not only the fruits of his own devoted labours for years but has laid under contribution other serious students and commentators of Tagore. The Poet himself has occasionally helped to remove the author's doubts and difficulties. What the Poet has written is of peculiar value. Very interesting and helpful are the parallel and illustrative quotations from Sanskrit, Persian, Hindi and English authors by the writer.

Bengali literature has now to be read by candidates for the matriculation and intermediate examinations of some of our universities, and for the B.A. and M.A. degrees, and Calcutta University has now prescribed an honours course in Bengali for the B.A. For all these some works or other by Tagore are sure to be prescribed. As Professor Bandyopadhyaya's book is sure to be of great help to teachers in teaching Tagore in class and to students in mastering his works for examination purposes, he has earned the gratitude not only of the general reader of Tagore but also of our student community.

Our publishers do not usually publish bulky and expensive works of this description. The Calcutta University has earned the thanks of the author and the public by publishing it. We only hope that it will hasten the publication of Part II of the work. The printing and publication of the first part, of some 452 pages royal octavo, took five years. That was rather slow work for a big press.

D.

GUJARATI

VIJNAN-SRISTI: *By Revashankar O. Somapura, B.A. Bhavnagar. Price Re. 1-II.*

A collection of about twenty articles on topics like rubber, motor car, the art of printing, telephone, radio, the solar system, etc., not specifically for schools but for general readers. The accompanying illustrations are few, and not very well executed either, but more to our interest

is the author's attempt, mostly successful, to render technical terms in pure Indian language.

KALPA-BRIKSHA : *Umiashankar Thakur. Published by Gitamanjari Granthavali Karyyalay, Anand, Gujrat. Prices Re. 1 and Re. 1-4.*

A children's book, suitable for use as a school text also, but entirely on a novel plan: the letters of the alphabet are treated, by apt alliteration's artful aid, to the exquisite delight of the reader, and woven into a Pauranic story—thus combining story interest, Pauranic grounding, humour and enriched vocabulary in a strange assemblage of words, etc.

The sketches are well done and the printing good.

The novel attempt is well worth examination by educational experts.

RAGHUVAMSA : *Nagardas A. Pandya, B.A. Badval. 1937. Price Rs. 2.*

The nineteen cantos of Kalidas's immortal *Kavya* have been rendered into Gujrati verse; the translator has tried to be faithful not only to the spirit and language of the great poet but also to his metrical scheme—different towards the end from the prevailing metre of the particular canto. Word-notes are given in explanatory hints at the foot of each page as occasion arises, and in the introduction Pandit Durgashankar Kevalram Shastri tries to fix up Kalidasa's date—that debatable question in which scholars delight.

P. R. SEN

MARATHI

KASHI-RAMESHWAR YATRA : *Printed and published by Govind Chimnaje Bhat. Pages 200. Price Rs. 1-8. Profusely illustrated.*

This well-printed book is the sixth publications of the Principal Bhat's travel-series. Though originally meant to serve as a rapid reading text for the school-boys, the book does not lack literary merit. In its flowing style, fringed with light touches of humour, the narration all over has skilfully avoided the bore, which is so common with such travel-tales. Immense historical information about this well-known old route from Rameshwar to Benares comprising a variety of descriptions ranging from

the ancient temples at Madura and the nature's bounties on the Nilgiris, to the Buddha at Gomateshwar and marble rocks of Bhedaghat, has been given in a wayman's way. Leaving such defects as the out-of-place quotative repetition of the Queen's Proclamation in the chapter on Allahabad, the book has indeed added to Marathi travel literature and can be safely ranked along with the already famous travel-books of Kale and Kelkar Tikekar and Kalelkar, etc.

VIMYACHA SANDESH : *By Manubhai Gopaljee Desai, Gujrath Vidyapeeth. Published by the Author. Pages 67. Price six annas.*

This booklet named 'The Message of Insurance' was originally written in Gujrati, and it was warmly received in Gujerat. And passing through two editions in the original, it has now appeared in a translated form in Marathi. It contains a general information about the economic principles underlying Insurance and the progress of insurance activities in India, as compared with other Nations. Rules guiding insurance agents and persons getting insured, Gandhiji's 'aparigrah' and insurance, insurance and woman's rights are some of the instructive chapters. Surely, the booklet shall be very useful to those non-English knowing hundreds who become insured without surety.

JAPANCHYA PRAVASHACHEE SHIDORI : *By V. R. Velankar. Publishers Shree Gajanan Mills, Sangli. Pages 193. With several photographs.*

Being intended to serve as a guide for persons desirous of visiting Japan, the first half of the book is devoted to primary information regarding Japanese language and grammar, with an elaborate Japanese-Marathi Dictionary of words of every-day use. This part of the book is indeed very helpful, though such a book in Marathi was already available named 'Japanese Bhasha' by S. V. Paranjape. The latter half contains all through a businessman's superficial point of view in touring over Japan, giving some interesting details of the customs and formalities of the Japanese people. One chapter wholly unnecessary in such a book like this, sermonizes the Indian youths with the oft-repeated advice that they should take more interest in industries, ignoring all other limitations.

P. B. MACHWE

KEY TO ILLUSTRATIONS

The Celestial Hair-dresser

"On the left sits Buddha in the act of removing his three-pronged tiara. In the centre, the Heavenly Hair-dressers advances holding a razor in his hand; while the God Indra stands behind him with hands pressed together in sign of adoration. Chapter XVIII of the *Abhiniskramana Sutra* tells how Buddha, in preparation for the period of his austerities, lopped off his hair with a sword. The five little figures who kneel in the foreground must, I suppose, be the five Brahmans whom Buddha afterwards secured as his first five converts. The whole

scene, highly florid and sumptuous in the original versions of the story, is admirably simplified and secularised by the sober hand of the Chinese painter."—Waley, *Chinese Painting*.

Portrait of Kublai Khan

Kublai Khan (1214-1294 A.D.) was a great patron of the Confucian Temple and he restored the Temple in 1278. The picture is now in the collection of the Confucian Temple at Confucius's birthplace, Chu-fou in Shantung.

COMMENT AND CRITICISM

Fusing of Different Linguistic Groups

Dear Sir,

In the April issue of *The Modern Review* in the Notes columns, on page 493, you write, "Gujaratis dwelling in Maharashtra have not become fused with the Maharashtrians, nor the latter living in Gujarat with the former".

But in reality the case is not so. In Karachi there are hundreds of Gujarati-speaking families, but the names of castes of a part of them is Bhopatkar, Kirtikar, etc. They are not few in number, there are thousands of such people. Such names of castes are not found in *real* Gujaratis. When you ask these people about their history, they tell that their forefathers belonged to Maharashtra. But now they do not speak Marathi. To them Marathi language is as foreign as it is to me or to you. They marry their sons and daughters with the Gujaratis, and are completely mixed with Gujaratis. One of them, Dr. Popat Lal Bhopatkar, was elected to Sind Legislative Assembly on Congress ticket in the last general election.

Similarly there are about 800 families in Sind, who speak Sindhi and live like Sindhi Hindus. But their castes are like Punjabis. They also marry their sons and daughters with Sindhis. They can't speak Punjabi at all. Many of them have much reputation in Sindhi society. One of them also was elected to Sind Legislative Assembly on Congress ticket from Sukkur.

There are thousands of Punjabis living in U. P. from last hundreds of years. They also can't speak Punjabi, and speak and live like United Provincians. They have completely mixed themselves with the people living in that province.

The examples are not finished yet. There are two or three hundred Sindhi families living in Multan and adjoining districts from unknown period. They speak Multani, and have relations with Multanis.

Last of all I come to myself. I am told by my Kulprohith (family priest) that about five hundred years before our forefathers were residing in the Multan district and districts adjoining Multan. Today I can speak and understand English, Hindi and Gujarati. Punjabi we have adopted as our mother-tongue. But we can't even understand Multani.

Many more such examples can also be found if research be made.

I am not of the idea that Bengalis should also mix with Biharis or Assamese, and speak Maithili or Assamese, or any other such thing. What I want to say only is that the lines above quoted and possibly written by you, are not correct. Because generally whenever people speaking one language went to other places and settled there permanently, they cut all their connections, or, say, were forced to cut the connections, with their former language and society, and adopted the language and culture of the people among whom or the places where they settled.

An admirer of yours

I am Sir,

Sadu Jiwal Lal Bhardwaj,
Prop., Punjabi Chandu Halwai,
Karachi.

Editor's Note

The observation quoted from our Notes by our correspondent was made with reference to recent times, when

travelling is comparatively cheap, easy and rapid, but not with reference to days past when travelling and migration were difficult.

We do not know whether the facts and figures given by our correspondent are quite correct. But there is nothing improbable about them. We know there are Brahman families in Jaipur (Rajputana) whose ancestors migrated from Bengal centuries ago. But at present they do not speak Bengali or dress or live like Bengalis or intermarry with Bengali Brahmans of Bengal. We do not know whether they intermarry with any indigenous Brahman families of Jaipur. Similarly the Kashmiri pandits of U. P. speak Hindusthani, not Kashmiri, but they do not generally intermarry with other U. P. Brahmans. There are numerous Bengalis in Bihar proper whose ancestors migrated from Bengal some centuries ago. They bear Bengali names. We have read, many of them do not speak Bengali, but personally we do not know. Perhaps they do not intermarry with Biharis of their own castes. In Bengal there are numerous Kanaujia and Bhumihar Brahmans, and Rajputs, whose ancestors settled in Bengal long ago. They all speak Bengali as their mother-tongue and dress like Bengalis, but they do not intermarry with indigenous Bengalis. In Orissa there are Bengalis who cannot speak ordinary correct Bengali. They are known as 'Kera' Bengalis. Their ancestors settled in Orissa long ago. Some Maharastrian families—e.g., that of the late distinguished Bengali journalist Sakham Ganesh Deuskar, came to Bengal long ago and adopted Bengali as their mother-tongue.

We do not know any considerable number of recent emigrant families in any province who have given up their mother-tongue and adopted that of the region where they have settled and who intermarry with the local indigenous population.

Mr. J. B. Kripalani on Two Indian Movements

My attention has been drawn to the comments made in the Notes of *The Modern Review* of May last, on two passages occurring in my book *The Gandhian Way*. The passages in question are quoted from *Navavidhan*, which paper seems to have criticised them. The Editor of *The Modern Review* writes, he has not seen my book. He has, therefore, not seen the passages in their context. Evidently he did not think this necessary before indulging in adverse criticism.

In the first passage my sin has been to style the third rate copy of western civilization produced in India among a section of the educated after the advent of British rule as 'bastard'. I have further said that this civilization "like the mule it looked strong and serviceable but not creative". *The Modern Review* writes, "we are not inclined to comment on this coarse, if not vulgar, passage". I am sorry that even after being pointed out by the Editor I am unable to see the coarseness if not vulgarity of calling an unassimilated caricature copy of a foreign culture as bastard and mulish and uncreative. Evidently the learned Editor considers the use of these words in any context as vulgar. He will perhaps find their mention in a dictionary equally objectionable. The Editors of *The Modern Review* and *Navavidhan* are shockingly surprised that "Mahatma Gandhi has done the author (myself) the honour to write a foreword to his book". It has occurred to the editors that perhaps the words 'bastard' and 'mule'

used in that particular context may not have struck Mahatma Gandhi as coarse and vulgar and he saw no objection to writing the foreword.

The passages in question occur in a speech which I delivered in the year 1931 at a Students' Conference at Calcutta. The speech was widely quoted in Calcutta papers then. It was reproduced in the columns of *Young India* from where my publishers have taken it. After seven years the Editor of *The Modern Review* has discovered the vulgarity of the passages. It is a fruitful activity. I am but a poor scribbler but if the Editor runs through history, plenty of material of this sort will be found for his facile pen. He will find enough material of this sort in the religious books of the east and the west. He will find it in the literature of the world, ancient and modern; in Kalidas and Shakespeare and in such modern masters as H. G. Wells and Bernard Shaw, not to speak of others. "Vulgarity and Coarseness" in language seems to be common enough if the standard is set by the editors of *The Modern Review* and *Navavidhan*.

Further it is stated in *The Modern Review* that *Navavidhan* feels that the above passage has reference to the Brahmo Samaj. Some Sectarrians so work themselves up that they think that their particular denomination is being ever run down. They then become supersensitive and take offence where none is meant. In the passage quoted above as is clear I have not alluded to the Brahmo Samaj but to the type of culture that was introduced in India among a section of the educated after the advent of the British. I may here say that I am not even original in my criticism. Similar criticism will be found in Bengali authors of note, Shri Rabindra Nath Tagore, D. L. Roy and Bankim Chatterjee and others.

I have talked of the Brahmo Samaj in a different context and fortunately the passage in which I have done so is also quoted by the two journals. My thesis was that only such movements that kept to the Indian genius have been powerful and creative. Talking of the modern religious movements I have taken the examples of the Brahmo Samaj and the Ramkrishna movement. The latter I consider more clearly indigenous than the former. Every religious movement is of course influenced by what goes on, the world over, at the time. But some movements are more purely of native origin than others. About the Brahmo Samaj I have said: "It could not create a movement India-wide or permeate the masses or draw the busy world's attention to itself." "This", I have said, "was done by purely Indian movement, I mean the movement drawing its inspiration from Shri Ramkrishna and unfolded by the genius of Vivekananda". What I have given is a critical study of the two movements. I have meant no disrespect to the Brahmo Samaj. I count many Brahmos as my dear friends. I have great regard for the Brahmo Samaj, its founders and its achievements. It is quite possible that my Brahmo friends and other members of the Samaj may not agree with me in the critical estimate that I have made of the two religious movements, the product of the genius of modern Bengal. I am at the same time certain that the followers of Ramkrishna will find mine a true estimate. However that may be, I fail to understand how my estimate is falsified by quoting to me the high esteem in which Vivekananda held Rammohun Roy and his debt of gratitude to the latter. Vivekananda has recognized his obligation to western science and literature. Does it, therefore, follow that Vivekananda's movement was inspired by the west or that western thought was superior to his? Anyway, I have no quarrel with those who hold that the Brahmo Samaj was a more purely Indian movement than the Ramkrishna-Vivekananda movement, or that the former penetrated more into the masses. My criticism is objective

and I leave it to the students of modern religious history to judge between me and the learned editors of *The Modern Review* and the *Navavidhan*.

Again I am reminded that the Congress took up the work of untouchability at the suggestion of Mr. V. R. Shinde. As if I am concerned to prove the priority of conception of Gandhiji or the Congress in any field. In the same speech if the editor of *The Modern Review* will care to consult my book, which by the way may be in his collection of books for review, he will find that I have not credited Gandhiji with any such priority. I have said, "some will doubtless say that these ideas were there even before Gandhiji. Some items were in the old programme of the Bengal and Poona nationalists. I am not here concerned to establish the priority of Gandhiji in the field of discovery. My point is proved if I can show that he has brought them more forcibly before the public and has in every case seen to it that some organised constructive work is done".

I am sorry that objective critical estimates have been given a sectarian tinge and passages have been torn out of their context and meanings put into them which I never imagined. I am sure no unbiased reader of the speech "The Two Revolutions" will put on it the interpretation put by the two learned editors.

J. B. KRIPALANI

Editor's Note

In criticizing a sentence or a passage, extracted from a book, the ideal to be followed is certainly to do so with reference to the context. But this is not always practicable. In the case of Mr. J. B. Kripalani's *The Gandhian Way*, I got to know that it had come to my office for review, only after my note on the two passages extracted from it had been printed. It has been given to one of our reviewers for review.

It is to be understood that in what follows I write only for myself. The editor of *Navavidhan* is not responsible for my comments. Nor was he responsible for what I wrote in the May number.

I am sorry, what Mr. Kripalani has written has not convinced me that the passage relating to the "bastard", the "mule", etc., is not coarse or, possibly, vulgar.

Mr. Kripalani observes: "Evidently the learned editor (of *The Modern Review*) considers the use of these words in any context as vulgar." I am not learned. What is "evident" to him is not evident to me even after his attempt to open my eyes. Mr. Kripalani is wrong here. I am not so foolish as to consider the use of these words vulgar in any context.

Mr. Kripalani continues: "He will perhaps find their mention in a dictionary equally objectionable". No, Mr. Kripalani is wrong here, too. I have sense enough not to "find their mention in a dictionary" "objectionable" in the least.

There are many words in dictionaries which may be and are used quite properly in legal and medical or other scientific works, but which may not be used with similar propriety in many other kinds of writing. One may be sure, Acharya Kripalani knows this.

"Bastard", when applied to men, or often when used with reference to things human, is an opprobrious epithet. It is calculated or likely to give offence to those with reference to whom or whose notions, talk or doings it is used.

I do not like to repeat Mr. Kripalani's unsavoury sentences containing the word, but I must say the creative process described by him with such objectivity is unknown and incomprehensible to me.

I was not at all shocked that Mahatma Gandhi had written the foreword to Mr. Kripalani's book. My view,

is that, as Mahatma Gandhi, being an apostle of *ahimsa*, does not and will not use offensive material weapons and verbal weapons (i.e., offensive and abusive words)—that is my idea of the Mahatma, so his disciples, too, are expected to refrain from using such material and verbal weapons. As Mr. Kripalani is such a person, he is expected to be 'non-violent' in the use of words. I was not and am not concerned to speculate what might or might not have struck Gandhiji as coarse or vulgar.

Is there no word in the English language to mean the product of the mixture of different cultures, breeds, etc., without any implication of moral reproach? One may be sure, the Acharya knows there is. He could have used some such word instead of 'bastard.'

Mr. Kripalani says the passage occurs in a speech delivered seven years ago in Calcutta, which was widely quoted, and that "After seven years the Editor of *The Modern Review* has discovered the vulgarity of the passage. It is a fruitful activity". As I have not yet had the advantage of reading a single speech of Mr. Kripalani's through or more than a few sentences of some speech or other, if any, it comes as a great revelation to me that I had been perhaps engaged during the last seven years in the fruitful activity of discovering the vulgarity of a single passage in a single speech of his.

Any amount of coarseness and vulgarity in the ancient and modern religious and secular literatures of the East and the West will not make them desirable literary commodities used indiscriminately in other contexts.

Mr. Kripalani says that in the passage quoted he did not refer to the Brahmo Samaj. So far as I am concerned, in this matter, I accept his word as final. But it was not I who said that he had referred to the Brahmo Samaj. If the Editor of *Navavidhan*, who did so, thinks he ought to say something on the subject, perhaps he will do so.

Mr. Kripalani says, "In the passage quoted above", he has alluded to "the type of culture that was introduced in India among a section of the educated after the advent of the British." This is rather vague. Unless the section is definitely named and described, there cannot be any fruitful discussion of Mr. Kripalani's observations. Some may think this section was meant, some that. But as the section or its culture has been thought worthy of castigation by him, it is perhaps not nondescript; it ought to be possible to name it and some of its noted representatives.

Says Mr. Kripalani:

"My thesis was that only such movements that kept to the Indian genius have been powerful and creative. Talking of the modern religious movements I have taken the examples of the Brahmo Samaj and the Ramakrishna movement. The latter I consider more clearly indigenous than the former." "About the Brahmo Samaj I have said: 'It could not create a movement India-wide, or permeate the masses, or draw the busy world's attention to itself.' This, I have said, 'was done by purely Indian movement, I mean the movement drawing its inspiration from Shri Ramakrishna and unfolded by the genius of Vivekananda'."

I have no desire to minimise the achievement of the Ramakrishna Mission or to criticize it in any adverse spirit, or to institute a comparison between the Brahmo Samaj movement and the Ramakrishna Mission.

Mr. Kripalani's thesis is that "only such movements that kept to the Indian genius have been powerful and creative". In two different sentences he describes the Ramakrishna Mission as "more clearly indigenous", and as "purely Indian movement", and implies that, therefore, it has created "a movement India-wide", "permeated the masses", and "drawn the busy world's attention to it". Of course, no movement in India is *literally* India-wide or

has *literally* permeated the masses. In spite of their entirely non-indigenous origin the Christian missions are perhaps more 'India-wide', in a relative sense, than any Indian movement. So the extent and spread of a movement may not be due solely or mainly to its Indian or non-Indian origin and character.

From what Mr. Kripalani says, it seems he thinks the Brahmo movement has not been powerful and creative. That it is not powerful now is plain. *But in the spheres of literature, science, philosophy, art, industries, education, and spiritual productions such as hymns, men and women who are known as Brahmos have been creative—some of them among the most creative among Indians.* Is Mr. Kripalani ignorant of their names? It would be considered officious on my part to try to ascertain the position of the Ramakrishna movement in these fields of creative activity. Mr. Kripalani may do so, if he likes.

In the thoroughly anglicized Indian Christian community of earlier years, Michael Madhusudan Dutt was Bengal's greatest epic poet and one of the greatest of Bengali lyric poets, and Miss Toru Dutt, Bengal's greatest Bengali poetess in English.

Even among Eurasians there has been at least one man of genius, Derozio, if not more.

I do not know which other *section* or *sections* of people Mr. Kripalani had in view when he used the words "unlucky" and "uncreative."

I quoted Vivekananda's tribute to Rammohun only to show that the former, whom Mr. Kripalani considers the unfolders of a "purely Indian movement", "claimed himself to have taken up the task that the breadth and foresight of Rammohun Roy had mapped out". That is to say, the unfolders of the "purely Indian movement", took up the task mapped out by the originator of what Mr. Kripalani thinks the *not* purely, or *not so* purely, Indian movement.

I have never said that western thought was superior to Vivekananda's or that Vivekananda's movement was inspired by the West. Nor do I hold or have said that "the Brahmo Samaj was a more purely Indian movement than the Ramakrishna-Vivekananda movement, or that the former penetrated more into the masses." Why does Mr. Kripalani attribute to me by implication opinions which I have not expressed and do not hold? There are controversialists who ascribe to their opponents easily refutable views which the latter do not really hold, in order to have the satisfaction of smashing them. Acharya Kripalani is not expected to be one of such persons.

I hold that the Brahmo Samaj has worked and still works for the masses and is in contact with them—though it may be to a very small extent. Any comparison with other religious bodies was remote from my thought.

I mentioned what Mr. V. R. Shinde has done, not to establish the priority of conception of the Brahmo Samaj in any field of work, nor to minimise Mahatma Gandhi's very great work for the depressed classes. I want simply to point out that the Brahmo Samaj has thought for the masses, worked for the masses and continues to do so, though its achievement has not been imposing. It beside my present purpose to inquire why the Brahmo Samaj has not achieved greater success.

Mr. Kripalani complains that I have put wrong interpretations on some passages in his speech. In this rather long note I have tried to explain what exactly I meant and mean.

A few words more in conclusion. Mr. Kripalani has used expressions like "purely Indian movement", etc. As he has cited the names of Rabindranath Tagore, Banki Chandra Chatterjee, etc., in connection with his or adverse remarks on a certain unnamed movement of certain nameless section of Indians, which he has given a bad name, with reference to whom those great intellects

never used abusive words like bastard, mulish, etc. It may, therefore, be interesting to state here, that in his essay on "East and West," pp. 213-215, *Samaj* (new edition), Tagore says :

"The greatest thinkers in our country in modern times have spent their lives in bringing about the union of the West with the East." (Translation.)

And then he proceeds to describe what Rammohun Roy, M. G. Ranade, Swami Vivekananda and Bankim Chandra Chatterjee did with that object in view. Of Vivekananda he writes :

"...Vivekananda also was able to stand in the middle keeping the East and the West to his right and his left. To keep India permanently contracted within the narrow

Indian culture and tradition, denying the West in the history of India, is not the lesson of his life. He had the genius to receive, to unite and to create. He dedicated his life to the making of a path for giving India's *sadhana* to the West and accepting the *sadhana* of the West for India."

Of Vivekananda's Master, Ramakrishna, too, it has been said that in his *sadhana* he combined by his spiritual chemistry the non-Indian Islamic and Christian *sadhanas*.

Rabindranath Tagore writes in the introduction to his very recently published Anthology of Bengali Poets that modern Bengali poetry and fiction owe their origin to the inspiration derived from European literature. So that kind of creative activity also is not purely Indian.

WORLD AFFAIRS

INDIA'S "CHINA DAY"

ON hundreds of Indian platforms on the 12th of June last, Indians assembled to express their deep sympathy for the Chinese in their fight against Japan and thus celebrated the "China Day" as directed by the Indian National Congress. These demonstrations, as we noted formerly, signify but the interest which India in common with other lands, is forced to take, and willingly take, in the world affairs today. More and more we realise that our fate is somehow linked with that of others, and, more and more we are, though a subject people, making it plain to others that the Indian people have a right to have their say, on the big things that are shaping the world. May be our voice is ineffective—is not the voice of many mighty people today as much impotent?—but the great and significant fact is that we are discovering our voice.

China particularly has a bearing on our future political development as we all can easily understand. For India, apart from all other considerations, China is both a lesson to read and a warning to mind. She bears a close parallel to India in many respects—in bulk, in population, in the inheritance of an ancient civilization not altogether different, and in the possession of a social organisation with the family as the unit. Both share an ardent desire to adopt their life to modern times, and both lamentably betray a lack in the capacity for organisation and technique which dooms every attempts of theirs to failure and frustration. Hence, India in her unconscious mind dimly perceives the closeness of the parallel, and, in conscious life is stirred by the tragedy of China.

Just about the time the tragedy for the

Chinese is not any way relieved. Canton on the south is witnessing daily bombing; and is preparing against a serious Japanese invasion. In the centre, Japanese army after the fall of Suchow and the virtual occupation of the main railway systems of China were pushing further west. It threatens Hankow now. It was supposed that the Japanese would stop at Suchow to consolidate and gather together their long and strained line of communication. As masters of the vast territories they would weld together North China, Manchukuo, Jehol and the new conquests of East Central and maritime provinces. Contrary to all suppositions, Japanese warships steamed up the Yangtze with a warning to foreign powers to keep clear of the area against any untoward incidents that might occur as a result of engagements with enemies, and Japanese army swept on, penetrated further and further east along the Yellow River. "Who has the Yellow River", a Chinese proverb is said to state, "has the whole of China". Was this old saying and the truism that it embodies, the cause for Japanese advance? Perhaps the Japanese people at home, living on doled out official news of war and victories, wondered too long why the war did not end and at last questioned why the worthless Chinese opposition was not yet blotted out. A quick answer to that was planned. It was echoed through the bombing operations on non-combatants in Canton. It was to be broadcast by a loud and resounding victory along the rivers in the very heart of China. For once, however, Japan has been robbed of this happiness by the Chinese river god. Hankow may be saved for some time by the Yangtze. Whoever again

be responsible for the breach of the dykes, the Yellow River burst forth, and a long wall of water marched on the Japanese forces which had to beat a retreat. Japan had for the time being to tell the world the story of its noble 'relief works' in that area while, along with it, the world read of the bombing of the Cantonese Red Cross workers by Japan.

CHINESE PREPARATIONS FOR A PROLONGED STRUGGLE

Thus the war drags on in the front. In the rear the Chinese Government are meanwhile trying to organise themselves for a more protracted struggle. If time is on their side, they realize time is not to be lost in the front alone; it has to be utilized behind the lines in planning for a long war, for a regular supply of men, money and munition. The people's life has to be placed and settled on a war basis. The measures devised by the Chinese Government for that end have been described in a recent issue of the *Hindusthan Standard*, by a Chinese, Mr. C. Kungson Young, late director and editor of the China Press, Shanghai, and we recount them briefly here:

First, China's human power is inexhaustible. Japan has roused it to an unprecedented temper of sacrifice; even, women, it is known, vie with men in joining colours, and in doing their allotted duties otherwise. It only needs direction and organisation. Millions of Chinese are therefore being trained for the front, modelled on "Chiang's Own"—the well-known army of the Generalissimo that had modern training under foreigners. Mobile units are growing out of the militia too to continue the guerilla war in which the 'Red' units are so experienced.

But China's real difficulty is in arms and munition. From outside has flown in inadequate purchases. But except from Russia, as Dr. Wellington Koo pointed out in the League Council on May 10, China had no considerable help from any other power. The recent Sino-Soviet understanding places China on a better footing in this respect. But transport is bound to take up long weeks even though the attempts to shorten it by making new roads succeed. China, therefore, must organise her own arsenals. From Hankow the big Hanyang Arsenal and Hanyang Iron and Steel Works have been removed to a distant interior, machineries have been installed for the assembling of field guns and tanks, and plans completed for the manufacture of heavy field guns and tanks of their own. An airplane factory is about to come into existence.

'War Cabinet' also for the exigencies has

produced compactness and efficiency with Chiang as commander-in-chief; H. H. Kung as premier of the War Cabinet; Dr. Wang-Ching-Hsi; Oong Wen Hao, Chang Chia-guna, and Chen Li-fu forming the nucleus of this War Cabinet.

By far the most formidable need, however, is the economic and financial stability of the state. Here, Kung's currency reforms of 1935 are standing now in good stead; foreign exchange regulations have now been promulgated, and subscriptions are pouring in from the Chinese outside. "Kung has announced the floating of a war loan of 500,000,000 dollars Chinese currency *plus* an approximately equal amount in Customs Gold Unit and foreign currency.' These financial measures are of high importance. If these fail, Chinese collapse is bound to follow. The *Foreign Policy Report* of the U.S.A. (April 15) on 'China's Financial Progress' enumerates the measures and concludes: "For the near future, at least, there seems no reason to believe that China's military resistance will collapse for lack of financial resources."

The economic programme of the Chinese Government, outlined below, is to supply the basis for this Chinese resistance:

(1) Development of the nation's industries in the interior provinces to meet war time needs.

(2) Increase of exports to maintain, the present currency stability.

(3) Exhaustive study of China's natural resources, agricultural, industrial and transport conditions in the interior provinces of Szechuan, Kweichow, Yunnan, Kuangsi, Hunan and Shensi.

(4) Establishment of textile factories, paper mills and modern sugar refineries in the Province of Szechuan.

(5) Establishment of factories for the manufacture of radio, telephone and telegraph equipment.

(6) Erection of factories for the repair of locomotives.

(7) Extension of railway system into the present inaccessible districts in the interior.

(8) Construction of railway to link the provinces of Yunnan, Kweichow and Kuangsi.

The exhaustiveness of the above programme is beyond doubt. Its fulfilment would certainly mean a war in which China will hold its own and emerge out of it a modernised state, nay, a world power, like the Soviet Russia. But the very immensity of the task and the Chinese failure at organising themselves as evident from their history of the past few decades raise doubts as to the possibility of the programme being fulfilled in practice. The very expanse of the territories that stretches out from the Yangtze valley, now under Japanese occupation, and the undeveloped condition of it, would appear as a herculean task for even the skill and efficiency of a first class modern power. For a people like the Chinese, lacking like ourselves the training

in the technique of the organisation of the vast and complex modern bodies of war and war equipments, the problem becomes almost baffling. Yet, China has hopes. Chungkian, the temporary capital of China, is about a thousand miles from the war front, and, however quick and sweeping may be the Japanese victories, it is bound to take a long time for the army to traverse this vast and undeveloped land. "It is this immensity in territory, this immensity in human power, fortified, so to speak, with a united determination to resist conquest, that justify at least a cautious optimism in China's ultimate victory."

CHINA TO BE DOPED AND DESTROYED?

Still one has to remember the warning of Mr. Vernon Bertlett, recently returned from a tour in the Far East, that 'China may lose the war, even if Japan does not win it'. War has destroyed much of Chinese wealth and prosperity; Canton has seen the mad orgy which it will not be easy for it to forget; but a more malignant and more fiendish measure is already being devised by Japan to work the doom of the Chinese. This has taken two forms: first the legalisation of the opium traffic in North China as in Manchukuo; and second, the ousting of Chinese-owned and foreign-owned cotton mills in the areas Japan controls by military-backed enterprises of Japanese adventurers, as recently described in the *Manchester Guardian*. This last is but sops from Japanese militarists for the Japanese business interests, which are not very enthusiastic on this military adventures of the over-bearing soldiers. This also signifies an attack on the foreign interests. But it is the natural fate of the foreign enterprises, the governments of which, though they never put any faith in the Japanese promises of maintaining their interests untouched, suffered China to be beaten rather than face Japan to resist in a joint encounter. The plight of the Manchurian foreign interests was there for them to read. The 'Open Door' in North China was banged before their very eyes. Whatever promise or understanding the British diplomats might have secured on the status of the Shanghai Maritime Customs, they knew that Shanghai's

"open-door was being closed tighter by the widespread smuggling activities of the Japanese, the admittance of Nipponese goods duty free in occupied areas, and the host of nonsensical restrictions on trade imposed on shippers and consignees in Hangkow and Yangtzpoo districts.

So, 'Japan removes', as *The China Weekly Review* called, 'the open door's welcome Mat'.

Opium, it was noted by *The China Weekly Review* in April last, was appearing in Shanghai market in considerable quantities after the city fell. It is not legalised there as in North China, but enters the area from various sources. The Japanese army in Nanking was found selling opium to the public through its 'special service departments', somewhat resembling army canteens. The Imperial Japanese Army was thus proved to be in the narcotic business. "The objectives are two-fold: Revenue and the doping of population—Japanese military method of pacifying subject peoples."

For China, freed or enslaved, legalisation or revival by Japanese encouragement of smuggling of the opium traffic in the occupied territories is bound to spell a disaster. It is nothing short of condemnation of a people to a moral death by a process of moral slow poisoning.

JAPANESE POSITION

While in the front line Japan is winning, she is behind time too. The time-lag is not without effect, moral and economic. The Japanese Finance Ministry has just announced the budget for the year 1938-39. It provides for a revenue of £372 millions and expenditure of £358 millions—a decrease of £20 millions in revenue and an increase of £17 millions in expenditure compared with 1937-38. The figures of course do not include the extraordinary military budget of £283 millions. War is a costly affair. The "China incident", not a 'war' although according to the Japanese, is proving so to them even as an 'incident'. The former Japanese Foreign Minister, Koki Hirota, had admitted this on May 7 last:

"In the present circumstances, Japan must be ready to make enormous sacrifices in human lives as well as in financial resources. It is not possible to envisage the future with optimism if we consider the turn international situation is taking in respect to Sino-Japanese conflict."

Already the economic pressure had been severe on his people. The "Agence Telegraphique", R. U. P. reports thus that, as regards U. S. A., December arrivals from Japan were down by 28 p.c. compared with 12 months previously; January arrivals down 35 p.c.; February arrivals down 52 p.c. This is, the *Nichi Nichi* reports, due "to an intense business depression there and to America's feeling against Japan in connexion with China incident".

Japanese trade, as disclosed, has sunk slowly. According to *The Times* Tokio correspondent it records a setback to the level of four years ago. "Exports for the first three months of 1938 amounted to only 569,700,000 yen,

against 701,000,000 in the corresponding period of 1937... imports for the same periods are down, from 1,007,000,000 yen (1937) to 624,100,000 (1938)." "Japan's weakness in War is that she cannot tighten her belt much"...so opines the correspondent—which, incidentally, may prove an untrue prognosis. But to quote on: "almost the whole of her normal overseas expenditure is for raw materials for manufacture and when these are reduced her income shrinks, and the heavy demands of munition factories, coming when her earning power is reduced, cause a lack of balance which is more dangerous than actual recession."

That Japan is worried to some extent is evident from the reshuffling of its Cabinet last month. General Ugaki's (the new Foreign Minister's) talk of traditional friendship with Britain is not without significance from this point of view. But there is always a weakness on the part of China's friends exaggerating these tendencies in Japan. It will not do to forget the temper and peculiarity of the Japanese people. They can stand many privations; they are fired into a more brutal fury as their time-table fails; their pride and ambition are inordinate. *The Times* Tokio correspondent for once, we believe, is right when he reminds the readers on the moral and economic effect of the War on the Japanese. "Both are cumulative. Neither is really important."

JAPANESE SOCIAL RIFT

Yet undoubtedly there is a danger lurking behind the apparent calm of the Socio-economic life of Japan. We need not repeat that this highly industrialised country has still enthroned an old and traditional autocracy, or rather a militarist oligarchy embodying the ideals of Bushido and Samurai chivalry with modern imperialistic expansionism. In the plan and pattern of political life the big capitalist plays today a minor role; the militarist has on his side the teeming population, the peasantry, which supplies the soldiers and has no love for the bourgeoisie and its profiteering politics on the parliamentary chess-board of Japan. War as an adventure is welcome to the militarist, and opens a promise to this populace hungering for lands to settle and cultivate and live and toil; but the adventure has to be paid for by the industrialists who has little share of the political power. Hence,

"the more we deplete the profits of Big Business by the boycott, and the clearer it becomes to them that there is no hope of British or American loans or credits the more inclined they will become to call a halt to aggression. If they waver, if the ruling class is divided

in its policy, the mass of the Japanese people who are without political rights or means to express their desire for peace, will be able to assert themselves and stop the war."

thus hopes the *News Chronicle* in completing its survey of the position and in analysing the conflict that rages beneath the surface between the Japanese militarist expansionists marching on to Fascism and the Japanese, big capital, afraid of the State control of their giant enterprises and taxation of their enormous gains that such Fascism is bound to enforce. The gulf is widening no doubt between the militarists with the peasantry behind them, and the industrialists with the vast modern enterprises of their own utilized to further the militarist objective now. The War drags on, the economic conditions deteriorate, the exports fall off, and a boycott abroad slowly makes its influence felt on Japanese business. Yet, the rulers are not blind to its implications. Is not their enterprise meant to assure the limitless expansion of the Japanese capital in China and clear the Chinese market of all opposition? Already, the foreign economic interests are being suppressed and weeded out and the field thrown open to Japanese interests. If they only look to it there, Japan can finance her War in China from the territories already under her occupation. That would mean a War without economic strain on Japan. If the Japanese plan to pay from their new Chinese investment for this War on the Chinese succeed, the Chinese hopes, built on a prolonged struggle, of course, will be shattered. But altogether investments take a long time to pay their way, longer still to pay a dividend adequate for a military adventure. What returns from Manchukuo or North China, Japanese capital is getting are still doubtful. Japanese big business cannot be, therefore, reconciled easily to a long War. As regards the Japanese proletariat, which might be expected to break away first from this anomalous social order, nothing is certain. Thousands are behind the prison bars, we are told; but the feudalistic structure of the Japanese Society is still strong. So, China should not count from that quarters in near future. It is a revolt of the bourgeoisie that may be expected.

CHINA AND THE U. S. A.

From India, China can in the very nature of things expect nothing more than sympathy. But nations in more fortunate position have also offered China no better help. America after the *Panay* incident went into silence with the compensation in the pocket, though the *Current History* (June) admits that "the Sino-Japanese

situations reveals the futile, impractical side of our latest adventure in prescribed neutrality." The 'Alternative American Policies' in this connection are examined in the *Foreign Affairs* (April-June) by Mr. Tyler Dennett, who thought that the U. S. A. had now before it in the Far East a broad choice between non-resistance and coercion—protestations, appeals, etc., and action, independent or associated. Secretary Cordell Hull—now busy in evolving a plan to stop bombing of the non-combatants in Spain and China—had in his mind the example of Manchukuo and other such chapters of international faithlessness when he wrote to Vice-President Garner in January last: "There is a broader and much more fundamental interest—which is the orderly process in international relationships to be maintained." For the present, we find, this fundamental interest is served by the protestations, by occasional expressions of broad liberal and democratic revulsion against aggression and terror, in devising plans for the Jewish exiles, or for stopping the air bombings. But the writer in the *Foreign Affairs* is of opinion that though the American people are not now prepared to support a War against Japan.

"Japan would make a mistake to count too heavily on the situation. Nearly three years were required to bring the United States into the World War. All that can be said for the moment is that both Japan and the United States are living dangerously, the one by a policy of ruthlessness, the other by indecision."

In a Naval War, weighing the possibilities it is thought, Japan would be immediately cut off from the use of all-American ports and from the Panama Canal, and if Britain joins the U. S. A., as she would most likely do, Singapore would bar the Japanese door to Europe. Besides, Japan even now is dependent on the U. S. A. for the supplies and later would do so for capital.

"In view of this, the present policy of the Japanese is to be explained only on the grounds that without warrant they have assumed that under no circumstances will the Americans fight. In this the Japanese are mistaken."

May be, but Japan is not mistaken in assuming that *under the present circumstances*, the U. S. A. or any western power will not fight in the East.

CHINA AND THE EUROPEAN POWERS

The U.S.A. have failed to put their economic house in order, and are facing moreover a "trade recession." European peoples are too much entangled in the web of the Spanish War and the Czechoslovakian crisis to think of any effective policy to help China. Britain, it may be presumed, would rather have a China, weak and

disorganised, than see Japan swallow it, and rise like a giant shadowing Australia and the Indian Empire. But, Britain cannot for the present make any move in the East, Soviet Russia alone has been taking a growing, though guarded, interest in the Chinese affairs. The recall of the valued German experts of the Chinese Army by Hitler threw probably Chiang Kai-shek more in the arms of the Soviet. A pact is said to have been concluded, and Chiang, the sworn enemy of the Communists, is to accept help again from the hands which he had bitten hard after the break with the Communists in 1927. It may be expected that Chiang will have the benefit of service now of the Soviet experts and technicians and propagandists who are masters in the art of organising resistance. Japan, of course, is too busy to go in direct for the Soviet enemy, and, it is really necessary for the Soviet too to knock out the eastern enemy at the Chinese gates before its ally, the Fuehrer, appears at Ukraine or right through Poland or Lithuania to the very door of Russia herself. Once Czechoslovakia is actually attacked Russia will have to fight for her own threatened life on the west; and, if Japan remains her old self at the moment, of course, with the Chinese opposition fully crushed, the Siberian Red Army may not prove equal to the task in the east. The Soviet will then be fighting on both fronts, east and west, and probably on some more; for, except for the international complications and jealousies, no power would desire to see the Soviet regime last and flourish even in Russia.

EUROPEAN CONFLICTS

Czecho-slovakia however has just secured the breathing space, thanks to the tact and vigour of her own statesmen, M. Benes and Hodza, and to the British diplomatic *demarche* on the situation in Berlin. The municipal elections passed off peacefully; the general elections are over as well. Father Hlávka's separatist Slovak movement is eclipsed, but a thumping majority for Henlein has been secured in Sudeten Germany. M. Hodza and Henlein's representatives are now discussing the terms of a permanent solution of the Sudeten Germany minority question. The situation is not so dark now as on May 20. It is to be seen how the two points of view are met and reconciled. The acceptance in toto of Henlein's conditions would, as we indicated, reduce Czecho-Slovakia into a weak and loose federation of minorities in which the German element, and, through them, the Nazis of Berlin, would predominate until such time as

the State of Masaryk goes into voluntary liquidation or is ordered to do so by the Führer. For the present the Führer is watching, but not idle, as we know. "Hitler will not need to go to war," Benes is said to have told a correspondent, (*Current History*, June, 1938), "if he can win without fighting". It is to be seen if Benes can prevent Hitler winning and maintain the existence of Czecho-Slovakia. It may fall fighting or go into pieces slowly. British diplomacy is having a role of 'pacification' to play here, with French diplomacy to give friendly advice to the Czechs.

Both Britain and France however are equally anxious over the fate of Spain too. Franco has won Castellon, but the Republicans have been strengthened in their fight by a new supply of men and munitions, and hence complete victory is eluding the grasp of the Spanish knight still. Meanwhile, to fulfil their pact with Mussolini, Britain in the League Council secured a permission of the recognition of the Abyssinian conquests of Italy. In the League Council *realpolitik* counted for more. Thus, Britain has anticipated Mussolini's promised withdrawal of troops from Spain. But, contrary to Mussolini's expectations, Franco is not yet the master there, and, Mussolini, it is said, is really anxious to find out a way to honour his Anglo-Italian Pact. The Non-intervention Commission is now earnestly coming to his rescue with a more acceptable and effective (?) proposal for withdrawal of all aliens. This will leave Franco to complete his victories, and, so Mussolini can agree to this, and save his 'honour' and his diplomatic secret investments too.

Britain is engaged at the same time in arranging for a truce between the two Spanish parties while Non-intervention is about to be put into practice, according to Mr. Butler. The peace 'feelers' are certainly not welcome to Italy; but in this matter it is Britain's primary interest not to see Spain fall either into the hands of the Republicans and their Red supporters or pass completely under the sway of Franco, and the Anglo-German Fascists who virtually are Franco's masters. She would rather have a

Spain divided between the two, each guarding the other, and the Gibraltar way of Britain menaced by none—that is just what Il Duce cannot allow. The Republicans in desperation are just now thinking of bombing reprisals in Italy, this, Italy quickly warned, would not be met by protestations, but swift and quick gunning and war. Are we then approaching this last act in the last days of June?

The Spanish tragedy any way is drawing to an end. It has let loose, however, horrors which other powers would not fail to repeat when necessary. The Japanese are never reported for fine sentiments; so, in Canton they outstripped the Spanish Insurgents' exploits in Valencia, Catalonia and Madrid. Usual protestations were dismissed by the Japanese in unusual and unceremonious diplomatic language. But 'the better conscience' of the world, we may be assured, has been roused. For, are not the British people stricken with horror at the inhumanity of bombing the non-combatants? Mr. Chamberlain even is of opinion that even as a method of demoralizing the enemy resistance it is ultimately of doubtful value. Of course, Mr. C. F. Andrews had long ago protested against the same method when applied to Indian frontier men. Mr. Chamberlain, however, can defend that still, because Britain always warns the enemy beforehand. The Chinese and Spaniards too, he may be reminded, had such warnings after the first occasion of bombing at any rate. And, the Britisher forgets that in the League it was he who stood against abolition of air bombing. Others simply now follow his Indian example, for long unrivalled in the world.

China and Spain, we hope, remember this British Indian chapter now, and, the Spanish intellectuals affirming their solidarity with the Chinese people, or, for that matter, the Chinese people for whom we observe "the China Day", will realize, as they remember this, that "the struggle is one", to quote the manifesto of the intellectuals, and that "the universal civilization is at stake" in China, in Spain and in India too.

G. H.

INDIAN PERIODICALS

The Congress in Office

Founded in 1885, the Indian National Congress has passed through the various stages of infancy, adolescence and a vigorous manhood. Writes Nagendranath Gupta in *The Hindustan Review*:

The Congress spoke fearlessly of freedom, it accepted without hesitation the challenge thrown out by the Government, it submitted without complaint to lathi blows, but it never thought of accepting office under the present regime. And yet the unexpected has come to pass. The Congress is well astride the saddle of office and its seat is becoming firmer every day. The other day when the Ministers of Bihar and the United Provinces resigned it seemed as if the brief reign of the Congress was over and another period of a bitter struggle was about to set in. Happily, however, the united good sense of the Viceroy and the Governors themselves prevented the precipitations of such a catastrophe, and the Congress continues to remain in office.

By one of those ironies which cannot be explained but which upset our calculations there is no Congress Ministry in Bengal. The President of the first Congress was a Bengali and so is the present President, but the Congress is in a minority in that Province. Not only so, but the Cabinet there is a most unsatisfactory one and there is not one Minister who has the confidence of the people. It is quite on the cards that the Congress may come into power in Bengal and Assam may follow. But the Punjab and Sind will stay out though, all things considered, the non-Congress Governments in those Provinces are satisfactory.

There is a little breathing space and we may halt and look around us. For the nonce, at any rate, the weather is set fair. It is not for us to say when the barometer will show signs of a disturbance again. The Congress Governments have done good work and may do better. They have justified popular confidence. They have abated no jot of their independence and their goal remains unchanged. At any moment they will be prepared to exchange office for prison. What more do you want? Prohibition is assured and the people will become sober and wholesome. Let us criticise the Congress by all means but let us not expect the impossible from it. Let us wait and watch certainly, but let us hope also—hope that the path to liberty is clear and in a few decades India will be free—as free as Britain is today.

Our Heritage

India has bulked large in world thought; its literature, its art, its philosophy, its science, in a word, its culture and civilisation deserve the earnest study of mankind. Writes Hamid Raza in *Triveni*:

Indian civilisation possesses a considerable unity and contains the germs of expansion. It has a peculiar

unifying tendency which is manifest in different channels of life and thought. India had a clear understanding of the central unity in the midst of all diversity, and tried to ignore differences of values in different things, for otherwise life would be impossible. Thus Indian culture has given its heterogeneous elements a certain organic unity. All the foreign races—Aryans, Sakas, Kushans, the Huns—were assimilated by Indian civilisation and became, in a sense, its torch-bearers. All the mighty impulses that entered into India were synthesised on the same plan. All religions India welcomed, since she realised from the cloudy heights of contemplation that the spiritual landscape at the hill-top is the same, though the pathways from the valley are different. To us all she says, "Raise your eyes. Things in the valley separate us. Up yonder, high above us, we are all one. The variety of ways has meaning at the foot of the hill, but if we understand what they signify on the snowy summits, we shall know that all are reaching out for God." What wonder, then, that India, with her assimilative genius, may succeed in unifying the different creeds that have met on her soil! Her soul has always yearned for unity underlying the diversity of phenomena.

In conclusion, he says:

To sum up, India is immortal. Her great civilisation teaches us the lesson of simple living and high thinking. Her sciences, arts, literature, and philosophy have ever fascinated the imagination of mankind. Literature and art express India's visions of beauty and perfection. Philosophy and religion contain her most intimate realizations of inner experience. Indian civilisation is a product of centuries of co-operative effort of all those races which settled in India. It is a complex organism growing in richness and content, and the contribution made to it by the British people is an incalculable one. Every aspect of Indian cultural life and activity is as wide as life itself. Mrs. Sarojini Naidu has truly said: "Many nations had contributed to enrich Indian culture and life, and, therefore, they should prove to the world that Indian culture did not merely excel in metaphysical genius and in undying philosophy but that there was a dynamic force in it, namely, the gift of Islam, which had played an important part in their national life as well." We are living today in one of the creative periods of Indian civilisation. As it is active and dynamic, Indian civilisation has endured so long and proved so capable of adaptation to the growing complexity of life. India's living past affords a new vision of her cultural destiny. We should earnestly try to understand and appreciate Indian civilisation, and re-evaluate its traditions in the light of our modern scientific and industrial outlook. Its spiritual heritage has a vital meaning for the modern world. Amidst all her failures and foibles, she has not unbent. Her sense of the divine in man. But India has to envisage the *Zeitgeist* and to restate her cultural ideals with due regard to her philosophical traditions. Her philosophy then will have a new meaning for the modern world.

Dharma Rajya—Finance

Finance was as important in Ancient India as it is today in the West. Observes H. Krishna Rao in *The Aryan Path*:

Wealth is a necessary appendage of life, individual and public. Wealth and wealth alone, says Kautilya, is important inasmuch as character and desire depend upon wealth for their realisation. "All undertakings depend upon finance." But the acquisition of wealth should not be opposed to Righteousness.

The land tax, fines and forfeiture constitute the chief items of revenue. The other sources of income are taxes on merchants and artisans. The author of *Sukra Nitisara* recommends:—

- (1) Duties (Sulka) : 1/32 to 1/16 *ad valorem*.
 - (2) Land Revenue : $\frac{1}{4}$ to $\frac{1}{2}$ of the produce from places irrigated by tanks or rivers and 1/6 from rocky soils.
 - (3) Royalty from mines : $\frac{1}{2}$ of gold, 1/3 of silver, $\frac{1}{4}$ of copper, 1/6 of zinc and iron, $\frac{1}{2}$ of gems, after the expenses have been met.
 - (4) Revenue from the collectors of grasses and woods : 1/20th to 1/3.
 - (5) Revenue from tax on Livestock : 1/8 of the increase of goats, sheep, cows, buffaloes and horses.
 - (6) Tax on artisans : one day's work in a fortnight for the State. If the people undertake new industries, cultivate new lands, dig tanks or make canals for their good, the king should not demand anything of them until they have realised a profit equalling twice their expenditure.
 - (7) Tax on usurers : 1/32 of the interest collected.
- The following classification of taxes may interest the modern financier. Kautilya instructs the collector-general to collect revenue from:—
- (1) Durga (Fort) : tolls, fines, liquor, prostitutes, gambling, artisans.
 - (2) Rashtra (Country parts) : ferries, boats, pasture land and roads.
 - (3) Khani (Mines) : all minerals extracted.
 - (4) Setu (Bridges and gardens) : flowers, fruit and vegetable gardens and wet lands.
 - (5) Vana (Forests) : game and timber forests.
 - (6) Vrija (Herds of cattle) : cows, buffaloes, goats, sheep, asses, camels, horses.
 - (7) Vanikpatha (Public highways) : land and waterways.

The Problem of Nutrition in India

Dr. K. P. Basu concludes his informative article on the problem of nutrition in India in *Science and Culture* with the following remarks:

Before deciding on the policy of national agriculture, it is highly important that dietary surveys should be undertaken throughout India so that facts about actual consumption of different ingredients like proteins, carbohydrates, fats, etc., per head and the actual defect in nutrition may be definitely known.

Another urgent necessity is the establishment of laboratories in different parts of India for the study of and scientific research in human nutrition. The foodstuffs of India have got to be analysed, their protein, fat, carbohydrate, mineral and vitamin contents and the biological value of the proteins determined, and the effect of methods of preparation and cooking on their nutritive value investigated. The nutritive value of diets as actually consumed has also got to be determined. Basic researches in nutrition should be a prominent feature of these

laboratories. India is a vast country and the dietary habits of people in different parts are different. It is impossible for one central laboratory to deal with the different nutritional problems of the country.

The problem of nutrition in India is one which requires immediate attention. Compulsory primary education with a view to educate the mind of every individual is no doubt greatly to be desired, but the fact remains that millions of children in India are physically and hence mentally incapable of profiting by any education. The fundamental problem is to make them physically and mentally fit by ensuring an adequate nutrition for them. The State has a very great responsibility in this matter. Provincial Nutrition Advisory Boards, and a Central Nutritional Advisory Committee for all India including nutrition, agricultural, animal husbandry, educational, economic, medical and public health experts should be immediately set up. These Boards will direct diet and nutrition surveys, control and co-ordinate the work of the nutrition laboratories, define satisfactory diet standards which would be of practical use in the country, suggest supplements to correct the deficiencies in diet, advise regarding the dietary aspects of maternity and child-welfare work and control and undertake propaganda through trained workers.

The Indian Research Fund Association is doing valuable work in this direction but the scope of its work should be considerably enhanced.

Corporations, Municipalities, District and Union Boards and also Infant and Child Welfare Organizations can do very valuable work specially by organizing the supply of pure and fresh milk and by disseminating knowledge regarding correct nutrition, so that people in India should not only live but also enjoy the joy of living.

A Survey of Childhood Education in India

In presenting a brief survey of childhood education in India Dr. Satyananda Roy remarks in *The Indian Journal of Education*:

There is a flourishing Montessori School in Calcutta, sponsored by Lady Abala Bose. In recent months we have heard of the Nursery School started by Mrs. Minmoyee Ray. The Lady Hassan Suhrawardy Creche for working class children is an altogether new institution of its kind in Calcutta. The Sishu Sadan or Children Hospital in connection with the Chittaranjan Seva Sadan which is soon going to have a nursery school of its own and the Ramkrishna Sishumangal Pratisthan are institutions which have the interest of both the parents and their children at heart. The Mental Hygiene Association, the Marriage, Birth Control and Social Hygiene Leagues and the activities of the Women's Educational League—all are contributing to the solving of parent education problems in their own ways. I am glad to announce that we have a few new or experimental schools like those conducted by Mr. Animananda (or Mr. Rewachand Gyanchand of Sindh) and one of our colleagues and fellow-workers, Mr. Ajit Kumar Banerji, besides some well-conducted Kindergartens and Montessori Departments under the direct supervision of the Mothers and Sisters of Christian religious orders.

The work of Parent Education is an extremely difficult task in our country and just a slight bit of spade-work is being done on this side of India though work was begun in this direction in other parts of India more than twenty years ago. The vast illiteracy, the grinding poverty and the crushing burden of social injustice have been instrumental in checking the progress of education. The colossal ignorance of the mothers of the race has contributed not a

little to the difficulties experienced in launching any project for parental education.

Education of Industrial Workers

Satis Chandra Sen, Workers' Delegate to the International Labour Conference, Geneva, 1937, writes in the course of a paper contributed to the Adult Education number of *National Reconstruction* :

Before launching upon any scheme for that purpose the difficulties and the conditions of life of the Indian workers must be fully understood. Generally an Indian worker begins his work in the factory at 8 a.m. and lays down his tools for the day at 7 p.m. Besides, as he has generally to prepare his food himself he has to spend an hour or more both at the beginning and at the end of each working day for the purpose. So after doing hard work in his factory and making his own food an Indian worker neither feels inclined nor has any energy left to take up any mental work—not even reading or writing. This is the reason why institutions such as night schools could neither attract many adult workers nor be effective for educating them. It will be found that night schools are attended more by the children of the working class people than by the workers themselves.

However, night schools cannot be left out in any scheme for imparting education to the adult workers. It can render some valuable service if situated in the locality where the workers generally reside. In some places it is found that the school rooms are used as clubs for the workers who come there just for a chat with the teachers who are generally labour workers and seek their assistance and advice on various matters.

Services of the especially trained labour workers whom the labourers may look upon as their friend, guide and philosopher may be requisitioned both for the removal of illiteracy and spreading of general education amongst the workers. They will visit the workers' quarters in the night and on holidays and collecting them in small groups will teach them to read and to write and create interest in their mind about diverse matters. For the purpose of general education establishment of circulating library, distribution of newspapers and pamphlets amongst the workers, as is being done in Europe, may be undertaken.

But it must be borne in mind that whatever method is adopted it must not put any extra strain on the worker's mind and must not assume the character of a drudgery. After hard and prolonged hours of work no labourer, specially one whose heredity and environment are rather uncongenial for any mental work, will be willing to take lessons unless their interests are specially roused or they find it a pleasure. So education here must combine with recreation. Lantern lectures, radios, cinematograph may prove valuable for this purpose.

So if the work of eradication of illiteracy and spreading of general education amongst the workers is to be seriously undertaken, then opportunity must be created for these workers to learn their lessons during the hours which would be otherwise devoted in the factories. But no wage-earning worker will be willing to come to take any lessons if he is to lose his wage for these hours. So if something like "study leave with pay" is arranged and either the employers or the Government are made to pay their wages to these workers for this period of study leave, then this scheme may be successful. But this, I am afraid, is out of the question now.

Hindu Astronomy

In the course of his article on Hindu Astronomy in *The Indian Review* Asoka C. Dutt observes:

In the golden age of Sanskrit literature, astronomy shared in the general revival of learning and great strides were made in this science.

This period, according to Mr. Kaye, lasted from 400 A.D. to 700 A.D., and according to Mr. R. C. Dutt, from 500 A.D. to 800 A.D.

Three illustrious names stand out prominently in this age.

I. Aryabhatta. He was born at Pataliputra in 476 A.D. He was no blind follower of tradition but a respecter of truth irrespective of its source. As Mr. Kaye says: "Aryabhatta is chiefly notable as an opposer of certain aspects of the orthodox Hindu teaching of his time. He demonstrates that Mount Meru is not high. He teaches that the Earth is a sphere and that it rotates on its axis."

Aryabhatta maintains that eclipses are not caused by Rahu but by the Moon and the shadow of the Earth.

For his progressive outlook he has been vilified by the orthodox teachers and, perhaps, by none more strongly than by Brahmagupta.

II. Varahamihira. He was born in Avanti probably in 505 A.D. and died in 587 A.D. His *Panchasiddhantika* has been referred to, and he wrote other works on Astrology, the best known being the *Brihat Samhita* (edited by Dr. Kern).

III. Brahmagupta. He was born in 598 A.D. He represented the orthodox view. As quoted by Alberuni, he says: "All heavy things fall down to the earth by a law of nature, for it is the nature of the earth to attract and to keep things." Besides his commentary on Aryabhatta's doctrines, he wrote a book called the *Brahmasphutasiddhanta* comprising 21 chapters. "The first 10 contain an astronomical system, describing the places of the planets, the calculation of lunar and solar eclipses, the position of the moon's cusps, the conjunctions of planets and stars, etc."—(Mr. Dutt).

The last Hindu astronomer of eminence was Bhaskaracharya, born in 1114 A.O. His work the *Siddhantashiromani* along with the *Suryasiddhanta* are regarded as the most authoritative text-books on the subject in this country, although there are reasons to believe that the extant edition of the latter book differs materially from the text of the old work of the same name.

Two Etchings of Nandalal Bose

In the course of a review of an Exhibition held in Calcutta last month under the auspices of the Santiniketan Asramika Sangha, Mr. Nirmal Chatterjee observes in the *Comrade*:

The refreshing atmosphere of reality and truthfulness is nowhere more palpably perceptible than in the section of Graphic arts. Subjects of these pictures are generally chosen from the most common environment in which the artist spends his daily life, but the newness of the treatment that raises these works from mere reproduction of reality to the category of higher art is the direct result of the artist's original vision.

He is no more a mere delineator, he is a creator in the truest sense of the term. To realise the truth of this statement one need only look at Nandalal Bose's etching, "A Goat."

One can hardly conceive of a more common animal,

but the grace and strength of the curves with which it is drawn and the very peculiar contour of the figure are the product of the magic combination of the artist's keen observation and his bewildering imagination. The real has not been changed into something unreal, it has been recreated into something immensely more real.

The forceful swing of the arms of the girl (in Nandalal Bose's etching, "The Poet and the Dance") seems to awaken a rhythmic swing even in the atmosphere encircling her. The Poet-Philosopher's reposeful attitude in the midst of the whirling surroundings sets an excellent contrast and seems to maintain the central equipoise in a very delicate manner.

A Few Facts About Poland

Poland ranks fifth in Western Europe with her population of 35 millions, and sixth with her territory of 150,000 square miles. Maurice Frydman, in an article in *The Indian Review*, relates a few facts which may be taken as the outstanding landmarks in the history of Poland.

Between the Carpathian Mountains in the South and the Baltic Sea in the North, on a vast plain watered by the mother river of Poland, Wisla, surrounded by countries known presently as Germany from the West, Czechoslovakia from the South-west, Roumania from the South, Russia from the East, Lithuania from the North and Eastern Prussia from the North-west, dwelt from immemorial times Slavonic tribes, of which Poles were one.

These tribes were worshipping Nature gods in timber, shrines, growing corn, rye and wheat, spinning and weaving, linen, breeding horses, cattle, sheep and bees, living in self-governing and self-dependant villages. They were a sturdy, simple and peaceful folk, loving music, song, cooking and painting on wood, ready always to defend their own, but rather careless about invading other people's land. The social system was patriarchal, with a high degree of respect for womanhood. Many goddesses in the old Slavonic faith bear testimony to it.

About 800 A.C. they were still devoted to their Nature gods, but the pressure of less peaceful Christian tribes from the West forced them to enter into defensive alliances and finally, when the Polanian tribe elected one of their wheel-wrights, Piast, as their head for his wisdom and statesmanship, he succeeded in bringing into permanent political union several Slavonic tribes who adopted the name of Poles.

Hundred years later (about 900 A.C.), the Poles were converted to Christianity.

About 1000 A.C. Poland was already a powerful and prosperous country and continued to grow till the middle of the 13th century.

Tartars came to Europe at that time, conquered the Russian tribes, but were stopped by Poland's knighthood, who saved Europe from devastation.

In the 13th and 14th centuries, Poland was rapidly developing. Agricultural improvements, building of towns, opening of mines, founding of the Cracow University, the second in Europe, promulgating of a code of laws, the first complete code in Europe, building of state granaries—one followed the other in rapid succession.

Poland was the only country at that time to give refuge to the Jews, driven out from most of the European States. Towards the

end of the 14th century, Poland and Lithuania entered into a permanent political union.

In the 15th century, the Teutonic order of the knights of the Cross, plundering and murdering the peaceful Pagan tribes in the Eastern Prussia for the sake of their souls, was badly defeated by Poland and promised better conduct. In the next century, Eastern Prussia having to choose between the absolute rule of the Prussian king and the democratic Poland, chose the latter and became a part of Poland by voluntary union.

The 16th century was the most brilliant in Polish history.

Already in 1430, i.e., 259 years before the Habeas Corpus Act of England, Poland issued her law that nobody shall be imprisoned unless legally convicted. The Polish Parliament was established in the 15th century, and in the 16th she was a regular republic with kings elected for life but not hereditary.

Poland became a safe refuge of all oppressed people in a most ghastly intolerant and fanatic Europe. All persecuted creeds and opinions found shelter in Poland.

The 17th century was spent in repulsing the invasions of Turks, Swedes and Russians.

At that time there were but two nations—Poland and England who enjoyed Parliamentary government, and in many respects the people in Poland were more free and more safe than in England.

Especially in the 18th century when people began to murmur against the tyranny of the kings, Poland was constantly cited as a country of exemplary freedom.

Internal weakness and mutual understanding of three powerful absolute monarchies, Russia, Germany and Austria, broke down a free and proud nation.

The 19th century witnessed several efforts of Poles to regain their independence, ruthlessly suppressed.

The Great War weakened the oppression. The Poles had prepared their future army about 20 years before the Great War, and when it came, they immediately organised small armed units wherever they could and got their freedom out of the furnace of war. Joseph Pilsudski was the father of Poland's independence.

Freedom was and has remained the key-note of Poland's history.

Aldous Huxley—Interpreter of the Intellectuals

According to S. L. Kaul, among contemporary writers Aldous Huxley is an intellectual *par excellence*. He writes in *The Twentieth Century* :

In method, Mr. Huxley is independent and personal. As a novelist, he is far removed from the caricaturist of the Dickensian school. He does not care for plots. Indeed he does not mind if he is regarded as a novelist or not. Mr. Galsworthy's *Forsyte Saga*, large as it is, has the classic unity and compactness of structure. But each of Mr. Huxley's novels is an assortment of fragments from high-brow life. Brimful of ideas, he is to the general body of the Edwardians and Georgians what Meredith was to the Victorians. He is an essayist, a thinker, even in fiction. He puts himself bodily into his books. He has not the detachment of Mr. Arnold Bennett. The heroine of the latter's *Sacred and Profane Love* speaks of the double personality of the novelist: writer and censor, as if the combination were a fatal gift. Mr.

Huxley abounds in self-conscious characters. It should, however, be noted that he does not make of them mere registers of immediately changing consciousness like James Joyce, Virginia Woolfe and Dorothy Richardson. He does not specialise in religious psychology like Sheila Kaye Smith. Both in material and psychology, he transcends J. B. Priestly, Hugh Walpole and Joseph Conrad. His *Point Counter Point* has material enough for half a dozen novels of Mr. Bennet or Miss Rebecca West. He does not care to be an artisan of fiction, carefully conserving his observations and ideas, and parcelling them out for a series of popular books.

He goes on to say:

Mr. Huxley writes mostly about the intellectuals of the contemporary age. His characters keep diaries and have read great books and been influenced by them. The chief among them are authors or would-be authors, journalists, artists, philosophers and representative men and women of the age. No writer takes as great pains as Mr. Huxley about the ideas of his creations. He even mentions the books that his men and women have read, and the masters that have influenced them.

Of the present-day writers, it may be confidently asserted that Mr. Huxley is the best interpreter of the intellectuals. His chief characters are intelligent men, the more serious among whom are assailed by doubts as disillusioned men whose work and ideas and amusements are a bore or a mere refuge from boredom, men who cannot resolve the conflict within them and synthesise the ideas that seek to master them.

Huxley is groping for a new integration of values.

What then is going to become of the disillusioned intellectual? Perhaps the only answer to this question for each person can come from the innermost recesses of his own mind. Mr. Huxley has shown in his essays that he is no imitator of St. Francis of Assisi. Of course, his irreverent references to "the Kingdom of God" and to moral values in general are intended only to show up the modern man's loss of faith and cynicism. It is never his ambition to be Mr. Oscar Wilde's Prince Paradox. But to the intelligent reader of his books, it is obvious that the answer to the questions that trouble minds like his cannot be found in books either of religion or science. Each man must find a solution for himself by turning inwards. He has more than hinted at that. This does not mean asceticism. But it is certainly the path of the mystic, of the inquirer within himself, who has shed all the prejudices of his individual mind, prejudices born with him as well as the prejudices that come from book-learning and ratiocination.

Saint Pattanathar

St. Pattanathu Pillai or as he is familiarly called St. Pattanathar was one of those early Dravidian Saints who had exercised such a

profound spiritual influence on the life of the people in South India by his soul-elevating poems and teachings that to this day, even after a thousand years, his message is as fresh and helpful as when it was first delivered. *Sadhana* gives a brief description of the life and teachings of the Saint:

Our Saint came from a wealthy South Indian merchant family and was born in the sea-port town of Caverypu Pattanam, which was situated somewhere near where the river Cavery flows into the sea.

He flourished towards the latter part of the eighth century or the earlier part of the ninth or at any rate not later than the ninth century.

After completing his secular and spiritual education, he married, at the age of about 22, Shiva Kallammai, a young woman who had also finished her education.

The husband and wife lived happily for about 20 or 25 years and though they had no child of their own, they adopted one from a Shaiva family and named him Marudavanar. But the latter who was fondly brought up with great care and love by both of them died a bachelor at the early age of sixteen and while passing away left a palm-leaf manuscript in a small box to be given to his father after his death, wherein he referred to the endless desire for wealth and said that "the amassed wealth that is not spent for the good of God's children is only as useful to a person as an eyeless needle." This had such a profound influence on the woe-begone father that it brought about his renunciation and conversion from the life a householder to that of a *sannyasi* (ascetic).

He began his *sadhan* of conquering the fleeting pleasures of sense life and continued the same till he had found union with his Parama Shiva, which was the ultimate goal of his existence.

The Parama Shiva of our Saint is the one All-pervading Spirit, with neither form nor earthly frame, whom no temple can hold, no book can exhaust, no priest can reveal, no preacher could explain and no philosophy could expound. "He is the Lord God of all ages of all lands and of all people, who reveals Himself to His *bhaktas* (devotees) in their own hearts" and shines there most and best.

He asked sinners "to cast aside their little self and dedicate themselves to God." No wonder he made many converts, including among whom Sri Bhadrachariyur who was an enlightened king of one of the states in South India.

Our Saint was "a moral and spiritual rebel" who fought against all shams—false priests, books, traditions and cults—which stood between God and man. To him Shiva was *Anbu* (Love) who cannot be purchased or bribed and to behold whom no mediator of any sort is necessary.

He says: "Religious devotion which busies itself merely in humanitarian activities is superficial, unenduring and momentary emotion. Religious devotion which ends in purely passive contemplation is barren, empty and individualistic. True religion is the golden chain that connects God and man"—linking the contemplative aspect of a *bhakta's* life with the practical aspect.

ROYAL MARRIAGE AT ALBANIA

Queen of Albania

The rejoicing crowd near the Tirana Mosque

The Queen of Albania is seen signing the Marriage register; King of Albania and Count Ciano are seen standing behind her.

Thanks to Japan

Thanks to Japan, writes Pearl S. Buck in the *Asia*, the great inner provinces of China—the original China in the first place—hitherto almost untouched by modern times and maintaining their medieval civilisation, are suddenly being repopulated by the modern Chinese. As a result of Japanese invasion China is moving into the interior; some may call this retreat, but to do so is to miss the importance of the movement.

As much as two years ago Nankai University began putting up buildings in Chungking and Yunnanfu, in preparation for the very thing which has happened. When the Japanese bombed Nankai University they thought they had destroyed it. They were mistaken. Nankai University was already not there. It was safe, thousands of miles inland. Other great universities have followed its example. And the Ministry of Education itself, in spite of the tremendous military costs to the government for defense, is proceeding steadily with its work. The Central Military Academy is already established in new buildings in Chungking; the provisional schools for students from the war zone, started in Sian, are marching further westward to the country bordering Tibet, carrying on a "moving university" as they go.

Something must come of this return of the young Chinese to their own true country:

They will change the people in old China, and old China will change them. Two distant extremes will meet and mingle. For no foreigner ever has been as remote from the real Chinese people as the modern educated Chinese has been. He has not only not understood his own people, but too often he has been ashamed of them and despised them.

I see a significance which is symbolic in those long lines of the young Chinese marching on foot into their own country. Thanks to Japan, a real Chinese culture may be the result, a culture truly composite of the best of old and new. What no one has been able to do in China, Japan has forced the Chinese to begin to do themselves. While the outer provinces lie a waste of war the rich untouched inner provinces will be developed. And when Japan withdraws, as withdraw she must some day, a new Chinese race will be ready and will come out of those inner provinces to reclaim and to rebuild the whole. What the effect of this may be upon the world of life and art, not to mention politics, can scarcely be calculated. Those who know the Chinese best have long felt the gathering of a new power in her which promised, if it could only come to expression, a real golden age. There was lacking, somehow, the final spark to the tinder. This spark has been given, and it is difficult for the moment to see anything except what seems to be the devastating fire. But when the fire is over, those who survive it will be a stronger race and a better than the one that went in or the one that was there.

No greater benefit could possibly have been given to China than Japan has thus given. I do not say it is worth the war, for nothing is worth the folly of war. But I do say that, granted the war, Japan has opened the whole of China not only to new intellectual forces but to material forces as well. For merchants and bankers are going inland too, and whole factories are moving, with all their machinery. And they are not bottled up in that interior, though for the time they are cut off from old seaports. They are developing new trade routes, opening, as they call them, "back doors" to Europe and the South Seas, which in time may become front doors. Northwest through Sinkiang and southwest through Burma these doors are being opened and enlarged and the Chinese do not feel cut off and isolated from the rest of the world. Thanks to Japan, China may develop a stronger foreign trade than she has ever had, and not with Japan.

Chinese Art

In the course of an illuminating paper (condensed from the *Magazine of Art* by the *Parade*) on how a difference in technique which appears to be merely mechanical has far-reaching consequences in Chinese Art, Lin Yutang writes:

The whole difference in technique and conceptions of line and form between Chinese and Western painting goes back to a difference in tools and materials: the Chinese use a hair brush and ink, whereas Western painters use a pencil or pen or a brush with oil paint. The consequences are extremely far-reaching. It is an aesthetic and not merely a material difference. The basis is mechanical, but the developments are spiritual.

To-day the entire field of Chinese art is profoundly influenced by this mechanical accident. It is a case of accomplishing a great deal with very little.

The Chinese speak of painting as the "play of ink on paper". This paper is so sensitive to the touch of ink that every trace of the brush across its surface is recorded in a way which almost suggests the effect of light on a photographic plate.

There is an entire technique about the handling of the brush:

Either the point or the body is used, its varying impact, whether pausing or lifting from the paper, achieving strength of stroke or sureness or gracefulness or delicacy. Then there is the control of the comparative liquidity or dryness of the ink, so that when laid on paper it can suggest different tones and qualities of surface.

Chinese painting, therefore, begins with the mastery of the stroke:

Chinese contributions to the notion of line and rhythm are important, because line is emphasised in Chinese art, has a more important development there than in Western art, and reveals a greater richness and variety of rhythm. And here we come to the quality which

is most basic of all—rhythm. The stroke became a means for imitating the irregular lines of nature, for Chinese art is characterised by hatred of the straight line. One of the singular contrasts between Chinese and Western painting is the emphasis on outlines in the former and the emphasis, in the latter, on surface—with consequent obliteration of outlines. In most Western painting the outlines of forms are implied rather than indicated by bold strokes.

The Chinese emphasis on line, then, leads to an appreciation of the linear aspects of nature:

To the Chinese artist, all nature is vibrating with the sensuality of its rhythmic lines, the soothing lines of blue hills and winding rivers, the soft lines of clouds, the rugged lines of rocks, the delicate lines of bamboo, the massive lines of pine trees, the entwining lines of cypress and old giant creepers and the graceful lines of willows. So long as we are not blind to the beauty of lines and rhythm, the beauties of nature can never be exhausted. The secret lies in training ourselves to see these lines, their witchery, their clarity and their grace or strength.

Japan's Foreign Trade and Industry

The foreign trade outlook in Japan is not encouraging, despite the efforts of the Japanese Government to balance imports and exports by curbing imports of non-urgent and unnecessary goods, says *The China Weekly Review*:

Partly as a result of the Government's measures, partly because of trade depression and partial boycott of Japanese goods in other parts of the world, a heavy shrinkage of exports has taken place since the beginning of the year, which cannot fail to exercise direct pressure of no mean proportions on Japanese industries and therefore on Japanese living conditions.

At the same time, the higher prices now demanded by Japanese exporters to meet increased costs largely due to increased taxation and Government interference with trade generally, tend to impede a recovery of the export movement. That the outlook is serious may be gathered from a recent statement in the *Oriental Economist*, leading Japanese financial monthly, that: "If the world depression drags on, Japanese export industries are liable to be hard hit and thus give rise to a problem perhaps even more grave than the China Incident itself."

Nevertheless, the adverse balance of Japan's foreign merchandise trade for the first quarter of 1938 was only Yen 65,900,000, showing a sharp decline of Yen 257,376,000 or 79.7 per cent in comparison with the corresponding period of 1937. Japanese exports for the first quarter totaled Yen 605,220,000 and imports Yen 670,922,000. Compared with the first quarter of 1937, a decrease of 17.5 per cent was shown in exports and of 36.5 per cent in imports. An examination of Japan's export trade for the period indicates that exports of cotton textiles amounted to Yen 97,000,000, showing a decrease of 10.6 per cent from a year ago.

In view of indications that raw cotton arrivals to Japan will hereafter be curtailed, it is feared that cotton textiles exports will show a further decline during the year. Exports of hosiery goods as well as woollen textiles are being affected in the same way as cotton textiles. Exports of such commodities as rayon textiles, canned and bottled provisions, pottery and porcelain and toys for the first

three months of this year decreased by from 20 to 40 per cent, compared with the first quarter of 1937. Owing largely to the depression in the United States, exports from Japan of raw silk and textiles have suffered a shrinkage ranging from 17 to 20 per cent compared with the first quarter of last year. In the import group, raw cotton decreased by 70 per cent, raw wool by 33 per cent, crude rubber by 55 per cent and lumber by 45 per cent, during the same period.

Turkey and Religion

The following note appears in the *World Dominion News*:

The Grand National Assembly made certain amendments to the Constitution of the Turkish Republic on the 5th of February last. Article 2 especially was changed and now reads (in part), "The Turkish State is Republican, Nationalistic, Populist, Laic, Etatist, and Revolutionary!" These six principles are the fundamental planks in the platform of the People's Party.

It is of special interest that the State is declared to be Laic. The term implies that the State does not recognize an official religion, nor does it stand to support any particular religion. In the old Constitution an Article stated that "The Religion of the State is Islam"; this is no longer so; no one now interferes with another's religion, each respects that of the other; in religion as in intellectual and political matters fanaticism has given place to mutual tolerance.

The deputy Bey Ne'ih Ali, writing in *Ulus*, the official organ of Ankara, warns the Turkish people, however, that freedom of conscience is not a limitless freedom. The State may interfere in certain situations. He says that children under eighteen may in foreign schools be subjected to a kind of spiritual compulsion in religion, and this in fact has happened and cannot be tolerated. But after passing the age of eighteen every individual is free to choose his religion, provided this does not disturb the social order. "The State is Laic, and everyone can think and believe as he likes, but the young must not be dragged into Catholicism, and thereby a culture foreign to our thought and feeling be permitted to spring up in the midst of the Turkish people."

Emil Ludwig on Hitler

Emil Ludwig observes in *The Atlantic Monthly*:

It is a mistake to say that Hitler is not German. In his demagogism, he unites just those incentives which goad the German mind to frenzy. He resembles Wagner in his histrionic instinct. It is from Wagner that Hitler has adopted his endless melodies that is, the wearisome repetition of the same few themes; the splendor of the processions and choruses, the burning thirst for success, the bluster, the brutality and blamelessness, which make Wagner's work so effective can all be observed in the way Hitler works on his audience. He is altogether most effective in his speeches, and he is the first popular orator modern Germany has ever had. . . . Hitler is like Wilhelm II in so many ways that he might be called Wilhelm III. Even physically—draw in the Kaiser's moustache on Hitler's latest photographs, and there is the Kaiser again: the smartness, the same histrionic energy. The ~~history~~ of modern Germany will one day record that

the people let themselves be gulled twice by the poses of a neurasthenic.

"Nashevism"

Z. Rowe coins the word "Nashevism", to describe the authoritarian regimes, and comments on the "common front" of Nazism and Bolshevism.

To us the difference between war and peace is a difference in *kind*, whereas to the Nashevist war differs from peace only in degree. Nashevism recognizes no difference between war and peace except that in war all pretense at amicable relations is abandoned; in peace, deference to the pretense of friendship restricts the attack on the enemy to three fronts: propaganda, economic pressure and terrorism. Under these three heads Nashevism conducts various forms of organized lying, fraudulent bankruptcy and violence ranging from murder and abduction to the kidnapping of a nation.

No odium attaches to treaty-breaking because a treaty has only the same significance in 'peace' that the consolidation of newly-won positions has in war. Having scrapped the Versailles Treaty, Herr Hitler extolled the Locarno Treaty—and likewise scrapped it a few weeks later.

As long as we remain blind to the Nashevist common front we will be shuttled back and forth between Nazism and Bolshevism according to the momentary delusions of our own public opinion.

An Irish Seer

"While we strive after happiness, he holds it in his hands"—observed George Moore about A E, the Irish poet and seer. 'A E' has already been placed among the great mystics, and it is only as a mystic that he can be understood, writes "Brother John" in *The Inquirer*:

The belief in the Divinity of Man colours all A E's writings. As also does a second great idea, that came to him on the hill of Kilmashogue. Here it was revealed to A E that the Earth was a living being—veritable Mother of all living things.

"I heard them in their sadness say,
The earth rebukes the thought of God;
We are but embers wrapped in clay
A little nobler than the sod."

"But I have touched the lips of clay,
Mother, thy rudest sod to me
Is thrilled with fire of hidden day,
And haunted by all mystery."

The Mother of Life was very real to A E. She has many names—Isis, Ishtar, Artemis, Hertha, and so on. A E called her Dana, for he lived in Ireland and had seen the Paps of Dana.

He was always a student of Comparative Religion, and confessed that he found truth in all the Bibles of the World, and "a singular identity of belief." All the Bibles taught men how they might become as Gods. And this was A E's test of organised religion: "The religion which does not cry out: 'I am today verifiable as the water wets and the fire burns. Test me that ye can become as Gods'—mistrust it. Its messengers are prophets of darkness."

There was a very practical side to this Irish seer. For years he worked for the Agricultural Organisation Society, helping to establish banks and creameries, and talking about pigs and poultry. He edited a farming paper. He also took his part in Irish politics, and represented his country at Conferences. Then he became Editor of *The Irish Statesman*, the leading literary journal of his country.

In Dublin, as he grew older, A E was a sort of Socrates. In spite of all the "troubles" he still believed in Ireland, and he inspired men and women to be worthy, not only of Ireland's past, but of Ireland's future.

The Novel of Ideas

Sir Hugh Walpole observes in the *Listener*:

Today the most modern belief of what the novel ought to do is that it should be interesting in the matter of ideas. The modern novelist is out to give you new and arresting ideas. Now why do I think that that is not nearly as good a thing for the novelist to do as to give you characters? Of course, if he gives you characters *and* ideas, all the better, and there is no novelist of any great merit anywhere who does not give you some ideas about which you can think. But I believe that is really his own voice giving utterance to these ideas, and I think he might do that much better in some other form: in written philosophy, or what you please, history even, and, of course, in autobiography. And if he is going to create, he has to create outside himself; he won't have much time for planting his own ideas into his characters, because his characters will become unreal. They won't be naturally the vehicle of his ideas if they are independent people themselves.

For instance, in *Henry Esmond*, by Thackeray, you cannot imagine Beatrix speaking as Thackeray himself, a man of many years later, of a different kind of civilization almost; you cannot imagine her speaking as Thackeray would speak. You cannot imagine, for instance, that Mr. Pickwick was really the young Dickens, almost a boy, sitting and doing his journalism day by day, eager for life, full of vitality, but of a totally different vitality from Mr. Pickwick.

DANCE OF LIFE

The rhythm of life has been depicted in this mural "Dance of Life", a bas relief by Sculptor Jacques Schnier. It will occupy a space 80 feet long and 26 feet high on one of the East Towers. The relief will be covered in gold leaf.

AMERICA'S ORIENTAL-OCIDENTAL EXPOSITION

By CARLTON KENDALL

IN 1939, the United States is to celebrate the achievements of The New Deal with two great international expositions. One of these is to be held on the Atlantic seaboard in New York State. Its exhibits will depict the trade and culture of the European and South American nations and the industrial and scientific advances of that half of North America lying east of the Rocky Mountains. The other exposition is to be on the Pacific seaboard in California and will be participated in by the Oriental and Occidental nations bordering the Pacific Ocean and the eleven Western States, together with Hawaii and Alaska.

On these two expositions America is spending nearly two hundred million dollars erecting two unique magical cities—the one facing Europe and the Occident; the other Asia and the Orient. Symbols of peace and goodwill, they rise as two beacons to the achievements of a modern civilization being built by a free people whose heritage finds its roots in the age-old cultures of the earth. The Pacific exposition especially reaches out to the peoples of India and Asia a friendly hand of welcome. Many of those who read this article will probably visit it. Coming at a most significant moment in the history of western United States, when the Pacific Coast States (with their combined areas as large as that of western Europe) are emerging from a pioneering period into the dawn of a technological era, it aptly celebrates several recent American engineering achievements that will transform western America from a remote

sparsely settled area into one of the future centers of human civilization. These achievements are: the completion of the world's two largest bridges spanning San Francisco Bay, the inauguration of rapid air transportation (including the trans-Pacific clipper service connecting America and Asia) and the erection by the government of three giant water and power projects, the Boulder, Bonneville and Grand Coulee dams which will furnish irrigation to millions of acres of rich agricultural land and cheap electrical power to an area as large as one-half of India.

But beyond these local accomplishments, the Golden Gate International Exposition, as it is called, will celebrate the awakening of the nations bordering the Pacific and Indian oceans to a new era of civilization, a new epoch in their individual unfoldment, a new quickening of the life pulse of their social organisms. It is this deeper theme—"The Pageant of the Pacific"—which runs like an overtone throughout the entire exposition, its landscaping, its architecture, its exhibits, even the selection of the site itself.

Where now rise the vast exhibit halls, less than three years ago was nothing but the lapping waves of the Pacific Ocean; for the exposition is erected upon a man-made island built by U. S. Army engineers in San Francisco Bay opposite the Golden Gate. This island is over a mile long and three-fifths of a mile wide and rises thirteen feet above sea-level. Protected from erosion by a three mile rock wall, it has

added 400 acres to the area of the United States, later, after the exposition, to be utilized as a central airport for the two million people inhabiting the cities surrounding San Francisco Bay. Two of the exposition buildings are giant concrete and steel hangars and another is to become the permanent administration and terminal head-

percentage. By barge, 100,000 yards of rich topsoil was brought from the fertile delta regions of the Sacramento valley where many East Indians made fortunes some years ago by raising asparagus and potatoes. On this earth foundation, crews of landscape gardeners have planted over 4,000 trees (some 60 to 70 feet high),

Court of the Moon, an approach to the Central Court of Honor, with its 400-foot Tower of the Sun. It is one of the many landscapes with tree-lined promenades and sunken gardens. On the left is the Hall of the Mineral Empire, on the right the Homes and Gardens buildings

quarters for the airport. The landscaping surrounding these permanent buildings is to remain, making it ultimately one of the most beautiful air ports in America, a fitting terminal for trans-Pacific passengers and for the fast overnight planes connecting San Francisco and New York City 3,000 miles away.

To transform a salt-soaked black sand island into a semi-tropical garden set with pools, fountains and beautiful courtyards sheltered by dream-like colonnades and pastel-tinted pavilions supplied with all the electrical, gas, water and sewerage facilities of a large city was in itself no small task. Charts were made of the salt tolerance of the plants, trees and shrubs to be used and the land washed with fresh water from a special reservoir constructed for that purpose, until the sand was free from any dangerous saline

40,000 shrubs and literally millions of flowering plants, using every electrical and chemical device known to modern horticulturists for stimulating plant growth to its highest beauty. In this garden, risen from the sea, are set the hundreds of buildings housing the exhibits.

While futuristic structures comprise the outstanding architectural features of the exposition in eastern United States, this western exposition, true to its theme, has combined modernism in architecture with the inspirational forms from the older civilizations around the Pacific Ocean, particularly the Mayan, Cambodian, Incan and Malayan. Its designers avoided that stark architectural realism, almost brutal in its conception, that characterizes many attempts to depict the spirit of the mechanistic, materialism today sweeping metropolitan areas

of western civilization. Instead they tried to achieve an effect that would suggest the romantic lure and charm, the spiritual attainments, the century-old cultural aspirations of the Orient combining with the scientific civilization and

PACIFICA

This is a 70-foot figure by Ralph Stackpole, which will dominate the Court of Pacific Shores. Behind the figure a curtain of metal bangles that will sway in the breeze to produce harmonious sound and color effects

material modernism of Occidental cities. The approaching visitor nearing the island by ferry is impressed with a massed effect of stepped setbacks surmounted by 400 foot "Tower of the

Sun" bearing at its peak a giant golden Phoenix, Bird, symbolical of the reawakening of Pacific civilizations.

The lighting at night embraces several unusual recent electrical developments. Dark light is used to enhance the color effects and no direct lighting is visible so that to an observer on the Bay the exposition appears a luminous, magical, ageless city of mystery risen from the sea and bathed in glowing soft colors against a timeless sky.

The visitor enters through an imposing gateway whose ramparts rise in the heavy masses of two Malayan pyramids converging sharply into Cambodian towers supported by formalized elephants. Passing into a walled city, he is confronted with a series of courtyards some with mirror-like pools reflecting the tinted walls and sculptured details of the buildings, others with splashing fountains and still others a riot of bright-colored flowers. In one such flower courtyard only plants with red blossoms are used. The main feature of the horticultural effects, is a "Persian Prayer Rug" of mesembryanthemum covering 25 acres.

The exhibits, like the buildings housing them, are centered about the one idea of showing in graphic manner the various cultures developed by the nations bordering the Pacific as a background for demonstrations of the newest advances of modern science and engineering, special stress being placed on those discoveries that will aid man in his civilized evolution, in his century-old struggle against the ravages of nature, in the perfecting of himself and his artificial environment to meet the requirements of the strenuous ordeal of living in a changing modern world. Such recent agricultural developments as the newly discovered methods for profitably raising agricultural products without soil in chemically-treated tanks where crops attain unbelievable yields secure against insects, independent of seasonal cycles, temperature and weather conditions will be shown. Example of the latest type of "electrical farms" now transforming American rural life, speeding up productive agriculture, freeing the long toiling farmer from back breaking labor and bringing to him all the comforts and advantages of the city dweller are among the many exhibit features on display that will directly influence the future life of the rural individual in the agricultural nations bordering the Pacific.

For the exposition the American government has planned a demonstration of the recent developments brought into American life through The New Deal, of the social changes, of the

construction of planned communities, the programs for clearing city slums, the great nationwide building of public works which is transforming the vast countryside into a network of paved highways, navigable rivers, and modernized farms supplied with cheap electric power. A special community of the new types of American homes has been built. Here visitors can see the latest improvements in house construction and the latest aids to the housewife: mechanical robots that perform much of the housework.

Today in California even many of the laborers' cottages enjoy the newest electrical equipment: automatic washing and ironing

close doors when a person or an automobile approaches or leaves, the new "electric nurse" recently put on to the market in America which watches the baby and informs its mother about its condition at any moment of day or night without her having to go into the nursery or leave tasks elsewhere in the house, the "cold heat" stoves over which meals can be cooked while the top of the stove is as cool to the touch as a dining table—a boon to the housewife or servant of the future who has to prepare meals on hot summer days, or that careless individual inadvertently forgetting that hot stoves burn human fingers that touch their surfaces. These and many other scientific wonders that will

Aerial view of Boulder Dam, which impounds the waters of the Colorado River in the heart of a barren desert region, creating Lake Mead which is 115 miles long and 8 miles in width, thus making it the world's largest artificial lake. The black dots on the top of the dam are automobiles

machines, electric vacuum cleaners for taking up dust, electric refrigerators for manufacturing ice for the family and keeping foodstuffs preserved at cool temperatures, automatic controlled stoves that will begin cooking the dinner an hour or so before the family expects to return home, automatic radios that can be set a day ahead to turn on and off special programs of music or public addresses that the householder does not wish to miss.

In addition to these things, which are already a part of the everyday life of the average family living on the American side of the Pacific, there will also be shown glimpses into the future homes: "electric eyes" that open and

transform the daily lives of all of us in the next score of years, will be shown, together with the best in modern art, music and culture. It is an exhibition of the past, the present and the future.

In all over twenty foreign nations are erecting buildings or arranging special displays, together with the eleven Western States of the United States, Alaska, Hawaii and several British dominions, besides many special scientific and educational displays from American universities, medical laboratories and research institutions. Every important oriental nation, with the exception of India, has already made arrangements to present graphic exhibits depicting its cultural, economic, scientific and spiritual

achievements and to tell the twenty million or more visitors expected about the wonders of their homeland. Those of us who know the wealth of thought and material accomplishments in India today hope that she too will join with her sister nations of the Pacific and Indian oceans to help celebrate this emergence into the new path of human destiny that ties America and Asia with the common bond of mutual interests.

Structures for the other oriental exhibits are already rising from the sands of the man-made island, some representing expenditures of over a million dollars. Most are uniquely typical of the oriental cultures they depict. The Chinese exhibit, for example, is in the form of a Chinese community, surrounded by Chinese gardens landscaped with rockeries, old bronze statues, pavilions, camel-back bridges and winding lagoons, patterned after an old cormandel screen. At one end of the main garden is a temple with a golden statue of the goddess Kuan Yin; in the center a multi-colored pagoda in which, among other displays, is shown early Chinese inventions antedating many modern similar western discoveries. Outside the village proper are Chinese farms operated by rural farmers brought from the interior villages of China, showing the agricultural heritage from Asia that forms the basis from which modern mechanized agriculture has developed.

The Netherlands East Indies Building is set with bas-reliefs copied from the ruins of Borobudur and intricate Javanese scroll-work. The Johore exhibition contains a Malay Hut in charge of native Malays. The Japanese exhibition is the most extensive ever planned by the Japanese people. The building to house it was constructed in Japan and has been sent over to the United States in crates and erected on the exposition site. It is in the form of an ancient Japanese feudal castle surrounded by Japanese gardens supervised by Dr. Murata. In addition, a Samurai's home is also to be constructed in the gardens. The buildings proper are designed by the three most famous Japanese native architects: Dr. Uchida, Dr. Okuma and Dr. Kishida.

Indo-China's exhibit reflects the great ruins of Cambodia and the Latin American countries on the other side of the Pacific have used as a motif for their exhibits the ancient civilizations built by the Incas, the Aztecs and the Mayas. Japanese Nô plays, Javanese puppets, Bali ceremonial dances, Chinese drama and Indian music will be presented as well as exhibits of all forms of oriental art. Nor will many of the

priceless spiritual teachings, so long nourished in the Orient, be forgotten in the array of material displays. Special conferences are planned and special lectures scheduled to bring these treasures of the soul to the exposition visitor for, perhaps of all the Orient has brought to man, no gifts are more precious nor more needed in the world at this time than those written upon generations of human hearts by the great seers of Asia.

As a setting for this exposition of the Pacific, the selection of California was a happy choice. With its months of rainless summer, it has always been the home for elaborate outdoor pageants and for many outdoor symphonies, operas and plays presented on mountain tops and in the giant redwood forests. Its people have the gaiety of the Italians, the Spanish love for fiestas, the French joy in fêtes and little fairs. Perhaps more than any other part of the United States, California has from the old gold-mining days following 1849, enjoyed a carefree spirit which finds full expression in celebrations. Like India, it is a land of fertile valleys, rich with orchards and teeming farms, with the sea on one side and the snow-crested mountains forming a natural barrier at its back. In Europe it would have been a separate nation. In America it is an integral part of the forty-eight states, though distinct in culture and atmosphere. Facing the Orient, it turns to the Orient as well as to the Occident for its inspiration.

Over a quarter of a million East Indians, Chinese, Japanese and Philipinos live within its borders, each race contributing a measure of its heritage to fuse into the vital new civilization arising there. The Japanese have brought fifty or more Buddhist temples to California, the Chinese their Joss Houses and Confucian societies, the Philipinos Mohammedan churches, the East Indians Sikh and Vedanta temples. Sufi and Hindu retreats are scattered here and there amongst its mountains, while in the cities the influence of oriental architecture, household furnishings and culinary art may be discerned on every hand.

Named "California" for Odronez de Montalvo's romantic novel, *Las Sergas de Esplandian*, published in Madrid in 1510 and which describes an enchanted island "to the right of the Indies, very near the quarter of the terrestrial paradise", this land, with its great central harbor entered through the hill-cleft straits of "the Golden Gate", is in truth the garden joining Asia and western occidental civilization. To the Occident it turns for the development of its bodily comforts; to the

Sunset over San Francisco Bay, recently spanned by the world's longest bridge connecting San Francisco and its adjoining communities. The two main decks of the bridge stretch $4\frac{1}{2}$ miles

Los Angeles is the largest city in Western America

A spectacular preview of Treasure Island, site of the 1939 *Golden Gate International Exposition*, to be held on San Francisco Bay, is afforded by this photograph of an elaborate scale model of the Western World's Fair

The California giant redwoods are some of the oldest living specimens of vegetation upon the earth. The trees grow from 200 to 300 feet high and have a diameter around 20 feet, and a life-span of from one to two thousand years

Orient for the awakening of its spiritual self. Too young to be, as yet, completely crystallized by the pattern of western industrialism, this Pacific Coast of North America still reaches out for that profound spiritual understanding of the function and purpose of human life which for countless centuries has formed the seed-atom of Oriental philosophy.

As the Orient finds herself developed spiritually far beyond her technological attainments, inversely the Occident is beginning to realize that her new scientific discoveries far overshadow her spiritual evolution and threaten to enslave her populations with the case hardened chains of material power undirected by adequate inner comprehension. She too is fighting for her freedom and, like Asia, searching for that pattern which will bring a peaceful solution of the complex human problems besetting the world

today. Beyond race, beyond nationality, moves the common destiny of man. The contemporary struggle of social evolution which grips the nations surrounding the Pacific and Indian oceans, is a community problem affecting all the peoples inhabiting that geographical arena. The reshaping of their respective civilizations, the emergence into a new cycle, a new freedom of life, the completer conquest of man's collective mastery over physical nature and over his own inner nature—these problems draw the people of Asia and the people of western America into closer ties of mutual interests. So, when the Golden Gate International Exposition opens its gates in February 1939, it will be a fitting celebration for the beginning of a new era in the forward progress of the nations inhabiting the Pacific basin.

INDIAN WOMANHOOD

Miss Gouri Rani Banerjee, daughter of Dr. H. C. Banerjee L.M.S., Saharanpur, passed the M.A. (Sanskrit) Examination of the Benares Hindu University this year in the First Division standing First in the University. She appeared in this and all other previous examinations as a private candidate and passed them with credit.

Miss Gauri Rani Banerjee.

ACKNOWLEDGMENT

The picture of "A Haripura Village Woman" which appeared in *The Modern Review* for March, 1938, p. 353, was reproduced from the cover page of the special annual

number of the *Hindustan Times*. We regret proper acknowledgment was not made in the March issue through oversight.

INDIANS ABROAD

THE Indian generally goes abroad in search of a living like other people. But the Indian as a rule is only a labourer who, because of the low standard of life he is said to be used to at home, is able to supply cheap labour in the labour-market everywhere. He is thus often accused of underselling his labour and thus becomes the object of hate and derision of his competitors who, whatever be the actual grounds of their defeat, always put it down to the lower Indian standard of life. As soon therefore as the needs of the employers abroad are satisfied, the Indian is sought to be got rid of. The story is true almost wherever the Indian set his foot—in Africa, Malaya, or the Indies. Ceylon of late witnessed a bitter campaign against the South Indian labourer who is said to be squeezing out the very islander himself. The Ceylonese were however neither very scrupulous in their regard for facts nor very wise in forgetting what the reaction or the reprisal from the Indian side may mean to the island's economic life.

Recent informations speak of Ceylon recruiting her own plantations labour from the island itself. It is to be seen if Ceylonese native labour answers to the purpose.

EMIGRATION TO MALAYA

The Malayan planters and the Department of Labour in Malaya imposed, as is known, a 10 p.c. cut in the wages of the Indian labourer from May 1, last, which has meant 45 cents for men and 36 cents for women per day. Because of a cut in the production of rubber a further reduction of the wages to 40 and 30 cents for men and women respectively from August 1, next has been decided on. The Central Indian Association of Malaya submitted a long Memorandum to the Government of Madras pleading for the prohibition of the assisted emigration to Malaya, and 'advocating the stoppage of unassisted emigrants from Madras districts to the Malayan peninsula.' The Memorandum alleges that "at least a majority of them (the unassisted) do not pay their own passages from their own pockets any more than the assisted emigrants". "An adequate minimum living wage for Indian labour, coupled with permanent family colonization seems to be the only course available for the solution of the serious impasse which has arisen in connexion with the emigration of the unassisted emigrants to Malaya".

EMIGRATION TO FIJI

The Immigration Committee appointed by the Fijian Government in December last "to report on Indian immigration and the issue of permits and travel documents" has, it is announced, completed its labour and the report will shortly be available. The Indian immigrant, it is known, still suffers from many small disabilities, and, as there is considerable labour shortage in Fiji, if extended immigration of Indians is recommended, Fiji Government should be made to guarantee for them economic security as well as non-communal franchise.

A heartening fact is the progress announced to have been made by Indian education in Fiji. The Fiji Government have promised to establish new schools, one at Suva another at Nadi, and grant £100 for night schools for adults, besides assisting the communities that are prepared to help themselves by giving building grants for schools etc.

AFGHAN DRY FRUIT TRADE

Indians were sufficiently alarmed at the proposal of the Afghan Government monopolising the Afghan dry fruit trade. It would cause ruin to many Indian traders. An Afghan government order recently abandoned this proposal in response to the appeal from Indians, and the Government have been gratefully thanked by the President of the Indian National Congress for this.

INDIANS IN MAURITIUS

The story of the riot in the British colony of Mauritius and the wounds inflicted there on the Indians as a result of the firing by troops about two months ago failed to attract sufficient notice outside. The following extracts from the interview of Pandit Satyadeo, reported in the *Bombay Sentinel*, and quoted by the *Indian Opinion* of Durban, speaks of the grievances of the Indian workers in the Sugar factories, their disabilities and their experiences.

He told our representative that three lakhs of Indian residents in Mauritius out of the total population of 4 lakhs had no representation either in the Legislative Body or in any civic bodies. Government jobs were denied them, their children were forced to toil in the factories, their civic liberties trampled over and the Immigration Laws hardly enforced.

Describing in detail the two recent outrages that took place in Mauritius on unarmed Indian workers who were on strike, Pandit Satyadeo said that about 60 workers made for the factory, owned by an Indian who was also the British

nominee to the Legislative Council, with a view to put before him their grievances.

At the time about the month of August, last year, sugar export price in the world market seemed to them to be rising, but the cuts in their wages had not been restored in spite of the attempt of the Labour Party Society recently formed there.

But hardly had their grievances been heard, when, he told our reporter, shots rang in the air and some persons were injured in the premises of the Indian Sugar Factory owner. The Police inspector who raised his hands to ask the party concerned to stop firing got a bullet in his hand!

Then a prolonged, although to a little extent sporadic strike, he added, followed. Fresh troubles began. The meetings of the workers were dispersed and at one of the meetings, the Police were stated to have opened fire with the result that three died and several others were wounded.

"But the authorities," P. Satyadeo said, "continued long after the incident to ride roughshod over the feelings of the petty planters and labourers and our appeal for humanitarian consideration went unheeded. Although four months have passed, the report of the Inquiry Committee set up in this connection has not been published."

In the Inquiry Committee, he stated, no Indian was appointed.

INDIAN FARMERS IN NATAL

Indians had gone to Natal Coal and Cane fields as labourers under the indenture system. At the termination of the indenture, Indians recruited from India drifted into various walks of life, "but the majority took to farming," says the *Indian Opinion* (May 13th.), which editorially refers to the danger that the Indian farmer is now facing in the areas because of the dumping of bananas from the Portuguese East Africa under a treaty.

Indians who, at one time lived quite close to Durban, which they looked upon as the only market for their produce, have now gone further afield—miles away from Durban. Motor transport has made distances disappear. That bananas and other produce arrive practically every day at the Durban market from Port Shepstone—a distance of 75 miles—is an indication of what motor transport has done to the Farming industry. Banana plantations are the mainstay not only to those who farm on the outskirts of the boundaries of Durban, but also to those who farm along the South Coast extending to Port Shepstone. The Mozambique Treaty which enabled bananas from Portuguese East Africa to be dumped into the Union, affected the Banana industry in Natal to such an extent that the Natal Indian farmers began to think whether it was worthwhile farming. The Treaty in guaranteeing labour for the Reef Mines, did so at the expense of the banana industry which directly contributed to the development of the wealth of South Africa.

Once the bananas in Portuguese East Africa are ready to be reaped, the markets of South Africa would be flooded.

The Natal Indian farmers would be well advised to consolidate their forces so that in matters affecting their interests they could speak with one voice. The Mozambique Treaty could have been modified if proper representations had been made to the Government at the time. The case of the Indian farmer went by default.

We believe there are two Associations each claiming to represent the Indian farmers.

A strong Association with a membership of at least fifty per cent of the Indian Farmers would be the only adequate safeguard against such dangerous enactments as the Marketing Act. The Indian Farmers should learn to grow on their own strength.

SOUTH AFRICAN ELECTIONS

South African elections which resulted in the return last month of the Party in power, the United Nationalist Party, to which Mr. Hofmeyr, known to India for his fairness on the Indian question, belongs. Mr. Hofmeyr's attitude was the cause of many "upheavals" within the Party; so "South Africa needs many more Hofmeyrs before the Indian community of South Africa can have its much deserved rest." The Indians there have been denied franchise, that elementary right of man. Even the so-called uncivilised natives of the country have some semblance of representations in the Parliament, which the Indians lack. It is time for them to make a united demand for it, as one of them, Mr. P. R. Pather, pleads in the following:

Three parties have been in power since Union, the South African, the Nationalist and the United Nationalist Parties. None of these parties has exhibited any feeling for the Indian. Each party has had its share of anti-Asiatic legislations. And none has spared the Indian. We will continue to occupy the position of inferiority so long as we are denied the franchise. Recently the Natal Indian Congress presented a petition to the Natal Provincial Council urging the restoration of the Municipal franchise. That petition has been thrown out. The petition unfortunately was half-hearted, and did not have the backing of the people. By that, we mean that an appeal for the restoration of the franchise should be made not by way of petition signed by one or two persons, but it should emanate from the Indian community of Natal as a whole.

The occasion demands a united front for the Indian community and that is the only sure way of making a bid for the franchise.

RESERVATION OF THE KENYA HIGHLANDS

The motion of Major Cavendish-Bentinck for a 'White Kenya Highlands' has received a fit warning from that tireless friend of the overseas Indians, Mr. C. F. Andrews, in the Indian press. Kenya papers to hand prove how reasonably and spiritedly the Hon'ble Messrs. Shams-ud-deen and J. B. Panday thrashed out every aspect of the question in the Kenya Council to show the hollowness, the insult for the Indians involved, and the disservice to the Imperial issue that is signified by the proposal mooted in the face of all the promises and assurances from the the Secretary for the Colonies which we referred to in our last issue. To bring home the disaster that is impending we recall the opinion of Mr. Andrews:

When asked what disaster would be, Mr. Andrews said that it would be the very first act of deliberate racial discrimination on a vaster scale than the British Parliament itself had sanctioned and determined. Other cases of racial discrimination of a more doubtful character both in Fiji and in Kenya had already taken place but this reservation of Kenya Highlands by an Order-in-Council would be absolutely glaring. It would mean that the British Parliament had completely abandoned its principle of racial equality and justice. Since 1833, the British had stood for no racial discrimination.

"There have been many acts in which that constitutional principle has been broken, but this, if carried out in Kenya, would be the first flagrant breach of the British Constitution" added Mr. Andrews.

"I think it glaringly inconsistent if one and the same Parliament professing to grant Self-Government to the Indian people in their own country at the same time pass an order which virtually denied the same people their most fundamental and elemental rights in another Colony," concluded Mr. Andrews.

"ALL RIGHT" AT TANGA?

Kenya, it is known, is notorious for its anti-Indian measures. From the smug self-satisfactory talk of the Indians in Tanganyika and Uganda, one might conclude that it is all right over there. The *Tanganyika Opinion* wants our colonists to remember that this is quite contrary to the fact. In the railway and in the English-run and English-patronised hotels the Indian is barred from any equality or social contact with the Europeans.

In civil services this distinction of races goes much deeper and takes the form not of ordinances but of unspoken social rebuffs and persecution. Why did the only African Assistant Secretary of the Dar-es-Salaam Secretariat throw up his privileged job? Why is an Asian not placed even in acting charge of higher posts? Except a stray case or so, will any Government conscientiously say that they do not consider it unusual that Asians should be placed in acting charge of high offices ordinarily scheduled to be filled up by European incumbents?

Both in Uganda and Tanganyika there are such divisions as European and Asian posts, and we want to know what statutory authority the Government of the Mandated Territory have to divide the civil service into Overseas recruited, Intermediate and Local services.

THE SOLUTION OF THE INDIAN PROBLEM IN SOUTH AFRICA

South African Indians are generally found to be in favour of keeping aloof from the Anti-European Front, the formation of which was announced about two months ago. They consider their problem to be allied to those of the native people, but still distinct in certain respects, as the Indians form a distinct group in South African life. Seth Govindadas was keen on this idea. He had recommended even a scheme of colonisation, 'starting a limited company on co-operative lines'. We were afraid this was hardly the proper method, and, our doubts have been borne out by South African

'Indian Opinion' as well. It probably makes the best suggestion for the solution of the problem.

If the report in the press is correct, Seth Govind Das proposes that Indians in India and East Africa should start imitating the imperialist powers in their policy of exploiting the backward races. I believe that Indians in Africa have a nobler mission to perform than the adoption of this policy. Nothing should be done by the Indians in East Africa by which their relation with the Africans should be strained at any time in the present or the future.

Helping in the regeneration of the African race is the destiny which awaits the Indians in Africa. Stooping to schemes of exploiting the Africans politically or industrially can never be justified by the Indians here or in Africa and I am sure that if Seth Govind Das had consulted the Working Committee of the Indian National Congress or any prominent Congress leader he would have acted in a different manner. Settlement of Indians in East Africa can be justified only to the extent that it remains harmless to the future progress of the Africans and to the extent that it actively helps such progress.

G. H.

Ambulance For China

Presented by the Central Indian Association
of Malaya

Dear Sir,

In connection with the Sino-Japanese War, the Indian National Congress had declared that our sympathies should go to China in her present

Ambulance presented to China by the Central Indian Association of Malaya

struggle against Japanese Imperialism. Following the lead of the Congress the Central Indian Association of Malaya, decided to focus local Indian opinion to this aspect of the question, as a result of which I am glad to inform you that my Association was able to raise sufficient funds to present the Chinese Government with an Ambulance for Red Cross Service. The cost of the Ambulance as well as the cost of transport and insurance up to Hongkong is paid by this Association.

In one of the photographs of the

are

HILLMAN

MINX

Official registration figures recently issued shows that of all 10 h.p. cars now sold throughout the United Kingdom, the MINX accounts for no less than 33.7% of the total — and this against some sixteen different makes.

Distributors :

WALFORD TRANSPORT LTD., 71-73, Park St., Calcutta.

The Indian National Flag is seen fixed in front of the Ambulance

Ambulance you will find the inside view showing the plate with the inscription, "Presented by the Central Indian Association of Malaya on behalf of the Indian Community". In another picture you will find just in front of the driver's seat the Indian National Flag which is fixed in an enamelled plate.

The Ambulance was formerly delivered to the Consul for China, resident in Kuala Lum-

Inside view of the Ambulance showing the inscribed plate

pur and in acknowledging delivery, the Consul has written to this Association as under:—

"I wish to assure you and your community in Malaya that my Government is notified of this valuable contribution and feelings of sympathy towards the unfortunate sufferers in China. I would like to express once more that I am deeply moved by this noble contribution and that is with feelings of the highest appreciation and deepest gratitude that I now acknowledge receipt of the ambulance car from the Indian Community in Malaya."

Yours faithfully,
K. A. NEELAKANDHA Aiyer
Hon. Secretary,

Central Indian Association of Malaya

Indians in Mauritius

As I have told you in my previous communication (Vide *The Modern Review* for June, 1938), the Honourable Seeparsad Sheerbookun and the

Mr. S. Sheerbookun,
Member, Legislative Council, Mauritius

Mr. A. L. Osman,
Member, Legislative Council, Mauritius.

Honourable Abdul Latiff Osman, the newly nominated members of the Council of Government, have been chosen to represent the interest of the small Indian planters at the Council.

They delivered their maiden speeches on Tuesday last while the bill on the Industrial Association was being discussed and although

not trained for public life their performance was so remarkable that the senior elected member—a European—congratulated them for their masterly handling of a bill in which legal technicalities were involved.

For "In the course of his article on the art of

criticism Principal P. Seshadri observes" read "In the course of his article on the art of criticism in the *Journal of the Benares Hindu University* (Vol. II, No. 2), 1938, Principal P. Sheshadri observes.

A CORRECTION

Dear Sir,

An admiring reader of your "Notes" in *The Modern Review*, may I take the liberty of drawing your notice to an unfortunate oversight that occurs on Page 715, second column, in the current number of the Review.

The lines wrongly quoted from "the Irish

poet" really occur in Byron's 'Childe Harold,' Canto 2, ll. 720-21:

"Hereditary bondsman? Know ye not "
Who would be free themselves must strike the blow?"

Yours truly,

D. K. SEN,

Professor of English, Krishnagar College.

3,000 YEARS' OLD HINDU FORMULA WORKS FURTHER MIRACLES :—

- (1) European gentleman with baldness over 25 years grows hair in 5 weeks.
- (2) Indian Lady checks awful falling of hair in a fortnight.

Please write full details of your case (age, health, history of baldness, constipation, etc.) to:

Mrs. KUNTALA RAY,

208, Bowbazar Street, CALCUTTA.

WORLD'S WOMEN TAKE TO AIR

"Poor Man's" Wife Earns Two Crores in Business

Free Flights for Women

By Mrs. CHAMAN LAL

We have a lot to learn from our sisters of the West in their enterprising spirit, talent and commercial ability. One woman in New York has earned nearly two crore rupees (7 million dollars).

Mrs. Max Kramer startled American business men a few days ago by producing a cheque for seven million dollars to purchase the thirty-storey Lincoln Hotel in New York. Her husband, Mr. Kramer, went to America from Russia as a poor boy. He started to build small houses, then larger houses, blocks of flats and finally hotels. When he married in 1926, he gave his wife a present of a million dollars. She had organised a hospital in the war, and now runs a successful gown shop in New York.

Neither minds taking a risk. He has the business brains; she has the artistic genius. He owns and runs the five-storey Hotel Edison and from behind the scenes he will superintend the Lincoln.

The purchase price was actually eleven million dollars, but Mrs. Kramer paid cash over and above the first mortgage of four million dollars held by an insurance company.

WOMEN'S AERO CLUB

Miss Amy Johnson and Miss Pauline Gower are organising an Aero Club for Women, which they hope will be affiliated to the Royal Aero Club. Premises have been offered to them by the Forum Ladies' Club in Belgravia and the two airwomen are now trying to build up a list of all the women who have learnt to fly in Great Britain.

Miss Johnson says:

"We believe there is room for such a club. Many hundreds of women have taken their amateur pilot's licence in the last ten years and, although all have not renewed it, my experience is that, once a woman begins to take an interest in aviation, she never lets it go."

"Pauline and I, two of the handful of women pilots who hold the Air Ministry commercial licence, are anxious to hear from all these hundreds of women, as we have not got a list of their addresses."

The Air Ministry, which has a record of all women who have taken the "A" licence, does not divulge their names and addresses.

GORT—REJECTED PLAN

Miss Ursula Waldron's scheme for the training of women pilots to assist the R.A.F. has been rejected by the Air Ministry.

Miss Waldron is a niece of the Marchioness Townshend. She proposed to have women trained to pilot R.A.F. aircraft so that in time of war they could fly on tasks behind the lines.

Lord Sempill approached the Air Ministry on her behalf. He was told, there are not enough aircraft available for her plan.

AIR RECORDS BY WOMEN

Three Soviet women aviators, Polina Osipenko, Vera Lomaka and Marina Raskova, claim to have established an international record for a women's long distance flight on a circular course.

The women—Osipenko as chief pilot, Lomaka as second pilot and Raskova as navigator—flew 1,160 miles in a single-engined seaplane over a course Sebastopol, Yevpatoria, Ochakov, Sebastopol.

Osipenko afterwards said that her record flights were a fulfilment of a promise she made to Stalin to fly higher, faster, and farther than any other woman in the world.—*Exchange*.

WOMEN'S LEGION

Another plan to enable women to assist the R.A.F. is being prepared by Lady Loch, head of the aviation section of the Women's Legion in London. This section has been given official recognition by the Air Ministry.

WOMAN LIEUTENANT

Eight years ago Polina Osipenko who was working on a farm in Russia, had never seen a plane. Now, a lieutenant in the Soviet air force and holder of three women's altitude records, she is to try for the international flying-boat record.

FREE FLIGHTS FOR WOMEN

An American Aviation Company is giving free flights to "wives," since a survey showed that "36 per cent. of wives do not want their husbands to fly, primarily because they themselves have never flown, and many have never visited an airport." The Company, therefore, invited the wives of men who like to fly to take a free trip with their husbands between San Francisco and Los Angeles.

In Tokyo, there is a Women's Club which gives flight over the city and a light lunch, all for Rupees Two. Will Mrs. Pandit organise a similar Air Club in India?

NOTES

Possible Problems for the Constituent Assembly

"Sufficient unto (or for) the day are the evils thereof." So runs the proverb. One may in a similar spirit say, "Sufficient for the day are the problems thereof". But man is a creature who looks before and after. And man the political animal has to look ahead.

Nobody knows when the Constituent Assembly which Congressmen want may be convened. And some may even doubt whether it will ever be summoned at all. But its convention is not an impossibility. It is not impracticable. Whether those members of the British Parliament who have recently, during Pandit Jawaharlal Nehru's stay in London, promised to practically support the calling of a Constituent Assembly, will be able to keep their word, may be uncertain; for men and parties in opposition sometimes make promises which they are unable or unwilling to fulfil when in power. But the idea of convening a Constituent Assembly for drawing up India's constitution may materialize without British help and even against British opposition. Whenever it may meet, it will have to consider many serious questions and arrive at conclusions thereupon. Though it is not practicable to draw up a list of these questions just now—nor is it necessary, it may be permissible to mention some of them.

The cleverest and, from the British imperialist point of view, the most effective move connected with British rule in India has been the Communal Decision and the drawing

up of a constitution for India making that its framework and essence. From the Indian nationalist point of view it has been the most sinister strategic move on the part of British imperialism. If Indians are to be and remain a nation, this move must be countered. There should not be any weak yielding in this matter to propitiate communalists. However strong or numerous the propitiators and would-be propitiators of communalists, the fight against it should never be given up. "Never say die."

It is obvious that the whole of India, 'British' and 'Indian', cannot now or in the near future have a unitary government. Nevertheless, the consideration of the question whether 'British' India can have some form of unitary government may not be quite academic. Mr. C. Vijiaraaghavachariar of Salem, the oldest ex-president of the Congress now living, had much to say on this subject. If his paper on it is out of print, it may be republished.

If the question of unitary government for 'British' India be considered a merely academic one, the question of the number and delimitation of the provinces and the further question of the principle or principles on which they are to be constituted or re-constituted are eminently practical ones. The question of forming provinces on a linguistic basis is very much to the fore at present.

Some provinces have been recently constituted on the linguistic basis. There is a demand for more such provinces. The inhabitants of Andhra-desh, Karnataka, Kerala, Tamil Land and Chota Nagpur want separate provinces for

themselves. Bengalis want the Bengali-speaking areas in the immediate vicinity of Bengal, now forming parts of other provinces, to be re-included in Bengal. We do not know whether there is any demand for a separate Maharashtra, a separate Gujarat, or a separate Mahakoshal province. But if the principle of linguistic provinces be, as it has been in some cases, accepted by the Government and the Congress, justice and consistency would demand its observance in other cases, too. Of course, all new provinces should be self-supporting. But as this principle has not been insisted upon in the case of the N.-W. F. Province, Sindh and Orissa, it cannot be insisted upon in the case of every other region whose inhabitants may ask for a separate province for themselves. The question of self-support does not arise in the case of Bengal's desire for the outlying Bengali-speaking areas. For Bengal is self-supporting and a re-constituted Bengal would be also self-supporting. Moreover, Bengal's demand is not for a new province, but only for getting back her own. In the case of some Bengali-speaking areas, Bengal's wish has met with the approval of the All-India Congress Committee.

Of course, the plea for justice and consistency cannot be pushed to the extreme limit. We need not and may not accept the British Government's enumeration of India's languages as correct. Political motives may have led to their number being put at too high a figure. But counted even only scientifically, our languages are so many in number and some of them are spoken in such small areas by such a small number of persons that all these areas cannot be constituted into separate provinces. Therefore, after all the comparatively large areas inhabited by comparatively large distinct linguistic groups, have been formed into separate provinces, there would remain many small linguistic areas and groups which must be included in some big province or other. Such provinces would thus consist of several linguistic areas. Moreover, owing to migration, whether in times past, present or future, there would always be in the midst of the biggest linguistic group of every province small groups of persons speaking languages different from the main language of the province.

There would thus be some multi-lingual provinces, the aggregates of different linguistic areas; and in each of such provinces, one linguistic area and group would be larger than the rest. Again, in each practically mono-lingual province there will be the largest linguistic

group, and in its midst there will be smaller linguistic groups.

The problem which Indian nationalists have to face now and the Constituent Assembly will have to face when it meets, is how these smaller linguistic groups in both multi-lingual and mono-lingual provinces are to be treated.

Theoretically and according to the law, an individual belonging to a small linguistic group in both these kinds of provinces and an individual belonging to the largest group are equal citizens. But what we actually find in some provinces is that persons belonging to the largest group seem to look upon themselves as having a superior grade of citizenship and to look down upon persons of smaller groups as having an inferior grade of citizenship, *if any*; and persons belonging to smaller groups are oppressed by a sense of inferiority.* The biggest linguistic groups in these provinces seem to feel and behave like masters and the smallest or smaller groups appear to feel and behave as if they were completely at the mercy of the former. Such a state of things cannot be conducive to the fostering or conservation of a feeling of national camaraderie and harmonious co-operation between all groups for national ends.

In some of the provinces which are multi-lingual, the areas inhabited by the smaller linguistic groups do not receive as much attention, in the matter of nation-building services for example, as the areas peopled by the biggest groups, who wield the controlling power.

The facts mentioned in the two foregoing paragraphs explain to a great extent the desire for separate linguistic provinces. The Congress "High Command" and other Congress leaders should try to find a remedy for such an unwholesome state of things. And certainly the Constituent Assembly, when and if it is summoned, will have to solve the problems arising out of it.

What has been said above shows that there are opportunities in multi-lingual provinces for autocratic behaviour on the part of the biggest or bigger linguistic groups. There are such opportunities in the Federal Legislature also for the biggest and bigger linguistic groups.

In the Federal Legislature of the United States of America a remedy has been found for any possible exercise of "tyrannical power" by

*What is curious is that in Assam-Province members of the largest group are not treated as equal citizens. They are discriminated against and put to the indignity of having, for various purposes, to secure and produce domicile certificates.

the larger States. It will be understood from the following passage extracted from the *Encyclopaedia Britannica*, eleventh edition, Vol. XXVII, p. 653:

"Much controversy had raged over the conflicting principles of the equal representation of states and of representation on the basis of numbers, the larger states advocating the latter, the smaller states the former principle; and those who made themselves champions of the rights of the states professed to dread the tyrannical power which an assembly representing population might exert. The adoption of a bicameral system made it possible to give due recognition to both principles. One house, the Senate, contains the representatives of the states, every state sending two; the other, the House of Representatives, contains members elected on a basis of population. The two taken together are called Congress and form the national legislature of the United States."

In the House of Representatives the smallest States, namely, Arizona, Delaware, Nevada, New Mexico, Vermont, and Wyoming, have one Representative each, and New York, the largest state, has 45; but in the Senate the biggest and the smallest states alike have two members each.

In India the Central Legislature and some of the Provincial Legislatures have two chambers; but neither the upper nor the lower chambers are constituted on either of the two principles followed in the United States of America. It may not be possible in our country to strictly follow the two principles in the case of the Central Legislature and of the bicameral provincial legislatures. But they may supply a clue to the solution of the problems indicated in previous paragraphs.

We will mention one other problem which our political leaders must tackle to prevent injustice to some provinces and the resulting discontent. It is well known that much more revenue (whether classed as Central or Provincial does not matter) is raised in some provinces, *e.g.*, Bengal and Bombay, than in others. But the provinces which pay most do not get proportionately large amounts to spend for their own good. The principle that the provinces which yield most revenue should contribute most to the Central Exchequer, is not objected to. But the contributions exacted from them should not be such as to pauperize them. Bengal, which is one of the two most revenue-yielding provinces, has been persistently fleeced for years. It is no extenuation of the Central Government's exacting policy to say that Bengal has got the Permanent Settlement and, therefore, the Bengal Government does not get as much land revenue as some of the other provinces, and that is why it is poor. But the Permanent Settlement was not the act of the Bengal Provincial Govern-

ment. The Government of India was and is responsible for it. If it be true that that Settlement deprives Bengal of some revenue, is that any reason why it should be still further fleeced?

What China Does With Her Students

In China, where there is a real crisis if ever there was one in any country, and a grim real fight for freedom is going on, the far-sighted Chinese leaders are using their students in a wise way. This is described by Pearl S. Buck in her article in the May number of *Asia*. She has resided in China and taught Chinese students, and knows the country. Says she:

"What is really happening as a result of the Japanese invasion is that China is moving westward into the interior. Some may call this retreat, but to do so is to miss the importance of the movement. For it is of the utmost significance that the great inner provinces of China—the original China in the first place—hitherto almost untouched by modern times and maintaining their medieval civilization, unknowing of and unknown to the world, are suddenly being repopulated by the modern Chinese."

How is that being done?

"Universities are being taken wholesale into this heart of old China. As much as two years ago Nankai University began putting up buildings in Chungking and Yunnanfu, in preparation for the very thing which has happened. When the Japanese bombed Nankai University they thought they had destroyed it. They were mistaken. Nankai University was already not there. It was safe, thousands of miles inland. Other great universities have followed its example.

And the Ministry of Education itself, in spite of the tremendous military costs to the government for defense, is proceeding steadily with its work. The Central Military Academy is already established in new buildings in Chungking; the provisional schools for students from the war zone, started in Sian, are marching further westward to the country bordering Tibet, carrying on a "moving university" as they go. Thus encouraged, the great movement west has begun and from all of the outer provinces students, men and women, are making their way inward by any means they can, by desultory boats and bomb-threatened trains, by newly-built bus roads, and thousands of them, in great bands, are on foot. It is one of the most astonishing and exciting things that has ever happened in history, this tremendous trek inland of the modern Chinese intellectuals into the ancient heart of their own country, which they have never known before."

Why and how is such a thing happening? Is it accidental? No. Pearl S. Buck writes:

"For the national government of China is pursuing in the midst of its distress an extraordinarily sane and farsighted policy. Unlike the western nations, who hurried their young educated men into war and praised them when they died, the government of China is commanding her students to go on with their education and not waste their lives in foolish warfare.

Let the Japanese bomb and kill the ignorant, if some must die. Let them even seize territory and plunder,

and one can imagine with what enthusiasm he guided those aspirants for knowledge.

Now it is already eighteen years since Turayev departed from this world.

The introduction to his work, *The Classical East*, says :

"On July 23, 1920 death snatched Turayev from the ranks of the living and left to life the memory of this great personality, to science his numerous works and the school created by him. To this school, the ranks of which after the death of B. T. continued to thin out, has been entrusted the responsible task of preserving and introducing into scientific usage the literary bequest of this teacher. His students, both in Petersburg and Moscow, have carefully looked after the works which B. T. left in the press. In Petersburg soon after his death there were withdrawn from publication several studies devoted to the memorials of the Museum of Fine Arts in Moscow, and to the great papyrus of the collection of Prakhov in the Reports of the Russian Academy, of the History of Material Culture."

Then Struve goes on to give the following just statement about Turayev :

"Carrying out his colossal task, B. T. displayed enormous erudition in the almost boundless literature about the ancient East, yet this literature did not dominate his thinking; he decided all problems on the basis of study of the sources themselves. A broad acquaintance with almost all the languages of the cultures studied by him gave B. T. the opportunity of making manifold use of the countless epigraphic memorials presented to science by the inexhaustible soil of the East." In dealing with this material B. T. displayed with identical mastery the deep analysis of the philologist and the broad synthesis of the historian."

"Together with epigraphic material he made use with equal success of material evidence. In his deductions B. T. was always exceedingly cautious, and, drawing out from the sources all they had to give, he never had recourse to artificial and hazardous interpretations for the sake of a larger attainment, he never obtruded upon the source his own cogitation. All these merits of the work of B. T. his remarkable objectivity and many-sidedness, enormous erudition, universal knowledge of all the materials accessible to him, epigraphic as well as objective, and the carefulness of his deductions on the basis of this material, make *The Classical East* the cornerstone of the most remote labours devoted to this period of universal history."

This is a just appraisal to which one would still wish to add something about the most attractive personality of Turayev. It is characteristic to observe the fact that no one was surprised that in him lived both a religiousness of his own and a great respect for the religions which he studied. One would not wish to forget that Turayev, being himself not of strong health, was always remarkably responsive in allotting time to those who came to him.

As with many scholars, Turayev did not live in ease, but these difficulties were swamped in an ocean of scientific enthusiasm. Indeed, the enthusiasm for knowledge kept Turayev

on the unquestionably lofty pathway of the investigator—his path of life, all perplexities remained in him, not disturbing in him the basic meaning of forward movement. He worked unusually assiduously and always progressively. Likewise he did not belong to that order of scholars, who, in order to avoid responsibilities, chose for themselves a completely limited problem, within the limits of which they risk no criticism.

Turayev, on the contrary was not afraid of responsible tasks, summing up his investigations in well-ground deductions. The larger problems fascinated him, as a result of which partial investigations flowed together remarkably harmoniously in his basic structures. Nothing obscured his horizon and at the same time the paths of his research were firmly enclosed. Now-a-days, when there is particularly required a realization of basic synthesis, the memory of such great scholars as Turayev must be preserved as a guiding example for many.

The recently departed Vladimirtsev had the same aspirations. Coeval with them is our great and esteemed Rostovtsev, an outstanding figure among scholars. Vladimirtsev's numerous works (like *The Life of Chingiz-Khan*, *The Social Structure of Mongol Life*, etc.) are new, well-founded and attractive to read. These three circumstances are rarely encountered in combination. It occurs so many times to all readers to regret the fact that very needful treatises are set forth in such clumsy language that their meaning is obscured by artificial accumulations of words. But the books of Vladimirtsev and Rostovtsev are manifested as parts of their enormous knowledge of the Orient. Moreover as true scholars, they identically understand and respond both to the oldest and the newest.

Being deeply acquainted with objective evidence, Rostovtsev is also a just appraiser of contemporary art. Archaeologist, historian, judge of art, he is always renewing his book learning with excavations and with travels. His word sounds clearly, both about the most ancient periods of history and about our own times. He absorbs everything. He is now justly recognized as an authority in America and in all the European countries. His books may be seen in university libraries and in the most unexpected book-collections, and everywhere they show signs of frequent reading. The world has need of such scholars! They are needed by us, by his countrymen, and by the whole world. I rejoice that the works of Rostovtsev are pub-

If Women's power was only organized and mobilised, it would transform the world. And this power, which came to the forefront during the Civil Disobedience movement, had been recognized by no less a person than Mahatma Gandhi, "a mere man."—A. P.

The appointment of some women as constables in Cawnpore cannot be called an "encroachment". They were appointed by the U. P. ministry of whom all but one are men. As there have been women warders in jails for a long time, so there ought to be women police to deal with women transgressors of the law, whether technical or real.

In many countries of the world, there have been successful women rulers—for instance, Queen Elizabeth and Queen Victoria in England. In India, Queen Ahalya Bai is an illustrious example both in saintly character and great administrative ability and the capacity to rule. The Maharani of Travancore has done her work admirably during the minority of her son, the Maharaja of Travancore. So it cannot be said that a woman as governor of a province will be necessarily a failure. But it cannot at all be admitted that disunion, jealousy, greed for power, desire for self-aggrandisement, and communalism are male monopolies.

Higher Education in Soviet Russia

The number of students in the combined universities and high schools of Britain, Germany, Italy, France and Japan is just over 400,000.

The number in the Soviet Union is 550,000.

This remarkable contrast was made by Molotov, chairman of the Council of People's Commissars, in a speech on the 19th May last at the first "All-Union" conference of teachers and students in universities and high schools.

Molotov made another particularly telling reference. Unemployment among university graduates, research workers, scientists and scholars of all kinds were heavy in capitalist countries, he said, but:

"Try to find an unemployed scientist or specialist in our country. If anyone can find an unemployed scholar in this country we will give him a premium." (Laughter).

There were about 100,000 specialists now graduating every year from Soviet high schools and universities, but still there was a big shortage in many branches of work.

Such a thing as "unemployment among the learned professions," simply sounds absurd," he said.

He said the number of students in the universities and high schools of other countries was:

Britain, 51,000; Germany, 74,000; Italy, 73,000; France, 74,000; Japan, 146,000.

It is very properly pointed out here that the present higher educational system offers an amazing contrast with that of Tsarist Russia. In the old Russia there were 90 higher educational institutions and 125,000 students; today there are 700 institutions and 500,000 students. And the students today are not the children of the rich and middle classes, as in old Russia, but, all children who have the ability and the inclination to profit by higher education.

Away in the remote regions of Kazakhstan,

Uzbekistan, Kirghizia and other areas, where the population under Tsarism was practically 100 per cent illiterate, great schools and universities now flourish.

So this conference has something to talk about.—*Reuter.*

All education in Russia, up to the highest, is paid for out of State funds and benefits the children of the masses who avail themselves of it up to the highest. And the highest education does not cause unemployment in Russia. No high education in any country can cause unemployment if it is in harmony with the economic structure of the society of the country and with the structure of its government.

No Racism and Communalism in China

"Buddhism, Taoism, Islam, Confucianism and Judaism live in harmony in China. There is no feeling of bitterness or enmity among the different races or religions," observed Mr. M. I. Shah Kuo-Chen, Director of the Chinese Missions in Al-Azhar University, speaking at the Calcutta University Institute Library Hall on the 17th July last on education and religion in China.

Mr. Shah referred to General Omar Pei-Tsong Shah, a great Chinese Muslim military leader, who was fighting in the battle-fields of China under the command of Generalissimo Chiang Kai-Shek, and he thought that India could learn the lesson of religious amity from the Chinese.

Referring to education in China, Mr. Shah said, "China has adopted the American system in education. It was not centralised, but provincial. Since the Republican Government had introduced the new system in 1911, the percentage of literacy has reached 25. The system includes primary, secondary and higher education spread over a period of 16 years. China, the speaker continued, could boast of technical and commercial education. There was mass education for adults."

Referring to the Sino-Japanese war, Mr. Shah said that China had never tried to attack any people. China's army defended the people from any aggression. Japan's continental policy was to conquer the whole of Asia.

In Memory of the French Revolution

Subjection is subjection, whether it be to republican France or to imperial Britain. French subjects are not necessarily freer than British subjects.

CHANDERNAGORE, July 15.

To observe the anniversary of the French Revolution, citizens, youths, students and workers of Chandernagore assembled last night in the Library Hall under the presidentship of Mr. Srish Chandra Ghosh. Mr. Kali Ghosh of Chandernagore Socialist Party described the social, economic and political condition of Europe and France about the time of the Revolution, and showed how it destroyed Feudalism and gave rise to modern Capitalism. With the Revolution dawned the day of democracy and the republic, he said, and its advocates taught people that "Man is born free". He deplored that the French Indian

citizens were denied republican rights and privileges; and demanded, on this solemn occasion, such rights and privileges for the French Indian subjects from the French Government.

Mr. Satyendra Nath Ghosh, ex-Mayor of Chander-nagore, said that it was a cruel irony that the French Indian people were commemorating the day of the Revolution for republicanism when they did not enjoy a whit of republican rights and privileges. In course of his speech the ex-Mayor described how the labour movement in Pondicherry was being crushed ruthlessly, and what a panic had been created there, due to which no lawyer dares come forward to defend a labour leader's case. He called upon citizens, youths, students and workers to get united and prepared to face and to struggle against the hard circumstances coming.

Mr. Tinkori Mukherjee of the Socialist Party, in paying homage to the memory of the Day, contrasted the revolutionary French Capitalists of 1789, who took the leadership of the French Revolution, to the inert Indian Capitalists, who are perpetually compromising with the Imperialist exploiters, instead of trying to bring about a thorough change in the social and political condition of India.

The President, in his concluding speech, observed that the meeting was commemorating the Day when the Bastille—the prison for politicals, was bombarded, and when the National Assembly, voicing the will of the people, was recognised by the King and the ruling classes. He paid homage to the memory.

What Is Implied In Making Hindustani India's Lingua Franca

Both those who are in favour of making Hindustani the lingua franca of India and those who are opposed to it should know what is implied in such a step. Some of its implications are mentioned below.

Unless and until a common script is agreed upon and adopted by the advocates of the Nagari script and the advocates of the Arabic or Persian script, it is evident that all who would use Hindustani in the letters, articles, pamphlets, books, etc., written or printed by them must know both the scripts. If any one writes in Nagari to a person who uses and knows only the Arabic script, the latter must go to a person who knows Nagari to get it read. That would be troublesome and cause delay in correspondence. But if both the senders and receivers of written communications know both scripts, exchange of news and views would be easier and quicker. As the adoption of Hindustani as the lingua franca is meant to promote intercourse between all religious communities, provinces and linguistic groups, that object cannot be fully gained unless all Indians (and it is implied that they are all to be literate—at least in Hindustani) know and can use both the scripts.

In the case of printed Hindustani literature of all kinds—newspapers, periodicals, pamphlets

and books—either both scripts must be used in parallel columns or opposite pages to suit the convenience of the knowers and users of either script, or all readers of such literature must know both the scripts, so that they may be able to read and profit by the perusal of what is printed in Nagari as well as of what is printed in Arabic. Otherwise, those who know and use Nagari will get the benefit of only what is printed in Nagari and those who know and use the Persian or Arabic script will get the benefit of only that which is printed in that script.

So it is implied in the adoption of Hindustani (Hindi and Urdu) as the lingua franca of India that all over India people must be able to read and write both scripts—unless and until, of course, as said before, a common script is devised and is accepted by all. And in addition they must know the script of their own mother-tongue, if it is different from Nagari and Persian.

As regards the language to be used, in Hindi-speaking and Urdu-speaking areas the language of ordinary conversation contains both Sanskritic words and words taken from Arabic and Persian. Such words in current use are understood by all—though educated Musalmans and Lalas use a comparatively larger Persian vocabulary and educated Brahmans and other Hindus (except perhaps Lalas) use a comparatively larger Sanskrit vocabulary. So much for the language used in ordinary conversation.

As regards the language used in political discussions and speeches, my experience is (and, of course, I speak not as one who knows much of Hindustani but knows only a little) that I can grasp the substance of discussions and speeches in Hindi but cannot understand what is said in Urdu. I say this with special reference to the language used by Pandit Madan Mohan Malaviya, and with reference to the language used by the late Dr. Ansari in his speeches at the last Karachi session of the Congress and by Maulana Abul Kalam Azad in the course of the Unity Talks at Allahabad some years ago.

So my conclusion is that, except for purposes of ordinary conversation, if one wants to understand and speak both Hindi and Urdu as used in political discussions and speeches, he must master both Sanskritized and Arabicized-Persianized vocabularies to a considerable extent, though the grammatical framework of both the dialects may be the same. There may, of course, come a time when both the dialects may be fused into one language.

We now come to the language of printed literature.

Ordinarily the language used in Urdu text-books for schools is somewhat different in vocabulary from the language used in Hindi text-books for schools. But it is possible to write text-books having the same vocabulary to be printed either in Nagari and Persian script or both. Such text-books have been written.

But when we come to higher text-books for colleges and universities, written in Hindi or Urdu and printed in either script, we find that there is greater divergence. Hindi text-books written for the Benares University or for the Kashi Vidyapith and printed in Nagari characters, will not pass muster in the Osmania University of Hyderabad if printed in Persian characters, nor can the Urdu text-books of the Osmania University be used in the Benares University and the Kashi Vidyapith if printed in Nagari. The reason is, in conveying modern knowledge to Indian adult educated readers in all subjects—philosophy, history, economics, physical sciences, social sciences, archaeology, mathematics, political science, . . . —we have to use many words which are not to be found in any modern Indian language *as used in ordinary conversation or even in ordinary works of fiction*. These have either to be taken or coined from some classical language. Now writers in Hindi naturally prefer to go to Sanskrit for the purpose and writers in Urdu as naturally resort to Arabic and Persian. As Sanskrit is not less rich in words and roots than any other language in the world, as it is an Indian language, and as words taken or coined from it harmonize perfectly not only with northern Indian modern tongues but also with such southern tongues as Tamil, there is no reason why Hindi writers should have recourse to any other language than Sanskrit for new words. And it would not at least be expedient or politic to try to persuade writers of Urdu to go to Sanskrit for new words.

What has been said above with reference to higher educational text-books is true also of all serious literature for adult general readers.

So one who wishes to read higher literature in both Hindi and Urdu—and one must be able to do so if one wishes to have the full advantage of the Hindustani *lingua franca*—must have some amount of knowledge of both Sanskrit and Arabic-Persian vocabularies. If, in addition, he wishes to be the producer of such literature in both Hindi and Urdu, he must have sufficient knowledge of Sanskrit, Arabic

and Persian to be able to cull and coin words from them for his own use.

Objection to Sanskritized and Persianized Hindustani

In the United Provinces and Bihar persons interested in the progress of Hindustani literature, and elsewhere in India also persons similarly interested sometimes say that Hindustani should not be unnecessarily Sanskritized or Persianized. They are right. But if it be meant that, so far as modern Indian languages are concerned, Sanskrit, Persian and Arabic have the same standing as 'source-tongues' to draw from, they are wrong. Sanskrit is an Indian language and is genetically connected with all the main north India and middle India languages, and even south Indian languages like Tamil have a large Sanskritic vocabulary. Therefore, it is far more natural to draw from Sanskrit than from any non-Indian tongue. And, there is an advantage in having recourse to Sanskrit. If any modern Indian language enriches itself thereby, the wealth can be easily shared by other modern Indian tongues. That is one of the reasons why Bengali books have been translated in considerable numbers into other Indian languages—it being comparatively easy to translate from a Sanskritic language. The late Pandit Sakharam Ganesh Deuskar, a Maharashtrian Brahman by lineage, whose mother-tongue was Bengali but who mastered Marathi, the mother-tongue of his ancestors, imported into his Bengali writings many Sanskritic words used in Marathi but not in Bengali.

Some Congress Working Committee Resolutions

WARDHAGANJ, July 24.

The Working Committee passed the following resolutions:—

1. The Working Committee congratulates the people of Mansa, Vala, Ramdurg, Jamkhandi and Miraj on the success they have achieved in their brave and non-violent struggle for the vindication of their economic and political rights.

2. The Working Committee express their sympathy for the people of the Nilgiri State in Orissa on the non-violent struggle they have been carrying on against the regulations banning meetings and processions, and the formation of associations within the State.

3. The Working Committee resolves that State Congress Committees do function as heretofore under the jurisdiction of their respective Provincial Congress Committees for the time being.

7. Resolved that Babu Rajendra Prasad be authorised to go into the Bihari-Bengali controversy relating to questions of (1) domicile, (2) public services, (3) education and (4) trade and commerce, and settle it

finally. Pending settlement of this controversy, the Working Committee appeal to all concerned, particularly to the press in Bihar and Bengal, to desist from any further agitation in this behalf, and help in creating a proper atmosphere for just and harmonious solution of the whole problem.

We are entirely against the importation of any abusive language, personalities, insinuations, and provincial and racial or other bitterness into the Bihari-Bengali or any other controversy or agitation. But facts bearing on the controversy should be made known to the public in a sober, truthful and dispassionate manner. It was almost or more than a year ago that Babu Rajendra Prasad was entrusted with the work of going into and settling the Bihari-Bengali controversy. It is much to be regretted that illness has prevented him from taking up that duty as yet. It is to be hoped he will soon recover sufficiently to be able to tackle the problem.

The Working Committee did well to appeal to the press to desist from agitation in this behalf. They would have done better if they had also appealed to the Bihari Ministers and their government and officials to desist from enforcing anti-Bengali discriminatory acts, until Babu Rajendra Prasad published his decision. It would be a bad bargain if Bengalis were to be obliged not to speak and write in self-defence, but Bihari officialdom were to be free to act against the interests of Bengalis.

Separation of Chota Nagpur and Re-constitution of Linguistic Bengal

It is not our intention to discuss here the questions of the separation of Chota Nagpur and of the reconstitution of the province of Bengal on a linguistic basis. We only wish to point out that they are distinct questions. That the Bengali-speaking areas in Bihar-Province—whatever they may be—should be given back to Bengal, has been recommended by the All-India Congress Committee. But on the question of the separation of Chota Nagpur, no Congress Committee has yet pronounced any opinion.

India's Medicinal Plants

The *Hindustan Times* of the 29th June last published an editorial article on "Our Medicinal Herbs" which has perhaps received as little attention as our notes on the subject in more than one previous issue received. Our Delhi contemporary wrote :

Orders to reduce the imports of medicinal herbs by 30,000,000 marks (£2,500,000) this year, says Reuter, have been issued by officials of the Four-year Plan in Germany. "Every German citizen must be familiar with the curative

powers given him by the medicinal herbs of the Fatherland," is the slogan invented at a recent meeting of homoeopaths in Beyreuth. School children are to be trained to recognize and gather herbs, and model gardens containing every variety of medicinal herb, will be established in various parts of the Reich."

What will Germany gain by this step?

This new German drive is intended to benefit the country in two ways. At present Germany imports £6,000,000 worth of herbs every year, and the cutting down of this huge import will mean saving so much foreign exchange. What is perhaps of greater importance is the new interest that is being created among the youth in medicinal herbs, which is bound to have substantial effects on the progress of medical research.

India imports from foreign countries large quantities of medicines some of which are prepared from medicinal plants which those countries take from India. These medicines can be manufactured in India and sold here and abroad, to the economic advantage of our country. Substitutes for other foreign medicines prepared abroad from foreign plants and exported to India can be found if all our medicinal plants were subjected to scientific research and manufacture of medicines undertaken on the basis of such research. That would go to create wealth in and for India as well as make for the progress of medical research.

There is a monumental work on Indian Medicinal Plants by Lieutenant-Colonel K. R. Kirtikar and Major B. D. Basu, both deceased, which has been revised, enlarged and brought up to date by three specialists, two European and one Indian. This work is eminently fitted to help medical researchers and manufacturers of medicines. But we are afraid even our big pharmaceutical works do not take advantage of it.

There is much talk of state encouragement of the Ayurvedic and Unani systems of medicine. But we should be agreeably surprised if we received definite information that even the biggest Ayurvedic and Unani colleges had been using the above-mentioned work, or that even Congress ministries and the more progressive Indian States had requested their Education, Industries and Public Health Departments to procure copies of the work.

Mango Graft On Citron Tree

At the recent mango show in Allahabad, held under the auspices of the Fruit-growers' Association, at which more than 90 kinds of mangoes were exhibited, a new kind of fruit was shown. It was the result of a mango graft on a citron tree. It was produced in the Government Garden at Saharanpur, U. P., under the

supervision of the Assistant Director of Agriculture. The fruit looks like a mango, but with a rough and thick rind. The stone within is small. The pulp is sour, tasting and smelling

Fruit of mango graft on citron tree

neither like a mango nor like a citron fruit. If the sourness of the pulp can be improved off, which is not impossible, there will be an additional fruit for frugivorous persons.

Patents for Plants in U. S. A.

In India plant breeding is not much practised, and therefore we do not bear much of new kinds of plants, fruits and flowers. But in America plant breeders produce many varieties of them. So a Plant Patent Act has had to be passed there. The "World in Brief" news service informs us that

In 1930, the U. S. Congress passed an act permitting the granting of plant patents. In 1937, fifty-five plant patents were granted and in the years since the law first went into effect the United States Patent Office has granted 267 patents on new kinds of plants. Fourteen of these went to one man, Mr. Ralph H. McKee of New York City—all of them for new varieties of poplar trees. These new varieties, developed after the growing of over 16,000 seedlings, Mr. McKee claims, grow faster, are more resistant to disease and produce a longer fiber from which stronger paper can be made than from the ordinary poplars.

Up to the time the United States plant patent law was passed, American plant breeders who created new varieties of plants had no way of preventing others from stealing their discoveries. The effect of the plant patent law was to change this, since it permits the inventor or discoverer of a new variety of plant to obtain the same legal protection as the inventor of a new machine. To come under the protection of the patent law the plant must be reproduced asexually; such as by cutting, grafting, cuttings, layerings, division, or some other form of vegetative reproduction other than by seeds. Tuber propagated plants are also excluded from patent applications

Aluminum-Coated Steel

Manufacturers of high-tensile steel goods will be interested to learn that

Columbia University (U. S. A.) recently announced the successful commercial application of a process for coating steel with aluminum developed by Professor C. G. Fink, head of Columbia's division of electrochemistry. The new aluminum-coated steel is more resistant to corrosion and acids than either tin plate or galvanized iron and can withstand much higher temperatures. In both sheet and wire form, Dr. Fink found, it can be brought to the white heat of 1,800 degrees Fahrenheit and maintained at that temperature for 1,000 hours. This is impossible with either tin plate or galvanized iron for the melting-point of tin is 450 degrees and that of zinc is 784 degrees Fahrenheit. The new product combines the high corrosive resistance of aluminum with the great tensile strength of steel and offers unlimited possibilities in bridge construction, airplanes, automobiles, buildings, railroads, house furnishings and industrial machinery.—*World in Brief.*

Poison Gas Seized in China

Telegraphic news was received in India some time ago that the Japanese intended to

Receptacles of poison gas seized by the Chinese troops

Receptacles of poison gas seized by the Chinese troops

use poison gas in their warfare in China. Whether they have actually done so as yet is

not known. But that they have brought some quantities of it to China seems to be proved by receptacles of it seized by Chinese troops along the Lunghai railway lines. We print here two of their photographs received from Hankow. Those who know Chinese or Japanese will be able to read what is written on the photographs.

International P. E. N. Congress in India in 1940

We are glad to learn from Srimati Sophia Wadia, founder of the P. E. N. India Centre, that it has been arranged to hold the 1940 session of the International P. E. N. Congress in India.

Just before the P. E. N. International Congress which was held in Prague, Czechoslovakia, at the end of June last, Mr. Hermon Ould, the P. E. N. International Secretary, wrote to her by air mail inquiring if the India Centre would like to invite the International Congress to meet in India in 1940. He had to know at once. So, feeling sure that the members of the managing committee would wish to embrace this fine opportunity to promote the cause of world cultural fellowship and universal brotherhood, as well as that of the freedom of literary creation and expression, she cabled the invitation with her characteristic hopefulness and courage. Mr. Ould cabled back accepting the invitation.

The Dewan of Mysore, who showed interest in the work of the P. E. N. India Centre when Srimati Sophia Wadia visited Bangalore last year, has been so kind as to invite the International P. E. N. Congress to hold the 1940 session in Mysore State. The dates have not yet been settled. There is plenty of time to do that and make plans for the success of the sessions in consultation with the Dewan of Mysore and members of the Indian P. E. N. Centre.

International Peace Conference Resolution on Bombing of Open Towns

PARIS, July 24.

The International Peace Conference, attended by delegates from thirty countries, passed a resolution with regard to the bombing of open towns demanding that the supply of anti-aircraft armaments should be unhindered and that financial aid should be given to the countries which are victims of aggression. It also asked that an embargo should be placed on petroleum and metals for the aggressors and that the Spanish and Chinese, threatened by bombing, should be evacuated.

The conference decided to organise petitions against bombing to all countries, and entrusted the bureau of universal peace to organise commissions to visit the bombed cities.

At the Peace Conference Pandit Nehru's speech was frequently interrupted by applause and acclaimed at the end by the delegates standing.

Speaking on the bombing of open towns, Pandit Nehru said that most terrible responsibility rested on those who looked indifferently at such crimes.

"What must we think of Governments who do not know how to resist aggressors and allowed the nationalists to receive all the necessary war material but insisted on the Pyrenean frontier being closed against Republican Spain? Aid for victims of aggression should be organised on a world-wide basis. I appeal to the conference to take concrete action. If peace and democracy perish, we perish too, but if they live on, so shall we."—*Reuter*.

Congress Working Committee on the Development of Industries

At its sitting on the 25th of July last the Congress Working Committee passed a resolution on the development of industries in the provinces, authorising the Congress President to convene a conference of Ministers of Industry at an early date and call for report of the existing industries operating in different provinces and the need and possibilities of new ones as preliminary to the appointment of the Expert Committee to explore possibilities of an All-India industrial plan.

Perhaps the non-Congress Ministers of Industry also will be invited to take part in this conference.

In this connection we invite the attention of the public to the articles on industrial topics in this issue of *The Modern Review* by distinguished scientists and industrialists.

Congress Working Committee on Some New Linguistic Provinces Demanded

At the same sitting of the Congress Working Committee it passed a resolution

assuring the people of Andhra, Karnataka and Kerala that a constitution of separate province on linguistic basis would be undertaken as part of the future scheme of the Government of India as soon as the Congress has power to do so and calling upon them meanwhile to desist from further agitation in this behalf.—(U. P.)

Perhaps this is an abridged version of the resolution actually passed. Its Bengali translation as given in the *Ananda Bazar Patrika* says that the Congress Parliamentary Sub-committee has confirmed the resolution in favour of linguistic provinces passed by the Madras Legislature and the resolution in favour of a separate Karnataka province passed by the Bombay Legislature, and that the Working Committee also fully supports these resolutions. There is no mention here of a previous resolution of a Congress Committee in favour of the restora-

tion to Bengal of the Bengali-speaking areas in the province of Bihar.

The aforesaid Bengali translation of the resolution concludes with the following appeal: "In order that the attention of the [Working?] Committee may not be diverted from its main duty [of winning Purna Swaraj?], for that reason the inhabitants of those regions are being appealed to to refrain from any agitation in this connection." (Free re-translation.)

The appeal to cease to agitate has been made, strictly speaking, to the inhabitants of Andhra, Kerala, and Karnataka, who alone sent deputations to Wardha and who have gained their point. Lawyers in the Working Committee will, we hope, excuse the pettifogging interpretation of the appeal that it does not apply to Tamils, Chota-Nagpuris, and Bengalis, who did not send any deputation and have not got any assurance in consequence!

Much can be said in favour of this appeal, if it has been really made.

It may be pointed out in this connection that the teaching of Hindustani in schools as a compulsory subject is not at present necessary to enable the Congress Working Committee to perform its main duty. Moreover, the agitation resulting from the attempt to make the teaching of Hindustani compulsory *has certainly been diverting the attention of the Congress from its main task*. But the attempt goes on.

The resolution does not take any notice of the desire expressed in Tamil land and in Chota-Nagpur for the constitution of those regions into separate provinces. Perhaps their inhabitants have not yet been sufficiently persistent in their demands and sufficiently obstreperous. If babies do not cry, they do not get milk.

As for the re-constitution of Bengal on a linguistic basis, Bengalis have been asking for it ever since Bengal was re-partitioned more than a quarter of a century ago. They have been crying in the wilderness. Including the President the Congress Working Committee has two Bengali members. As far as we are aware, they are not opposed to the re-constitution of the province of Bengal on a linguistic basis. But perhaps because they are Bengalis, feelings of delicacy prevented them from pressing Bengal's case on the attention of the Committee. And perhaps, too, there has been such persistent preaching in Bengal against a "mendicant" policy, that Bengali Congresswalas have ceased to pray to and petition not only the British and Brown Bureaucracy but even the Congress High Command, too! We have read in the papers that deputations went to Wardha from

Andhra, Karnataka and Kerala to place their case before the Congress Working Committee. But we have not read of any Bengal deputation going there. In our opinion Bengalis, like the other provincial and regional citizens concerned, should place their case before the Congress as well as before the British bureaucracy in all possible ways. Some prominent Andhra and Karnataka Congressmen had recently expressed themselves in favour of sending deputations to England. That is an orthodox Congress precedent for others to do likewise.

The Federation Issue

The following *United Press* message appeared in the morning papers of the 25th July last:

"The United Press" is in a position to announce that President Bose had heart-to-heart talks informally last night with Mr. Bhulabhai Desai, Sardar Vallabhbhai Patel, Babu Rajendra Prasad and Maulana Abul Kalam Azad about the Federation issue, with special reference to the recent press controversy over it. Mr. Sarat Chandra Bose was also present. It is gathered that these talks served to clear up all misunderstandings which have unfortunately centred round this issue of late.

It is learnt that there is no possibility of the Federation issue being discussed during this session of the Working Committee, as it is felt that nothing has happened since the Haripura session of the Congress to deserve special notice from it now. All suggestions about the slightest weakening of the Congress attitude towards the Federal scheme as envisaged in the Government of India Act are discounted as "sheer bunkum" in authoritative Congress circles.

This ought to put a stop to all *open* agitation by any Congresswalas in favour of working the Government scheme of federation after some changes have been made in it. But we are not sure whether all secret manoeuvres in that direction will be given up by all Congresswalas. For we do not have (nor desire to have) any access to either Congress "authoritative" or Congress "unauthoritative" circles. Those who want full freedom and independence for the whole of India should not be thrown off the scent by any clever move on the part of any section of the Congress. By the by, a clear statement on the part of the Congress Working Committee as to whether it approves the resolution passed by the Madras and two other provincial legislatures in favour of working an amended federation scheme, would have been appreciated.

Pace the Congress bosses, it has been held that Mr. Satyamurti's propaganda in England and India in favour of working an amended federation scheme, if not also the impression produced on the minds of Sir Frederick Whyte

and other not undiscerning Englishmen by the public and private talks of some Indian nationalists in England, are happenings since the Haripura Congress which did deserve serious special notice.

With the Congress, we have long humbly believed in the goal of freedom and complete independence. Only, we do not rule out the practicability of reaching it *via* the working of an amended federation scheme. The tactics of De Valera and of the British Dominions' statesmen are not to be despised.

Congress Reply to Muslim League

An *Associated Press* message, dated Wardha the 25th July last, states that it is understood that the Congress Working Committee's reply to Mr. Jinnah categorically answers points raised in the meeting of the Council of the All-India Muslim League.

With regard to the claims put forward by the Muslim League that the Congress should recognise the All-India Muslim League as the sole and only representative Muslim organization which can speak on behalf of the Mussalmans of India, the Working Committee points out that, consistently with its ideals of nationalism, it cannot agree to concede this claim.

Secondly, the Muslim League demanded that in the Committee to be appointed for settling the details of an agreement between the Congress and the Muslim League no other Muslim representatives, such as Nationalist Muslims, should be included.

The Working Committee, it is understood, maintains that it cannot agree to this demand, and its hands should be left free to select such representatives of any community as it thinks necessary and proper in any future negotiations.

The Committee, in conclusion, is understood to have expressed the hope that the Muslim League will consider these terms and try to adjust its demands in such a manner as to make it possible for both the parties to continue the useful work which they had started.—(A. P.)

This is a clear indication that the Congress is willing to resume the "unity talks." But what good will it do?

Sympathy with Arabs—And With Jews

Instead of quiet being gradually restored in Palestine, the situation has been worsening. This is greatly to be regretted. Our heart goes out in sympathy to that unhappy country. But we cannot truthfully say that we sympathize with the Arabs alone of that country. We sympathize with the Jews also. Our eminent countryman, Pandit Jawaharlal Nehru, when in London, is reported to have expressed sympathy with the Arabs. We hope he express-

ed sympathy with the Jews also. We cannot take sides in a case like this.

It is true no doubt that Britain in pursuance of her imperial policy played false with the Arabs. But that is no reason why we should deny our sympathy, whatever its value, to the Jews. The author of *Twisting the Lion's Tail* writes:

"It is well known that in the Peninsular War, when Wellington wanted the help of a Spanish general, he went down on his knees before him in order to entreat him to give it. When the English wanted Arab help during the Great War, they bought over the Arabs to their side with gold, promising them at the same time that after the War was over they would be given the opportunity to create a great Arab empire in Asia. But a little later, when they wanted Jewish money to prosecute the war, they promised the Jews that they would be allowed to make Palestine their National Home—thus nullifying the promise that they had given to the Arabs."

The same author writes that "the Jews will always remember her (England) as the originator of the romantic Zionist ideal which has brought them so much joy—and so much sorrow!"

Palestine was for centuries the motherland of the Jews. It had ceased to be so for centuries—they had lived scattered all over the world, though a small number of them had always been in their ancestral homeland. Almost everywhere the Jews had been and are a persecuted people (India being an exception). In such circumstances, is it any wonder that they seized England's offer of a National Home to them? Undoubtedly England made the offer to promote her own imperialist policy. But that ought not to deprive the Jews of anybody's sympathy. And whatever land they have occupied in Palestine they have purchased with good money, not forcibly or fraudulently dispossessing the Arabs. Moreover, as Professor Gilbert Murray, the great humanitarian, says in *Liberalism and Civilization*, the Jews' "presence in Palestine has increased their (the Arabs') wages and improved the value of their estates."

The Arabs have got the whole of Arabia, Iraq, Syria and Lebanon to dwell in, multiply in and rule. If England had kept her promise to give the Arabs an opportunity "to create a great Arab empire in Asia" perhaps that empire would not have included more countries than these. But supposing that opportunity would have enabled the Arabs to annex some non-Arab country or countries, would that have been just? Could any Indian democrat who hates British imperialism have justified and liked Arab imperialism? Palestine is comparatively a small country and of that the Jews can and

do occupy only a small part. Are they not to have even a portion of a small country to call their home? We should always bear in mind that if Zionism has brought them some joy, it has brought them much more sorrow, too.

So it is not quite clear that on grounds of justice the Arabs alone are entitled to our sympathy.

As generally or very often a nation sympathizes with another nation from self-regarding motives, let us see whether, considerations of justice apart, India can gain more by sympathizing with the Arabs than by sympathizing with the Jews. Neither the Arabs nor the Jews can give any direct help to Indians in their fight for freedom. It would be a delusion to fancy that Pro-Arabianism would incline the Indian Musalmans to join forces with non-Musalmans in India's struggle for liberty. What has the Congress gained by participating in the Khilafatist agitation? Indirectly, the Jews can be more useful allies than the Arabs. The Jews are a progressive people with a modern outlook. There are great scientists and other thought leaders among them. As great financiers and financial magnates they have or control many newspapers and thus can, if they choose, influence public opinion in many countries in favour of India.

It may be that Britain will lord it over Palestine. That is to be unequivocally condemned. But if she does it, she will lord it over both Arabs and Jews, now favouring one community now the other, as she does in India. So both the Arabs and the Jews would come to have a common grievance—as intelligent Hindus and Musalmans have in India.

(The Language of Universities Under Congress Rule)

If in the near or distant future India has Indian rule, it is at least very probable, if not quite certain, that that rule will be Congress rule. And Congress has declared that Hindustani is or will be (it does not matter which) India's lingua franca. That means that it will be India's state language, of which it is necessary to understand the implications.

At present English is the state language of India. In 'British' India in all the officially recognized universities and in the Mysore University, it is the medium of instruction and examination. We are not here discussing the disadvantages of such a foreign medium. We are merely stating the fact. Whatever the disadvantages of a foreign medium, it being the

same in all provinces, men who have received education through it can, if they want to, establish cultural interchange and fellowship among themselves through it.

Under Congress rule, when Hindustani becomes the state language, debates in the Central Legislature will be conducted in Hindustani and in the provincial legislatures in Hindustani or in the provincial mother-tongues. That has been made plain. But what language will take the place of English in the universities and colleges of the different provinces? What will be the cultural medium in these institutions, as English is at present? One answer may be that in every province the principal vernacular or vernaculars will be the cultural medium. But if that be the correct answer, cultural interchange and fellowship among the educated people of the provinces will not be as easy as now. Making Hindustani merely the administrative, legislative and political lingua franca will not lead to sufficient cultural interchange and fellowship among the intellectuals. If Hindustani be made the cultural medium in all universities and colleges as English is at present, assuming that that would be practicable, then cultural interchange and fellowship would be easy.

If Hindustani became not only the legislative, administrative and political lingua franca of India, but the cultural medium also throughout India, then the Hindustani language and literature would receive a double filip. (We do not raise here the question whether there would be two scripts and two forms of the language, which has been discussed in a previous note).

It should be understood here that this raising of the status of Hindustani would be tantamount to lowering the status of the provincial languages and the prospects of their development. No language, no literature, can attain its full stature if it be not the medium of the highest education and culture. Therefore, if Hindustani be made the medium of the higher and highest education and culture, votaries of provincial languages and literatures like Assamese, Bengali, Gujarati, Marathi, Oriya, Tamil, Telugu, etc., need not try to further develop them by trying to convey the highest knowledge through them in the form of works of great merit, and all should bend their energies to the improvement and enrichment of Hindustani.

In this note we have tried to state according to our lights what should and would be the logical outcome of the Congress decision about Hindustani.

What is Causing Decreasing Birth-rate?

That Germany and Italy, and Russia, too, have been trying to have more and more babies has been explained by saying that they want more cannon fodder. But that is not the only explanation. Labour is wealth. The larger the number of actual or possible workers in a country the greater can its prosperity be. In India there are economists who are preaching the use of contraceptives as a remedy for poverty. That is an easy nostrum to prescribe. If there be less babies, there would be less mouths to fill, but there would be less actual and possible workers, too. Why cannot these economists concentrate their attention on the economic development of the country so that there may be more work, more actual workers, less unemployment, greater income, and a higher standard of living, with *natural* decrease in the birth-rate in consequence.

The result, to a great extent, of the use of contraceptives may be understood from what has happened and is apprehended to happen in England in future, as stated in *Twisting the Lion's Tail*:

In the 'eighties of the last century the British birth-rate was 34 per 1,000 of the population, but last year it was 14.8, which means that the output of babies has been less than halved in fifty years. Then again, 100 women of the present generation give birth to 75 women for the next. And if this decline continues at its present rate the population of England and Wales will be reduced in six generations to 7,000,000 according to Professor Carl Saunders, and to 5,000,000 according to Dr. Enid Charles.

In a predominantly illiterate and poverty-stricken country like India, the cult of contraception, if followed, can be followed only by the educated and intellectual classes. That would result in the comparative decrease of these classes and the comparative increase of the lower orders of the people. That would not be good for the country.

Sir Akbar Hydari's Speech at Dacca Convocation

Sir Akbar Hydari delivered a very able and statesmanlike speech at the Convocation of the Dacca University. He paid a handsome compliment to Dacca, past and present, and to Dacca University, mentioning its unitary and residential character and laying stress on its being a teaching institution, where research also is carried on. He emphasized the need for a solution of the communal problem, and said:

There is one problem which alike in its gravity and in its importance claims our primary attention, I mean the problem of the differences that appear to exist

between the two principal communities of India. I for one refuse to believe that those differences are not capable of a lasting solution such as would, on the basis of a common nationalism and of national endeavour in the service of a common patrimony, lead to mutual respect and understanding.... Religion enters every detail of our daily life, nor does it follow necessarily that in so entering it should serve to take away from us the qualities of sympathy and toleration which the teachings of every religion inculcate...the strongest of our collective passions are group hatred and group rivalry, and whatever the cause or causes which lead to such hatred and rivalry between the two Indian communities—whether political, economic or cultural—the fact that such hatred and rivalry are based upon religion makes them the least appreciable and perhaps the most tragic of all. Yet here in this University and in Universities like it which have all the blessings of the atmosphere which surrounds a house of learning, we can learn and show to ourselves and to others the value and the inherent virtues of toleration and sympathy, and the baneful effects and the vice of hatred and jealousy. I know that you in Dacca have done much to learn these lessons and to exemplify them...a spirit such as yours is widely needed if we are to be true to our motherland and to ourselves.

He also dwelt on the importance of what he called the "decommunalizing" our histories. This is a subject on which Professor Bhuvan Mohan Sen of Gauhati sent us an article some months ago, which is printed elsewhere in this issue.

After describing the kind of reconstruction of education, with a vocational bias, which he considered necessary, and on the desirability of an Indian Encyclopædia, he concluded his address by drawing attention to the prayer and ideal contained in that beautiful and inspiring poem of Rabindranath Tagore which begins,

"Where the mind is without fear
and the head is held high."

Dacca Vice-Chancellor's Speech

On the occasion of the Convocation of the Dacca University, Dr. R. C. Majumdar, its Vice-Chancellor, delivered an important address. A considerable portion of it was devoted to a description of two big schemes of expansion contemplated by the University, *viz.*, the establishment of a Faculty of Agriculture and of a Faculty of Medicine.

He entered a firm protest against much of the hostile criticism to which universities in India are subjected. Said he:

"Severe criticism mostly hostile, and various speculation about its radical reform fill the air. Indeed, it would be hardly an exaggeration to say that Indian Universities have fallen on evil days and evil tongues. Every evil from which the country is suffering is laid at the door of the University, the unemployment problem, the acute economic distress, the physical weakness of

boys and girls, backwardness in trade and industry, absence of a proper national spirit, lack of reverence for one's own society and country, the wayward conduct of youth and the irreligious outlook of the present generation, are all supposed to be due to the defective system of University education, while Government ascribe to the same cause the growth of anarchical crimes and revolutionary movements in the country."

By way of comment on such criticism the learned Vice-Chancellor observed with truth :

"What is needed today in India, above everything else, is a band of men with the most disciplined intellect and character, and equipped with the basic knowledge in sciences and humanities, on which all real progress will necessarily depend. We need today leaders of thought and action as much as or even perhaps more than we do mere engineers, mechanics, industrial magnates and technicians of all descriptions. And whence can we reasonably expect these leaders to come from except from the universities? The problems that surround us today are grave and menacing, but they have to be solved if this country has to be saved. The new products of the University ought to be fully equipped for the task if they have imbibed the true ideals of University education and utilised their time and opportunities during their residence in the University. Indeed with the highest ideals of humanity and backed by a strength of will, and grim resolve, they can hope to achieve success where others have failed."

Sir Akbar Hydari Subjected to Criticism

After what Sir Akbar Hydari had said against communalism, declaring among other things, "let us undertake, for example, never to belong to any institution that represents such purely sectional or communal endeavour," it was inevitable that his words will be contrasted with what treatment is meted out to Hindus in the Hyderabad State of which he is the President of the Executive Council. A specimen of such criticism of Sir Akbar is extracted below from *The Subodh Patrika* of Bombay, organ of the non-communal Prarthana Samaj :

Sir Akbar Hydari in his convocation address to the graduates of the Dacca University showed his deep concern for what one witnesses all around today. And that was communalism, and be deeply regretted on the same. He stressed the fact that India was the land where the Mahommedans and the Hindus had lived as brothers for generations together and their cultures had commingled as their monuments studded all over the country went to show. His earnest hope that this spirit should disappear from the land we highly commend. But may we be permitted to ask, and will he tell us why and how what was only confined so long to British India is now rearing its head in a State in which he holds such a high position today? A former Nizam, let us remind him, had told Lord Minto when the latter consulted him about communal representation and the communal question, that there was no such thing in Hyderabad and it was no good to drive in a wedge between the two communities by resort to communal representation.

Taking a leaf out of that book, will Sir Akbar Hydari impress upon his master to follow the advice of his father in his dealings with the Hindu subjects of the State? Will Sir Akbar ask the Muslim League of India to foreswear communal representation? Or does he think it enough to mourn over the lot in an address here and an address there, and for the rest to continue as before?

President Savarkar on Muslim Dissolution of Marriage Bill

Mr. Vinayak Savarkar, President of the Hindu Mahasabha, has issued a statement on the Muslim Dissolution of Marriage Bill which has been introduced in the Central Legislative Assembly. The statement begins :

I feel it my duty to voice forth the opinion of the Hindu public in general as evinced in a number of resolutions passed at their meetings and institutions throughout the country and enter a strong protest against the bill titled 'Moslem Dissolution of Marriage Bill' and introduced in the Central Legislature by Mr. Kazimi. The bill is detrimental to the interests of the nation in general and Hindu Society in particular.

He proceeds to show in how many ways it is detrimental to Hindu society :

Firstly, it is an unwarranted encroachment by a non-Hindu member on the personal law of the Hindus. Secondly, although the bill professes to enable Moslem women to secure a divorce and thus liberate them from the shackles which hold them bound to a nuptial tie against their free will according to the present Mahommedan Law and practice, still, inconsistently enough, it seeks to chain them down to share the bed and board of a Moslem husband whom they may hate and wish to divorce by imposing on them new fetters under Clause 5 despite the Mahommedan religious and legal injunctions to the contrary.

The clause lays down that "the conversion of the married Moslem woman to a faith other than Islam shall not by itself operate to dissolve her marriage." But according to the Mahommedan Law and Shariyat in force till now, the conversion of a Moslem woman to any other religion secured for her an automatic dissolution of marriage with her Moslem husband.

He next explains how the Bill affects kidnapped Hindu women.

Now, it is a matter of common knowledge which has been substantiated in hundreds of cases in courts of justice that organised and stray attempts on the part of the Moslem fanatics have been continuously going on to kidnap, capture or abduct unguarded Hindu women, to make them embrace Islam per force and hustle them through a sort of marriage with Moslems, the records of which could easily be fabricated in a fanatical Kazis register. Whenever some of these women were either rescued or escaped and were reconverted to Hinduism they were up to this time automatically free from the enforced Moslem marriage as according to the Moslem Law a woman's conversion to any non-Moslem religion amounted by itself to a dissolution of her marriage with her former Moslem husband. But if under this bill the Hindus are made to lose this valuable right which they have secured through court decisions these unfortunate Hindu women who fall victims to Mahommedan fanaticism

cannot be freed from the clutches of even such forced marriage with Moslems even though they are rescued or escaped and got reconverted to Hinduism of their own free will. That will clearly show that this bill is not so much a genuine attempt to liberate Moslem women from the tie of marriage with Moslem husbands they hate as it is a deliberate attack against the rescue work of the Hindu Sanatanist and the Suddhi Movement.

The Bill affects the interests of the Indian Christian and other non-Muslim communities also.

For the same reasons Christians and other non-Moslem communities other than Hindu will also suffer as Moslem women embracing any such non-Moslem faith of free will, will be unable to shake off their chains of a former Moslem wedlock under this new bill.

In conclusion the anti-national character of the Bill is exposed.

The bill is also anti-national, for clause 6 runs as follows:—

"Subject to the provisions etc., a suit for the dissolution of the marriage by a married Moslem woman shall be filed in the proper court provided that the presiding officer of that court is a Moslem". And again "appeals from the decision of the trying courts shall lie to the High Court and shall be heard and decided by a Moslem judge of that court".

Now this innovation is bound to be detrimental to the unity and cohesion of the national State, as the attempt amounts to nothing short of introducing the communal virus even in the judicial administration of the State. Are we to have as many courts as there are creeds and religions in the land?—each competent only to try the cases of those to whose creed or religion the trying judge belongs? The distrust that the bill shows towards non-Moslem judges amounts to a covert condemnation against that class who have ever been known to deal evenhanded justice without any distinction of creed or religion.

For these and other objections against this bill it is the duty of every nationalist member in general and Hindus and Christians in particular to oppose it as it stands. Even in the interest of civil liberty alone the bill ought also to be condemned by every member who is a free-thinker and follows no religious persuasions.

"Round Table Conference" In India on Federation?

The *Hindusthan Standard* has published the following message from its Poona correspondent:

POONA, July 26.

One more Round Table Conference (and this time in India) seems to be the outcome, according to the London correspondent of "Kesaree", of recent political discussions in London on the Federation issue.

Writes the "Kesaree" correspondent: "I am in a position to reveal exclusively that the Government of India will call a Round Table Conference in India. This time it will be predominated by Congress delegation."

The correspondent further understands that Mr. Bhulabhai Desai's recent London visit was undertaken on an invitation of a British peer interested in Indian politics.

Afghanistan Dry Fruits Trade

The Congress Working Committee has passed the following resolution at Wardha on the Afghanistan dry fruits trade:

"The Working Committee appreciate the action of the Afghan Government in abolishing the monopolistic arrangements made by them for controlling export trade in dry fruit, which is detrimental to the interests of Indian merchants in Afghanistan and India. The Committee welcome the restoration of status quo in this behalf, which will help to improve the friendly feelings between the people of India and Afghanistan."

"Prescripts for Ailing Democracy"

Under this caption *The Living Age* for July, 1938, publishes three articles from three British newspapers. They are in effect answers to the question, Does Britain need a dictator?

Mr. A. J. Cronin writes in the *Sunday Chronicle*:

I am convinced that Roosevelt will fail completely because he listens to everybody, just as I am assured that Hitler succeeded because he listened to no one. Nevertheless, the fact remains that America has been prepared to submit to a man who has been called the 'awful demagogue.'

I am no war monger. Two years ago I was as much a pacifist as the rest, but I came to realize that it was no use lying down like a lamb when the European sheep fold was full of wolves. Thanks to the appalling fiasco of our late foreign policy I am now firmly convinced that our only hope of a European peace is a Britain both strong and prepared.

Equally, I still believe in the principles of democracy, but I am positive that the time has come when such democratic principles should be mobilized and enforced by a more active and powerful unit than our parliamentary system.

I am not crying for a pocket Caesar. I am merely enumerating the benefits to be achieved through unimpaired, rapid and direct action by a man of age, experience, integrity and good-will. Have we such a man? That is a question which the future will decide.

That is practically a vote for dictatorship. The Right Honorable L. S. Amery, M.P., writes in the *Sunday Times*:

It is a commonplace of scientific organization, long since recognized in all the fighting services, that the planning of policy for the future can only be effectively carried out if those responsible for it are free from the day-by-day tasks of administration. The failure to recognize this principle—the general staff principle—is the real weakness of our present Cabinet system, and makes it incapable of dealing effectively with any serious situation where clear thinking on difficult and complex issues, definite decisions (not formulae of agreement), and swift, resolute and consistent action are required.

It was Mr. Lloyd George's great achievement in the War that he faced this inherent weakness of the departmental Cabinet system, and boldly set up a War Cabinet of half a dozen Ministers without departments, leaving the departmental Ministers outside the Cabinet as such, and only called in when their own particular subjects were under discussion.

I believe there is no measure that Mr. Chamberlain, with his courage and power of decision, could undertake that would more facilitate his own almost superhuman task, and make the nation feel that its problems were being faced in a really bold and big spirit, than the application, in some form or other, of that principle of Cabinet reform which Mr. Lloyd George introduced with such marked success in the War.

This is practically asking for a small oligarchy.

Sir Norman Angell writes in *Reynolds News*, desiring a "will to co-operate" among the "democratic" powers against the Fascist powers. Says he :

Imagine that you had a United States composed of Russia, China, France, the British Empire, their armies, navies, air forces, industrial and agricultural resources making a unit. Compared with the material and human resources of such a Power, how would the Fascist combination appear when we recall that it would be composed of a Japan already feeling the pinch of exhaustion in its Chinese entanglement, of an Italy already in economic straits and feeling the pinch of a still unconquered Ethiopia and an extremely unpopular Spanish war; and a Germany already short even of elementary foodstuffs?

If Russia is in a position to concentrate her whole power upon Germany—is freed, that is, of serious danger from Japan—then, for the reasons indicated, Germany is placed in a militarily hazardous situation, which she will not lightly provoke.

The way, therefore, to offset the power of Germany for aggression is to aid China in her resistance to Japan (a resistance which, despite setbacks, seems certain in the long run now to be successful), which could be done by the extension of credit to China for the purchase of motor trucks, tractors, machinery, cement—an operation incidentally relieving unemployment at home.

The way to defend Czechoslovakia is to see that the Spanish Government gets the materials for its defense, so that the strategic position of France is not worsened and that of the totalitarian States not improved.

The security, not alone of peace, but of democracy, is indivisible. To defend it in China, or in Spain, or in France, is to defend it here. To be indifferent to its fate there is, in the end, to betray it here.

Protest Against Proposed Co-operative Legislation in Bengal

A closely-reasoned and weighty manifesto signed by a number of public men, legislators and co-operative workers, has been issued as a protest against the way in which the new Co-operative Bill, which was published in the *Calcutta Gazette*, early in July, 1938, is attempted to be rushed through the present session of the Bengal Legislative Assembly. The manifesto runs thus :

1. During the last two years and more the general public had off and on been informed that it was proposed to amend the laws relating to co-operative societies in Bengal. The forecasts of changes that had from time to time been announced by responsible authorities in the Province produced in the public mind a vague

impression that what was really aimed at was the concentration of more and more power in the hands of the Registrar and the department. The new bill which has been published in the *Calcutta Gazette* of the 7th July 1938 fully confirms this apprehension.

2. Co-operative Societies in Bengal are now governed by the Indian Co-operative Societies Act, 1912. Taking advantage of the fact that under the Montagu Reforms Co-operation became a Transferred Subject, some of the provinces such as Bombay, Madras, Bihar, etc., enacted Provincial Co-operative Acts. It is now the turn of Bengal to have a Provincial Co-operative Act of its own.

3. When co-operative legislation was introduced in India, Government declared that it was their intention that co-operative organisation should, in its essence, be a popular movement; that no efforts be spared to strengthen among the general public the feeling that it was to be based upon self-reliance and freedom from outside control and dictation; and that Government should not allow co-operation in the country to develop into an official concern managed by the State. It is extremely unfortunate that provincial authorities have completely departed from the principle that the Government of India laid down at the outset for guidance. The trend of provincial co-operative legislation has been more and more to officialise all co-operative organisation. This has, of course, evoked protests both from independent co-operative workers and the general public but instead of any check to this most unsalutary tendency, co-operative societies are being subjected more and more to comprehensive and minute administrative control, involving interference in the details of internal administration and the day-to-day work of the societies, in contravention of the fundamental principles of co-operation.

4. The Statement of Objects and Reasons and the Notes on some of the more important among its clauses, appended to the Bill, make an elaborate attempt to justify the new provisions. These contain a scathing condemnation of non-official workers of co-operative societies in Bengal and it is suggested that as the powers that the present Act gives to the Registrar and his officers are very inadequate, more extensive powers of control and intervention are needed to check the present abuses.

5. The position is rather the other way. For an examination of the provisions of the existing Act shows that the Act, in fact, invests the Registrar and his officers with sufficient power to control and check the abuses that have gradually developed round co-operative societies. The Registrar, in accordance with the terms of the Act, is constituted the very foundation of the movement. "It is left entirely to his discretion to register or to refuse to register a society (cf. section 9), and the by-laws and every amendment of them require his approval (cf. sections 9 and 11). Thus on him rests the responsibility of seeing that a society starts under conditions as favourable as he can make them. In order to ensure that wise rules are carefully observed he is given unlimited power of inspection and audit (cf. sections 17 and 35). He controls the power of a society to make loans to, and receive deposits from a non-member (cf. sections 29 and 30) and has a voice in the investment and disposal of its funds (vide section 32(1) d and 34). Finally, he has full discretion, subject to the right of appeal to the Local Government or such Revenue Authority as it may nominate, to order the dissolution of a society (cf. section 39) and to appoint a liquidator to wind it up." (*Vide Calver's Law and Principles of Co-operation*). All this shows how extensive are the

powers with which the Registrar and his staff have been invested which make the Registrar an unmitigated autocrat.

6. As a result of the experience gained in the working of co-operative societies for now over thirty years, there should be on the one hand, a gradual relaxation of the unrestricted and dictatorial powers that the Registrar and his staff exercise over co-operative societies. On the other, steps should be taken for imparting proper co-operative education and training for introducing a sound and efficient system of audit, independent of the control of the Registrar and his department, along with a proper system of appointment of officers and staff of the department and co-operative societies and the abandonment of the use of co-operative officers for political objects and purposes of election—that is, for purposes and objects other than those for which they are employed and paid from public funds, etc. etc. Such a course can alone engender a sense of real responsibility in bodies intended to be autonomous and self-reliant. For those societies which still fail to discharge their responsibilities in a proper manner the provisions of the present Act, together with such help that the law courts provide, give sufficient power to bring any offender to book.

7. The framers of the Bill seem to imagine that they will succeed in reforming the co-operative societies and their members and officers, paid and honorary, by the use of the penal sections of the Bill, by instilling into their minds fear of fine and other methods of punishment proposed to be inflicted for their failure to carry out the provisions of the Act and of even the rules thereunder; by endowing the Registrar and his staff with more extensive summary powers than they are entitled to exercise at present and by excluding in many co-operative matters the jurisdiction of the courts. Efforts in such directions elsewhere have in the past invariably failed and people even with a modicum of commonsense and of knowledge of history will safely predict that any scheme of reform of co-operative societies by methods of regimentation and dictation is foredoomed to failure.

8. We desire to point out that the policy and administration of the Co-operative Department have thrice during the last three years been subjected to very severe criticism in the Legislature. The Chief Minister gave practically an assurance of a proper enquiry, but we do not know that anything has so far been done in fulfilment of the Chief Minister's assurance. Not only this, some of the officers against whom allegations of a grave nature were made have either been promoted or steps have been taken to follow a policy of whitewash, drift and suppression. Further, no steps have so far been taken to give effect to some of the insistent demands for reform, such as the introduction of an independent and sound system of audit, etc., already referred to above.

9. The fact that notwithstanding the extensive powers that the Registrar already possesses, the Co-operative Department has allowed the societies to deteriorate unmistakably shows that the fault lies more with the former than with the societies. Even a superficial analysis of the causes of determination will show that in every important matter the Registrar and his department had adequate power to deal fully with the situation. Not only have essential remedies suggested from the time of the Maglagaan Committee, by various Commissions, Committees, and Conferences been ignored, but they have failed to take timely action in regard to the abuses that have developed even after certain instances have been brought to the notice of the Department and of responsible authorities.

10. That the situation has become very onerous

is made clear by the important speech that the Hon. Finance Minister delivered at Jamalpur a few days ago. This was the first time when a responsible authority of the position of the Finance Minister considered it his duty to take the public into his confidence in the matter. No less serious is the fact, as we have already pointed out, that in matters of fundamental principle, the present Ministry in Bengal proposes to depart from the accepted standpoint of the co-operative movement, in complete contravention of the policy laid down by the original promoters of the co-operative movement in India. We consider it our duty to urge, in this circumstance, that no steps should be spared by the public to oppose by all constitutional means the Bill by the help of which the Ministry of Co-operation in Bengal proposes to carry out its reactionary policy.

11. We would like to emphasise that any amateurish treatment of a matter like the co-operative movement might have serious consequences. It is essential, particularly, in view of the grave allegations that have been made with reference to the administration of co-operative societies to have a thorough and sifting enquiry, as has been the case in some of the other provinces, before the handy short-cut method of legislation is resorted to. There can be no justification for the drastic, anti-co-operative and reactionary legislation as contemplated in the Bill, and we regret that as in the case of the recent educational projects and excursions of the Ministry, here also a measure which the previous Ministry had in its files but was unable to place on the statute book has been ransacked as a panacea for evils, the roots of which lie deeper than is attempted to be shown. We would conclude with a fervent appeal to people interested in the co-operative movement to study and expose the serious blemishes of the Bill and make their views known to representatives on the legislature, in clear and distinct terms. Our legislators will also, we hope, insist on a critical and detailed examination of the implications of the measure, before entertaining the interested propaganda that is being conducted for some time past in behalf of the proposed legislation.

We are in complete accord with the views set forth in the manifesto quoted above. The new Bill sets entirely at naught the fundamental principles underlying co-operative organization by placing it entirely under official surveillance and the dictatorial control of the Registrar and his staff and attempts to exclude the jurisdiction of the courts in many vital matters. The authorities have not only ignored the very serious allegations that have repeatedly been made in the Legislature and the press against the way co-operative societies are being worked by the Co-operative Department but no proper and systematic effort appears so far to have been made to introduce the essential reforms needed for the rehabilitation of the movement. We are firmly of opinion in this circumstance that before such a reactionary measure is placed before the Legislature, it should be thoroughly recast and brought in line with the accepted co-operative principles. It should also be duly circulated for eliciting opinion thereon. Besides a proper enquiry should also

be made into the working of the movement by independent and impartial public men acquainted with the principles and working of the co-operative movement.

A Gwalior Army Chief on the Defence Problem

Col. S. R. Bhosle, O.B.E., A.D.C., Inspector-General, Gwalior Army and Officiating Army Minister, in a message to the Cadets of the Bhonsla Military School observes:

'The problem of national defence is not a simple one; it is already extremely intricate, and its solution tends to become more and more difficult as new weapons of destruction continue to come into play. Tremendous mechanisation of land forces now going on all round us and the ruthless necessity of being fully equipped in all branches and above all, on a size adequate for every possible contingency, cannot be created in a short time. It requires the persistent application over a long period of time, of stupendous amount of energy, brain and money, while for the present, we have not even the mental background necessary for this titanic effort. It is a great pity indeed; but it would be national suicide if we gave ourselves up to despair and did nothing.

'Modern warfare is not a series of heroic duels in which muscle, more than mind, appears to constitute the best argument. It is out and out a struggle of brain backed up on both sides by most diabolical inventions of modern science. You have to remember this, and to equip yourselves accordingly. As a supplement to your vocational training, you should interest yourselves in such studies as military geography and great military campaigns of history. Talking of political developments, I think, I must sound a note of warning, namely, that the army should keep aloof from active politics. That is not its line, and it is definitely not in the interest of the country it intends to serve, that the army should at any time be divided into different contending political groups. This does not rule out patriotism. What is actually necessary is the sense to distinguish between patriotism and political controversy. The mettle of patriotic fever is to be tested against an aggressor and not in political party squabbles.'

—*Amrita Bazar Patrika*.

Prof. Suniti Kumar Chatterji's Programme in Europe

PARIS, July 18.

Dr. Suniti Kumar Chatterji, Khaira Professor in the University of Calcutta, passed through Paris on his way to Ghent to attend the International Phonetics Conference taking place this week.

Suniti Babu has a crowded programme. Besides reading his paper at the Ghent Conference, he is expected to speak at a series of Conferences in Denmark and the Scandinavian countries on anthropology, Phonetics and Orientalism. He may also lecture on the Creole languages, which, as he explained, are nothing else but white men's languages in the mouth of coloured men.

Suniti Babu is also visiting Soviet Russia in the middle of August. Asked whether his purpose in visiting Russia was merely touristic, Suniti Babu said he was in contact with several Russian professors and it was

possible that he would give lectures there also.

Suniti Babu said that he was carrying with him nearly 200 slides depicting Indian paintings and sculptures as well as Negro art.

Asked whether he intended to study, while in the U. S. S. R., the problem of its languages and specially, in view of the fact that the question has a bearing on the language problem in India, how the problem is being handled in the more backward republics in Central Asia, etc., the language and culture of whose native populations were completely crushed by the Russia of the Czars, Suniti Babu said he was very much interested in the problem. The process of Russification of the conquered people was an integral part of Czarist policy, and it was his intention to find out for himself how far and in what way that policy had been reversed by the Soviet regime. There was always, summed up Suniti Babu, a chance of linguistic imperialism in cases where there emerged in multi-language states a supreme national or state language.

—*The Hindustan Standard*.

As Dr. Chatterji is a savant and a teacher, his countrymen may expect him to tell them on his return, to what extent in the disturbed state of Europe teachers and students have given themselves up to flag-waving and shouting of slogans.

Reaction Against Stalin's New Policy

Recent declarations made by Stalin in connexion with his new policy have not gone without giving rise to some reaction against it. The *Evening Post* of America, quoting from one of such declarations, opines that

"four years of bunk have been wiped away. Stalin reveals that the Communists have been sharpening the knife against our system . . . To talk of a united front for democracy with men plotting a proletarian revolution and a dictatorship of the proletariat is to talk nonsense. There can be no united front for democracy with enemies of democracy."

Referring to Stalin's "International Proletariat", the paper remarks that

"there can be but one interpretation. American workers must, according to Stalin, be prepared to fight for Soviet Russia when he wants them. Their loyalty must be to 'the world proletariat' and to Russia, not to their own country."

The paper welcomes this declaration for the reason that it would clear the air completely. Those who have so long approved communist activities in the United States and have felt that Soviet Russia was, after all, friendly to democracy, would now be disillusioned.

X.

Communism in Disfavour

Communism in American labour movements has of late been hardly hit. The progress of American Unionism or Trade Unionism has given a hard blow to communism. Different

American labour unions have of late challenged communism and is trying to get rid of its influence. At a recent convention the Union of Mine Workers of America re-affirmed its original resolution of excluding from its fold those who were members of the communist party. The trade union movement in America has been forced to face the question of what is to be done with the communists in its rank. The communists are now facing opposition not only from without, but also from within, i.e., both from the rank and file, as well as leaders.

Another instance of communism being in disfavour is found in a recent decree passed by the Swiss canton of Vaud outlawing communism and prohibiting associations and organisations being affiliated directly or indirectly with the Communist International, whose activity is contrary to public order. The above decree on being put to vote received a large majority.

X.

Bengal Finance Minister on the Co-operative Movement in Bengal

In the course of his presidential address at the Dacca Division Co-operative Conference, held at Jamalpur on the 2nd July last, Mr. N. R. Sarker, the Bengal Finance Minister, is reported to have made some very important observations. We make the following excerpts from the report of his speech, of which a copy has been supplied to us :

"The co-operative movement in our country left much to be desired and the chief reason was that the movement had come to be regarded by the public as part of a Government machinery and wanting in any living touch, with the result that while members of the societies had readily availed themselves of the facilities of credit afforded by societies, they had not evinced the same eagerness to fulfil the obligations that a loan involved."

"People of this country had never taken kindly to the co-operative movement and those in charge of it had failed to take note of the fact that the co-operative movement was not like a pill that could be thrust down the throat of a patient. It was on the contrary a refreshing draught that should be willingly and voluntarily taken, and that was how it could succeed."

"There were two aspects of the problem to be considered. Firstly, the co-operative societies were burdened with heavy, unrealised and unrealisable overdues which, owing to drop in prices of agricultural produce and other reasons, the agriculturists were not able to meet; secondly, inability of the societies for the last few years owing to this accumulation of overdues to advance money to the cultivators for their short-term requirements."

"To resuscitate these societies it was necessary to carefully analyse the financial position of the members. Fortunately this task has been done in the case of all primary societies involving the 4½ lakh members. This information would furnish the figure which was likely to be recovered by the societies and the central banks would

have to that extent to write off their dues from the societies. It might be necessary to arrange in certain cases payment by instalments. If however, in spite of these returns and in spite of the reserve fund the central banks were unable to repay fully the depositors, Mr. Sarker did not see what other course there could be for the depositors except to forgo a portion of their deposits. It was no doubt a pity, particularly because the deposits represented the hard-earned money of the middle classes, of helpless widows and of small institutions. It pained him when he thought of the incidence of this loss."

"The central banks also would do better to show in their balance sheets the actual assets in the shape of what they were likely to recover from the societies rather than to show a fictitious amount representing their accumulated debts. Such a course, he thought, was likely to reassure the public."

"The idea had gained currency that if only arrangements could be made for composing the debts of the agriculturist and for provision of cheap loans in future, all his problems would be solved. This was, however, an entirely erroneous impression, and Mr. Sarker emphasised that it was absolutely essential that debtors should be educated not to extravagantly spend money obtained from the societies. They would have to be taught to make the fullest productive use of such credit facilities as might be made available. In fact, the success of the co-operative movement would in the main depend on the ability and willingness of the agriculturists to make a productive and intelligent use of credit and not merely on the extent and amount of credit that might be provided for."

The Finance Minister is to be congratulated on the frankness with which he gave expression to some of the oft-repeated criticisms against the way the co-operative movement is being run in this province. Possibly owing to the handicap of his official position, he refrained from discussing the louder complaints that have repeatedly been made with reference to the department—the defalcations, the communal bias in administration, the defective system of audit, etc., etc. During his last Budget speech Mr. Sarker had spoken of the intended reorganization of the Department and of the movement. The public has had a foretaste of it in the clumsy and unabashed manner in which certain appointments and promotions have been recently made, and also in the *communiqué* white-washing the officials specially mentioned in the Edgley Tribunal's report. Mr. Sarker must have known by now that the *malaise* from which the movement suffers requires a thorough, independent and expert investigation. We made the suggestion long ago and make it again.

Congress Working Committee's Resolution on C. P. Ministerial Crisis

The Working Committee passed the following resolution on the C. P. ministerial crisis:

Wardha, July 26.

"After having heard the Parliamentary Subcommittee and given anxious consideration to the circumstances that have happened since the agreement

arrived at Pachmarhi between the Ministers in the presence of the members of the Parliamentary Sub-Committee and the Presidents of the three Provincial Congress Committees concerned, and after having had several interviews with Dr. Khare, the Working Committee have reluctantly come to the conclusion that by a series of acts committed by Dr. Khare culminating in his resignation of his charge and demanding the resignation of his colleagues of their charge, Dr. Khare was guilty of grave errors of judgment, which have exposed the Congress in the C. P. to ridicule and brought down its prestige. He was also guilty of gross indiscipline in that he acted in spite of the warnings against any precipitate action. His resignation was the direct cause for the exercise, for the first time, since office acceptance by the Congress, by a Governor of his special powers, whereby Dr. Khare's three colleagues were dismissed.

"The Working Committee note with satisfaction that these three Congress Ministers showed their loyalty to the Congress by declining without instructions from the Parliamentary Sub-Committee to tender their resignations, which was demanded by the Governor. Dr. Khare is further guilty of indiscipline in accepting the invitation of the Governor to form a new Ministry and contrary to practice, which he was aware in actually forming new Ministry and taking the oath of allegiance without reference to the Parliamentary Sub-Committee and the Working Committee, specially when he knew that the meetings of these bodies were imminent. By all these acts of his, Dr. Khare has proved himself unworthy of holding positions of responsibility in the Congress organization. He should be so considered till by his services, as a Congressman, he has shown himself well-balanced and capable of observing strict discipline and discharging the duties that may be undertaken by him.

"The Working Committee have also come to the reluctant conclusion that the Governor of the C. P. has shown by the ugly haste, with which he has turned night into day and forced the crisis, that has overtaken the province that he was eager to weaken and discredit the Congress in so far as it lay in him to do so. The Working Committee hold that knowing as he must have what was going on among the members of the Cabinet and the instructions of the Parliamentary Sub-Committee, he ought not to have with unseemly haste accepted the resignation of the three Ministers and demanded the resignation of the other three, dismissed them on their refusal to resign and immediately called upon Dr. Khare to form a new Ministry and swore in available members of the new Ministry without waiting for the meeting of the Working Committee, which was imminent."—A. P.

This resolution of the Congress Working Committee practically prevented Dr. Khare from ascertaining and letting the public know whether he still enjoyed the confidence of the majority of the Congress group of the members of the C. P. and Berar Assembly. No wonder, therefore, that he protested against the Working Committee's resolution and issued a statement defending what he had done. Mr. M. S. Aney, the Berar nationalist leader also expressed the opinion that Dr. Khare ought not to have been practically prevented from standing for the ministry again.

As subsequent public meetings have shown, Dr. Khare has a considerable number of supporters among Congressmen and other politically-

minded persons in Nagpur and elsewhere in the province.

This is a very brief statement of facts. As regards Dr. Khare's fitness to hold the office of premier of his province, our view is that either on account of his own lack of ability or owing to his colleagues in his cabinet not co-operating with him, it is perhaps for the best that he has "gone out of the picture"—temporarily, we hope.

That Dr. Khare had admitted his error of judgment should have toned down the language in which he has been condemned—if not also diminished the severity of the action taken against him.

Regarding that part of the Working Committee's resolution which relates to the Governor's action, we are not aware that he acted unconstitutionally. It would have been better if he had waited a little before dismissing the three ministers who had refused to resign and asking Dr. Khare to form a new Cabinet. Nothing would have been lost by some delay in the formation of a new Cabinet. In our opinion the Congress Working Committee would have done better if they had refrained from imputing to the Governor the motive "to weaken and discredit the Congress". They were not men of our profession engaged in writing incisive paragraphs for the delectation of readers, but grave elders seriously engaged in shaping the destiny of the nation. There is no harm in being charitable even towards the agents of imperialists, who may be merely guilty of error of judgment like others. Moreover, it should be noted that the cabinet formed by Dr. Khare at the Governor's request consisted of Congressmen. Perhaps such personnel of the Cabinet did not discredit the Congress.

New C. P. & Berar Cabinet Formed

At a meeting of the C. P. and Berar Congress legislative party held on the 27th July last, at which President Subhas Chandra Bose took the chair, Pandit Ravi Shankar Shukla was elected leader of the Central Provinces Congress party by a majority of votes.

"When Dr. Khare's name was proposed, the President, Mr. Subhas Chandra Bose, drew the attention of the mover to the Congress Working Committee's resolution and said that he would put the motion to vote, if the mover wanted it, despite the Working Committee's resolution yesterday on Dr. Khare. Thereupon the mover withdrew his motion."

What President Bose said was quite judicious and considerate.

It is understood the C. P. and Berar cabinet is to consist of the following members:

- (1) Pandit Ravi Sankar Sukla, Prime Minister.
- (2) Pandit Dwarka Prosad Misra (Jubbulpore).
- (3) Mr. D. K. Mehta (Seoni).
- (4) Mr. S. V. Gokhale (Amraoti).
- (5) Mr. M. P. Kolhe (Yeotmal).
- (6) Mr. C. J. Bhoruka (Commerce Constituency Nagpur).

The Kind of Autonomy Our Provinces Have

Though the expression "provincial autonomy" is used by British bureaucratic imperialists to denote the kind of British-made constitution given to our provinces and though it has come into vogue even among Indian nationalists, there is no real provincial autonomy. There are various limitations on the powers of the ministers as regards finance, legislation, the superior services, etc.; the legislatures also do not possess the powers possessed by Dominion legislatures—not to speak of those of the British Parliament; and there are various safeguards, and special powers and responsibilities of the Governor. Hence the provinces do not possess real autonomy.

This so-called "autonomy" is still further restricted, so far as each Congress-majority province is concerned, by the kind of power and control exercised by the Parliamentary Sub-Committee of the Congress.

"Democratic Responsible Government" in the Provinces

Democratic responsible government in a province means, among other things, that the ministers are chosen by the leader of the majority party in the provincial legislature and that they are responsible to the legislature, consisting of the elected representatives of the people. They go out of office if they lose the confidence of the majority of these representatives, not otherwise.

Now, in the Congress provinces, the personnel of the cabinets does not depend solely, or perhaps even mainly, on the wishes of the majority party of the legislature. The personnel has to receive the approval of the Congress Parliamentary Sub-committee, and, if need be, of the Working Committee, and in

some cases, of Mahatma Gandhi. Sometimes, some member of the Parliamentary Sub-committee may find out and choose a particular minister for a province, as in the case of the now famous Mr. Shareef, ex-minister of C. P., who was found for Dr. Khare by Maulana Abul Kalam Azad. Mr. Shareef was not even a Congressman before his selection by the Maulana.

In the recent C. P. ministerial crisis, the Parliamentary Sub-committee, and the Working Committee (including the Congress President) could not arrive at a final settlement without the help of the Mahatma. That is how it can be put mildly. The rest is silence. It is a fortunate circumstance that at all crises Mahatma Gandhi, though technically out of the Congress, is available and ready to act as the *deus ex machina*.

It may perhaps, therefore, be said without unfairness, that Congress provinces do not possess real *provincial* autonomy. The ministers no doubt, owe responsibility of a sort to the legislatures, but they are responsible also to the Parliamentary Sub-committee, the Congress Working Committee, the All-India Congress Committee, and finally, if the worst comes to the worst, to Mahatma Gandhi. A provincial ministry may not have been proved to have lost the confidence of the provincial legislature, but if it has lost the confidence of the Congress bodies and person named above, it may have to go out of office. And it should be noted that the Parliamentary Sub-Committee, the Congress Working Committee, the All-India Congress Committee, and Mahatma Gandhi, who can make and unmake the cabinet of a province, are not responsible to the legislature of that province.

Therefore the kind of provincial government which we have may be what we are now fit for, but it is not exactly what is really meant by provincial autonomy or by democratic responsible government.

A contributor to *The Asiatic Review* for July, whose political views we do not share, writes in the course of an article, entitled "Dictatorship By Proxy In India":

"We see forming in India a new kind of political institution unheard of in past history—namely, dictatorship by proxy. Such a dictatorship does not need military strength behind it, but uses great popularity and support from the general masses of the people under the avowed creed of non-violence, and uses the democratic institution of an elected Parliament as an instrument to carry out its policy. Even so, the Cabinet is no more than a servant, acting on the commands of its master, who is

constitutionally not responsible to any one. It will be interesting to watch how this kind of dictatorship by proxy will work."—*The Asiatic Review* for July, 1938, p. 567.

Our intention in writing this note is to point out, among other things, that we shall deserve and have real democratic responsible government when the electors, their chosen representatives in the legislatures, and the ministers responsible to the legislatures alone in theory will cease to be intellectual minors in politics and cease also to be treated as such.

In the meantime it is all right that a person of Gandhiji's character and calibre is at the helm, though working through a sort of Fascist organization.

Health Co-operatives

Bulletin No. 25 of Visva-bharati, on "Health Co-operatives," by Rathindranath Tagore, is a very useful and timely publication. All who in any province or state in India are engaged in the work of reclamation, reconstruction and uplift of villages will get many hints and suggestions from it. It fittingly opens with the following passage as motto taken from the Report on British Health Services prepared by P. E. P. (Political and Economic Planning:)

"A purely salvage role is untenable for the health services; they must find out how to prevent ill-health and organize the necessary measures.

"Social and economic conditions determine health problems, and many of the greatest opportunities for improving the national health lie outside the specifically health services, in such fields as housing and town and country planning, education, distribution, transport, industrial design, labour management, social and economic research and public relations.

"The facts are, as they have always been, that an enormous amount of illness and a large percentage of all deaths are directly traceable to poverty."

A map of the Birbhum district showing the co-operative health societies founded by Visva-bharati forms the frontispiece. The paragraphs mentioned below will give some idea of the contents of the bulletin:

An Experiment, Medical Relief in Villages, Condition of Health in the district of Birbhum, Efforts of Visva-bharati to improve the Health conditions of villages in the neighbourhood of Sriniketan, the Problem, the Field to be covered by a Health organization, Territory covered by each society, Need of a Central organization—the Health Union, Training School for village Doctors, Constitution and Working of Health Co-operatives, Capital Expenditure for Building and Equipment,

Specimen of an annual budget for a Health Unit, Spade Work, Health Co-operatives actually at work, Bored-Hole Latrines.

There are appendices relating to stock of medicines and medical appliances required, model bye-laws for health co-operatives, and so forth. There are illustrations showing construction of drains, clearing of jungles, and distributing centres.

Last Resolutions Passed By Congress Working Committee

The Working Committee held a short sitting today and passed the following resolution on Sikar:—

WARDHAGANJ, July 27.

Having heard an account of the settlement of the Jaipur-Sikar dispute from Seth Jammalal Bajaj, the Committee congratulates the people on having listened to his counsel and shown a true spirit of bravery in having decided to give up the idea of armed resistance and adopt the method of non-violence, resulting in the prevention of bloodshed which was imminent. The Working Committee regrets the needless loss of life that had resulted during the recent firing in Sikar on July 4 and expresses its condolence.

The Working Committee then passed the following resolution:—

MEDICAL PRACTITIONERS

"The Working Committee received a deputation of medical practitioners other than Allopaths. The Committee is of the opinion that innumerable persons in towns and villages in India are receiving the benefit of treatment under other systems, like Ayurveda, Unani and Homeopathy and they should receive recognition and encouragement from Congress Governments. The Committee is further of the opinion that while measures may be adopted to ensure the efficiency of such practitioners, nothing should be done to penalize any particular system. As regards objections to particular proposals in the Bill pending before the Legislative Assembly of Bombay, the matter is referred to the Parliamentary Sub-Committee.

Linguistic Fast Broken

MADRAS, July 27.

Mr. "Stalin" Jagadisan, who was stated to have been fasting as a protest against the introduction of Hindustani in schools wires from Peralam today stating that he has broken his fast as desired by his friends and parents.—A. P.

We are glad the gentleman has broken his fast.

Bengal Tenancy Bill Going Back to Bengal Legislature

It is understood that His Excellency the Governor of Bengal will refer back the Bengal Tenancy Amend-

ment Bill adopted by the two Houses of Legislatures at their last session for the modification of two of its clauses by the Assembly.

The first modification is in regard to the clause 75A of the Amending Bill which seeks to suspend all provisions relating to enhancement of rent including Section 52 of the Bengal Tenancy Act for a period of 10 years with effect from 27th day of August, 1937.

The proposed modification in the clause will be for the deletion of the sentence in reference to Section 52 of the Bengal Tenancy Act. The effect of the modification will be that the Section 52 of the existing Act will remain unaltered. The Section 52 refers to alteration of rent in respect of alteration in area.

The other modification that will be asked for is in regard to the mandatory provision in the Bill that it will come into force on such date not later than 31st May, 1938. It is understood that this will be amended in a way as to make the Act operative on the date it is published in the "Calcutta Gazette."

Floods in Various Parts of India

Many districts in Assam, Bengal and Bihar have been inundated, causing great distress to the people. We deeply sympathize with the sufferers. It is greatly to be regretted that nowhere in India have great engineering works been undertaken to prevent or minimize the ravages of floods.

Peasants and Factory Workers

The mere appearance of peasants and factory workers, and their dress and dwellings show that there is much room for improvement in their lot. If sober reasoning cannot secure such improvement, strikes inevitably follow.

Consulting Engineers in India

Our esteemed contributor Mr. J. M. Datta writes to us:—

"Writing on the progress of Engineering in India during the last twenty-five years Mr. W. C. Ash, B.Sc., M. Inst. C.E., Inst. M.E., F.N.I., has adopted the opinion of Dr. A. Jardine, and says:

"The State Railways to a large extent, and the Company Lines almost entirely," place the final responsibility for their bridge designs on consultants abroad, this feature being particularly noticeable in regard to the steel work

itself, which in all cases is designed out of India. The same remark applies to most other public bodies in India.

"The already firmly established connection with these consultants, extending back as it does for half a century or more, is the chief reason for the persistence of the present system of referring automatically abroad all important matters in regard to bridge design. As affecting the development in India of a tradition in this vital aspect of bridge engineering, it is unfortunate that no change appears to be seriously contemplated. One of the immediate effects of this *a priori* reservation of the largest portion of India's consultative work is to render it unattractive to any Consulting Engineer of standing in his profession to establish himself in practice in the country. From the nucleus of such a consultative organisation once established, development would rapidly take place, and a body of Engineers skilled specially in the art of bridge design would soon become available.

"Suitable talent undoubtedly exists in India, and with the removal of the present handicap it could easily keep pace with the rapid expansion in all other departments of bridge engineering."

"We would like our all-India legislators to put pressure on the 'too wooden, too bureaucratic, and too ante-deluvian' and reactionary Government of India to have this system of consultants abroad modified and finally abolished at an early date. Let India be self-sufficient in the matter of directing brains. Our public bodies, now that they are under Indian control and influence, should note this aspect of India's dependence, and try to make India self-sufficient."

Mr. P. R. Das's Article In This Issue

We have to state for the information of our readers, particularly those in Bihar, that we received a request from Mr. P. R. Das not to publish his article "until Babu Rajendra Prasad has made his decision." We regret his request reached us too late to enable us to exclude his article from this number.—Editor, *The Modern Review*.

THE PHILOSOPHY OF INDUSTRIALIZATION

By M. N. SAHA, D.Sc., F. R. S.

[For some time past, I have been advocating "large-scale industrialization" as the only solution of India's problem of poverty, and unemployment, but I have found in the course of conversation with several esteemed friends that my views have been misunderstood in some quarters. Some are of the opinion that "large-scale industrialization" will lead to pure and simple mammonism; others think that, instead of solving the problem of unemployment, it will throw more people out of employment. I have also discovered that very few people have a correct idea of what "large-scale industrialization" means. Add to this the opinion held widely that the amount of "industrialization" which has been already achieved has to some extent spoil the spiritual life of India, supposed to be preserved in her millions of village homes. I have, therefore, welcomed the invitation of the Editor of *The Modern Review* to restate my views on the subject.]

WHEN Mahatma Gandhi visited London during the last Round Table Conference, he had amongst others, a very interesting visitor. This was no other than the celebrated Charlie Chaplin, the cinema star. It was a unique meeting between two men of unique types; one a great political seer whose voice is obeyed implicitly by large sections of one-fifth of the human race, and respected by a great part of the rest,—the other, an apparently light-hearted man who, by his performances, has provided innocent mirth and amusement for millions.¹

But the conversation was not light-hearted. Charlie asked the Mahatma: "I understand that you are against the use of all kinds of machinery; you want your people to go back to the villages, lead a simple life and produce their simple necessities of life by manual labour and simple kind of machinery. May I know, why you are preaching such a philosophy of life, which appears to me very retrograde?"² The Mahatma, who, it is stated, had never heard the name of Charlie Chaplin, was apparently surprised at this question and gave his usual arguments. He explained to Charlie Chaplin that 90% of India's millions live in abject poverty and want, and the introduction of

machines, particularly for the manufacture of textiles, have rendered many artisan classes idle. If the machines could be abolished, the ancient crafts of India, like spinning, weaving, and others, could be revived in the village homes; this would not only give employment to idle millions, but also bring some income and relief to them. He made some further remarks about the ethical value of hand-spinning and manual work in general. To this Charlie made the following significant remark: "I understand that in your country, the rulers do not care much for people who are living in poverty, and whose poverty is due to the fact that they have lost their occupations on account of the growth of the factory system. But suppose you had a Government which organized industrial work on modern lines, and also saw to it that every individual got proper work, and got also proper food, clothing, housing and was also assured of all the amenities of modern life, would you be still against machinery? Would you still advocate a return to primitive methods of production and distribution?"

I believe that, to this question, Mahatma Gandhi did not give any satisfactory answer at the time. I do not know if he could think out subsequently any suitable answer. I have put this question to many Congress leaders, some of whom have now taken upon themselves the task of government, but have received no satisfactory answer. The activities of the Congress leaders, of those who are in office and also of those who are out of it, and their pronouncements lead one to the suspicion that *they themselves have no clear-cut Philosophy of Action for National Reconstruction*. We find that in the same breath, they are talking of rural development by the introduction of the spinning wheel, and the handloom, by the abolition of zemindars and middlemen and also of grid electrification of the country, whereby the rural population is expected to get cheap electrical power out of the energy of running water. They do not probably realize that grid electrification is a highly mechanized and complex scheme, the successful installation and working of which involve co-operation of industrialists, economists and technical men and huge outlay of capital. The pronouncements of many of these leaders, who are now running governments, appear to me to be like the performance of a well-known liberal politician who went to

¹ Charlie Chaplin, unlike other cinema stars, is known to be possessed of shrewd business instincts.

² I am quoting from memory from the account of Charlie Chaplin's visit to the Mahatma, but I believe that I have not mis-stated anything.

Benares during the last War, and persuaded the Benares University to pass a resolution to the effect that "the Benares Hindu University will undertake the manufacture of aniline dyes." We know that the resolutions of a debating society do not create an industry nor do the optimistic pronouncements of those new to their office. Further, though the newspapers are full of flamboyant pronouncements, both from Congress as well as non-Congress provinces, there have been, to our knowledge, no serious practical move, to give effect to these. A clear-cut *Philosophy of Action* for National Reconstruction, which is very much needed at the present time, seems to be entirely absent.

If the reforms are to bear fruit, it is necessary that a clear-cut Program of National Reconstruction be decided upon by the High Command. Mere resolutions will not do, but actual steps should be taken to give effect to them. It is well-known that many of these programs cannot be given effect to unless power at the centre passes to the Nation. But I believe that a good deal of preparatory work can be done by the provincial governments, even with the limited powers they possess.

To return now to Charlie Chaplin's inconvenient question to the Mahatma. I personally believe that neither measures of rural uplift, nor introduction and encouragement of cottage industries, nor abolition of zemindars or money-lenders will make any substantial improvement in the lot of the rural population. The reasons for this have been given in my Presidential Address to the National Institute. These may be quoted here with some change:

"Everybody knows that India is an agricultural country. According to the Census Report of 1931, 66% of the Indian population is engaged in agriculture, i.e., are peasants, i.e., they have to spend their life in raising food. Of the remaining 34%, only 11% are city-dwellers, i.e., engaged in industries and other professions. The remaining 23% are either village artisans, merchants, landlords, or belong to other professions mainly dependent on a rural economy.

"Everyone will admit that the distribution of the population according to professions reveals a very unhealthy state of affairs. In no other countries of the world, excepting such backward ones as China, is there such a large proportion of peasants. And do these peasants enjoy a good living? A few huts, mostly without doors and windows, a few mats and rags, a few half-starved animals, hunger, debt, and frequent diseases,—this is all they have to enjoy!

"There is a widespread desire for improving the lot of the peasants and to raise the general standard of living. But how can this be achieved? Not by an exodus of the townsmen to the villages, as advocated by certain persons distracted by middle class unemployment, for that will merely increase the pressure on the over-congested rural area and multiply misery. Greater efficiency in agricultural methods, which is certainly

desirable, may give us more and cheaper food, and other necessities of life obtained from agriculture (like cotton), but it can never touch even the fringe of the problem of poverty and unemployment. For greater efficiency amounts to the fact that the same production in agriculture can be effected by half the present number. At present the proportion of food raisers is 66%. They produce food materials and other products by the most primitive methods. If improved scientific methods are adopted, larger amounts, more than sufficient for the whole nation, can be produced by 30% of the population. This will render about 36% of the peasant population unemployed. This, added to the already existing middle class unemployment, will make matter worse.

"If we analyse the widespread public sentiment for better living, what do we find? Everybody of course wants his food supply to be insured, but this is the least part of his demands. He wants to be better clothed and better housed; wants to get a better education for himself and his family, more rest from work, freedom from drudgery and greater enjoyment of life. Analysing this sentiment, we find that if these needs are to be satisfied, the quantity of industrial products has to be increased ten to twenty times its present level: all these works have to be organized, and a large proportion of the village population is to be diverted from the task of food-raising to industrial work. In fact, the only way to improve the villages is by drafting more villagers into cities, and by creating a larger number of cities based on industrial work."

The above gives the argument for "large-scale industrialization" in a nutshell. But what is exactly meant by "large-scale industrialization" and how to achieve it?

The word 'Industry' taken in the widest sense means "organized production of commodities required for civilized human life." Such commodities include food, clothing and housing materials, medicine and chemicals, materials used for transport, offensive and defensive armaments, articles of everyday use, as well as articles of luxury. The needs of mankind have varied according to the age man has lived in and the stage of culture he has reached. Probably, for the primitive man, there was no other occupation except food-gathering and defence. When man began to form communities, settle in villages and towns, his wants multiplied. He required clothing and housing, and offensive and defensive arms to protect his property. With the advance of civilization, his needs are becoming complex, and more variegated. The needs of the twentieth century man are not the same as those of the eighteenth century man, in any country of the world, except backward ones.

Probably no educated man now believes in the theory widely prevalent in different forms in all countries about a century ago that there was once a golden age, when the different human societies lived in idyllic happiness free from want, disease and fight. On the contrary, a scientific study of the remains of

vanished peoples has made us familiar with a different picture of bygone days. It appears that the ancient, and even pre-historic human communities were not free from diseases, pestilence, and fights; nay, life was far less pleasant compared with the present times. But throughout the chequered history of mankind emerges the idea of "progress": that man has advanced to culture stage by stage, by organized and collective efforts, and by the invention of new technique for industrial production, which has made his life in this world more pleasant, and has assured him increasing insurance against hunger and extremes of climate, and against disease. History has also shown us that unless a community believes in the idea of "Progress," it stagnates, and has no chance of preserving its independence and individuality against other progressive nations, and sooner or later vanishes from history. The epochs of culture are classified by the scientific man according to the technique used for industrial production. Thus we have the different epochs of Old Stone Age, when undressed chips of flint were used by man for defence and offence, for preparation of food and other requirements. These epochs were succeeded by the New Stone Age, when man began to use tools made of polished stone (axes, daggers, needles and knives, maces, etc.). Then came the Chalcolithic or the Copper Age. Copper was the first metal used by man—in this age all tools were made of copper. The ancient Sumerians and Egyptians, and probably the people belonging to the oldest strata of the Indus Valley Civilization used only tools of copper. The Copper Age was succeeded by the Bronze Age—when tools were made of bronze, which is much superior to copper in point of hardness and durability and strength. The Homeric Greeks, the later Indus Valley people, all used bronze armaments and bronze tools. The Bronze Age was succeeded by the present Iron Age about 1200 B.C. But these new phases in technique have not been simultaneously current in all parts of the world: the Iron Age came much later to the new world; in fact when the Spaniards came to America, they found two highly civilized communities organized in great Empires, the Aztecs in Mexico, and the Incas in Peru. But these people had only copper tools, and no wheeled vehicles and no domesticated animals excepting a degenerate species of camels.

The Bronze Age was succeeded by the Iron Age about 1200 B.C., and this age according to some is still continuing. All our tools are now made of iron and steel, though of course the

modern technique for industrial production is so much more complex and advanced than during the primitive Iron Age culture, that it deserves a new name altogether.

A careful reading of history shows that human communities using inferior tools and technique have always been conquered and enslaved by those using superior ones.

The Old Stone Age man vanished in the struggle with New Stone Age man, who in turn disappeared before men using copper tools. These again had to yield to men using iron tools. The tragic history of the Aztecs in Mexico illustrates this lesson within historical times. When a handful of Spaniards mounted on horseback and armed with guns and swords invaded Mexico, the Aztecs, warlike and well-led as they were, could not stand before the Spaniards, because they were armed only with copper swords, daggers and lances. The Copper Age men of the new world were completely subdued by a handful of Iron Age men possessed of superior technique, tools, and organization. *The grand moral lesson of history is that, if a human community fails to take advantage of the newest technique for industrial production, it has no chance of maintaining its independence or individuality in the struggle with communities armed with superior technique.*

THE NEW TECHNIQUE FOR INDUSTRIAL PRODUCTION

The technique used by the most advanced countries of the world at the present time is so complex that it is very wrong to classify it as the continuation of the primitive Iron Age culture. It constitutes entirely a new phase in culture, distinguished not only by a new system of industrial production, but also by a new philosophy of human life. This new age has been variously called the neo-technique age in contradistinction to the paleotechnique age which has passed off and the change is sometimes termed as the Third Revolution (Gordon Childe) of which the Industrial Revolution of the last century was only the precursor. But it is better to call the present one as the age of science, because human activity in the present age springs from the conviction, that by the application of science we can attain to a much better standard of living and in general to a much better world. The idea of progress which is the driving force in the modern age was absent even a century ago, when religious pedantry in every country was painting a dismal future, e.g., a collapse of the world or some catastrophe which would engulf human society.

To have a comprehensive idea of the New Age, we should look at the kind of life pursued in a country like U. S. A., England or Germany and the present system of industrial production in these countries and contrast it with the course of human life and industry in the same countries two centuries ago. We may ignore for the present the social and political upheavals caused by the transition from the one age to the other. About two centuries ago, industrial workers in these countries (including agriculturists) were organized mostly in guilds according to their professions, *e. g.*, farmers, serfs, weavers, potters, masons, blacksmiths, fishermen, etc. The profession usually descended from the father to the son, and the secrets of the profession, if any, were confined to families. Work was individual or, at most, was a family organization. On the whole, every country, almost every locality was self-sufficient, in the production of the indispensable necessities of life like food, clothing and housing materials, and imported only such goods as were not available locally. There was a certain amount of organization in such professions as those of merchants, who carried on the foreign trade, or in the profession of the miner, who produced the metals or chemicals necessary for human life. People's wants were few, they did not travel much, and the ideas of hygiene were quite as bad as in any backward oriental country of today.

Those who may sneer that we are only talking of the materialistic side of human life may be reminded that the sages of our country laid more stress on the safeguarding of industrial production than the Westerners. In India, the professional guilds crystallized into rigid castes, for which a divine sanction was found by the invention of myths, and those who had the audacity to change their profession were threatened not only with a hypothetical hell-fire but also with this-worldly punishment. In other countries, though a very small percentage of persons actually changed their profession, there was no moral sanction against their doing so.

The discoveries in science dating from the 18th century changed the whole aspect of industrial production and the course of human life in the West. It is unnecessary to discuss the effect on the method of production, and generally on human life, of the steam-engine, the electrical engines, and the different kinds of oil-engines. Now every commodity for human life, textiles, housing materials, medicines and chemicals, armaments, etc., etc., are produced

in factories run by powerful machines, and the products are far better, cheaper and abundant than those produced by the paleotechnic methods. Even the ordinary man can now afford luxuries which were available a century ago only to princes. The railway, the steamship, the motor car have rendered long distance travel not only feasible, but pleasant. This has facilitated mixing of different people on an unprecedented scale, and has rendered the transport of goods between the furthest corners of the world possible. In countries like England, village-life is almost disappearing, the whole country is fast becoming suburbs of big cities, and cities, roads, houses are rapidly changing. Whether we like it or not, the new system has come to stay.

PROBLEMS OF ORGANIZATION

But the new system has also imposed greater burdens on the nations. The needs of the modern man are so great, that far more work is necessary to produce them. In the western countries which have taken to the neo-technic methods, calculation shows that nearly 1800 units of work are required per head in the year for producing all the necessities of life. But if production of work depended mainly upon human and animal power, as in the paleotechnic countries, then we could not get more than 90 units. The modern neo-technic man therefore requires 20 times more power than the paleotechnic man. In the advanced countries, this power is provided by harnessing the forces of nature—by the use of coal, oil, and water-power. To use figurative language—the Westerner has, by the harnessing of the forces of nature, got 20 slaves constantly working for him, while countries still accustomed to older methods have to depend upon human and animal labour, which, on the average, is merely equal to the labour of one slave.

The full utilization of the power resources of the country, and organization of work for industrial production has put a great strain on all modern governments. Though utilization of power resources and factory work was started by private individuals, it has now become, more or less, the function of governments.

Let us take the case of a country like England, and examine how she controls her power resources, and organizes work.

Production of electricity in England is completely controlled by the state through the grid system, which is managed by the electricity commissioners appointed by the government. Liquid fuel is necessary for motor cars, engines

of ships, etc. For these England has to depend at present on foreign supplies, which, though at present under British control, may be cut off during the next great war. The British Government has therefore subsidized companies for the production of liquid fuel from coal, at heavy loss to the treasury.

England's only power resource is coal. She has no water-power worth mentioning, no oil. If the coal supply fails, England would lose her pre-eminent position as an industrial country. Hence the Government has to devise strong and effective measures against the wastage of coal, by the creation of fuel control and research boards. In fact, coal has now become largely a "manufactured good," and every caloric of energy, available from it, is utilized.

The "Power Industry" is the key to the present system of industrial production, but even other industries cannot stand competition, in the face of constant improvement due to scientific research, but for state protection. But the best kind of protection is "Efficiency" and this is safeguarded by the state by the organization of the National Council of Scientific and Industrial Research. The object of this body is scientific study of the existing methods of production, and application of the latest scientific knowledge to the betterment of the method and the creation of new industries. In addition to this, every big company has its own research workers.

The above picture of neo-technic methods of production, though incomplete, will probably give the reader some idea of the terrible efficiency of this method compared with the older paleotechnic methods, to which some of our leaders want us to revert. The paleotechnic man has no more chance of surviving the onslaught of the neo-technic man, than had the Aztecs the chance of withstanding the Spaniards. England, Germany, the U. S. A., France, and other Western countries are at an advantageous position, because the neo-technical methods were perfected by the pioneers in these countries. The State has therefore shared the responsibility with those companies which have been the first to take advantage of scientific discoveries and create a new industry, or convert an old one to neo-technic mechanism. But not so in the case of Russia or Japan. About 1868, Japan became convinced that if she were to **work** her way up as a great nation, she must discard her paleotechnic methods in favour of neo-technic ones. The object was accomplished by the zeal, industry and far-

sightedness of her leaders, backed by a strong, centralized national government. But Japan has been able to preserve to some extent her ancient life by the remodelling of her small, cottage industries. This has been done by instituting a cheap supply of electrical power, which enables the Japanese worker to work in his cottage with up-to-date machinery; and further by the organization of research, supply of raw materials, and marketing of finished products he is assured of an adequate return for his labour. The Japanese weaver, for example, does not work with the handloom or the charkha, but he uses the Toyada loom, which is driven by electricity. His industrial output is 10 or 12 times larger than that of the Indian workman. It is estimated that more than half of Japan's industrial production comes from cottages.

Today, before our very eyes, Russia has been passing by a supreme effort from the paleotechnic to the neo-technic method of production. The main cause of collapse of Czarist Russia was the failure, on the part of her leaders, to organize the country according to the **new** method of production. It depended, for all the necessities of modern life, upon foreign capital and foreign experts.

Countries which have been slow to organize themselves according to the new method of production, and adjust their social and political life accordingly—China, Abyssinia,—amongst others is not their current history a good illustration of the great moral lesson of human history or which so much insistence has been laid in this article!

The task before India is, therefore, to organize her industrial life according to the neo-technical method of production. Unlike certain other countries, India taken as a whole (not in parts) is one of the three countries (others being Russia and the U. S. A.) which possess all the resources in power, minerals, and agricultural land which can enable her to pass to the neo-technical method of industrial production. Unless this is done, India can never solve her problems of poverty and unemployment, and can never be assured of a bright future. Sir M. Visweswarayya, ex-Dewan of Mysore, has already pointed out to a certain extent in *His Economic Planning* how this revolution can be achieved. But all human actions spring from conviction, and if we continue to look back with wistful eyes to the supposed charms of older methods of living, we can never decide upon the line of action which alone can lead to the fulfilment of our national desires.

SOCIETY AND THE INDIVIDUAL TODAY : A PROBLEM

By BOOL CHAND

Hindu College, University of Delhi

THE problem of society and the individual has come to have a far larger significance today than at any previous period of history. The reason is that, as the result of certain factors of modern life, society has developed, particularly in the post-war period, into a rigorous and all-pervasive organization instead of a voluntary and limited one: it has come more and more to take the place of the state itself.

Ever since the time of the Greek thinkers in the West, the whole conception had rested on 'a rigid dualism of the sphere of public concern, which was conceived of as unified in the state or the original polis, and the private sphere of individuals, in which they were thought of as essentially independent, entering only into contractual relations with one another.'

The idea of the state had been emphatically that of political organisation, as distinguished from social and functional organisation. Even a few decades ago, the state used to be described as an agency for social control having as its object the regulation of 'the outstanding external relationship of men in society'², and used to be clearly distinguished from the terms—association and community. Such a view is now generally thought of as erroneous, for as a matter of practical experience it is being increasingly felt that states are no longer confining themselves merely to the external relationships of men in society, they are coming more and more to regulate and control almost all phases of the economic and social life of society. This orientation of the state towards the economic, social, and moral aspects of life makes it imperative to consider society, not as anything contrasting from the state, but merely as a content of the state. Indeed, we have tended back to that primitive type of social organization, where the tribal custom and tradition were so overpowering that they left little or no scope for individual initiative and concern. Only the part of that ancient custom and tradition is now being played by the dictates of the bureaucratic hierarchy of Government.

II

But while the divergence between society and the state is thus rapidly vanishing, by the

state taking up the role of society itself, the distinction between the individual and society remains as ever. The primitive type of social organization, to which we just made a reference, was based on its fundamental characteristic of a communal ethos, which made the members of a tribe so absorbed in the group that they formed what anthropologists have called a tribal self. That communal ethos modern civilization and government have consistently tended to destroy, and in its place they have created an individualistic society, which regards human beings as being the best judges of their own interests, it being assumed that they have interests and business which are completely their own. Two forces of the modern world helped to deepen the root of this conception of individualism. One was the enhancement of the idea of supreme worth of the individual, which came from the rise of religions like Hinduism in the east and Christianity in the west, laying their emphasis upon the capacity of the individual to attain the highest goal of liberation. The other was the emergence of the modern economic system, dominated by exchange and married to the system of private profits. In Hobbes this concept of individualism found a zealous devotee who gave it a systematic shape and philosophic content, characteristically preaching that

'social and political relations are merely the means by which the individual obtains more efficiently what he desired before he entered into those relations';³

that although men did enter a class of social relations, yet their essential nature was not affected by them.

It is needless to say that as a thorough-going and consistent philosophy of social life, this concept of the individual could not go very far. Nevertheless, it achieved quite a remarkable success in the domain of practical life, particularly in legislation and in economics. Even in practical affairs, one can say that the effort towards the entelechy of individuals and communities constitutes the main theme of world history.

'After the semi-conscious liberty of the Greek city-states had been realised, the fight went on for religious liberty, later for constitutional liberty as a guarantee against arbitrary power, later for self-determination of groups

1. A. D. Lindsay in *Encyclopaedia of Social Sciences*.
2. R. MacIver: *Modern State*.

3. A. D. Lindsay in *Encyclopaedia of Social Sciences*.

rooted in the same cultural tradition, and later for racial emancipation of peoples exploited by imperialism. In the same light may be viewed the recent fight for economic freedom. Socialism can be viewed as a veritable child of Liberalism. When a considerable amount of political, religious, cultural, and national freedom had been acquired, it was quite natural that the self-realisation of the individual should not stop at the economic barrier. It was keenly felt that the liberty of the spirit would be undermined if the elementary liberty of the stomach was not realised.¹

III

And this raises the fundamental problem. We are faced today by a state of affairs wherein the state has extended its horizon of activity so far as to take within its purview not only the purely political and economic aspects of life but also the so-called social and moral aspects of the life of individuals, and yet the emphasis of individualism upon the necessity of leaving the individual free to develop his personality by himself has continued. This has produced an inescapable antinomy, a conflict, between the society and the individual. In this conflict, one thing seems to be certain, that the claims of society will and must remain paramount. It is true that society is but a total complex of human relationships and cannot exist apart from human beings, who play their part in all its concrete manifestations and who also will the nature and the ultimate ends to which that concrete manifestation is to be directed. But once the ultimate ends of action have been thus broadly decided, the action of the individuals is commanded and controlled by society; regulatory norms are set up and enforced to maintain an orderly process to secure what the ruling section in society considers to be in harmony with the ultimate value system of the community.

It must, therefore, be taken for granted that, particularly in the modern world when life is becoming highly complex and varied and therefore demands detailed and all-round direction, the dominance of society over the individual is an inevitable development. But the problem that arises then is to reconcile the position of the individual with these claims of society.

IV

Of this problem, two solutions are being suggested at present, one by the Fascists and the other by the Communists.

The Fascist solution is comparatively simpler, but also more crude and unacceptable. Recognising that the claims of society today have become nearly as extensive in form as

they were in the more primitive stage of social organization, the Fascist suggests that as a natural corollary of this development in the position of society the individual must also find his level according to what it was in that simple organization. The individual has no place outside society, and he can find his perfection in society only if he merges himself into it so well that he becomes a veritable part of the social personality and the social self. Mussolini once defined the chief characteristics of the Fascist doctrine to consist in '*riconciliazione*, the reconciliation of the individual with the state, *inserzione*, his fitting into the life of the state, and *unificazione*, the unification of the state and the individual.'

The position of the individual, thus, in the Fascist ideology is sought to be reduced to that of unquestioning obedience and subordination to the state. The Fascist has a tendency to hide his real meaning behind euphemistic terms. He calls his solution as the cultivation of 'community life' amongst individuals. But it is difficult to see how the Fascist states represent any more intense community life than, for instance, Liberal states do, although they do certainly seem to have a better commotive power, at least in the early days of the establishment of the Fascist regime. On the contrary, their structure is based upon anarchistic individualism—a whole world of human beings dominated and governed by the personal whims of one individuality at the top that regards itself as the mystic repository of the community will. The Fascist oath reads as follows:

'In the name of God and Italy, I swear to execute, without discussion, the orders of the Duce and to serve with all my strength, and if necessary with my blood, the cause of the Fascist revolution.'

It gives no leeway at all for dissent. The same is largely true of the much-praised community spirit of the Far East, which expresses itself in practice inevitably by sacrificing the individual to society.

V

The Communist solution is a little more involved, although it is more plausible, at least in theory. Proceeding from the hypothesis that all history is a conflict between the oppressing and the oppressed classes and that state is primarily an instrument of oppression, Marx suggested that this state of affairs could be brought to an end by means of the union of the working classes, and after an overthrow, by revolution, of the ascendancy of the bourgeoisie, by means of the dictatorship of the proletariat. But he emphasised that the dictatorship of the

4. Oscar Tazi in *Social Philosophy*, January 1938.

proletariat, however necessary in order to bring to an end the exploitation of the workers, would not by itself constitute a solution of the problem of class-conflict or of the relationship between society and the individual. It must, if it is to be a real solution at all, look forward to a conscious organisation of the classless society, which would be based upon the ideas of common good and in which people would have become habitually accustomed to observe the fundamental principles of social life, so that they will voluntarily work according to their abilities and the needs of society as a whole and there will be no need for compulsion. In this new society, mass mind will have become so well-educated that there will be left no room for governmental operations in the sense in which we understand them today, and the state itself will wither away. This society would be permanent and unshakable in the sense that when once such a society has been established the possibility of all future conflicts of a serious nature will have been altogether removed.

Yet this reasoning has one great deficiency. It is certainly conceivable, as Marx insistently argued, that once the mental diseases and oppressions that result from poverty and class struggle are forgotten things, most of the reasons for coercion will have vanished. But Marx made the great mistake of tracing all human desires and ideas solely and irrevocably to economic causes, to the exclusion of all other ideological and psychological factors. He forgot that so long as men or women remain, whatever the economic structure of society, there must remain possibilities of quarrel and efforts at oppression, unless we could directly change or materially modify human nature and thought itself. Not all violence arises from economic causes; there is also, for example, sex. No material reform, therefore, can alone bring about a thorough-going and lasting change in human mentality; in order to produce such a change, the reform must be positively spiritual.

VI

Herein comes the need for a philosophy of life which puts its emphasis upon an impersonal attitude. Such a philosophy, for instance is enshrined in Hindu thought in the Gita. The Gita ideal of conduct differs from all other systems that are basically spiritual in that while the aim of other systems has been to transcend the sphere of action and duties and to rise to a

stage in which one could give up all one's activities, mental and physical, the ideal of the Gita has been characteristically an ideal of work, and of work with a mind that is dissociated from attachment, so that it tends to make all actions non-moral and, by cutting away the bonds that connect an action with its performer, incapable of causing any disturbance either to the doer himself or to the body-politic. This is the path that has been described by Swami Vivekananda as that of 'the understanding of necessity.'

But even after all this has been granted, the problem has not been wholly solved. For our lesson from world history is that wherever this impersonal attitude has been either practised or sought to be practised on a mass scale, there becomes prevalent, in the course of time, a sort of a passive outlook towards life. A pre-eminent example of this is supplied by the case of India, where emphasis on the understanding of necessity has produced a fatalistic loss of enthusiasm and commotion; and after all, the need of commotive power is as great in a society in order to carry it to a higher plane or even to keep it efficiently into existence as of anything else. The growing power of the Fascist countries in Europe today may be explained in terms of the greater feeling of commotive power and solidarity of Fascism, which even though often generated by admittedly unwholesome means is nevertheless a recognized fact.

VII

So, in the end, far from answering the question we have simply re-stated it: is it or is it not possible to evolve a social structure in which the individual may properly and permanently fit in? To stress society overmuch in contrast with the individual would clearly result in a distortion of human nature, and yet an ignorance of the possibility of continued commotive power in society must ultimately create intolerable conditions which might degrade the best qualities of man. Looked at from this point of view, perhaps, society and the individual, even though clearly antinomous in their emphasis, are not quite antagonistic in their implications. In many respects, indeed, they seem to be closely connected and even of complementary value. The world needs today a scheme of organization which could institutionalise this intimate connection between these two factors.

EDUCATION FOR NATIONAL UNITY

By DR. G. S. KRISHNAYYA, M.A., Ph.D.

"Then none was for a party;
Then all were for the State;
Then the great man helped the poor,
And the poor man loved the great."—Macaulay

THAT communal discord, sectarian dissension and caste discrimination are symptoms of an unhealthy condition, and have not yet become matters of ancient history is all too obvious. There is no 'we-spirit,' no feeling of oneness, no sinking of differences for a common cause and no passion of patriotism big enough to consume petty prejudices. Now, if this is true, it is pertinent to ask: Has Indian education in the last hundred years tried to meet this situation? When all the world has been using education as a means of bringing about ends nationally considered desirable, what has India been doing? Can it be said that Indian Education struggled to create and cultivate a common devotion to a common motherland, or that it attempted to minimize the differences and emphasize the similarities? If not, have the schools of the land been made to solve one of the most desperate of India's problems—the making of Indian citizens?

A leading Anglo-Indian daily recently remarked:

"Idealists who speak of Indian Nationhood, of the Indian Nation and of Indian Nationalism overlook the fact that except in the geographical sense there is no India. The word 'India' indicates a land in which live (lives) a large aggregate of races and nations."

This striking of the lame man with his own crutches, however merciless it may seem, draws pointed attention to his long-standing deformity and possibly to the need for immediate treatment. At a time when various schemes, educational and political, are being put forward and aims and methods are being subjected to unsparing scrutiny, it may not be inopportune to consider how worthier citizens can be prepared by our schools and colleges and how education in India can be made to help in bringing about national unity.

LIGHT FROM OTHER LANDS

The problem confronting India—that of making its citizens feel that they are first and foremost Indians, not members of particular

sects and castes and classes,—is not unprecedented: several other countries have had to face a similar situation. Their experience may afford India invaluable guidance and encouragement.

Keeping in the mental background India's handicaps, it is comforting to notice that national unity has been achieved by the United States in spite of racial heterogeneity. The Swiss are a nation, though they have no language peculiar to themselves and are divided into French-speaking, German-speaking and Italian-speaking districts. Religious disunity has not been an obstacle to national unification in England. One of the most potent of factors making for consciousness of nationality is common tradition. Says Ramsay Muir in his *Nationalism and Internationalism* (p. 48):

"Heroic achievements, agonies heroically endured, these are the sublime food by which the spirit of nationhood is nourished; from these are born the sacred and imperishable traditions that make the soul of nations."

The essence of nationality is a sentiment. According to Pillsbury (*Psychology of Nationalism and Internationalism*, p. 20):

"National characteristics are not discovered directly but only through responses of the individual, and through the responses that betray his emotional and intellectual activities. Ask him if you want to know to what nationality he belongs and you will have a better criterion than his racial descent or physical measurement. Nationality is first of all a psychological and sociological problem; only indirectly can it be determined by anthropometry or even by history."

Germany was no more than a congeries of separate and often warring states, yet out of it all, Germany has evolved into one indestructible nation. All that Italy had to start with was geographical unity, and yet in less than two generations, she has become an indissoluble national entity. The potency of an ideal cannot be ignored. In view of these facts, it is clear that the edicts of fate can be set aside and nationality can be nursed into existence, even where most of the elements of unity are lacking in the beginning. The nation must be an ideal before it can become an actuality, and the

ideal must be an ideal before it can become an actuality, and the ideal must be preached everywhere. This is the lesson taught by history, and is perhaps best illustrated in the case of Italy. Italian poets sang of their land. Italy as ideal was pictured and chanted until Italian hearts throbbed responsive to Italy as Motherland. Then came Mazzini the idealist, who wrote his words of fire, Garibaldi, the warrior, who drew his sword and battled, and Cavour, the statesman, who built the Italian polity. Significant also is the oath, quoted by Professor Rose in his *Rise of Nationality in Modern History* (pp. 81-82), which Young Italy imposed at initiation—a means to which nation-builders have had occasional recourse:

"In the name of God and of Italy, in the name of all the Martyrs of the holy Italian cause who have fallen beneath foreign and domestic tyranny... by the love I bear to the country that gave my mother birth and will be the home of my children... by the blush which rises to my brow when I stand before the citizens of other lands, to know that I have no rights of citizen-ship, no country and no national flag: by the memory of our former greatness, and the sense of our degradation: by the tears of Italian mothers for their sons dead on the scaffold, in prison or in exile, by the suffering of the millions—I swear to dedicate myself wholly and for ever to strive to constitute Italy one free, independent, republican nation."

Italy came from the world of ideas into the world of facts—Italy was born.

The United States of America should have been India's comrade in misery, also having had to weld together into a modern nation many races, religions, cultures, nationalities and language groups. But she early realized the need for Americanizing the immigrant, and creating a unified national consciousness. Accordingly she planned a programme for absorbing the foreign-born, and her schools co-operated heartily in producing thorough-bred patriots. The united front presented during the Great War is proof positive of the success of their endeavours along this line.

Britain's problem was comparatively easy, but even there one sees the working out of a definite national purpose. England needed patriotic sons, valiant heroes and dependable representatives to help her with her commerce, administration and colonial expansion, and so her outstanding schools set out to give an education which stressed courage, character, love of country and loyalty to the king. It is unnecessary further to expand in illustration of the responsibility felt by the school everywhere and at all times for providing the kind of training that would produce the desired type of a citizen.

WHAT CAN BE DONE

The moral that might be drawn is that India is not beyond redemption, and that education, among other agencies, should be used definitely as a unifying factor, promoting cohesion, bridging gulfs, rousing national consciousness and stimulating a healthy patriotism. To realize this worthy objective, a comprehensive programme, a many-sided attack, is necessary.

The first requisite is *information*. Knowledge of India's past, her social and cultural development, with its distinctive features and chief merits, is indispensable. This should enable the pupils to derive their inspiration for the future from a known and real past. It would also foster a legitimate pride in their country and teach them dignity and self-respect. They should also know the defects and pitfalls of that culture so that they may form a balanced judgment of its real value, and discover how to lay the foundations for desirable progress.

Far greater emphasis should be laid on a study of India's present condition—social, economic and administrative. For this courses in Civics or Citizenship should be made compulsory and dealt with in a live, practical manner. The unparalleled phenomenon of the birth of a new nation, inhabiting a sub-continent and including divergent elements of eastern and western religions and cultures, should be dealt with in such a way as to challenge the attention and curiosity of our young people and give them a glimpse of the tremendous opportunities for service which lie before them. They should have a helpful understanding of India's terrible problem—poverty, ignorance, disease, communal rivalries and the like. There is much to learn in this matter from the work of the British Association for Education in Citizenship.

Lest they should become narrow in their outlook and in order to bring to the solution of India's vast and pressing problems the experience of the rest of the world—not merely of one solitary country, Britain, as now—the pupils should be given a bird's-eye view of some of the outstanding tendencies and movements in the world of today. Nationalism should thus be assisted by a wider vision, a richer background and a larger enthusiasm.

Indian education has managed to leave the realm of ideals, attitudes and aspirations severely alone. These must be harnessed to a worthy end—peace and good-will amongst the peoples of India. Mere intellectual apprehension is not enough. The emotions must be touched. History

must be taught in every school in a new way. The common past must be dwelt upon. Not only should the blood and thunder view of greatness be dropped and homicidal geniuses be forced to abdicate their positions of importance in school histories, but a new spirit should be infused. To ensure the right approach and the desired quality the books will have to be approved by qualified Committees. The example of most Western countries suggests that the historians who write for boys and girls should be patriots pulsating with love and pride in the splendid history of their country's past. The varied contributions of the different communities to India's complex culture should be brought home in a sympathetic manner. The lives of great men, of every province and of every religion, should be taught in all the schools so that appreciation and understanding may take the place of hatred and contempt, and so that parochialism may make room for an all-India consciousness. Men who have risen to national fame through service, sacrifice and commendable achievement should be held up as ideals, as well as the successes secured when people have worked together for a common goal. If history serves only to create fear, jealousy and sense of shame and cannot be used to bring the various groups together to toil for their country's welfare in joyous and proud comradeship, the sooner it is ejected from the school curriculum the better.

Finally, it must be remembered that 'an ounce of experience is better than a pound of precept.' If this is true, opportunities should be provided for children to give expression to their love for their motherland, to engage in activities which train the good citizen and to realize the thrill which comes from effort to serve those in need. The experience of citizenship here and now is the best possible preparation for future citizenship. If the pupil's devotion to his country is not to be thwarted and choked, and if the sluices are to be opened for the natural flow of his enthusiasm, care has to be taken to see that he has the same outlets as are available to children abroad. The singing of national songs, the veneration of portraits of national heroes, the celebration of the birthdays and anniversaries of the poets and prophets, sages and seers, scientists and statesmen, the institution of prize contests for the composing of national songs, the writing of national biographies and the planning of suitable programmes to commemorate national events and festivals, are a few of the many ways employed in the West which might with advantage be adopted in India. The

national flag plays a prominent part abroad in most schools and in every country, and therefore the formal approval and use of a flag in India by all the parties concerned is well worth hastening, especially so on the eve of the further unification of the country. The wider adoption of a common language, the celebration of an 'India Day' on lines similar to the 'Empire Day' and the arranging of periodical national Exhibitions—industrial and agricultural—are also worth recommending. All these serve not only the immediate end, but also the remoter purpose of informing the intelligence and developing among pupils a sentiment favourable to national unity and understanding.

Another important lesson which we may learn from English and American schools is their recognition of the value of the more purely social activities as a means of training citizens. Virtues do not grow in a vacuum; they need the stimuli of a concrete setting. Unselfish service, co-operation, toleration and true democracy are ideals which are forced to function only in actual social situations. The curriculum being burdened with examinable subjects, it is necessary to depend on such extra-curricular activities as School Councils, Assemblies, Scouting, Games, Debates, Excursions, to provide the training so invaluable to modern youth. Not only do these activities develop the devices and mechanics of government, but they also supply facilities for teaching the rights and responsibilities, the skills and qualities of good citizenship and the habitual enjoyment and appreciation of the company of representatives of other groups and parties. Civic conscience and civic intelligence need careful cultivation. In such matters deliberate and detailed planning will have to take the place of happy blundering. Good things rarely happen: they must be caused to happen.

JUSTIFICATION

This advocacy of a nationalizing education should need no explanation when it is remembered that in a country like India with its innumerable languages, its variety of religious and its heterogeneous inhabitants, nationalism is nothing short of *internationalism*. The national idealist is confronted with a task not altogether dissimilar to that of amalgamating into a working unit the different peoples of the Continent of Europe. What might ordinarily seem excessive, narrow and dangerous abroad is in India's present condition the least that can be recommended. No son of the soil and no well-wisher of India can look with indifference on

the Indian situation or desire its perpetuation. No amount of emphasis therefore on unifying factors and integrating experiences can reasonably be considered unbalanced. As Shakespeare puts it:

"Diseases, desparate grown,
By desparate appliance are relieved.
Or not at all."

Apart from that, it must not be forgotten that if we educate good state-citizens, we are also educating good world-citizens, and that without the former the latter is unthinkable. This view is supported by Professor Rose who

"The cosmopolitan who sneers at his country and raves about humanity is like a man who disdains the use of stairs and seeks to leap to the first floor. Such efforts have always failed.... Because narrow-minded people can't see beyond their town or country, you do not abolish the organization of the town or country. You retain the organization and seek to widen their outlook. The true line of advance is not to sneer at nationalism and decry patriotism, but to utilize those elemental forces by imparting to them a true aim instead of the false aim which has deluged Europe with blood."

It may be added that without a healthy national consciousness no contribution that can be recognized as distinctive and worthwhile is conceivable. One humanity, parting into many peoples, enables it by their competition and their manifold energies to unfold all those hidden powers which are capable of common development, and to fulfil its destiny more abundantly. To quote the sublime conception of nationality expressed by no less a nationalist than Mazzini himself:

"Every people has its special mission which co-operates towards the fulfilment of the general mission of humanity: that mission constitutes its nationality."

CONCLUSION

To summarise:

Schools and colleges which do not strive to widen outlook, broaden loyalties and elevate thought must be regarded as rendering a positive national disservice. If the citizens of future India are to live and work as one nation, if they are to strive to increase communal concord and understanding, if they are to lend a helping hand to those less privileged than themselves, if they are to be worthy of the tasks awaiting them, a sense of national unity and a sentiment of patriotism have to be stimulated and strengthened. The efforts made in western countries along these lines deserve to be imitated in India—not to develop a narrow nationalism but a benign and inevitably broad-based internationalism.

This paper is a plea for engineering in the realm of the emotions, for the displacement of drift by definite direction and for the assertion of the superiority of intelligence over instinct. The task is not easy—that of producing in our schools and colleges Indians who can rise above their creed and community—in fact, very difficult. But it is difficult problems which statesmen—educational, political—make it their business to solve. Living in an age when mental and mechanical miracles are matters of everyday observation, how dare we doubt its possibility?

THE PRICE OF THE ANGLO-ITALIAN AGREEMENT

By MAJOR D. GRAHAM POLE

Is there anyone so unpopular as is the British Prime Minister, Mr. Neville Chamberlain? There is scarcely a friend to praise him. Only a voice applauds from Italy, the voice of Signor Mussolini. Signor Mussolini claims him and ranges him on the side of the Dictators, translates his attitude into one of support of General Franco, making England appear a double-dealer like Italy who intervenes in Spain and is at the same time a member of the Non-Intervention Committee. The British Government, says the *Gazetta Del Popolo*, apropos of the Anglo-Italian

Agreement, has "pledged itself to give free scope to the victory of Franco". And to all this fulsome praise and traducing, if it is traducing, Mr. Neville Chamberlain makes never a disclaimer. In fact he goes out of his way to play Italy's game.

It is not enough for Mr. Chamberlain to turn a blind eye to Italian intervention. When such acts of intervention are thrust under his blind eye, he must condone them with an allusion to other people's intervention. When he is invited to protest against the merciless bombing of

HITLER'S VISIT TO ITALY

Benito Mussolini welcoming Adolf Hitler at the new railway station, Rome

Herr Hitler laying the wreath at the tomb of the unknown soldier
in the Victor Emmanuel Monument, Rome

Illumination of the Via del Trionfo on the occasion of Herr Hitler's visit to Rome

Naval review at Naples on the occasion of Herr Hitler's visit to Italy

defenceless citizens in Alicante, he rises to reply that he has not sufficient information to judge what were "the military objectives" on that occasion. And when he said this the Consuls of eighteen nations had already sent a message of sympathy and protest to the Civil Governor of Alicante.

This answer of Mr. Chamberlain's as regards Alicante is worth noting. It is typical of a favourite technique of his, the technique of creating prejudice. Thus, when he is asked if he will do nothing to protect British seamen trading in Spanish waters, he points irrelevantly to the swollen wages which these men are receiving. And he doesn't stop there! He goes on to remark that there are some ex-convicts fighting as volunteers in Spain in the International Brigade. Do the Opposition ask him to protect them also? Irrelevant and cruel. Surely Mr. Chamberlain is aware that there are also in that International Brigade some of the foremost amongst young English artists and poets. It may be recalled perhaps that in his last novel Mr. Day Lewis, one of the best known modern poets, sends his hero to Spain to fight in the International Brigade. Anyway if Mr. Chamberlain does not know these things, the Conservative *Spectator* does. In the current issue of that weekly, writing in another connection, a reviewer has this to say:

"The volunteers who have fought and fallen in Spain may have been misguided, impetuous, fanatical, but anyone who understands them must concede that they were animated by that kind of idealism to which so many British leaders have appealed with only partial success. The idealism is there, and is prepared for any sacrifice that it counts worth the cost."

But the gibe was irrelevant. Seamen are not combatants. And while Mr. Chamberlain is creating prejudice, diverting attack from the matter in hand and sending us off down other avenues in defence of the people he has disparaged, see what has happened. He has betrayed British interests, has betrayed the general interest, in three vital ways. First of all he has surrendered the old proud boast that wherever you are, provided you are engaged on your lawful occasions, as these seamen were, you are entitled to the protection of the flag. Next in condoning attacks upon trading vessels, attacks upon vessels not carrying contraband (that they were not carrying contraband is attested by the presence on board of Non-Intervention Officers), he has made an amazing admission for a British Prime Minister. He has informed the whole world that in the event of another great war any neutral country which tries to run food to England will only be getting

what she asks for if her vessels are sent to the bottom of the sea. But worst of all, to return to Alicante, in encouraging the idea that a little port, two hundred miles from *any* front, might have "military objectives" and so be a legitimate target for bombing, Mr. Chamberlain has provided a pretext which can be used in future for bombing any and every town.

It is not fashionable these days to be enthusiastic for Mr. Lloyd George. There is a feeling that anyone aged seventy-six ought not to be quite so aggressive. But the fact remains that he is, when he chooses, the most clear-sighted of them all. He has the artist's gift for damning and dismissing a situation in one swift gesture. When in 1931 the Conservatives made use of Sir Herbert Samuel to bring in the Liberals into the National Government, did not Mr. Lloyd George describe Sir Herbert as their quacking decoy duck? The other day, speaking of the squalid misery in Jamaica, he made every one reflect when he deplored the idea of a slummy empire. And now he has impaled Mr. Chamberlain. Why is it that Mr. Chamberlain will not move a finger in protest at the outrages which are going on in Spain? It is because behind Franco is Italy and he has staked his reputation on the Anglo-Italian Agreement. He cannot offend Italy and as a result he has, in the words of Mr. Lloyd George, placed himself in a position where *his own personal reputation is in conflict with the interests of the British Empire*.

So that is what it amounts to. It is an awful illustration of how soon a fixed idea can destroy a man's sense of realities. Mr. Chamberlain indeed is fast becoming a pitiable spectacle. You cannot indefinitely wrench a situation to your way of liking. You are sure to leave out some factor and in the end it may prove too much for you. The bombing of British ships is proving just too much for Mr. Chamberlain. He would do nothing to restrain Franco and so offend Signor Mussolini and injure the Anglo-Italian Agreement. But Signor Mussolini was unwilling equally to offend Germany. And it suited the Berlin-Rome axis to bomb British ships and bomb open Spanish towns and generally try out their war wings in Spain. But it has suited them just too long. There are signs that Italy has had enough of the Spanish adventure—but we have had enough of Italy.

This is what Mr. Chamberlain is beginning to realise and this is why he is beginning to falter. This week he has shown on more than one occasion that he is losing his nerve. His attack on Mr. Mander, who had drawn attention to a remarkable statement of British policy which

was sent to the New York *Herald-Tribune* by their London correspondent who claimed to shed "official light on the real British attitude towards Czecho-Slovakia, Spain, Abyssinia...Hitler and Mussolini", was uncontrolled and hysterical. It betrayed the Prime Minister's agitation. (It betrayed more, but of that later.) Then in the debate on Thursday, concerning the bombing of British ships, he made the extraordinary statement, which he withdrew later, that the providing of these ships with anti-aircraft guns was a matter for the owners. And now suddenly on the spur of the moment, no doubt because of the temper of the House, he is recalling the British Agent to France, Sir Robert Hodgson, to consult with him on the matter of this bombing.

Mr. Chamberlain loves the Anglo-Italian Agreement, and when he loves it not—when it is shown up for what it is by these attacks on British shipping—chaos is come again!

Signor Mussolini's mind is not in the least chaotic. He is intent on making use of England and on making use of her in two ways. First of all England's "pacifism" must have no limits. Not only must it allow Signor Mussolini to make war on the Spanish Government, it must cover up his war. It must even allow him to sink British ships if thereby he can finish his war more quickly. Then when the war is finished, and the Anglo-Italian Agreement comes into operation, England must allow Italy credits because Italy's resources have been so depleted by this Spanish war (and also by the war in Abyssinia which England never approved). Italy's plight indeed is growing serious—her silk crops and her corn crops have suffered through the drought—and so she has been trying to persuade England to implement the Anglo-Italian Agreement even before a "settlement" is reached in Spain. As there seemed little likelihood of that, she is re-doubling her efforts to end the Spanish war. That is why these attacks on British ships in Spanish waters have been intensified on the one hand, and why on the other progress has suddenly started to be made in the Non-Intervention Committee!

It is indeed a cynical state of affairs.

At the moment of writing the British Government is awaiting the explanation from General Franco which Sir Robert Hodgson has been asked to obtain. But what is the use of asking Franco to explain? It is not *his* planes which are destroying our ships. He has no planes. The planes belong to Germany and Italy. As the Diplomatic Correspondent in the *Sunday Times* points out, "aeroplanes are not yet built

in Nationalist Spain—at least not in appreciable quantity—nor are aero-engines made there." That the planes are Italian is in fact the boast of Italy. To quote the *Sunday Times* again:

"The Italian Press does not attempt to hide the fact indeed, stresses it—that Italian planes based on Majorca are responsible for the recent sinkings in Spanish harbours....The newspaper *Tribune* yesterday declared that seventeen ships had been sunk in this way between June 4 and June 23 in Valencia, Barcelona, Sagunto and Alicante harbours."

This is the State to whose alliance we cling. This is the State which expects to get credits from us. Not only so. It even has the effrontery to proclaim that before its troops are withdrawn from Spain, it will have to be decided who is to pay for the withdrawal! Evidently we are to share in the cost.

It would be refreshing if General Franco, who calls his Spain Nationalist Spain, suddenly implemented his patriotism and told his German and Italian allies that the Spain they are winning for him will not be worth having. It will be a gaunt and impoverished thing. These bombers from the air, in the words of M. Daladier the French Premier, are attacking civilisation itself "ruining in a few seconds the heritage left by centuries." Does he really like that? Or, in his heart of hearts, does he not think the Spanish Government showed a truer patriotism when it decided not to take part in the new fell policy of bombing open towns? (Although it is just reported that the sorely-trying Spanish Government is now threatening reprisals—and reprisals even against Germany and Italy. To which of course Germany and Italy, Germany with between five and ten thousand technicians in Spain and Italy with thirty thousand troops in Spain, have promptly replied with a threat that they will go to the full limit of war).

I mentioned earlier in this article that the Germans and Italians are trying-out their arms in Italy. To them this agony in Spain, and especially perhaps to Germany, is nothing more than a dress-rehearsal for the coming war. At the beginning of this month a Spanish official commented on this fact to Mr. A. J. Cummings of the *News Chronicle*. He asked:

"What is the use of protesting to Franco? He can do nothing. He has no say in this matter. Surely, the British Government knows that all these bombings are carried out by German and Italian aircraft under direct German and Italian instructions. The German and Italian Governments are experimenting on the Spanish people with various types of machines and bombs and with changing tactical methods. They are also conducting what they call psychological experiments on civilians. Careful reports are sent back regularly not to Franco but to Berlin and Rome."

And he added what is reported to be in the minds of the Spanish Government now (although it can only pull down more ruin on their heads:

"Reprisals by the Spanish Government, therefore, should be made not on Spanish centres of population, but on German and Italian towns."

I think the most important point in the foregoing is the allusion to *psychological experiments on civilians*. What sort of pass have we come to in the West when we contemplate such experiments? When we shake hands with the people who go in for them? The pacifism which stands completely aside is understandable (although a peace-maker is the more honourable role). But our new kind of pacifism shakes hands with the murderer in the presence of the corpse.

Unfortunately there is a great deal of this kind of thinking in the air to day. Peace at any price is the fashion and especially in high quarters. Some people think, for instance, as they see Germany straining every nerve in her preparations for war—virtually mobilising now as she has done in her plan for the conscription of labour announced this week—that the best course is for us to stand aside. This gigantic war machine, they argue, need not be put to use. Herr Hitler is only forging a weapon for blackmail. He knows that if he can make Germany so strong that no one can challenge her, then no one need challenge her. Germany can go ahead and we will look on "while the smaller States of Central Europe are peaceably absorbed into a new continental empire under German hegemony." (You see how the fallacy has crept in. Because these small deserted States could have no hope in standing up to Germany, it follows that their annexation is "peaceable"!)

There is no such state of affairs as peace at any price. A paraphrase of peace at any price is peace at someone's expense. And that means injustice. And injustices are the only kinds of ghosts that never can be laid. They will keep on rising and rising.

But this does not mean that opponents of Mr. Chamberlain's policy of peace at any price are advocating war on the Dictators. They believe that even now, at this eleventh hour, the situation could be saved by a return to the policy of Mr. Eden and Collective Security. Herr Hitler thinks that he will make Germany so strong that no one can resist her. He rightly thinks that that is one way to peace—peace on his conditions. Well then, say those who believe in the League, make the League so strong that no one, not even Germany, can resist the League. This is not such a fantastic idea as the British

Government and the Beaverbrook Press and all those who have done their best to weaken the authority of the League would have us believe. France is with us, Russia is with us, America would be with us if our aims were to be equitable as well as strong. And those smaller States, who have no wish to be "peaceably absorbed" into the German Empire, aggregate, as Mr. Winston Churchill has reminded us, no less than 75,000,000 peoples. What a chance after all is there. The League could be strong enough to show Germany that she cannot be allowed to blackmail any longer. She could also be strong enough to say to these smaller States of Central Europe that some wrongs were created by the Treaties of Versailles and Trianon. These wrongs must be righted. But we will see to it that they are righted in such a way as to cause the minimum of economic and other dislocation.

Who could doubt that if such a return to the League were made, if Great Britain and America threw in the weight of their vast economic resources, peace could be made?

In any event, what is the alternative? War is coming nearer and nearer every day. Perhaps future historians will date this present time as a war period which began in 1931 when Japan attacked Manchuria; continued in the Abyssinian War and in the Spanish War—and ended? One thing also seems to escape Mr. Chamberlain and his circle. If we are finally drawn into war with Germany, after these tedious years of trying to placate and condone and explain away, there will be no heart left in the people. And in war, as Napoleon never lost sight of, the morale is everything. This has been said so often that it has become somewhat musty. But it is noticeable that several people are saying it now, people whose voices cannot be disregarded. Lord Cecil, Mr. Eden, Mr. Winston Churchill—they are all preaching that unity can only have a moral basis. Mr. Churchill believes that there is still a chance to save Europe, but it is the last chance. The choice is between Germany over Europe or Geneva. In a striking review of a compilation of Mr. Churchill's speeches (*Arms and the Covenant*. Harrap. 18s.) the matter is thus concisely put: the Sibylline books are to be proffered to us for a third time, and the fate of Czecho-Slovakia is to decide the fate of the British Empire.

But if the present Government is to decide the fate of the British Empire, then the Empire is doomed. We shall either become a Fascist Power linked up with Germany and Italy, or

we shall drift into war. And we shall have no chance of winning that war because we shall have lost Central Europe to Germany before we come in. It is futile to think that we can keep friends with the Dictators and not become Fascist likewise. Because, unlike a democracy, fascism is always expansionist. Of certain kinds of government you can say we can be friends with them because it is not our business what goes on inside their frontiers. But you cannot say that of German and Italian fascism because they do not stay inside their frontiers. Fascism means economic nationalism but neither Germany nor Italy can be economically self-sufficient; they depend upon outside sources for their raw materials. Of those raw materials they intend to make themselves master, whether it is in Roumania or in Spain. And if we acquiesce in their depredations we shall be thinking like unto them.

Unfortunately there are signs these days of an increasingly Fascist mentality in our society. In industry you see it in the growth of monopoly. In our rulers you see it in their increasing tendency to shut the common people out of their confidence. The Simonite Liberals, for instance, passed a resolution the other day at their Party Conference advocating the setting up of an All-Party Parliamentary Foreign Affairs Committee "whereby decisions on national safety and external relations might be taken in such a manner that the real and deep unity of the country might be truly reflected." The pious wording of this resolution covers up the very dangerous departure it suggests. Why should a *Committee* take decisions on such vital matters as external relations? In the old days these matters were decided upon in accordance with the mandate received from the electors... As Mr. Henderson Stewart said in opposing the resolution, it would turn Parliament into a body of yes-men.

The Conservative *Spectator* calls attention this week to the tendency to refuse information. The most glaring instance of this of course is in the Anglo-Italian Agreement itself. That Agreement is to come into operation when a "settlement" has been reached in Spain. But what is meant by this the Prime Minister never will explain.

This going over the heads of the common

people, who elected them, is at its most insufferable however in the state of affairs revealed by Mr. Mander—in that fishing enquiry which he made in the House of Commons the other day and to which reference has already been made. He raised the question as to who had authorised a statement of British policy which appeared in the American press. Apart from the merits and demerits of the statement as such (and it is full of such mischievous assertions as that "Czecho-Slovakia cannot survive in its present form" or Russia "cannot be counted upon to move troops into Czecho-Slovakia any more than France can" or again, "any suggestion that Russia might fly 1,000 bombers to Czecho-Slovakia... is ruled out with the comment that Czecho-Slovakia lacks the necessary equipment and ground facilities for such an additional air force") the occasion of its appearance is outrageous. Mr. Chamberlain will neither own it nor disown it with the result, as one critic points out, that the whole world from China to Peru believes he is responsible for it. But the latest news is that it originated at a luncheon party at Lady Astor's. She says that the Prime Minister and the journalists were her guests, but that "nothing in the nature of an official statement was made, although foreign politics were discussed around the table". Why should Lady Astor invite journalists to lunch with the Prime Minister and discuss foreign politics when they are in such a critical state? It is fascism again, arranging public affairs at private meetings. It is an eye-opener and very damaging to the reputation of a democratic Prime Minister. To quote that same critic again:

"I cannot imagine any thing more improper than that a complete and elaborate statement of British policy, involving far-reaching decisions, should be given conversationally to a group of foreign and Canadian journalists before it is made known to the British Parliament and the British people."

Sir John Simon hinted the other day that a General Election was only about a year away. It would be a good thing if we could have an Election now to blow some of these cobwebs away—or perhaps blow the Government sky high.

Westminster, London.

Giri-Govardhana-Dharana

AN ILLUSTRATED MANUSCRIPT OF THE BHAGAVATA FROM ORISSA

By O. C. GANGOLY

THOUGH illustrated manuscripts of the *Bhāgavat* are by no means rare, a very peculiar interest attaches to a series of full-page illustrations which occur in a manuscript written in Orissan character, now in the collection of an ancient family hailing from Cuttack. In this manuscript the Tenth Chapter of the text, the chapter most popular amongst all sects of the Vaishnavas, is embellished with about seventy-seven full-page illustrations of the size of about $11\frac{1}{2}$ inches by $5\frac{1}{2}$ inches with a few lines of the text at the bottom of the illustrations enclosed by borders in red, and by four double-page illustrations. As the family Bible, daily read in thousands of homes in different parts of India, the text undoubtedly called for various *éditions du luxe* of which this version from Orissa is a typical example. I am not competent to offer any remarks on the text, but the illustrations provide interesting data as to the existence of a widely spread, common or analogous pictorial tradition which links up the history of the various phases of Indian Art in closely related resemblances and stylistic affinities.

By the courtesy of the owner we are able to cite here three examples of the illustrated pages from this MS., one of which is reproduced in colours.

To take the Colour Plate first, it is an illustration of one of the events in the early Nativity of Krishna, where Kamsa, the Indian Herod, carries off Vasudeva and Devaki—the prospective parent of the enemy of the king of Mathura. They are seen standing on the chariot, well guarded by a row of armed retainers in a heroic procession led by a rider on a galloping red horse, followed by a standard-bearer on an elephant, at the back of which are two lance-bearers whose heights rival those of the riders on the elephant,—a piece of archaism, which is called for, by the demands and exigencies of the composition. The rear of the procession is made up by two riders (with drawn swords) on galloping horses. The other members of the procession are spread over the composition in two sections,—the chorus of musicians on the top of the horse and elephant, and the trio of standard-bearers on the top of the horsemen. They really ought to come in line with the other members of the procession, but are here placed on the top, *not* on the demands

of “transcendental perspective” but out of the necessity of filling up vacant spaces.

This *naïve* treatment and disposition of the figures, as also the primitive palette—confined to Light Red, Pale Blue, Rich Yellow, and Grey Black, lend to the picture an archaic romanticism, which is appropriate to the atmosphere of the legend.

The types of the retainers, their head-dresses, tunics and trousers, as well as the treatment of the horses recall the manner of the Hindu Paintings of Rajaputana. The landscape, on a white background, is treated symbolically by pairs of cypress trees (not indigenous to Orissa) and are borrowed from Mughal pictorial conventions. In this example the only evidence of its local Orissan character is the type of the chariot with *makara* brackets and the tri-foiled arch of the *vimana*.

The two other illustrations, here cited, offer novel treatment of well-known topics.

The *Giri-govardhana-dharana* theme, generally treated in Rajasthani and the Hill Schools, in oblong panels, is here spread out in a horizontal composition which somewhat discounts the intensity of a compact and crowded composition. If we compare the treatment with the well-known Kangra examples in the Ghose and Bharat-kala-Parisad Collections (*Rupam*, No. 41, January 1930, pp. 17, 18), we find that the artist of this MS., was not familiar with these well-known masterpieces and has treated the theme independently, and has not followed traditional patterns though the nervous and schematic treatment of the cows recall similar conventions in Kangra pictures. The most peculiar elements are the conical caps (*Kan-tope*), characteristic of Northern India and frequently occurring in Pahari miniatures.

The third example is of peculiar interest as it illustrates the Prelude to the heroic exploit of the ‘Quelling of the Kaliya-naga’. There are numerous illustrations of the ‘actual fight’ with the Dragon, but our illustration treats of the moment *before* Krishna jumped from the Kadamba tree on the head of the Serpent. The three cowherd-boys on the shores appear to have guessed the resolve of the Hero, and are frantically gesticulating, to dissuade their young companion from the rashness of such a dangerous

venture—an attitude which is echoed and emphasized by the row of cows in the foreground.

The manuscript offers a rich panorama of pictorial presentations of numerous themes from the text, and in many details of treatment, types, and conventions offer contact with pictorial practices of other provinces, attesting an unity and homogeneous character of culture at different

centres of India—which is now cut up and separated by divergence of outlook and provincial peculiarities. India was one, and permeated by one uniform and homogeneous culture—which transcended political boundaries or geographical barriers.

Our manuscript is an interesting evidence of this common link which strung together distant tribes and culture-units.

HOW INDIAN SHIPPING WAS RUINED BY VESTED INTERESTS

By C. A. BUCH, B.A., F.R. ECON. S.

MAHATMA GANDHI, writing in *Young India* of 26th March, 1931 said that the British Shipping in India is built on the ruins of Indian Shipping. While this is a patent fact, attempts have frequently been made by the spokesmen of the British Vested Interests and the Government of India to show:

(1) That there never was any Indian Shipping worth the name, in recent past;

(2) That whatever Indian Shipping did exist, was ousted from the seas, because wood was ousted by steel and sail was ousted by steam.

These vested interests further try to show that the several Indian ventures in the field of shipping during recent years, came to grief because of bad finance and inefficient and inexperienced management.

Very interesting and informative evidence was tendered before the Indian Mercantile Marine Committee, which was appointed by the Government of India in pursuance of a resolution moved by Sir Sivaswamy Aiyar in the Legislative Assembly in 1922, among other purposes "for the encouragement of the growth of an Indian Mercantile Marine by a system of bounties, subsidies and such other measures". No less than 128 written statements were received by the Committee from all over the country, out of which 72 were tested by oral examination (and severe cross-examination) of their authors. Thirty-eight Indian witnesses out of these 72, including representatives of 15 Indian Commercial Associations were in favour of creating a National Mercantile Marine, owned, controlled, managed and ultimately named by the nationals of the country. Out of the 34 non-Indian witnesses, most of the 19 who were either independent of vested interests or were technical men like Port Officers, Surveyors, etc. were in favour of giving Indians a chance to carry out their

desire, even as a national experiment. The rest of the non-Indians entirely opposed the very idea of a National Mercantile Marine, which they contended was unnecessary, unjustified and impossible. These were mostly European diehard representatives of British Shipping in India, often representing various British Commercial Associations.

Captain Headlam, The Chairman of the Committee informed a witness that he had with him a table of ship-building in India in the 18th and 19th centuries, but the figures were so poor that these can be regarded as negligible. On the other hand notable men like Professors K. T. Shah, P. N. Banerji and others quoted from various historical records to show that Indian ship-building and merchant shipping was in a very prosperous condition right upto the fifties of the 19th century. A fact that requires to be better known by the students of the History of Indian Shipping including that of Indian Marine is that about 1864 all the records relevant to this, were burnt by the India Office. This act of vandalism is mentioned by an Officer of the Marine, Lt. Charles Rathebone Low, in the preface of the first volume of his book (in 2 volumes) *History of Indian Navy*. No wonder then, Capt. Headlam could not find any reliable records of the existence of vast ship-building and mercantile marine activities of the Indians, even upto the latter half of the last century.

Professor Cunningham, an impartial writer, however, avers in his *Growth of English Industry and Commerce* that the ruin of Indian shipping in English waters was directly due to the Navigation Laws of England, which Laws were meant to secure for English shipping the place that it has occupied ever since.

Leaving the history of the old Indian ship-

ping aside, it is enough to view the tragedy of recent attempts to show that the absence of a national mercantile marine in this country is directly due to the ruthless hostility of the British Vested Interests, who have monopolised the Coastal and Overseas trade of the country for over three quarters of a century and more.

The Coastal and Overseas trade of India is estimated at Rs. 540 crores in cargo, stores, etc., with 3 million passengers and 30 million tons of cargo every year. The sphere of Indians in this vast traffic is less than 5%. The fate of several Indian Shipping Companies that have tried to get a footing in this traffic, during recent decades has been uniformly tragic—annihilation—resulting in the loss of anything between 10 to 12 crores of rupees.

TATAS IN THE OVERSEAS TRADE

One of the earliest attempts to start Indian shipping was by the Tatas, who desired to carry piecegoods and yarn to China in their own bottoms. The powerful P. & O. Company, offered competition and the rate per ton which was Rs. 15/- went down to Rs. 1/8/-. When the Tata venture was forced to extinction the rate was restored to Rs. 16/- per ton. The following paragraphs from a booklet issued by Tata & Sons tell their own tale.

"Having been instrumental in destroying the old Indian shipping trade, it has been unceasingly employed ever since its establishment, in raising the rates of freight, and consequently hampering facility of intercourse between India and the further East.

"With scores of liners, English and foreign, plying in these waters, which our petted and much glorified Anglo-Indian Company can afford, and perhaps finds it good policy to tolerate, it is only jealous of a small enterprise like ours, and while it can lovingly take foreigners and possible future enemies of England to its bosom, it discards the poor Indian for whose special benefit it professes to have come to India and from whose pocket it draws the greater part of its subsidy."

RATE WARS

As instanced above, rate war has been one of the most powerful weapons in the otherwise varied armoury of the non-Indian Shipping Companies. The various Coastal ventures that have been annihilated so far, have all had to face a ruthless rate war from their hands. Moulvi Mahamed Nur-ul-Huq Chowdhury of Calcutta told the sad tale of the killing of the Bengal Steam Navigation Company in the following words:

It was a purely Indian venture, but the B. I. and the Asiatic Companies were at that time trading with Rangoon, Akyab, Chittagong and Calcutta. The Bengal Company had two steamers in the same trade. Freight was cut down and the passenger fare was brought down to annas eight

per head! Sometimes passengers went free and received a handkerchief as an extra inducement. Among other misfortunes the Admiralty Court at Rangoon issued an injunction against the Bengal Company's steamers plying in the Bay. The Chairman of the Company deserted the Company and the Company was liquidated after a prolonged struggle for existence. The ships were purchased by the B. I., their most aggressive rival for a sum of Rs. 6 lakhs!

Rao Bahadur V. Govindan mentioned the case of Swadeshi Steam Navigation Company which started passenger service between Tuticorin and Colombo and subsequently was killed, when the B. I. once gave clothes free to passengers travelling by their vessels.

Apropos of rate war on Calcutta-Arracan ports, a retired Branch Pilot of Calcutta, in his book *Thirty-five Years on Hooghly* mentions a telegram by the Chittagong Agent of a Company to his principals at Calcutta stating, "B.I. offering fowl free to passengers, may I offer turkey?"

Similar rate wars were waged against each and every Indian Company, everywhere. The Burma-Bombay rice rates went down to Rs. 6/- per ton from Rs. 18/- per ton when Scindia Company started its operation in the Indian trade. The ridiculously low rate of Rs. 20/- from Karachi to Jeddah in 1938 is but recent history, the normal deck passage being Rs. 172/- per passenger. While it is added that out of these Rs. 20/- the shipping company had to pay Rs. 33 in dues and taxes at Kamaran and Jeddah and had to bear Rs. 20/- food charges per passenger, the nature of rate war against Indian shipping becomes as ridiculous as it is vindictive.

REBATES AND REFUSAL OF SPACE

Whilst rate cutting is utilised by British shipping interests for killing a newcomer into their monopolistic preserves, the weapon of rebates is directed against the possibility of any newcomer finding support from the shippers. The institution of Rebates is a very well-known factor in World Shipping. It has been used as a powerful safeguard against recalcitrant shippers, who support a newcomer. It is a highly protective measure in favour of monopolists and thus is an anti-social weapon against principles of Free Trade and *Laissez Faire*. The evil is so deep-rooted and widely practised that even the British Government has not been able to check its spread by legislation. The Royal Commission of 1907 examined this question and the allied question of Shipping Conferences but the majority report held the system irradicable. Deferred Rebate is in various forms like Contract, Preferential Contracts, Agreements, etc.

The hold of the British Vested Interests on Indian shippers is so great, that despite every sympathy that the merchants have for a national

venture, very few can dare to support it in a practical manner. The results are obvious. The existing lines coerce what is called "Loyalty" of the shippers. The newcomer dies a natural death for want of support. The freight rates remain high in favour of the monopolists. This weapon was and is ruthlessly used in Indian shipping business. Despite an attempt by Mr. T. V. Seshagiri Aiyar to get through a Bill to illegalise Rebate system, the Bill having been killed, the system still persists.

Whilst rebate system provides a weapon against the shippers in general, individual lapses from 'loyalty' are treated with a still more telling weapon of 'refusal of space' to the erring shipper, jeopardising his very existence as a merchant. Babu Jogendra Nath Roy, in giving evidence before the Government Committee referred to above, said:

"Even Indian shippers intending to ship jute by this Company's vessels to Indian consignees, such as mills owned by Indians, are restrained from doing so, by the threat that they will find difficulty in securing space for goods intended for the European Mills and also in shipping from stations where this Company's vessels do not run."

Another witness Babu Nil Krishna Roy told the following tale:

"I have found that if I want to ship by an Indian-owned Shipping Company, the European Companies would not give me space in their steamers for my goods for other ports. So, for the benefit of the other Ports I am compelled to ship by the English-owned Company's steamers. The B. I. has stopped booking my goods because I am the owner of a steamer. They never allowed me any space to book my goods to any other Ports in India. My only fault is that I am the owner of a steamer, which plies between Chittagong and Akyab in competition with the B. I."

"A merchant in Akyab once chartered a ship for rice to Jaffna and other Malabar Ports. For this fault, he was not allowed by the B. I. to ship his goods by their ships for four or five years. Now they have come to an agreement on better terms. The merchant is given special facilities so that he may not compete with the B. I."

Such a story was repeated all over the long coast of India, on the Hooghly and the Brahmaputra, on the Irrawady and the Salween, on the Karnaphully and in the Gulf of Munnar. Rate cutting, forfeiture of rebates, refusal of space and flagrant discrimination against Indian Shipping by allied British Interests like Insurance, etc., as well as petty harassments even by semi-Government authorities, Port Trusts, etc., were all combined against Indian Shipping till it was crushed out of existence.

DISCRIMINATION

An eminent freight broker of Bombay, the late Mr. Jiwandas Pitamber, J. P., said that

"for Colombo, Rangoon, etc., ports, the rates are Rs. 14 or Rs. 15 for certain industries and for the same if they

are required for European-managed concerns, the rate is Rs. 9 or Rs. 12.

This is an instance of flagrant discrimination by British ship-owners against Indian shippers. The policy of discriminating in favour of British shipping is as old as the early seventies of the eighteenth century. Mr. D. P. Khaitan laid before the Committee a table showing that the Customs duties in the Bengal Presidency were so fixed that foreign cotton goods paid 50% less duty if these were imported in British bottoms. This discrimination continued for over a hundred years, securing an immense import trade to British ships. It was further pointed out that the definition of British ships for the purposes of this favourable treatment was so worded as to exclude Indian ships from receiving such favourable treatment.

DISCRIMINATION BY INSURANCE COMPANIES

Babu Jogendra Nath Roy, a shipowner, stated that the British Insurance Companies would not insure goods carried by their vessels at the same rate as goods carried by steamers of the European Companies, even though their steamers were new and in some cases more strongly built. This very invidious and unfair discrimination was put an end to after various protests and through the intervention of Sir Ernest (now Lord) Cable.

Similar discrimination was complained by Mian Mahomed Baksh of the Hedjaz Steam Navigation Company even at the risk of being bullied into silence. The complaint was identical and was proved by production of the rules of the Marine Insurance Agents, Karachi, which read as under, regarding classification of steamers for risks:

"First Class—All those not classed as "Second" or "Third."

"Second Class—All-Indian owned and/or managed and/or chartered steamers other than those specially classed as third class."

Mr. S. N. Haji gave an interesting account of how the steamers of the Scindia Company were discriminated against by the Insurance Companies, in a similar manner, till after protests and recourse to non-tariff Companies, the invidious discrimination was removed.

HARASSMENTS

Mr. S. N. Badoo complained that he could not take their coal for three days from the jetty because the English firms simply make delay so that their customers may get annoyed with them, and they may not be able to load their steamer in time. He further complained that a certain European Auditor could not take up their audit work because pressure was put upon him by his

countrymen against it, and European Banks would not deal with Indian shipping firms like his, which, he added, is a fact, though a revolting fact.

What may be regarded as the climax of anti-Indian feeling was related by Babu Nil Krishna Roy as under:

"I had ordered a launch from the Eastern Bengal Service, Ltd., for a marriage ceremony and she was aground near the channel at Joffsher behind a steamer. Although she whistled 3 or 4 times for help, nobody gave any sort of help and at the request of the passengers and after great difficulty they agreed to the Master dragging the launch. The result was, the Serang of the boat was dismissed from service, because he was helping an Indian launch out of a difficulty."

NAUTICAL TRAINING

The inauguration of I.M.M.T.S. "Dufferin" was due to the hard fight put up by the Indian Members of the Legislatures pursuant to the recommendation in this regard of the Mercantile Marine Committee. While on the one hand the scholastic qualifications required for the entrants make it possible for middle class families to send in their sons for training, the sons of seafaring classes are precluded from taking advantage of this training. The intellectual standard required is of the High School cadre and as the seafaring classes do not take to high schools, the bar is efficiently prohibitive. With a coastline of 4500 miles, India is studded with thousands of villages exclusively populated with seafaring communities, whose sons take to sea life as naturally as duck takes to water. If vernaculars were to be made the medium of instruction, these class sea-men will prove a great success from the very beginning.

A vernacular school was opened at Masulipatnam, not for boys but adult fishermen, and naturally failed. No school for sea can thrive unless the pupils are 'caught young and treated rough'. A vernacular instructor, who had been a Captain on the high seas was engaged and then dropped. The result was that the school was closed down 'for want of boys'.

The story of the downfall of Indian Shipping can be concluded with what appears a very callously strange episode in the South-west Coast of India. The Swadeshi Steam Navigation Company, that bore the wrath of the powerful British monopolist between Tuticorin and Colombo was declared to have come into existence for "Political Motives". The closing of this venture was followed by riots in Tuticorin which were traced to the promoters of this Shipping Company, some of whom were condemned to jail! Of course the promoters disclaimed all political motives attributed to

them. It is a novel idea that for political motives, a few merchants should start a passenger Shipping Company!

British Navigation Laws to protect British shipping against outsiders including India, discriminating Customs Tariff by Fort William at Calcutta, against all non-British incoming bottoms, including Indian bottoms, active help to British ventures by the East India Company's Government, rang the death-knell of Indian Shipping in the recent past.

When the British Shipping thrived on carriage of stores, mail subventions, coal carrying contract and other subsidising preferences, the precursors of Lee Concession passages by British steamers only, they consistently succeeded in crushing out all attempts by Indians to built up a Mercantile Marine by rate wars, rebates, refusal of space, discriminatory acts of the most flagrant type and innumerable petty harassments on all sides.

The results were always the same. Gradual collapse, followed by liquidation. A score of companies thus went down to Davy Jones's locker, the capital loss to India being estimated from ten to twelve crores of rupees!

On the other hand a company like the Bengal Steam had to sell their fleet to the British rivals for cheap returns. This was a variation to total annihilation. Such offers were rarely rejected though often made. Raja Shri Nath Roy's venture did not feel the full brunt of the British compact until they refused to sell out their company outright to the Britisher. The story is told with simple naivette by Babu Jogendra Nath Roy:

"The Hon'ble Mr. Mackenzie of Messrs. Macneill & Co., threatened us in so many words, that unless we sold or made over the management of this company's business to them they were determined to crush our company."

But these Bengalis were made of sterner stuff.

The picture today is tersely eloquent. India's Coastal and Overseas trade is worth Rs. 540 crores annually out of which even 5% is not by Indian bottoms. Thirty million tons of cargo and three million passengers yield crores of freight and passage earnings to enrich the already bloated coffers of non-national shipping. Truly the word *ICHABOD** is written on the portals of the seaways of India, by gory hands of the ruthless foreigner. The words of Mahatma Gandhi never rang truer than when he said, "The Indian Shipping had to perish, so that British Shipping might flourish".

* The glory has departed from here.

CRITICISM OF MARQUESS OF ZETLAND'S SPEECH ON FEDERATION

By K. K. BHATTACHARYA, M.A., B.L. (Cal.), LL.M. (Lond.). *Barrister-at-Law.*
Reader of Law, Allahabad University

THE Marquess of Zetland has at long last blessed the Federal constitution in a speech at the Bombay Dinner held in London on the 27th May last! Lord Lothian and Lord Samuel a few months ago did the same. They went a step further and pleaded strenuously that as the Act was not rigid, but flexible and elastic, the Indians would do well to accept the Act, so that with the process of the suns the constitution may expand. Little did their Lordships think that this conclusion, which their Lordships came to, was unwarranted by the sections in the Act, as also by the declarations of Sir Samuel Hoare, the then Secretary of State, in the House of Commons. A passing glance over section 6, clause (5) read in conjunction with the second schedule would confirm one in the belief that not only is the Act rigid, but it is cast-iron. Furthermore, even the Instrument of Instructions issued, and to be issued to the Governor-General and the Governors, will have to be approved of by the Parliament—a procedure not adopted in any of the Dominions. I would like to make a present of the protected provisions of the second schedule to their Lordships to convince them that the special plea that the constitution is not rigid, is legally unfounded.

When the Governor-General's various powers are analysed they fall under six categories:

- (1) Powers and functions relating to the Reserved Departments.
- (2) Powers and functions to be exercised in his discretion.
- (3) Powers and functions to be exercised in his individual judgment.
- (4) Powers and functions to be exercised on the advice of his Ministers.
- (5) Extraordinary powers of legislation, supervision over Provincial Legislatures, etc., and functions relating to excluded areas.
- (6) Powers and functions as representative of the Crown relating to the States.

The two offices of the Crown representative and the Governor-General have been combined in one person, namely, the Governor-General. Armed with these powers the Governor-General will arrogate to himself

such a position as has never been enjoyed by the Governor-General in the Dominions or the Kings in England since the days of the Stuart Kings. If, notwithstanding the vigorous protest registered by the whole Indian nation against the proposed Federation, the Secretary of State is still convinced that the Federal scheme, as outlined in the Government of India Act, 1935, is something which is for the real good of the country, he must be treating his Indian critics, in fact the whole Indian nation, as a band of foolish petulant boys completely ignorant of what is good for them. We, Indians, however, refuse to accept the fact that reason had deserted us, or that we have not passed beyond the stage of political babyhood. We are still unconvinced, despite the special pleas advanced by his Lordship, that the Federal scheme will be productive of any real good to India.

If we direct our attention to the analysis of the provisions of the Federal structure we will be struck at once by the fact that the Governor-General has been vested with such enormous powers as to be able to overshadow the whole Indian Constitution and reduce his Ministers to mere puppets, who will have to carry out his behests, register his decrees, or get out of office. It really strikes one as painful that when dyarchy was found unworkable in the Provinces, it should have been introduced in the Centre giving the Governor-General powers over the Army, defence and foreign relations, not to speak of ecclesiastical affairs and tribal areas. He will be advised on the reserved side not by Ministers responsible to the Legislature, but by Counsellors responsible to the Governor-General. Thus the Governor-General and the Counsellor will play the role of irremovable executive having enormous powers and no responsibility towards the Indian Legislature, turning now and then for life, light and guidance to White Hall. Is it the contention of the British Government that an Indian Minister is still unfit to administer the reserved side of the Government? Does it require any special training to run that side,

if so, may the Indians in all humility ask the Secretary of State where such coaching classes can be found and who will be the teachers there?

Why should not the Army and the Navy be thrown open to the Indians, who cannot be deemed to be lacking in warlike qualities? The martial traditions of the Rajputs, Sikhs, Mahrattas, Pathans, and Bengalees should not be forgotten. Why should the children of the soil suffer from hunger and misery unable to find two coarse meals a day, while the English boys should be fed on butter and cream in the shape of fat salaries in the Army? Is there anything unreasonable in our demands that we want to be the protectors of our own hearth and home and defenders of our country? If today the British people, on account of international complications, have to take away the British elements in the Army and Navy to defend their own country, are we simply to sit with folded arms in our rooms praying to Lord Almighty against foreign aggression? The most abject dependence upon British Army can hardly be over-estimated, and it is time that the whole matter should be overhauled and there should be a preponderant introduction of Indian element into the Army and Navy (if not immediate and thorough Indianisation) which would make a vast curtailment of the military expenditure, while at the same time providing food for the starving young men of our country.

The Governor-General has also extraordinary powers of legislation, supervision over Provincial Legislatures, etc., powers to be exercised in his individual judgment and discretion.

If in these circumstances, even if strong Congressmen are selected on the Federal Ministry, is there any doubt that they will be like Samsons shorn of their locks, and as soon as they get the ministerial portfolios they will have to hiss and get extinguished, or if they refuse to be extinguished they will be dismissed by the Governor-General? A cursory glance at the Government of India Act, 1935, will convince any one that the Federal Ministers will have a very narrow field of operation and, therefore, no self-respecting man will choose to be a Minister when virtually he will have little power and far less responsibility, while the Governor-General will play the part of super-Minister.

The noble Marquess says that the Parliament will not alter the constitution before Federation has been accepted and, therefore, he pleads that the Act should be

accepted. This is a most queer way of looking at things. If the Indians are convinced that by accepting the Federal scheme, the future progress and the advance of the country are doomed, why should they put their seal of approval upon the Act? It is just like telling an undesirable man to get into water, which is reputed to be full of sharks, assuring him that he will be lifted out of the water, if and when attacked by them. Just as no man with a modicum of common sense in him would listen to his adviser, however aged he might be, so the Indians will not listen to the Secretary of State.

So much of sophistry and special pleading are apparent upon the speech of the Marquess that even a most commonplace brain can detect the specious line of reasoning. He says that the acceptance of the Federal scheme will bring about unity of the Indian people. But at what cost and with what future and will it ever do so under the present scheme? If one's attention is turned to section 6, clause (5) and to the second schedule to the Act, it will be manifest that no future progress can be made in any direction, unless and until the Princes choose to consent, and if they do not, the Secretary of State himself stated in the House of Commons, that it will be open to the Princes to walk out of the Federation. It is therefore crystal clear that the Princes will be the arbiters of India's future progress. The British Parliament has put legal fetters upon its legislative competence, though it is a well-known proposition of constitutional law that no Parliament can bind its successors. But in view of the declaration of Sir Samuel Hoare and the wording of section 6, clause (5) and the second schedule to the Act, it is abundantly clear that the Indian Provinces will have two masters to please, if the Federal scheme is introduced—(1) the Federated Indian Rulers and (2) the British Parliament. The future progress of India is therefore mortgaged primarily with the Indian Rulers.

It is they and they alone who will reap a rich harvest by accepting the Federation. They will send 33 per cent to the Lower House and 40 per cent to the Upper House of the Federal Assembly, while their population is only 23 per cent—men who will not be elected by the States' people, but who will on the other hand be the nominees of the Princes looking to them for inspiration and guidance, while the people in the States will be totally unrepresented. Can any scheme more prejudicial to the interest of the States' people be imagined? The noble Marquess in his speech stated that

the Indian Princes may send representatives of the people, but even in that case it is open to the objection that so long as there is nothing in black and white in the constitution the Princes may simply ignore what the Secretary of State wishes them to do. Let us suppose that the Princes choose to send half the number by nomination and half by election. Will it satisfy the States' people, or the people in British India? Certainly not. There must be undiluted democracy in the Indian States and thorough elimination of the principle of nomination.

Today, while the Indian Princes are clamouring for establishing their claims for internal sovereignty, the States' people are without any democratic institution worth the name. The Princes have got their rights guaranteed and the orders of the Rulers are final, over-riding the most elementary rights of personal freedom, not to speak of the complete control over the administration of the States. There has been some attempt, on the part of some States to introduce a semblance of democratic institution, but no tinkering will do. The people must feel that they are the masters in their own house able to have their say, and most effective say, on all affairs within the State and the Princes must be content to play the part of constitutional rulers. The States' people must also have the inalienable birthright of human beings, of which they cannot be deprived, except in due process of law. Dr. Keith in his book on the Government of British Empire at p. 554 says :

"To make the experiment safe it was desirable to create a conservative central legislature and this could best be accomplished by granting more than numerically proportionate representations to the States. It was assumed that their representatives in the legislature would solidly support the wishes of the Crown."

I am not drawing upon my own imagination. To quote the exact wordings of Col. Wedgwood, M.P., who in the House of Commons on the 19th February 1935, spoke about the Bill as it then was:

"It is undignified to go on pretending that by this constitution we are providing something for the benefit of India....What we are proposing is obviously worse at the centre than the present situation. If the Bill goes through its present stage there is no chance of any further step towards freedom, towards Dominion Status and towards a democratic franchise."

Mr. Cocks, M.P., in his speech in the House of Commons on the 19th February 1935, stated :

"It did not give responsible Government. In the centre we do not think that there is any democratic Gov-

ernment at all. Labour party would prefer a Federation of the British India which leaves the Princes out."

In the face of these opinions from responsible men can it be said that we Indians are most unreasonable in asserting that the Federation is unworkable and should not be thrust upon us. In my opinion if the following proposals be accepted then and then alone can the Federal scheme be worked. It would usher in a period of peace and prosperity for India as a whole and the establishment of cordial relations between the British Government on the one hand and the Indians on the other. We Indians want to control our own house, to fashion our own constitution and not to be dictated to from 10, Downing Street. The proposals are:

(1) The introduction of a thorough responsible Government in the States must be the condition precedent to the admission of the Indian States into the Federal structure.

(2) The nominees of the Princes must never be allowed to go to the Assembly or the Council of State; only the elected representatives of the people must be sent there. The population of the States being only 23 per cent. when compared with that of the British Government, 23 per cent of the representatives of the people of the States should go there.

(3) The Princes are to be guaranteed all the existing sanads, treaties and engagements along with usages, which must be a fundamental article in the constitution.

(4) The Rulers of the States must be constitutional Rulers acting upon the advice of the peoples' representatives in the States. "Paramountcy" is to be exercised by the Federal Ministry responsible to the Crown.

(5) The Princes may be given some seats in the Council of State.

(6) In case of disagreement between the Indian Government and any State regarding any interpretation of any treaty, engagement or otherwise, reference may be made to the Federal Court for adjudication and the decision of that Court will be final and conclusive.

(7) The method of indirect election must disappear for electing members to the Federal Assembly. There should be thus direct election.

(8) Dyarchy from the Federal Legislature must disappear. The Reserved Departments are to be handed over to popular control, that is, to the Ministers.

(9) The Governor-General's powers to exercise special responsibilities, his individual judgment and control over legislation, etc., must go. His powers to act in his discretion must be abridged within the strictest possible limits. He has to be mainly a figure-head, and to act upon the advice of the Ministers, just as is the position of the Governor-General in the Dominions.

(10) The Council of State must be relegated to a distinctly subordinate position. It must be more or less in the nature of a revising chamber.

(11) The high property qualifications of the Council of State as also the long tenure and the element of nomination must disappear. The House must be representative of the best talents of the country, if it is at all to serve any useful purpose, and suffered to exist.

(12) The Draft Instruments of Accession must be changed, so that there may not be two Indias—British-India and Indian-India.

(13) India should have the full control of

determining her economical, commercial and fiscal policies.

(14) Full control over all the services must be vested with the Ministers. Recruitment, etc., of all services should be made in India. Imperial services must go, and the Ministers should have the unfettered control over all questions relating to recruitment, promotion, etc.

(15) Constituent powers must be provided for in the Act.

(16) Communal electorate must go, and be replaced by joint electorate.

(17) The pernicious section, section 6, clause (5) and the protected provisions under the second schedule to the Act must go.

(18) Treaty making powers must be accorded to India.

The Federal scheme in order to be workable must comply with the foregoing proposals. They represent, in my judgment, the irreducible minimum demands of the Indian people. It will be in the supreme interests of the British Government to accede to all of these demands in order to avoid bitterness in the minds of the Indians. The noble Marquess has not perhaps taken stock of the political situation

in India today. Eight Provinces are under the Congress Ministry and of the three remaining Provinces, Assam may be Congress Ministry any day. Bengal may follow suit. It will then be the lonely Punjab, which might not form a Congress Ministry. It is high time for the British Government to ponder over the political situation calmly and dispassionately, and gauge the sentiment as well as the strength of the people. It will be a political catastrophe of the highest magnitude if in the face of the emphatic protests against the proposed Federation, it is foisted upon an unwilling India. While a timely grant smoothens the feelings, a long delayed privilege, which is wrung out of unwilling hands, loses all grace. Let it not be said of the present British Government that while they are fertile in administrators, they are sterile in statesmen, who cannot peer below the surface and understand realities; and it is far-sighted statesmen who are required at this juncture.

INDIAN HANDICRAFTS IN BUDAPEST FAIR

By MONINDRAMOHAN MOULIK, D.Sc., Pol. (Rome).

In the glorious spring weather of Hungary an International Exhibition of Industrial Arts takes place at Budapest every year, where most of the leading industrial nations of the world exhibit their handicrafts. Although as a fair

in the Budapest Fair this year too, with greater pomp and displaying more varied and a larger number of exhibits than it was possible to do last year. The Indian Pavilion has been organized by the Indian Government Trade Commissioner at Milan, and it is entirely due

The stick presented to Admiral Horthy, Regent of Hungary, by the Indian Govt. Trade Commissioner, Mr. M. R. Ahuja

it had rather a modest beginning, it has now gained enormous popularity as an annual exhibition and occupies today a large space on the outskirts of the city. India was represented for the first time in this fair last year, and the results of the experiment were so remarkably encouraging that the Indian Pavilion was raised

A photograph of the ivory necklace presented to Madame Horthy. It was made at Amritsar

to the organizing genius and business talent of Mr. M. R. Ahuja, that the Indian Pavilion at Budapest has achieved so much popularity and success.

The Indian Pavilion was situated this year in a very striking position, just facing the main entrance to the Fair, and there was something in the architectural design of the Pavilion which would easily remind one of the Orient. It was larger and more striking a structure than that of the previous year. The exhibits were arranged round the walls of the Pavilion and the passage for visitors circled around the exhibits. The brasswares of the incomparable Moradabad craftsmanship were the most popular among the visitors, and the entire supply of brasswares were sold out before the Fair closed. Next in popularity came the silk materials. Sports goods too were much in demand. Being

the results of this year are highly encouraging and extremely satisfactory.

In addition to that there was a very delightful function this year at the Indian Pavilion, when Admiral Horthy accompanied by Madame Horthy paid a visit to the Pavilion and received gifts from the Indian Government Trade Commissioner; Sir Geoffrey Knox, British Minister at Budapest, was also present at the ceremony. Admiral Horthy, Regent of Hungary, was presented with a cane stick finished in silver and mother of pearl, which was specially made for the purpose at Bhera in the Shahapur district in the Punjab from which Mr. Ahuja himself hails. Madame Horthy was presented with a

Corner of the Indian Pavilion, showing a part of the silk and brassware exhibits

asked by me, Mr. Ahuja explained how the general uncertainties of the political situation in Central Europe have affected to some extent the usual enthusiasm of buyers and the briskness of traffic that had characterized the Fair during the previous years. So, whatever drawback was experienced in the sale of articles it was a general feature of the Exhibition and not of any particular Pavilion. Mr. Ahuja, however, made it clear that although the highest hopes raised by last year's success at Budapest have not been fulfilled, yet in absolute figures

magnificent ivory necklace specially made at Amritsar. Admiral Horthy, when he was still a Naval Officer in the former Austro-Hungarian Navy, visited some Indian ports and is known to have unbounded sympathy for the eternal elements of Indian culture.

Although it is the apparent desire of the Government of India to expand the markets for Indian arts and crafts abroad through these Industrial Fairs and Exhibitions, they serve a still higher purpose than merely commercial. Such fine specimens of Indian

makes the concern still more precarious. In order to make the trade at least self-supporting, the producer takes recourse to adulteration. The loss to the dairy industry through adulteration is said to be to the tune of ten crores of rupees. While legislation against adulteration does exist in the country, it is so inefficiently applied that the State, whether it can afford it or not, is losing this large amount.

Insanitary milk is the necessary concomitant of adulteration; impure water supply is the bane of the villager and in consequence in spite of the fact that unboiled milk is the most wholesome, people refrain from using it for fear of becoming victims to water-borne diseases. Methods employed in the production and distribution of milk intended for human consumption and the colossal ignorance of the milkman and the cultivator in general in regard to the elementary principles of cleanliness are deplorable.

It is a fact worth remembering that only a third of the milk produced in India is consumed as such but the rest as curds, ghee, khoa and other byproducts. Milk products patronised by Indians consume 760 million gallons of milk; they are more remunerative than milk itself and are valued at 80 crores of rupees. Besides, it is reckoned that a million maunds of separated milk, a byproduct in the manufacture of creamery butter, is utilised in the preparation of casein for export. One has to seriously consider whether in a country where diseases due to malnutrition are so rampant and where milk is so scarce, such manufacture and export is justifiable. One would expect that indigenous products which to Indians are items of major importance would receive the most serious attention from the authorities concerned. But the pity of it is that they seem to think that manufacture of creamery butter, cheese, condensed and dried milk are of greater moment than indigenous products. Let it not be forgotten that India is a land of small holdings, that 90 per cent of its population lives in villages and that the Indian cultivator is in need of experts who would put their heads to the work of immediate practical benefit to him.

Two problems of vital concern to us are the insufficiency of milk and its prohibitively high price for the man-in-the-street. It is the poor man of the village that now produces it and his poverty tempts him to sell practically all he possesses to the more well-to-do townsman. It should be the concern of the Departments of Government dealing with live-stock improvement

to see that larger quantities are produced and sold at prices that a much larger number could afford to buy. The villagers should have sufficient quantities for their own use. This would naturally necessitate the production of much larger quantities of suitable fodders, a point already emphasised, and waste rigorously prevented. Although efforts made during the last 35 years or more have resulted in trebling the area under green fodders, obviously there is much room for improvement in this direction as only a very small area sown to crops is confined to fodder crops. Much larger areas should be apportioned to leguminous crops which are highly nutritious and cost not more to produce than cereals.

The Royal Commission on Agriculture opined that for the improvement of live-stock there ought to be at least one million of pedigree and improved bulls. But the number available in all Government farms is said to be only one per cent of this estimate. Therefore, even the fringe of the problem has not yet been touched. Efforts in this direction should be greatly augmented. Bulls born to the selected ones should not be lost sight of or converted into work bullocks, and steps taken to select good bulls from those already in the villages. To do this a special staff may be necessary whose business would be to select, purchase and make available good bulls at suitable centres to those needing them.

While too much emphasis can not be laid on the importance of improvement of pastures, fodder crops, water supply, castration of unsuitable bulls, and cattle breeding, it should be recognised that these are but palliatives. As has already been pointed out, the economic condition of the ryot stands in his way to give effect to these suggestions. To him the cow is sacred and yet slaughtering of dry cows in the cities is a daily occurrence. To raise economic position of the ryot should be the first item in the programme of all rural uplift work. Since the milk problem is of vital importance to us as a nation, it is time that the State bestirred itself to strike at the root of the evil. Individual initiative and enterprise, important as they are, can not adequately meet the situation. State aid and State leadership are essential for a successful solution of this complex problem. India can not grow to a healthy and self-reliant manhood without an adequate supply of wholesome and rich milk. Surely, India's destiny is linked up with that of her cattle.

THE BURDEN OF PROTECTION

By C. N. VAKIL,

University Professor of Economics, Bombay

THE economic organisation of the leading countries in the world is changing so quickly under the pressure of modern political and social forces that we are compelled to revise our opinions of the part which both the State and the individual should respectively play in the same. The accepted notions of economic theory of pre-war days have in many cases been thoroughly revolutionised, with the consequence that those who are still under the influence of pre-war ideas will find themselves hopelessly behind the march of events. These changes have occurred in the external economic relations of countries, no less than in their internal economic arrangements. While the economic order of the future has thus not yet shaped itself, and is still in a process of transition, it is difficult to pronounce judgment on contemporary events in the light of old theories. Whereas in some cases it is true that ideas are in advance of practice, we are now witnessing a situation in which the practice of modern nations will lead to fundamental changes in economic theory.

While we find that the otherwise conservative British people have been quick to perceive the nature of these dynamic changes and have been trying with extraordinary zeal to adapt the economic organisation of Great Britain to the same, irrespective of the classical economic theories, we find that the British authorities in this country, are amazingly slow in showing an appreciation of the need for a corresponding change in outlook for the economic organisation of this country. Such a change is all the more required because in the past, on account of a variety of reasons the economic aspirations of the people could not find adequate manifestation.

The development of industries, large and small, has been accepted by all as one of the most important measures that must be taken in this country in order to relieve the pressure on the soil, to increase the national production and thus help in raising the standard of life of the people or in removing even to some extent the poverty of the people. To achieve this such development must be comprehensive and prompt and above all, in national interests.

A small beginning in this direction was made in 1923 when the Government of India accepted the policy of Discriminating Protection. With the help of that policy a few industries have received State assistance; the capacity of the people of this country to organise and run modern industries has been proved and some progress achieved. But even the limited progress which could be thus made aroused jealousies which resulted in organised attempts, either to put obstacles in the way of the industrial progress of the country, or to obtain a share of the benefits of such progress for people other than the nationals of this country. In order to appreciate these observations, one has merely to refer to a few leading tendencies in the industrial and commercial policy of this country in more recent times. In the Second Steel Protection Act of 1937, preference was granted to British steel within the protective scheme. The same was done with reference to cotton piecegoods a few years later. It is well-known that both the steel interests and the textile interests in this country were coerced into the acceptance of these arrangements, because of the threat that unless they did so no protection would be granted. Indeed half a loaf was better than none, was the logic of the persons concerned. These exceptional arrangements made under such unusual circumstances were quoted to prove the willing acceptance by India of the principle of preference for British goods at the Ottawa Conference in 1932. The Ottawa Trade Agreement which followed was, as it is well-known, rushed through, without consulting the industrial and commercial interests in the country. It gave a large amount of advantage to British trade in this country without reciprocal advantages to Indian trade in the United Kingdom. It ignored altogether the possible repercussions on the growing small industries in the country under the impetus of the Swadeshi movement. The warning then sounded by a few economists* roused public opinion, and the Government of India found it difficult to convince the people about the

* Cf. *The Ottawa Trade Agreement between India and the United Kingdom*, by C. N. Vakil and M. C. Munshi.

advantages of the Agreement. But it was a period when it was easy for the Government of India to sanction any arrangement irrespective of the weight of public opinion in the country. The leaders of public opinion in the country were in jail; Indian commercial interests were also aloof so far as Government policies were concerned because of the political tension; a tame Legislative Assembly with a weak and unorganised opposition could be easily made to accept arrangements of this nature. The only thing that could come out of the opinion then created, was that the Agreement was made for a period of three years, at the end of which it could be terminated by either party; besides, annual reports of the working of the Agreement were to be issued by the Government of India.

The reports which were published from time to time could not establish the case in favour of the Agreement, and in due course the anticipation of those economists who had tried to prove the unfairness of the Agreement were borne out. The Assembly at the end of three years passed a resolution asking the Government to terminate the Agreement. The necessary notice has been given, but the Ottawa duties continue on the Statute Book, on the ground that fresh negotiations with Great Britain are in progress pending which changes in duties are not desirable. Somehow these negotiations have been protracted now for nearly two years; delegations have gone to and fro; the Indian Commerce Member has flown several times to London, but we have not yet seen the end of the negotiations. In the meanwhile, important departures have been made regarding the manner in which protection may be granted to Indian industries. For example, it has been admitted that in the case of any Tariff Board Enquiry, British industrialists are at liberty not only to make a representation to the Tariff Board but also to give evidence before the same. In no country in the world intending to protect its industries is the right of the competing party to lead evidence in this manner accepted.

Besides this, the Government of India Act, 1935 provides that in any State assistance that may be given for the development of trade and industry in this country, there shall be no discrimination against the British. In other words, the British shall obtain in this country all the privileges of a national if they want to start industries in this country.

Putting all these tendencies together, one is forced to the conclusion that the industrial and

commercial policy of this country is that of discrimination in favour of the British producer and the British importer; that subject to this policy, assistance may be given to Indian industries against third parties, and that in the giving of such assistance the hampering conditions of the policy of discriminating protection may be applied in a manner not conducive to that all-round progress which is so urgently required.

The adoption of the policy of Protection by a country involves a conscious burden on the people at large in order to help industries. Such a burden, however, is undertaken willingly because in the long run the development of industries creates greater employment and a larger production in the country, which enables the people to have a higher standard of life ultimately. It is possible to exaggerate this burden and sacrifice, and it is invariably so exaggerated by vested interests. An impression is created that the advantages due to protection are monopolised by the capitalist producer, and that the consumer is made to pay a higher price for his goods in order that the producer may flourish. It is however, forgotten that a stage arrives, when the producers of a protected industry are able to reduce prices because of internal competition, and in due course are able to do without protection when they have grown sufficiently strong. In return for the sacrifice of the consumer, the protected industry is in this way able to create both direct and indirect employment, a larger production and a state of affairs by which the resources of the country are retained within the country. If in some cases the distribution of these resources is uneven, it may call for steps to remedy the inequality by means of higher taxation of the rich or similar other methods. If we view these processes in their proper perspective, it will be obvious that there is no antagonism between the interests of the producer and the consumer in a country; their interests are supplementary because they are parts of a larger whole, namely, the interests of the community in the aggregate.

When therefore attempts are made to point out and exaggerate the so-called antagonism between the interests of the producer and the consumer in a protected country, we should realise the fact that it is the work of some alien interest desiring to have some advantage in the country by diverting attention from the real economic goal of the country, and creating conflicts between parties which should otherwise co-operate for the good of the country as a

whole. In this connection, we may refer to the attitude of Sir James Grigg towards the policy of protection in this country. He has made no secret of his free trade convictions; his constant flings at the producer in this country are familiar to everybody. He has found it perhaps difficult to undo the existing protective policy of the country by a direct attack. But protection is imposed by means of duties, and duties are a form of taxation, and taxation is within the purview of the Finance Member. It was significant that during the budget session at Delhi in March 1938, in answer to some observations by a European member, Sir James Grigg referred to the inequality of incidents of taxation in this country, and suggested that that was a subject which the new Economic Adviser to the Government of India would take up for investigation. The inequality in the incidence of taxation in this country is not denied by anybody. Land revenue is regressive in its effects and we have several taxes on articles of common consumption, like salt and kerosene, which are bound to affect the poorer man more than the richer. It does not require any detailed investigation to prove this obvious fact; the only remedy is that these taxes should be removed or reduced; if these taxes cannot be removed arrangements should be made to tax the richer class by progressively higher rates of income-tax, by death duties and such other methods.

But the intention of the proposed inquiry is not so much to study the incidence of taxation, but to study the incidence of the burden on the consumer due to the protection to industries in the country. If this is intended to create that conflict of interests between the consumer and the producer which was referred to above, there will be a new obstacle in the name of the people of the country themselves in the way of the development of industries in the country. It is one thing to welcome the burden of protection, and having welcomed it to see that it is distributed properly; it is another thing to create a conflict of interests because of this burden with a view to prove that it is undesirable, and thus divert attention from the good of the country as a whole to the sectional interests of the different groups of people.

With the record of the Fiscal Policy of India in the past, and with the present arrangements in the country by which the British producer and the British importer must be favoured in this country, one may well doubt the nature of the sympathy of the British capitalist

and the British statesman towards the poor Indian consumer as against the Indian producer.

Besides the growth of these tendencies, we find that an organised attempt is being made by foreign capitalists to build industries in this country. A large number of concerns have in recent years established branches in this country, and started companies nominally fulfilling the conditions of the Indian Companies Act. Some of these are taking advantage of the protective system; others are taking advantage of the general feeling in the country for a larger industrial production. Because of the command over a large capital, longer experience and contact with corresponding firms abroad, these concerns are able to secure a firm footing in the country. They are further assisted at least in the case of the British Companies by the existing arrangements in the country, which enable them to obtain advantages from the State as if they were the nationals of the country. Most of these concerns either assume Indian names or are registered under the Indian Companies Act, and in any case have a sprinkling of Indian Directors on their Board. Barring the small advantage which accrues to Indian labourers that they must employ, the profits mostly go out of the country, and the experience and skill of running such concerns is denied to the people of the country, because the superior posts remain in the hands of foreigners. Nominally it appears that the industrial production of the country has increased in this or that respect, but it does not necessarily follow that the resources available for distribution among the people of the country have therefore increased in proportion. The whole object of industrialisation is therefore defeated, because the full benefits of such industrial growth are not shared by the people of the country. It is significant that those who cry hoarse for the Indian consumers, are not in the least perturbed by this influx of foreign manufacturers in the country, who by taking the profits out of the country make it increasingly impossible for the average Indian to have a larger share of the national dividend. In this connection the considered opinion of Mahatma Gandhi as expressed in the *Harijan* of 26th March, 1938 is appropriate and timely. It is so because it draws pointed attention to the need of having genuinely Swadeshi industries in the country instead of industries which are controlled, directed and managed by non-Indians. If we allow the development of such non-Swadeshi industries in the country we shall find

that our poverty problem will be as acute as ever.

But this expression of opinion endorsed by the Congress Working Committee is inadequate from the point of view of the industrial problem as a whole in the country. As pointed out above what is required is a new industrial policy in the country instead of the present halting policy of Discriminating Protection, which shall enable us to achieve a comprehensive industrial progress as soon as possible. What is further required is an organised attempt to see that the advantages of such a policy are reserved for the people of the country themselves in the manner suggested by Mahatma Gandhi. At the

same time effective arrangements should be made to combat the clever devices of certain parties to divide and rule in the economic sphere even as they do in the political sphere.

Whereas the opinion expressed by Mahatma Gandhi and endorsed by the Congress Working Committee is useful inasmuch as it indicates the attitude of Free India, it does not materially help in removing or minimising the existing tendencies explained above. If the Congress hopes to get the value of the rupee changed by means of an organised agitation, it should also take up the question of a correct industrial policy for the country, and force the issue with all its might.

ECONOMIC NATIONALISM AND INDIA

By GAGANVIHARI L. MEHTA

ECONOMIC nationalism is no single theory or principle but a complex phenomenon whose origin lies in economic, political and social factors. It arises from the effort of a country to obtain its essential requirements from its own national resources and to protect its own economy. It differs from the theory of *laissez-faire* in its emphasis on national self-sufficiency rather than international division of labour as well as in its insistence on deliberate control of economic activities by national authorities as opposed to achievement of economic harmony by the free-play of economic forces. It is, in its present manifestation, a development of the economic and political forces since the last war.

Economic nationalism is, indeed, less a doctrine than a tendency. It is an inevitable concomitant of the more intensively organised life of the modern State due not merely to militarism but to the desire for maintaining a certain standard of life for its people and a balanced economy within its control. It is an aspect of the prevailing forces which have tended to undermine the economic order, under which a small number of large industrial countries have controlled the markets of the world. Every country is entitled to develop to the utmost its own resources and the weaker countries naturally resent any attempts to prevent such development on the plea of economic internationalism. International trade, after all, is

not an end in itself; it does not function merely to maintain exports and imports. Classical economists are prone to exaggerate the importance and value of international trade. The criterion of international trade as a measure of national recovery has its limitations. As Mr. Harold Butler, Director of the International Labour Office, observed in his annual report of 1937:

"One of the clearest teachings of the depression is that the maintenance of the domestic equilibrium must be the primary objective of monetary policy even if it entails lowering the external value of the currency" so that "internal stability must in future take precedence of external stability."¹

This undue emphasis on external trade and exchange and international market is the result of the predominance of a few powerful countries in production and trade which has involved an economic dependence on the part of the weaker and smaller countries. These newer or backward or weaker countries have failed to develop their own resources owing to this predominance which has led to a national inferiority complex in the economic sphere. The bare notion of international trade has, therefore, in the present-day world, to be co-ordinated with the whole economic activities of the country and its people. Nor is that all. In evaluating national prosperity and economic

1. Report of the Director: Twenty-third Session of the International Labour Conference, 1937.

progress, mere arithmetical computation of figures of imports and exports is no sure test and might even be misleading unless the character of the particular trade as well as the nature and value of the different commodities are taken into account. India, for example, has a large visible balance of trade, but this is no indication of its prosperity since that trade itself is the outcome of its external indebtedness so that it remains one of the poorest countries in the world, despite its vast natural resources. Such an economic paradox can only be resolved if internal economic development takes precedence over the development of external trade. For, in the economic policy of a nation, the centre of importance has definitely shifted from foreign trade to internal economy.²

Much is spoken and written about the excellence of the principle of international division of labour. It is, however, pertinent to enquire whether the existing location of industries in different national areas is the result of purely economic forces and whether political factors have not helped the stronger powers to build up their industries and trade on the basis of their colonial possessions. Why are countries which do not grow the raw materials essential for their manufactures and do not possess adequate home markets for their disposal but are able to acquire both these through the adventitious aid of their colonial and imperial possessions considered to be *naturally* suited, in the strict economic sense, for the manufacture of such commodities? Would Britain's shipping industry, for example, have been built up without its overseas possessions and colonies? It is a strange vindication of *laissez-faire* and of the principles of international division of labour that economic laws and forces operate freely only in a world whose sources of supply and markets have been and are determined by political considerations and forces. As Dr. Schacht, the late Minister of Economy and President of the Reich Bank of Germany, observed in his speech at the Berlin Congress of the International Chamber of Commerce in July last year:

"Economic nationalism only arises where the nation's conditions of life have been cramped by external forces."

It need hardly be pointed out that India's natural economic evolution has been hampered and the economic ambitions and aspirations of its people have been impeded and frustrated by

such external forces which have not hesitated, in the words of a British historian, "to use the arm of political injustice" to keep down and strangle the ancient handicrafts no less than to prevent the growth of modern enterprises in the country. But that is not all. The technique of modern manufacture along with the facilities of modern transport has tended to undermine the principle of international division of labour by diminishing the advantages of specialisation of industries in particular localities. One can almost make anything anywhere nowadays and the location of particular industries is, therefore, relatively a matter of economic indifference. In order, however, to encourage the growth of incipient industries in particular areas against long established competitors from outside, it might be essential to protect them. It is a mere abstraction to ignore the existing division of the world into separate national areas and to under-rate the importance of balanced national economies in a genuine world order. As Herr Frowein, the President of the Berlin Congress of the International Chamber of Commerce, pointed out:

"International trade can only reach its optimum development if based on sound and prosperous economies."³

The national economy of India is, for reasons on which it is unnecessary to dwell here, not prosperous. Until, therefore, India has grown to the full height of its economic stature and can secure the maximum satisfaction of its domestic requirements by its own industries, it cannot usefully participate in any movement for the development of international trade on a genuinely reciprocal basis. As Mr. Harold Butler observes in his Report this year:

"If social justice is to form the basis of universal peace, there must be some approach to greater equality between nations".⁴

It is necessary however, to eliminate some political bias attached to the movement of economic nationalism owing to its association with the Fascist States. Economic planning on a national basis is not the same as *autarkie* which involves complete control of foreign trade and economic processes for defensive even more than for economic reasons. For example, Mr. G. D. H. Cole acknowledges that

"a country which has so wide a diversity of natural resource, and so large a population that it can produce without serious economic sacrifice nearly everything it needs for an advancing standard of life is in a position by adopting economic nationalism to escape the fatal barrier

2. See *Foreign Trade Policy of India* by P. R. Srinivas, Editor, *Indian Finance*: a stimulating course of lectures delivered at Madras last year.

to high wage policy which international competition sets up".

Potentially, India is very much in this position but it is sheer misrepresentation to confuse Indian demand for and efforts towards national self-sufficiency with totalitarian *autarkie*. The development of the vast economic resources of India, industrial no less than agricultural, is a fundamental of its national economy. Industrialisation is an integral part of India's economic and fiscal policy and is deemed essential in order to secure a proper equilibrium between industry and agriculture. Protection to national industries is, consequently, a necessary instrument of national economic development. It is well-known that although India is considered one of the important industrial countries of the world, it is extremely backward in industrial production and the standard of living of the mass of its people is deplorably low. The Indian intelligentsia, therefore, desires to develop national resources and utilise the raw materials within the country for manufacturing goods, thereby not only creating larger avenues of employment but also securing a diversification of economic pursuits. If such efforts are considered as "economic nationalism" by the more highly developed countries which have attained their present economic position through their control and dominance over the weaker and backward peoples of the world, we should gladly plead guilty to the charge. Whatever orthodox economists might say, we should consciously and energetically establish industries of every kind, from a pin to a steamer, from hydro-electric power to steel. The betterment of a people's welfare depends upon the increase in economic productivity, both agricultural and industrial, and this economic advancement is inextricably bound up with the development and extensive use of our own natural resources. This view has received the powerful support of no less an authority than Mr. J. M. Keynes, one of the truest liberals and internationalists of today. Says Mr. Keynes: "I sympathize with those who would minimize, rather than maximise, economic entanglement among nations. Ideas, knowledge, science, hospitality, travel—these are the things which should of their nature be international. But let goods be homespun wherever it is reasonably and conveniently possible... a greater measure of national self-sufficiency and economic isolation among countries than existed in 1914 may tend to serve the cause of peace rather than otherwise."⁵

The "homespun goods" of Mr. Keynes are what India's economic nationalism, in its essence, aims at producing. The problem is wider than

one of pure economics. Mr. Bertrand Russel also visualised the evolution of international peace through the organisation of large land blocks each strong for defence but weak for attack involving a minimum of foreign trade and a maximum of self-subsistence.⁶

Indeed, under the present conditions of world economy, economic nationalism for a country like India is not only a right but an obligation. For, the tariff is as much an instrument of resistance and defence as of construction. The decline in international trade is not a theory but a fact, however much orthodox economists might regret it. The free market is an abstraction; it does not simply exist. In the field of foreign trade there can be no "back to normality". The formula of free trade may be sound in an ideal international society, but it is peculiarly irrelevant at present because it has little relation to economic facts of today. No one can, even if he wishes it, go back to the old policy of free trade which, so far as India is concerned, was really free imports without free trade and was imposed upon, rather than accepted by the people of this country. It is essential, therefore, to recognise that in the present changed conditions, wherein countries to which we exported have abandoned *laissez-faire* and free trade, India should also evolve a policy of reducing the national dependence on foreign trade and concentrate increasingly on internal development. Under prevailing conditions, there is no such thing as an absolute criterion of economic rightness. Economic policies cannot operate in a vacuum. National economies have to take into account new factors of planning and control and must seek to adjust themselves to them as well as to the decay of international trade. "Theoretically" the principle of international division of labour may be valid but then no one knows precisely what "theoretically" means. Unless our economic principles and policies are to be completely divested from realities as they exist and are to be barren of any results, the new elements of planning and control must enter into the sphere of international trade movements and expansion. The principle of *laissez-faire* implies achievement of economic equilibrium and harmony by the automatic working of economic forces and processes. But such *laissez-faire* is at an end, if ever it was strictly practicable. The enormous waste and frustration of efforts involved in the free-play of economic forces need no emphasis. It is widely recognised that national economic progress

5. "National Self-Sufficiency", *Yale Review*.

6. See his *Prospects of Industrial Civilisation*.

cannot be achieved merely by leaving economic forces to work themselves out as that might have catastrophic results; the preservation and expansion of national wealth is, therefore, acknowledged to be the concern of every progressive modern State. Yet if some sort of regulation or planning is needed and if today there is no international authority to do so on an international basis, the centre should, at least for the time being and as far as one can foresee, be the nation. Internationalism, after all, is still an aspiration, not a fact: it is less a force than an ideal. Economic prosperity of the Western countries has been mainly based on the political domination and exploitation of the Asiatic and African countries which provided raw materials and markets. The East has realised the futility of exporting raw materials to Europe and America in order to import them back again in the shape of manufactured goods; it would be much cheaper to manufacture them within one's own country. This development of self-sufficiency on the part of countries which served as markets is resented by nations which had an initial advantage in industrialisation and which are economically stronger. Behind the policy propounded for the international utilisation and rationing of raw materials is an undoubted apprehension of the loss of markets in undeveloped countries. This fear is not anything new. Industrialised England had the same apprehension when the continental European countries were developing their own industries; later, Europe had the same fears when the United States became industrialised and the whole West was alarmed when Japan underwent the same process. One finds, for example, an analogous position in shipping, an industry intimately related to international trade and the carriage of world's men and goods. Because certain countries developed their own shipping in the past and were able to carry a major portion of the traffic, they object to the establishment of national mercantile marines by other countries on the ground of an over-abundance of tonnage in the world. Just as the highly developed countries apprehend the loss of their markets by the industrialisation of the backward countries, so they fear the loss of their own predominance in the sea routes of the world through the development of national shipping in other countries. But every maritime country is entitled to have its own shipping for the carriage of its own coastal and overseas trade and the earlier development of some countries through fortuitous circumstances or political conditions does not give them a prescriptive right on the

oceans of the world any more than on the markets of the undeveloped countries. Such apprehensions regarding the industrialisation of countries producing raw materials should not, therefore, be permitted to influence an international economic policy. The industrially powerful countries of the world will have to learn to adjust themselves to the changed currents of international trade in so far as world industry is redistributing itself geographically on a more comprehensive basis in accordance with the change in productive technique on the one hand and the increase in social obligations of the State on the other. World economy is today in a process of readjustment and seeks to rectify some of the maldistribution of economic resources and some of the economic inequalities, particularly between the East and the West. India is, therefore, entitled to claim the right and liberty to utilise its raw materials itself in the first instance and no extraneous influences can be permitted to impede this right of a country's normal economic development in the name of a "rational" distribution of world economic resources or of "unfettered" international trade. Indeed, a policy of national economic development is not detrimental even to international trade, rightly conceived, because the process of industrialisation would lead to the expansion of wealth and is likely, therefore, in the long run to help rather than hinder international trade. As the example of Germany in the past and of Japan more recently shows, with the progress of industrialisation a country tends to purchase more goods rather than less even if they are goods of a different variety and kind. Economic nationalism, as is envisaged in India, does not imply a withdrawal from international trade but a change in its character and direction. Such economic co-operation is not and cannot be truly international until it is based on the free and independent national economies of the various countries, including the countries of Asia and Africa co-operating for mutual benefit. A rigid division of the world into economic hemispheres resulting in the perpetual exploitation of the resources of the weaker countries by the more powerful ones cannot be regarded as economic internationalism in any true sense. India cannot, therefore, subscribe to any idea or scheme for the promotion and extension of international trade irrespective of its effects on a balanced national economy. We rightly believe in nationalism not only as a political and cultural policy but also as an economic policy and we need not at all feel apologetic about it.

THE INDIAN COTTON TEXTILE INDUSTRY

By D. P. KHAITAN

THE Cotton Textile Industry was one of the first large-scale industries to be established in this country. Though the first cotton mill is said to have been erected in Calcutta as early as 1818, the real development of the industry may be taken to begin from the middle of the last century. During all these long years, this industry has to pass through many troublous times. The one special circumstance which has affected its progress throughout these decades has been the fact that it has had to encounter constant opposition from a quarter which had political power on its side, namely, from Lancashire.

In spite of all the vicissitudes through which this industry had to pass, its progress has been steady during these years. I do not

from abroad would be restricted. It is almost common knowledge how from the position of the prime producer of cotton textiles, India was reduced to the position of absolute dependence on her foreign suppliers for the clothing of her vast population. In the year 1913-14, over 3,100 million yards of piecegoods were imported into India from foreign countries and India had to pay over 66 crores of rupees in return. Most of this trade, almost entire, was of course with the United Kingdom. The progress of the indigenous industry, however, acted as a check on this huge annual drain with the result that in the year 1937-38 our total imports amounted to only about one-sixth of those in the year 1913 in respect of both yardage and value :

TABLE I.

| Year | No. of average working spindles | No. of average working looms | Yarn manufactured (Bales of 400 lbs.) | Cloth woven (Thousand Yards) | Cotton consumed (Bales of 392 lbs.) | Persons employed |
|---------|---------------------------------|------------------------------|---------------------------------------|------------------------------|-------------------------------------|------------------|
| 1913 | 5,736,701 | 82,577 | 1,721,182 | 1,220,443 | 2,096,016 | 253,786 |
| 1920 | 6,238,771 | 105,169 | 1,589,400 | 1,639,779 | 1,952,318 | 311,078 |
| 1928 | 6,505,175 | 126,235 | 2,022,351 | 2,356,565 | 2,009,782 | 360,921 |
| 1935 | 8,441,464 | 174,114 | 2,501,889 | 3,397,107 | 3,123,414 | 414,884 |
| 1935-36 | *9,856,658 | *200,062 | 2,648,216 | 3,571,371 | 3,109,624 | 417,803 |

* Total number.

TABLE II.

| Year | Mill production (Million Yds.) | Handloom products (Million Yds.) | Imports Million Yds. | Lakhs of rupees | Total piecegoods available for consumption (Million Yds.) | Per capita consumption (Yds.) |
|---------|--------------------------------|----------------------------------|----------------------|-----------------|---|-------------------------------|
| 1913-14 | 1,164 | 1,068 | 3,159 | 6,630 | 5,421 | 17 |
| 1920-21 | 1,581 | 1,148 | 1,510 | 8,378 | 4,239 | 13½ |
| 1925-26 | 1,954 | 1,160 | 1,762 | 5,450 | 4,876 | 15½ |

| 1935-36 | 3,529 | 812 | 836 | 1,419 | | |

(6 months)

propose going into the long history of this industry but to trace its development in the post-war period only, taking the immediate pre-war year as the basis. It will be seen that the volume of cloth produced in the Indian mills increased from 1,220 million yards in the year 1913 to very nearly 4,000 million yards in the year 1937. The average number of working spindles and looms likewise increased during this period from 5,736,701 and 82,577 to 9,856,658 and 2,00,062 in 1936 respectively. It was natural that with this development of the indigenous industry, the imports of piecegoods

The growth of the handloom and the cottage industry side by side with the cotton mill industry has, of course, had its share in preventing this huge drain from India to foreign countries. It will, however, be seen from the figures given above that the textile mills alone now produce, roughly speaking, about 100 crores worth of piecegoods annually and but for the existence of these mills this huge amount would have been added to our annual drain. It should also be remembered that not only has there been a quantitative development in the textile industry but there

has also been a great improvement in the variety and the fineness of the cloth produced. Printed and coloured cloth is now being produced in increasing quantities in India and there has also been an increase in the manufacture of finer counts, as will be apparent from the following figures :

TABLE III.
Total Quantity Manufactured in British India and States

| Year | | Gray and bleached | Coloured | Yarn spun | Yarns above |
|---------|----|---------------------|---------------------|-----------------------|-------------|
| | | piece-goods Yds. | piece-goods Yds. | Nos. 31 to 40 lbs. | 40 lbs. |
| 1927-28 | .. | 1,675,011,583 | 681,553,222 | 33,757,097 | 11,141,821 |
| 1935-36 | .. | 2,772,980,036 | 797,878,975 | 112,026,209 | 58,528,164 |

There is often a misconception prevailing in the public mind that there is some antagonism between the development of a large-scale industry on the one hand and small and cottage industries on the other. With her vast market and on account of her peculiar conditions, however, India offers equal scope for the development of both large-scale and small and cottage industries. It will be seen from the figures given above as to how the volume of cloth produced by handlooms has increased along with the development of the cotton mill industry in recent years. It will be apparent that the grant of protection has been equally beneficial to the small-scale and large-scale producers.

The increase in the production of Indian mills has naturally provided an ever-increasing and a certain market to the cotton-grower in this country. The quantity of Indian cotton consumed in the mills has increased from 1,835,943 bales in 1923-24 to 2,625,485 in 1936-37. It is needless to emphasise that not only has the Indian cotton-grower been able to dispose of increasing quantities of his produce to local mills but he has also benefited in another manner inasmuch as the creation of this home market has reduced his dependence on the uncertainties which always accompany a foreign market. It is obvious that in the absence of a substantial home market, the plight of the Indian cotton-grower would have been very unenviable. It might also be pointed out in this connection that the cloth that we import from foreign countries is not made from Indian cotton except in very small quantities for much of our imports are of finer counts in whose production only American or Egyptian cotton is used. It is therefore wrong to assume that the offtake of cotton by foreign countries will in any way be seriously affected as a result of the increase in the indigenous production of

cloth with a consequent fall in the quantity of imported goods.

Apart from the benefit that the development of the Indian Textile Industry has thus afforded to a very large number of India's agricultural population, it has also been responsible for giving direct employment to lakhs of

workers. The number of persons employed by the industry has naturally been continuously on the increase. The number of persons employed in 1913 was 253,786. It increased to 414,184 in 1935. It is estimated that on the basis of the present figures the wages bill of the industry amounts to over 10 crores of rupees per annum.

It will thus be seen that the growth of the cotton textile industry has been accompanied with all round benefit to the people of India. It has not only saved millions of our money from going abroad but has brought positive gain to the doors of millions of agriculturists and labourers, not to speak of a very large number of shareholders in the industry.

The textile industry today is the most important industry of the country. Indeed, by its very nature the textile industry is such that its place cannot be taken by any other industry in the country. Clothing is one of the prime necessities of life and looking to the vast population of this country, it is obvious that the textile industry would always occupy a most important place in the economic system of the country. There is no doubt that our country is yet far behind most of the progressive nations of the world in economic development. There is a large scope for the development of both large and small cottage industries in this country, in various spheres. This is, however, sure to give a further impetus to the textile industry inasmuch as the purchasing power of the people would be raised by such development. It would appear from the figures given above, that the per capita consumption of cotton piecegoods in India is only 16 yards per annum, whereas the minimum standard consumption should be 40 yards. It will thus be seen that there is a great potential field for expansion of this industry in India. There is no doubt that with

the economic progress of the country, there will be an increasing demand for textiles.

As I pointed out in the beginning, the cotton mill industry, in this country has had to face continuous competition. The nature of the political relationship between this country and the United Kingdom which has been the largest competitor, except in recent years, had prevented the indigenous industry from receiving adequate support from the Government of the country. In fact, it has been a standing grievance of the industry that its interests have always been subordinated to the interests of Lancashire. It was, however, the constant public support which the industry has been rightly receiving throughout which resulted in the abolition of the excise duty and in the grant of protection howsoever halting it has been. The support which the industry received from public opinion has not, of course, been in vain. The country has benefited in an all round manner by the progress of the industry, as pointed out above.

The progress of the industry has, however, been subjected in recent years to many attacks from outside. Apart from the constant competition from Lancashire, Japan has emerged in recent years as a serious competitor in the field of textiles. It is recent history how in order to withstand the serious invasion from this quarter, the protective duty on piece-goods had to be increased considerably and an agreement was entered into with Japan. Lancashire is also trying to take the opportunity of the revision of the Indo-British Trade relations in getting the protective duty reduced and having its market expanded. It was but right that the representatives of the commercial community refused to countenance the unreasonable demands put forward by Lancashire in the course of the recent Simla talks. The chief argument which Lancashire used in its favour was that of the Indian cotton-growers; but as pointed out above, the majority of cloth imported from Lancashire is produced out of foreign cotton and the parity being in favour of Indian cotton it is obvious that Lancashire will continue to take sufficient quantities of Indian cotton. Apart from this, however, it is always to the benefit of the country to have an increasing market for its raw material within its own borders rather than export the raw material to foreign countries and take manufactured goods in return. It is obvious that the expansion of the Indian market for the products of any foreign country would result in a set-back to both the

cotton mill and the handloom industries within the country.

Another source of concern to the industry recently has been the increase in labour troubles. It is natural that on humanitarian grounds, the sympathy of the public should be with labour. Everybody admits the necessity of progressive improvement in labour conditions. Mr. Harold Butler, till recently Director of the International Labour Office, who visited India last year, has acknowledged in his recent review of industrial conditions in the East that in the matter of labour welfare work, India keeps pace with most of the advanced countries of the world and is certainly ahead of 'other Asiatic countries.' There are, however, several important points which must be borne in mind while considering the question of labour conditions. Firstly, there is the competition from foreign countries and particularly from the United Kingdom which has always been using political pressure to thwart the attempt of the indigenous industry towards progress. Secondly, and this is a very important point, the power of granting protection is in the hands of the Central Government and not with the Provincial Governments who deal with labour conditions. If Provincial Governments had the power of giving protection in any form they could certainly proceed in labour welfare work more quickly without jeopardising the industry. Thirdly, it must be borne in mind that the majority of people in India are agriculturists. Most of the labour force of the cotton mill industry is drawn from agricultural classes and it would be obviously to the disadvantage of national economy to have the difference between industrial and agricultural labour very pronounced. Lastly, it is also to be remembered that if increasing burden is imposed upon the industry it would result in an increase in the prices of the manufactured article and would thus operate against the interests of the consumers. Taking all these facts into consideration it is a matter for serious consideration of the public as to at what pace the demands of the workers should be encouraged to grow. It is also for the public to consider whether it would not be desirable first to help the development of the industry to a stage where imports may be reduced to a minimum of only some special varieties that may be needed. It is also essential that steps should be taken simultaneously to increase the purchasing power of the people so that they may be able to buy at least what should be their minimum requirements and at higher

prices consequent on increased cost of production. What is more essential therefore is to develop the purchasing power of the people by an all round economic development, before placing increasing burdens on the industry.

As has been pointed out above, the cotton textile industry has got a great scope for development in this country. Apart from large potential markets within the country itself, there is also scope for expansion in the neighbouring foreign markets. On account of

the facility of raw material and certain other factors, India is particularly in a position to supply cheaper textiles. In fact the demand for our cloth from East Africa, for example, is increasing and there is no reason why with an ordered and progressive development the Indian textile mills should not be in a position to supply a major portion of the demands of the African and other neighbouring Asiatic countries which are not as fortunately placed in the matter of raw material and other essential factors of production.

EXPLORING THE ROCK-BOTTOM OF COMMUNALISM AND REWRITING INDIAN HISTORY

BY PROFESSOR BHUBAN MOHAN SEN

I AM honestly of the opinion that communalism would have been rampant in India today even if there were not a dozen Muslims in the country. The castes and sub-castes into which the immobile Leviathan called the Hindu society is divided and sub-divided, would have had its majorities and minorities as we have today. Even the racial colouring which is sought by interested people to be given to the communal problem of today by drawing an imaginary line between the Aryan and the Semitic, would have been present in the shape of Aryanism and non-Aryanism. So, the present problem is nothing very unnatural, and it should be possible to sit round a table to discuss it without any exasperation of mind.

We have seen many such round-tables for pacts and agreed solutions, but unfortunately, one by one, each one dies an unhonoured death. That was even the fate of the great 'Nehru Report' and the 'All-Parties Conference'. Yet other pacts are in the making, but let us hope they may not be as still-born as their forbears, notwithstanding the Congress High Command god-fathering them.

I have no objection to secure communal harmony by a policy of give and take, and for the present, there is no escape from some kind of agreed solution, whatever its defects may be. Whether we wish such a patch-work or not, it is inevitably coming; for there is the dominant party in Indian politics who are pursuing Swaraj at any cost.

But I humbly contend that the foremost leaders of the different communities should evolve some scheme of lasting harmony and good-will. Possibly they are frightened by the complexity of the problem. It shall be my endeavour to show that the problem is not as complex as it appears.

Obviously, any scheme of a permanent nature should be based on one great principle, "Forget the past, and look to the future". I do not propose the writing off the slate of the past history of the Hindu, the Muslim and the Sikh, but I do most emphatically believe that if you desire harmony for the future, the history of the past should be materially re-written for all communities. Englishmen today participate in the Washington memorial meetings and join the Wallace and Robert Bruce anniversaries with sincere enthusiasm.

What is the present situation? The young learners in India enter schools and are given a book of Indian History in which the most important things which they are required to learn are the wars and annexations, outrages and ravages, battles and sieges, murders and dynastic changes, etc., etc. As one passes from chapter to chapter, there is an unending succession. No third party existed then, and the rivals and combatants on either side were the Muslims and the non-Muslims. So, young learners in schools today digest from day to day the wild fury, the inordinate ambitions, the unscrupulous ways of their ancestors. In these circumstances, very

naturally, the youthful and tender learners of one community lustily seize upon the misdeeds of the heroes of the other, and their minds thus receive what may be called an ineffaceable taint for all times. The historical stuff with which their minds are filled may be all correct, but what I contend is this, that, history being a record of a people's many-sided achievements, the learning of these learners becomes confined mainly or only to one aspect in which there is little room for cultivating respect for the actors on the stage of history. Take for example, the growth of the mind of a Hindu lad. In the pursuit of an imperialistic policy, in divorcing religions from politics, in devising economic measures for the relief of the impoverished masses, in dealing stern justice to wrong-doers in high places, Sultan Alauddin Khilji stands unrivalled, and he would shine by the side of a modern Dictator or War-Lord. But when the Hindu lad leaves the school, he is for all his life obsessed with Alauddin and Padmini, and Alauddin and his assassinated uncle. Is this frame of mind conducive to a sympathetic understanding of sister-communities? The same applies to Muhammad Tughlak, to Nawab Sirajuddowla and to many other rulers. Then, take for example, the Muslim lad. He reads of the Hindu Mythology, the Pauranic Gods, the Ramayan in which Sree Ramchandra, the Avatar of the Almighty Maker, slays with his own hand, the Hindu Chandala Sambuka for 'practising Yogic austerities,' the Mahabharata in which Draupadi stalks the stage, from beginning to end, with her five husbands. Where is the teacher to tell his pupil how much of it is allegorical, how much myth, how much interpolation, and what kernel of truth these contain? Where is the teacher to tell his pupil of that unity in diversity which the Vedanta proclaims in the clearest accents? So the Hindu lad grows up in life with a detestation of the characters of Muslim history whom he regards all through life as little better than brigands and assassins. Similarly, the Muslim lad grows up with the queer idea that his lot is cast with so many idolaters whom it is irreligious to understand and cultivate. That is the atmosphere which we have deliberately created, and, whoever is solicitous of communal tranquillity must make it his duty to revolutionize this atmosphere.

How can that be done? I will indicate my lines of thought in this vital matter of national importance.

Let all interested in this question appoint a Select Board of Scholars to write a history of India. This Board should be clearly given

the mandate that they are not required to produce a scholarly book aiming at scientific precision and correctitude. It should be the duty of the Board to write a history in which the objectionable features of the characters should be eschewed as best as possible. It is a truism that whoever has made any mark in history must have had real greatness in him, and this Board of Scholars should emphasize those elements of greatness. Trietschke was once twitted by a friend that, though his lecture rooms were thronged by thousands of German students of history, he would never go down to posterity as a great historian—he would never attain the position of a Ranke or a Gibbon. To this Trietschke quickly retorted, 'I do not care for my reputation, I want to make my country great'. This he did by instilling into the minds of two generations of German youths the half-truth or untruth that Prussian genius was behind everything great achieved in the world. Our scholars need not go to this length, they need not distort. What I suggest is that they may keep back certain facts, and lay stress upon certain other facts. Trietschke was guilty of 'Suggestio falsi'; compared to that 'Suppressio Veri' in the nation's interest would be a virtue. Moreover, if the book were written in a philosophical vein bringing out the connected sequence and the onward march of events, stressing the narrative and chronological points would appear comparatively non-essential.

I will be more definite. Let us take the Hindu period. It is quite within the range of Indian historical scholarship to write paragraphs and chapters in simple intelligible language to bring home to the learners of all communities to what heights of philosophical thought, artistic, architectural and sculptural excellence, and intellectual pioneering, as in the fields of Medicine, Astronomy and Geometry, the Hindu mind attained in that dawn of history when the ancestors of the modern European nations were, in the humorous words of the late Sir Surendra Nath Banerjee, 'swinging from tree to tree in the jungles of Europe'. I was told by an esteemed friend of mine, one of India's representatives to the World Conference on Education held in America some years ago, that every American school teacher when he begins teaching Geometry to his pupils prefaces his lecture invariably with the statement, so flattering to Indians that Geometry was born in India. I will frankly confess that personally I was not aware of this fact before I had reached the Degree standard. There are references, no doubt, in existing works in this country, but they are

in the creeks and corners of the books, and it is well-known that University paper-setters attach such undue importance to bare political history (this they do from the bias their own minds received in schools) that pupils have come to omit those portions of their books which have a bearing on the growth of Hindu thought and the Hindu mind. Teachers and pupils are both dominated by the examinational need only.

Then let us take the Muslim period of Indian history. After passing the Matriculation with History (so long optional) we grow in life with vivid impressions of incidents like demolition of temples, forcible carrying away of beautiful maidens, outrages, assassinations, breaches of laws, human and divine. But we do not understand the meaning of a poem Rabindranath wrote long long ago with reference to the Muslim advent and Muslim contribution to the richness of India's heritage. Readers will kindly excuse me the very indifferent rendering of a very beautiful stanza: "Those who came in victorious glee roaring out victory's song through deserts and mountains—they also live in me—none, none is distant. In me have mingled all the varied tunes in harmony."* Is it impossible for Indian scholars to write paragraphs and chapters on the services of Islam to India in the fields of politics, religious thought, social organisation, arts, architecture, etc., etc. Sir Jadunath Sarkar's small book embodying 'Sir William Myer Lectures' delivered by him before the Madras University contains a very brief but well-arranged account of Islam's services to India. Not to speak of pupils, how many teachers have heard of, or read this book, I really wonder.

Thus proper books on Indian history not being available, and Indian Universities being supremely indifferent to the latent dangers of the policy they are pursuing now by the sheer inertia of age-long traditions, the rock-bottom of the communal problem has never been explored, whereas our great leaders are busy over the upper structures. They have failed, and they must fail till they change their modus operandi

log, stock and barrel. Let them evolve make-shifts and patched-up pacts today, but let them not stop here. Let them also simultaneously work for the 'future by providing healthy stuff for those who will be leaders a generation hence.'

Having said so much, I will now endeavour to indicate the lines on which a standard book on Indian History should be written by the afore-mentioned Board in English, and then translated by government orders into all the provincial vernaculars.

Firstly, the Hindu period should be dealt with in the manner I have indicated before. That was the broad outline. There should be ample references to the incoming into India of the Greeks, Bactrians, Sakas, Huns, Scythians, etc., and to the remarkable ease and absence of violence with which these people were assimilated within the 'roomy fold of Hinduism'. This power of self-adjustment, this capacity for assimilation and growth of the Hindu society receive very scanty attention in the existing textbooks on Indian History; whereas division into castes and sub-castes is dwelt upon amply and questions are frequently set which make them all-important to the examinees. Nalanda, Taxila, Colonization, Buddhistic Missions, our spiritual and cultural expansion in Ceylon, Burma, China, Greater India, Japan—all these should be dealt with in an inspiring manner.

Secondly, the history of the rise of Islam in Arabia with the wonderful conquest and complete Islamization of countries from the Hindukush to the Pyrenees, with full glowing references to the great universities and mosques, should be dealt with in a full manner.

Thirdly, in regard to the advent of Islam in India, the pupil should be told that on the Muhammadans securing a strong foot-hold in India, two great religions and two great social organisations stood face to face, each one proud of its past achievements—Hinduism for having assimilated the Sakas, Huns, Bactrians, Scythians; and Islam for having completely extinguished the civilizations of countries from Afghanistan to the Straits of Gibraltar. These two religions had their pride humbled for the first time. Notwithstanding conversions from the Hindu fold, the mass mind remained unconquered, and Hinduism's career of assimilation failed to absorb the Muslim as it had done with his predecessors.

Fourthly, the history that I am outlining should then proceed to state that two great religions, and two great social organisms, cannot live side by side for long without the one

* রণধারা বাহি জয়গান গাহি'

উদ্ভাদ কলরবে

ভেদি' মরুপথ গিরি পর্বত

যারা এসেছিল সবে,

তারা মোর মাঝে সবাই বিরাজে—

কেহ নহে নহে দূর,

আমারি শোনিতে রয়েছে ধ্বনিতে

তার বিচিত্র সুর।

influencing the other in vital and manifold ways, although the question of blood-fusion is ruled out. There must be some kind of blending and fusion. Thus began in Indian History a great Renaissance by the blending of the two great cultures and civilizations, including the birth of the great Vaisnavite revival all over India, the evolution of the Urdu language, and of the Indo-Persian schools of Painting, Music, Art, Architecture etc., etc. In a thousand and one ways Islam and Hinduism were being blended into a harmonious unity.

If these elements of harmony and unity, this history of the remarkable Renaissance which attained its culminating point in the Ibadat Khana of Fatehpur Sikri, where comparative religion was for the first time in the World's history discussed, and in that 'Poem and Dream in marble'—the Taj of Agra, are dealt with with the attention they justly deserve, one can easily imagine the impress such an account will make upon plastic minds.

I frankly confess, I am not competent to present a subject like the above in all its

bearings, but I shall consider my labours amply rewarded if this outline provokes thoughts in persons much more competent than myself, and some concrete results follow.

I conclude by quoting the weighty words from the speech which Principal P. Sheshadri made while addressing the World Federation of Educational Associations at Tokyo (*The Modern Review*, April, 1938):

"It is, however, in the teaching of history that there is the greatest scope for the teaching of international understanding. In the Educational Experts' Committee at Geneva, to which I have already made reference, we formulated a number of recommendations which have a profound bearing on this subject. One of our proposals was that all the history textbooks of the world should be revised, so as to eliminate traces of racial bitterness. It is not that textbooks for children should be colourless and devoid of patriotic enthusiasm, but that children should be taught to appreciate the heroes of not only their own country but also of others and sentiments likely to engender ill-feeling should be carefully avoided."

What Principal Sheshadri says about international understanding applies with greater force to national and communal spheres.

April 13, 1938

THE POLICY OF DISCRIMINATION IN THE PHARMACEUTICAL INDUSTRY

By RAJ MITRA B. D. AMIN

THE Pharmaceutical industry of India has attained some dimensions only in recent times. It has had to struggle hard against the policies of Government and no satisfactory solution of our difficulties has yet been reached. The policies of Government were first devised and framed in a manner that would discourage the indigenous products and encourage the foreign products imported from overseas. These policies still continue to be in operation with some minor revisions and seriously impede the progress of the industry.

The Indian Pharmaceutical Industry is struggling for bare justice and no favour. On the other hand we find an effective policy of discrimination in actual operation as between indigenous spirituous medicinal preparations and similar preparations imported from overseas. Products imported from overseas, once the tariff duty is paid on them at the port of entry, enjoy the privilege of free transport and move-

ment throughout India, while similar indigenous products are subjected to serious excise restrictions in the matter of transport and movement.

These excise restrictions have resulted in creating inter-provincial barriers to trade and industry in this country. No spirituous medicinal preparation of Indian manufacture can move from one province to another without import and export permits to secure which a long procedure is prescribed, and thereafter the consignments are subjected to inspection and verification. Such a restrictive and cumbersome procedure is vexatious and dilatory, and as quick despatch is the very soul of business, the inordinate delay caused by the excise restrictions in transport and movement is highly prejudicial to the indigenous industry. So long as similar imported spirituous products are not subjected to the same restrictions, the policy of effective discrimination operates

against the Indian industry. Both the Indian and imported products should equally enjoy the same privilege of free transport and movement, if discrimination is to disappear.

I need not discuss here the measures that are necessary to remove this discrimination. I have been suggesting them to the various administrations in the country from time to time but without much effect. Finally I was able to convince the Indian Industrial Conference that our complaints were true, and this Conference in 1936 unanimously passed a resolution that Excise policy should be so framed as not to injure the indigenous industry and that to this end there should be uniform excise rules in the whole of India. To attain this object, the Conference recommended that the Government of India should convene an Excise Conference of the Provincial Excise Commissioners.

The Excise Conference was held after a year i.e., in November 1937, and it did come to the conclusion that uniform rules must be established in India, but no effect has yet been given to the resolutions passed therein. On the other hand, we find some more restrictions placed in certain provinces as in the Bombay Presidency. In these circumstances, one gets greatly disappointed. Will discrimination disappear or not? Or, are the indigenous products to be under a perpetual disadvantage to the benefit of foreign products?

I shall next refer to another part of the policy of discrimination which affects the Indian industry prejudicially, namely, the policy followed in the purchase of medical stores. From the very beginning the policy of Government has been to give preference to imported products and to discourage the Indian products. The Indian industry has long established its capacity and reputation for manufacturing equally good if not superior products, and the Government ought to purchase these products in preference to imported products.

But under the present Government rules all supplies of medical stores to civil hospitals and dispensaries are purchased from Government Medical Stores (Army Dept.) which itself imports products from overseas and supplies them to the various administrations in the country. Is this a right policy? The Indian Drug Enquiry Committee which reported seven years ago, clearly stated that indigenous drugs of the proper quality were available in the market and strongly recommended that these should be purchased by Government for their requirements and thereby an encouragement should be given to the indigenous industry.

But this recommendation has been absolutely disregarded by the Government and the old policy still continues. Not only this, but the Government Medical Stores also maintains a manufacturing branch which competes with private enterprise. This is wrong in principle and the Indian Drug Enquiry Committee had recommended that this manufacturing branch of the Government Medical Stores should be discontinued and that the Stores should purchase all supplies from the market. But the Committee's recommendation remains unheeded.

Another important matter in which discrimination against the Indian industry is distinctly shown, is the heavy duty on the import of raw drugs which are required as raw material for the indigenous industry. In advanced countries including the United Kingdom the import of raw materials utilised in the manufacture of medicines is allowed free but in India, a high duty of 30 per cent *ad valorem* is imposed. This burden on the industry raises the cost of production and puts the Indian medicines to disadvantage in competition with imported products.

The Indian Drug Enquiry Committee had after due consideration recommended that the import duty on raw drugs should be abolished. At the time the recommendation was made (1931) the duty stood at 20 per cent *ad valorem*. Instead of abolishing or lowering the duty, the Government of India took a contrary move and increased the duty to 30 per cent. What shall we say to such action? Is this the way to encourage the industry? It was perfectly clear that this step serves to give an impetus to foreign imports.

An equally objectionable discrimination arises from the fact that the tariff duty on imported spirituous preparations is charged to alcoholic contents only, and not on the invoice value. This means that the drug contents, the bottles which contain the medicines, the packing materials, corks, capsules, etc., of the foreign article are imported free of duty. If these things, I mean the bottles, the drugs, the packing, etc., are imported independently a heavy import duty is charged on them. The indigenous industry needs all these things and has to import them in order to put its products on the market in a saleable position, but has to pay a heavy duty on them, and this burden still further cripples the industry, as compared with the foreign industry.

Take next the railway rates policy of the Government of India. It was well-known for many years that the railway rates on Indian

medicines were high. In about the year 1928, the Alembic Chemical Works Co., Ltd. of which I am the Managing Director, got the matter referred to the Railway Rates Advisory Committee which after two years of judicial investigation submitted its findings that the rates on indigenous medicines were high, and the Committee recommended a certain lower scale which in its opinion was right and proper. But the Government of India rejected the unanimous recommendation and the rates are as high as they were. We see how discrimination comes in here also.

Another direction in which the Railways apply discrimination is the framing of the rates on raw drugs. The rates on imported raw drugs which are required by the Indian industry are charged to R. R. 8 classification, while the raw drugs available in India and exported from India to meet the requirement of foreign manufacturers are charged to R. R. 4 classification. In other words, foreign manufacturers are given the advantage of lower freights by Indian railways while the same advantage is denied to Indian industry in its requirements of foreign raw drugs.

When I am writing of discrimination, two other interesting cases should not escape my attention. One is the fact that the Punjab Government prohibits into its territory the import of Indian-made foreign liquors including Rectified Spirit and Absolute Alcohol from any other province of India, except from the Solon and Rosa Distilleries. These distilleries, be it stated, are European concerns. This discrimination is of a double character against Indian products, because the prohibition does not apply to imports from overseas, and does not also apply to the products of particular European distilleries in India. The latest phase in discrimination is to be found in a new regulation

of the Sind Government which does not allow duty-free spirituous medicinal preparations for the use of Government-aided charitable hospitals and dispensaries to be imported from other provinces. This is provincialism and localism with vengeance. It is not also clear whether this new regulation applies also to imports from overseas countries.

We want that an Indian industry as such should grow as one whole, and not as provincial and local units protected by the discriminating rules of provincial governments inspired by the vicious spirit of narrow localism. Apart from this, such rules of prohibition and discrimination are entirely against the spirit and the letter of Section 297 of the Government of India Act 1935, and it is astonishing how this aspect of the question escaped the attention of those administrations whose rules have discriminating effect.

There are a number of other matters which can be pointed out as items in this policy of discrimination. But I shall close this article by referring to only one more. It might be recalled here that the Government of India introduced Drug legislation in regard to imported drugs only and the implication of the measure was that a stamp of inferiority would have been put on indigenous products if these latter were left out of the legislation. Strong opinions were expressed and finally the Government of India yielded and the Drug Bill, it is hoped, will now be made comprehensive so as to include indigenous drugs. I refer to this to show how the habit of discrimination once formed fails to take the larger view.

I have been an optimist and despite many discouragements in the past, I hope that the discriminating policy of Government will begin to diminish in its operative force, but there is real need of an ever watchful public opinion.

HOW TO PREVENT TUBERCULOSIS

By DR. SUDHINDRANATH SINHA, M.B.

IT is now an established fact that tuberculosis like all other preventible diseases is also preventible. Now we know that it is an ordinary contagious disease due to a known organism; that it is contracted only after birth and can be easily avoided and cured. These facts should be widely known. The more the people know the nature and the life-history of the disease, the better is the chance of cure and the less is the risk of the contagion spreading.

Tubercle bacilli are found in diseased tissues and in substances ejected directly from these tissues, *e. g.*, sputum, pus, excreta, etc. Indiscriminate spitting and other careless habits of patients are the principal factors responsible for the spread of the disease. Patients should be acquainted with this fact and advised to use the

tuberculosis in our body having acquired it in infancy, and the rival forces of the two—the host, the human body, and the unwelcome guest, the germ—seems to be delicately balanced. So long as the host can afford to keep himself in good conditions, the guest fails to make any impression. With circumstances unfavourable

Ventral position lessons

sputum flask and adopt healthy habits. With the co-operation of the patients the spread of the disease can be effectively checked.

In India the incidence of tuberculosis is on the increase. The statistics published from time to time hardly give us the correct figure of cases of tuberculosis; because many cases—especially in mofussil—are not diagnosed, and even when diagnosed, are not brought to the notice of the authorities.

Almost all of us carry the germ of

Breathing exercise for the development of the chest

to the host the guest gains upper hand, and the man becomes a prey to the invading bacilli. The fight is as a rule a long-drawn one, and the chances and risks are shared by both. General health of the man plays the deciding role in this fight. The body, therefore, should be strengthened and maintained at a high standard of efficiency. Factors contributing to the weakening and fatiguing of the body help development of tuberculosis and are to be avoided.

It has been established beyond all controversy that tubercular infection occurs after birth. It has been estimated (in England) that the number of children carrying the germ :

During the 1st year of life is 5 per cent.

| | | | | | |
|---|-----|---|---|----|---|
| " | 2nd | " | " | 14 | " |
| " | 3rd | " | " | 33 | " |
| " | 4th | " | " | 38 | " |
| " | 5th | " | " | 51 | " |

Then as age advances, the incidence of infection also rises and culminates in 98% of adults in town and 70% of adults in villages being infected with tuberculosis.

Inhalation and ingestion are the usual routes by which this germ enters the human body. Infection, though rare, is also possible by inoculation. After entering the body the bacilli penetrate the mucous membrane of the mouth, pharynx or the alimentary tract and arrive at the lymphatic glands where they remain dormant. Further progress of the bacilli and development of active trouble depend on the defence put up by the infected person. The first notice of the fight between the lymphatic glands and the bacilli will have to be taken from general weakness, loss of weight, rise of temperature especially after exertion, loss of appetite, disturbed sleep, inflammation of the glands, etc. If the bacilli win now or later when the resistance of the individual is weakened, they enter the blood circulation and may establish themselves anywhere in the body. And then the fight repeats here also; and with

Nothing but these two natural forces can give the required protection. These twin necessities are essential in sustaining life. Extensive experience has shown that fresh air and sunlight stimulate all the physiological functions of the body through its action directly on the skin.

The inevitable consequence of keeping an

Work and sun-bath

Going out for open class in the sun in winter

conditions favourable to the person the bacilli are rendered inactive and gradually they die out leaving only a scar. On the other hand, if the man is incapable of putting up strong resistance, he becomes a sure victim to the invading bacilli.

For the prevention of tuberculosis the measures must start with protection of the infant through proper development of its body and strengthening up of its natural resistance. Fresh air and sunlight are par excellence the agencies whose aid we must requisition for the purpose.

infant in the impure and stuffy atmosphere of a closed room is to help it to become extremely delicate and susceptible to cold and bronchitis—ailments which hinder proper development of the pulmonary system. And under-developed pulmonary system invites phthisis. It is a common practice in many homes to confine young children, especially at night, in air-tight rooms. The parents feel safe that thereby they keep out cold, bronchitis and other diseases—as if these enter through open windows! It is only when parents realise that by making their children sleep and live in closed and ill-ventilated rooms they are condemning the children to a slow death, they will, let us hope, change their habit. It is a common practice with many parents not to allow their children to go out in the sun lest their complexion gets dark! Is it then any wonder that these children so easily develop tuberculosis? In some houses again the shutters are closed to keep the Sun's rays from decolourising furniture, carpets and blinds. These parents have got to learn to put greater value on human life than on furniture.

For proper development of the child sun and air bath must commence soon after its birth. To begin with, the exposure must not be for more than a few minutes and then gradually the time is increased according to the established dosage and method. This reminds us of a very rational and wholesome practice in our country that has almost disappeared. Our mothers knew

and perhaps some in remote villages still know the blessings of sun and air on the uncovered body of the new-born baby. From its birth it had its regular sun and air bath. Regular and systematic contact with sun and air make the tissues and organs grow vigorously and the baby has a splendid growth, and is thus well-equipped to keep away tuberculosis and other 'diseases of darkness'. The daily sunbath also frees—though for a while—the child, the unwilling victim, of layers of clothing, not only irksome to the child but most unhygienic as well. This unscientific clothing shuts out air and light and

impossible to trace a family that can boast of a single child free from digestive trouble. Many mothers do not even care to suckle their children they have brought to this world. Mother's milk is the ideal food for the growing child before dentition. When the mother is physically incapable of suckling the child herself, let the child be fed on cow's milk (some prefer goat's or ass's milk) with necessary alterations in the composition to suit the delicate digestive powers of the child.

Milk supply plays a great part in prevention of tuberculosis. In America it has been found

Rollier's Sun School (in winter)

creates a dark and humid atmosphere which envelops the greater portion of the child's body. In Switzerland I have seen children with their bare bodies exposed to the sun playing about on the snow, and yet they are free from cold and bronchitis; and how splendid and vigorous is their growth! It is difficult to follow why in a hot country like India the child, or for that matter any one, should require so many layers of clothing.

Child-feeding hardly receives in India the attention it deserves. The result of this indifference has been deplorable, and it will be

that the rate of milk consumption per capita provides an excellent index to tuberculosis. It is known that during the last Great War in the milk-lacking countries of Germany and Austria the tuberculosis incidence rose rapidly. And when in later years there was a more liberal supply of milk the rate of tuberculosis incidence appreciably came down, though otherwise the standard of living was very unsatisfactory. It is a remarkable fact and shows us the importance of milk in preventing tuberculosis. Extensive and careful investigations carried out in England, France, United States, New Zealand

HOW TO PREVENT TUBERCULOSIS

Variety Performance by the students of the Rollier's Sun School

Position recommended by Dr. Rollier for students at his Sun School

Open air class

Gardening and sun-bath

and Japan have shown that milk is an essential item in the diet of people of all ages—especially children in whom it would ensure better bone formation and maximum growth as well as diminish the incidence of tuberculosis and rickets.

Let us now follow the child to school where he will pass nearly ten years—the formation period of his life. Our schools may justly be

Convalescent patients working at the Factory Clinic (Leysin)

looked upon as centres of propagation of tubercular infection. Insufficient ventilation and over-heating of the class rooms, prolonged and continuous inactivity in stuffy rooms, unsuitable and at the same time uncomfortable posture the students have to maintain at school constitute some of the main factors why today among the school-going children an alarmingly large proportion is found to be weak and of low resistance. And it is these children that provide a favourable nidus for the growth of tuberculosis. Movement is vital for the proper growth of the young children. Immobility and insufficient movement are detrimental to the normal functioning of the organs of the body and cause predisposition to tuberculosis. In girls the baneful effect of being shut up in schools is seen in anaemia, menstrual trouble and constipation-troubles which not only devitalise them but very often follow them for the rest of their lives. The girls in high schools and colleges do a lot of harm to themselves when for fear of losing percentage they attend classes during their monthly periods. This is the period when a girl

needs complete rest. The educational authorities should not overlook this fact; and in fixing percentage of attendance due allowance must be made for these periods.

The principle of holding classes in the open air whenever weather permits, should be recognized. For this purpose Sun Schools on the lines of Dr. Rollier's "Ecole au Soleil" in Switzerland, should be introduced all over India. This will be taking a definite step towards prevention of tuberculosis. Besides Sun Schools, there may be holiday camps away from towns. This will be a welcome diversion which will create interest in and love for nature and outdoor life. In addition to these, to aid physical development of the children, mobile classes—whenever practicable—should replace classes held in rooms. In towns such classes may be arranged in public parks and gardens, in open spaces under shade of big trees in the proximity of a river or pond—specially reserved for such purposes. In villages such classes may be held in the outskirts of woods, in big clearings or meadows. These mobile classes not only break the monotony of lessons inside school room but by bringing the young mind in contact with nature help it to learn the mysteries of nature through simple lessons. Moreover free movement in the open stimulate growth of the body.

At school and at home particular attention must be paid to the proper development of the child's chest. A well-developed chest is the best preventive against phthisis. By regular breathing exercise, by walking straight with shoulders thrown back and by avoiding the stooping and crooked posture the child will expand his thorax. His lungs will work more energetically and the respiratory system will be strengthened and he will have obliterated risks of tuberculosis.

Feeding plays a considerable part in all periods of human life in resisting tuberculosis. First principle in feeding is to avoid excess and insufficiency in quality and quantity. Unfortunately, we do not always realise that we eat to live and not live to eat.

Growing bodies need cereals, green vegetables, fruits and milk. Meat is not essential in a hot country like ours. Fish is a good substitute. Diet has to be modified according to the season. In winter a more liberal supply of fat is permitted, while in summer, more vegetables and fruits are required.

It needs to be emphasised that narcotics in all forms are to be discarded. People indulging in these—especially alcoholics—can hardly resist tubercular infection. Human body needs

adequate rest to keep up strength and efficiency. The present-day school system in our country shows utter disregard for this necessity. At the end of the school hours the young students are

they should be allowed to benefit from air and sun.

One very important factor contributory to the spread of tuberculosis in India is that no arrangement is made (except in hospitals) for the segregation of the patients with active lesions. Undoubtedly abject poverty is mainly responsible for this state of affair. Yet, it must be admitted, our ignorance plays not an insignificant part in it.

In our country attention is usually paid to those actually suffering from active tuberculosis. But cases of those pre-disposed persons who form a large proportion are simply neglected. The unhygienic and miserable life majority of them live aggravate their condition and they become actively tuberculous. To protect these pre-disposed people preventorium

should be started at suitable places. In these preventorium they will lead a healthy life under

Sport and sun-bath in winter

like so many depleted electric batteries with no spark of energy left in them. Even homes of most of the children do not provide for due rest for them. Consequently, the depleted batteries have hardly any opportunity to be replenished, and there is the inevitable breakdown. To remedy this state of affair school hours should be so modified that students may enjoy at least 2 or 3 hours' rest every day, especially when the day is the hottest.

In every school—primary, secondary or otherwise—an anti-tuberculosis campaign should be organised by means of books, pictures, post-cards, special anti-tuberculosis postage stamps (as circulated in the Western countries), lantern lectures and motion pictures (wherever possible) and lectures with practical demonstrations.

What has been said regarding prevention of tuberculosis among children is applicable to adults as well. For them also the golden rule to prevent tuberculosis is:

- (1) Enjoy fresh air and sun;
- (2) Eat proper food—both in quality and quantity; learn correct eating habits;
- (3) Take regular exercise;
- (4) Have adequate rest.

In many of the existing hospitals hardly any due regard is paid to the necessity of air and light for the patients. Suitable cases in every hospital should have sun and air bath which will no doubt expedite their cure. Hospital patients are weakened by illness and are likely to be easy victims of tuberculosis. So

Mobile Class (on the snow) in winter

better conditions and will be subjected to periodic medical examinations to watch their progress. The name tuberculosis must not be associated

with these institutions as that will scare away people from taking advantage of these centres.

Many of the existing social conditions in India are factors contributory to tubercular incidence among people—especially women, *e.g.*, the purdah system, want of physical exercise (I don't mean exercise making muscular giants!) and any out-door life.

It is impossible to do any justice to the subject of 'prevention of tuberculosis' within the short space allotted to a single article. It is even impossible to touch—however briefly—all the aspects of the problem. I shall, consequently give a very brief suggestion of the lines on which the preventive campaign should be conducted in India.

The campaign will be conducted by a central organisation with a network of branches all over the country. The work of the organisation will be:

1. Extensive, intense and unceasing propaganda to arouse public opinion against the menace of tuberculosis.

In this connection I may suggest the formation of *Travelling Health Caravan*. Its duty will be to travel the length and breadth of the country showing charts, diagrams, photos, paintings and distributing pamphlets in simple language. Lectures and demonstrations by medical men should be arranged by the Caravan. In villages these should be made sufficiently interesting to the simple folk. Special meetings for children and also for women are to be arranged. This will be the best way of establishing contact with people who will otherwise remain ignorant of the knowledge that is so essential in fighting tuberculosis. This caravan will teach people how to live simple hygienic life and all other things essential for prevention and cure of tuberculosis and disease in general.

2. Establishment of after-care colonies for the cured T. B. patients. The Papworth Settlement (Cambridge) may guide us in this respect.

3. Establishment of preventoriums for the pre-disposed.

4. Tracking down of all types of tubercular subjects and making arrangements for prevention, treatment and after-care as the cases may need. The Travelling Health Caravan will undertake this responsibility.

5. Slum clearance and removal of smoke nuisance in towns.

6. Fighting intemperance.

7. Necessary legislation for the control of the menace of tuberculosis.

Scenes from a village fair
By Sailes Deb Burman

THE STRUCTURE OF CHINESE SOCIETY

By M. N. ROY

EVEN today, the fundamental unit of the Chinese society is not the individual, but the family. The revolution of 1911 and the Republican State established by it, did not alter essentially the patriarchal character of that social relation. Under the Republic, new laws were made. But social relations cannot be changed overnight through legislation, so long as the economic foundations of those relations are not subverted. Under the old regime, the father was the legal head of the family; by tradition, he enjoyed the right to dispose of the lives of his children.¹ The Republican laws have changed the position of the *pater familias* but partially. Individual rights have been created, but the patriarchal foundation of society has not been completely destroyed. The ownership of land—the main means of production in China—still belongs to the family, and even to clans. The defective form of private property in the main means of production hinders the individual to replace the patriarchal family as the elementary unit of society.

In the capitalist society, family is not abolished. It continues to be the foundation of society. But its character is changed. The monogamous family is essentially different from the patriarchal family; it does not push the individual to the background. It is a social institution which rises in course of the evolution of private property. Individualism is the fundamental principle of capitalism, the highest form of private property. Therefore, individualism and monogamous family are not mutually exclusive. They exist side by side, being two different branches of the social system founded upon private property.

While the monogamous family is the nucleus of bourgeois society, the individual is the corner-stone of the capitalist State. The right of individual is the fundamental principle of bourgeois political philosophy. The republican form of government was introduced in China only in name. The old political order broke down. But the old social relations which had created it, remained intact to a large extent,

resisting the strivings for building up a republican system of government. Because of its weak social foundation, the Republic tried to adjust itself to antiquated conditions. Consequently, the republican laws could not go to the extent of even undermining the institution of the *pater familias*. They granted the individual the right of self-defence, although not to the extent of killing. But the right of self-defence is not valid in the case of an attack by an elder relative.² In a work on the new Chinese Penal Code, the famous jurist Wang Chiang-hui, former Chief Justice of the Peking High Court, observes :

"The Anglo-American law lay special emphasis on the individual and not on the family; while the Continental (European) Codes have inherited something from the Roman family. The unit of the Chinese society being the family, the Reform, naturally, tries to retain this institution and modernise it as far as possible."³

After two thousand five hundred years, the spirit of the old sage Confucius still dominates the thinkers of modern China. They long for something new; the old has become untenable; yet they try to clothe the venerable skeleton with a few selected pieces of novelty. The reformers undertake a hopeless task when they try to readjust patriarchal social relations with bourgeois political and legal institutions. The hopelessness of the task became evident during the dreary years of the futile struggle for the defence of the Republic. The cumbersome, highly bureaucratic Constitution of the Nanking National Government has been the culmination of that task. The "modern State" of the nationalists is essentially Confucian. The initial period of its creation is not a revolutionary dictatorship. It is the benevolent despotism of a few persons who claim the right to educate the people with the object of "developing their ability to exercise political right, so that a constitutional regime may be soon realized and political power delivered to the hands of the people."⁴ So, according to the

2. The Penal Code of the Chinese Republic.

3. Dr Wang Chiang-hui, *The New Penal Code of China*. The quotation is re-translated from the German edition of the book.—M.N.R.

4. "Fundamental Law of the National Government of the Chinese Republic" proclaimed by the Kuomintang on October 4, 1928.

1. G. von Mullendorff, *Journal of the Royal Asiatic Society* (Chinese Branch), Number 2, 1892-93.

open admission of her rulers, China, is not that kind of State in which theoretically the supreme political power belongs to the people composed of individuals. In the "Republic" of the Chinese nationalists, the relations are reverse; the political structure stands on its head, so to say. The political power and, consequently, the right of sovereignty, is monopolised by an elite, who benevolently promise to pass them on to the people in some indefinite future, when these will have qualified themselves for shouldering the responsibility. Since these self-appointed guardians reserve to themselves the right of judging when the people will have attained political majority, it is not very likely that the promised transfer of power will ever take place. The Chinese "republicanism" does not provide for a legislative body created by universal suffrage, of the kind that formally constitutes the highest organ of the bourgeois democratic State. Such a political ideology is determined by the patriarchal relations which dominate the major sector of national economy.

Unable, as well as unwilling, to set up a revolutionary dictatorship with the object of sweeping away all antiquated social relations, which hinder the creation of a modern democratic State, the nationalist bourgeoisie dress themselves in the musty, threadbare mantle of benevolent despotism, and thereby demonstrate their own impotence.

The cause of all these contradictions and peculiarities in the political life of modern China must be sought in the structure of her social system. In spite of the unreliability of the Chinese census report, it can be reasonably assumed that more than eighty-five per cent of the population live on the land. Sixty million families are engaged in agriculture.⁵ In the light of this fact, the social structure of the village is revealed to be the decisive factor in the life of the nation. The political life of a country is determined by the nature of, and the property right in, the means of production. Land is the main means of production in China. Therefore, the system of landownership constitutes the foundation of the social structure, and all other branches of national economy are largely influenced by the methods of cultivating land, that is to say, by the mode of production of the main industry of the country.

The dominating system of landownership is essentially patriarchal. Not only is the land possessed jointly by families, but often by

family groups—clans.⁶ There are villages which are populated by the members of single clans. Such villages are named after the clans. The landed property of the clan, or of families, or of individuals is mostly derived directly from the State. It is a system in which, theoretically speaking, private property in land does not exist, or find itself on a very low level of development. But practically, the superstructure raised over this patriarchal foundation is, in a high degree, of feudal character. The charges on land are expressly feudal, not only in their essence, but often in form. However may the present system of Chinese rural economy be theoretically appraised, the feudal features in the history of the evolution of landed property in China are unmistakable. The struggle between patriarchalism and feudalism characterised the Chinese history ever since the days of Confucius. In the present form of landed property, elements of both the systems are to be found, and the overlapping of the two systems, which normally characterise different stages of social development, is the peculiar feature of the Chinese society. This hybrid produced by the two mutually exclusive social systems was later penetrated by the mode of capitalist production.

Thus, the economic life of the Chinese village is subjected to threefold exploitation: patriarchal, feudal and primitive capitalist. Although large-scale feudal states or capitalist farms are rare, except in Manchuria and some of the northern provinces (Shantung and Chili), more than half of the cultivated land bear landlords' rent. The peasant cultivating the land today is either a tenant or a sub-tenant, having no proprietary right in the soil. The rent is not fixed, and tenancy not permanent. Only in about thirty-four per cent⁷ of the land is the proprietary right of the cultivating peasant legally recognized. A considerable part of the cultivated land is the property of ancestral shrines, temples and schools. In these cases, originally, the right was communal. But the traditional right has been abolished in practice. But the system of administering these traditionally communal properties even now supports the patriarchal relations in rural economy and politics. The village elders have usurped the proprietary right of these

6. The formal collective ownership, however, does not prevent, as will be shown later on, the subordination of the cultivator to the system of landlords' rent and capitalist profit.

7. Report of the Agrarian Commission of the Kuomintang, 1926.

5. Report of the Ministry of Agriculture, 1919.

formerly communal lands. The peasants who cultivate these lands have been expropriated, practically if not legally. Consequently, the village elders have really become landlords. But the formal continuation of communal property in a considerable part of the land invests them even now with patriarchal rights and power.

At the same time, primitive capitalism has penetrated this feudal patriarchal structure of rural economy. The result is continuously growing impoverishment of the peasantry and extraordinary backwardness of the entire system of national economy. Although since long money has become the legal means for the payment of taxes to the Government, the rent is paid by the tenants still mostly in kind. This system of collecting rent in kind and paying taxes in money makes traders out of the feudal-patriarchal landlords. The surplus of agriculture passes in their possession. But their essential feudal-patriarchal character prevents that they become capitalists. The wealth accumulated in their hand does not become productive capital; it is invested in semi-feudal landed property, which keeps national economy in backwardness. On the other hand, subjected to pre-capitalistic methods of exploitation, the peasantry cannot improve their means of production, so as to grow out of their practical serfdom. Thus, in its precarious existence, the patriarchal family still continues to be the foundation of the social super-structure.

While hereditary property in land is not legally recognized, land theoretically belonging rather to the State, rent-bearing tenancy is the outstanding feature of the agrarian relation. Approximately sixty-six per cent of the cultivated land is subjected to the payment of rent to landlords.⁸ So, for all practical purposes, even though not legally, private property has been created in land, because private property in land realizes itself in the form of rent.⁹ But the essence of this property in land is analogous neither with the *allodium* of the European middle-ages, nor the *socage* in feudal Britain, nor the *free-hold* of modern England. The right of this private property does not belong to peasants whose ancestors had received the

land from the Crown; it belongs to a class which received rent and, by virtue of that, has become owner irrespective of any written law. The growth of rent-receiving private property in land transforms the peasant into a tenant; consequently, he becomes dependent on another lord in addition to the king.

The classical feudal property in land was created through the expropriation of free peasant proprietorship. But the process was not uniform. Its essence was that between the king and the people, there rose a new class which, on the one hand, encroached upon the freedom and rights of the people and, on the other hand, restricted the king's prerogatives. The rise and operation of the new class were determined by the relation previously subsisting between the king and the people. The peculiar features of Chinese feudalism were determined by the fact that a rent-receiving class appropriated the ownership of land, not by robbing the right of the peasant, but thanks to the transfer of the proprietary right by the king to the court nobles, high officials and other patriarchal heads of villages. With this type of feudalism, the creation of private property in land begins at the top of the society; the rise of a landowning class between the king and the people is not the result of expropriation, but represents the expansion of the basis of private property. The supremacy of the king is not disputed; the nobility continues to be subordinated to the monarch. Since the land remains the private property of the king who incorporates the highest power (by the Grace of God, in Europe; and thanks to the direct descent from Heaven, in China), theoretically he is entitled to divide it further from time to time. This prerogative guarantees for the king undivided loyalty of the people and provides him with the possibility of checking high concentration of land in private possession and, consequently, the development of a powerful nobility. The most characteristic feature of this type of feudalism, therefore, is not the serf toiling on manorial estate, but the tenant cultivating the land, which practically belongs to a person standing between himself and the king, under such conditions of production as deprive him of the entire surplus in the form of rent and other charges.

In China, private property in land did not grow in the foundation of the right of conquest. When the Germans conquered Gaul, the king shared the right of conquest with all the members of the conquering race; that was necessary for fortifying his position in a foreign

8. Report of the Agrarian Commission of the Kuomintang, 1926.

9. "Whatever may be the specific form of rent, there is one thing in common to all types of rent; the appropriation of rent is the economic form in which property in land is realized; land rent presupposes proprietary right in land—the ownership of certain individuals of certain parts of the globe." (Karl Marx, *Capital*, Vol. 3, Part II. —My own translation from the original German.—M.N.R.)

land still full of enemies. The division of land by the king was a mere formality. In reality, each member of the conquering race simply took possession of as much land as he could cultivate. In order to secure the loyalty of his followers, the conquering king simply endorsed their action. Private property was created from the bottom. The transfer of the original-private property in land, which in any case constitutes the foundation of feudalism, could not be an analogous process in the cases, for example, of Gaul and China, because it started from the opposite poles of society. Because of the difference in the position of the two factors concerned, and in their mutual relation, the nature of the struggle must also be different.

In China also the distribution of land by the king to the people was a mere formality, which simply sanctioned a system in force. But the substance of the system, formally sanctioned by the king in China, was fundamentally different from that in Gaul. In Gaul, private property in land was created by the conquering settlers; in China, land came to be cultivated by separate families, while the tradition of regarding it as public property continued. The right of the Chinese king was not the right of conquest. It was, so to say, an organic right which could more easily claim divine origin. Since the land was not conquered with the help of the entire people, not in the historical period at any rate, there was no necessity for dividing it. The monarchy rising out of the dissolution of the tribal society ultimately developed into patriarchal despotism based on that unrestricted right of the ownership of land. Under those conditions, the peasant could have the right of cultivating land only by the grace of the Supreme Lord and for his benefit, receiving only so much as is necessary for subsistence and reproduction. Thus, the development of private property in land invested the patriarchal monarch with feudal attributes. He was no longer the head of a free community, possessing and cultivating the land collectively. He became the Lord and Master, and the people came to be composed of his subjects instead of free men.

But the king could not retain for ever the primitive monopoly of feudal rights. In course of time, they inevitably went over to those standing nearest to him in the social organization. That transfer of right was not legally sanctioned, but the existence of a feudal nobility was a fact. In consequence of their dependence on the king, this type of feudal aristocracy constitutes the foundation of that

special form of State which is characterised as Asiatic despotism.

In China, private property in land resulted from the decay of communal ownership and collective cultivation. The older system decayed; but the ruins were not swept away. Instead, they became the foundation of the new form of property which, consequently, could not grow normally to the full stature. The king distributed the land to the people. But he did not transfer the right of property, which remained in his hand. Since private property in land was created not by conquest, but in consequence of the dissolution of primitive communism, the king's share in the product of agriculture assumed the character of ground rent in its most primitive form.

In that period, rent represented the entire surplus labour; it absorbed directly the whole surplus product and as such, it corresponded completely with surplus value. Surplus value tends towards circulation. Therefore, even in those days of defective private property in land, its source broke the limits of patriarchal monopoly, practically if not in terms of law. With the appearance of rent, the private property in land expanded. So long as land belongs to the State, rent and tax are identical. The administrators of State revenue gradually came to be tax farmers; and, under the given conditions, rent being inherent in tax, they became landlords for all practical purposes.

The peasants had no right of ownership in land; therefore, they could not be expropriated like their class in Europe. Consequently, serfdom did not take the classical form. The specific Chinese forms of serfdom were semi-slavery, forced labour and tenancy. The social position, characterised by those peculiar appearances, however, essentially was serfdom. For, the essence of serfdom is the obligation of the producers to cultivate land which, though in their possession, is not their property, and to deliver a part of the produce to the landlord. Whatever remained with them, after the obligations to the landlord were discharged, might provide them a little more than the necessities of bare existence and reproduction. That depended on the conditions under which their labour was performed.¹⁰ In ancient and medieval China, natural conditions kept the surplus on a very low level. Often there was none. Consequently, serfdom approximated slavery, and the rise of capitalism within the limits of feudal relations was greatly restricted.

EDUCATIONAL SURVEYS

By DR. A. ARONSON, B.A. (Cantab.), Ph.D.

Visva-Bharati

EDUCATIONAL theories vary in form and contents according to the particular scholarly training of the writer or to his physical, social, economic, and political environment. In mixing various sciences such as psycho-analysis and education, sociology and education, politics and education, and the like, educationalists, during the last 50 years or so, thought to solve the irrepressible problems of our time. The "science" of education, therefore, became more and more complex and involved until those who really are responsible for education, namely, the teachers, are no longer able to distinguish between what is right and wrong in contemporary education nor indeed are they prepared to define the aims of education. The Teachers' Training Colleges do not provide them with relevant knowledge; textbooks on education are dry and abstract and divorced from experience and the living educational reality. The teacher or professor—after passing a certain number of irrelevant examinations and instilled with old and new educational theories alike—chooses his profession with the view to earn his living and to provide his students with the same kind of knowledge that has made him what he is now, namely, a "useful" member of society. His interest in teaching or in education generally amounts to next to nothing; he goes to his classes or lectures as the businessman goes to his office. A certain amount of work or preparation guarantees remuneration and a normal social and economic standing within the community in which he happens to live. Intelligence is not required of a teacher: textbooks, methods, and everything else, are handed over to him by some administrative body, which is responsible for the training of the young in a social group. On the other hand, the teacher is looked upon by the other members of the community as some kind of parasite, a social, economic, and political nonentity.

Only very few people seem to realize that the educational system of a country reflects best of all its cultural standards and values. Many are utterly ignorant of the responsibility that is laid upon the teacher to whom society entrusts its children. Although no originality or intelligence is required of him, although he is but a small wheel in the complex machinery of modern

standardization and mechanization, he is asked to be keen, alert, and "efficient". The result must inevitably be that teachers lose themselves in hopeless resignation, that kind of destructive fatalism which is so representative of the frustration-complex of modern intellectuals.

In this essay we want to neglect all educational theories of whatever "progressive" kind they may be. If really the educational system of a country reflects its cultural standards and values, it should be the aim of every responsible educationalist to understand this system first, before throwing himself into the disconcerting whirlwind of contradictory theories and principles. To understand this system implies, in fact, an awareness of the shortcomings and defects of cultural evolution. This awareness, no doubt, will help the educationalist in his practical everyday methods as well as in his way of dealing with educational theories. There is, we believe, only one way of attaining this awareness: by means of an intelligent survey of an average educational institution representing the educational aspirations of the social group in question.

Only if we realize the intimate connection between the actual environment and this educational institution, will this survey be successful? Our point of departure must, therefore, be the social group out of which this institution grew. This approach is justified if we keep in mind that there is no organized education without some kind of social order or social coercion.¹

We must, however, begin with a hypothesis, namely, that there are two or three intelligent teachers or professors in this institution who realize the use and the meaning of such a survey and who are willing enough to begin this investigation open-mindedly and unprejudiced. Their first concern should be to define the environment, that is to say, its physical, economic, social, political, religious, etc., characteristics.² Particular stress, no doubt, should be

1. W. S. Smith : *An Introduction to Educational Sociology*, 1929. B. S. Counts : *The Social Foundations of Education*, 1934. L. F. Ross : *A Sociological Philosophy of Education*, 1928.

2. L. L. Bernard : "A Classification of Environment," *American Journal of Sociology*, XXXI.

laid upon the social environment, whether this educational institution is situated in or near a city or in an agricultural area. This is, as we shall see later on, of greater importance than the political characteristic of this social group. As society always exercises some amount of influence upon the educational system of a country, the various population groups have to be taken into consideration; and as the institution which has been selected, represents, so to speak, the most important population group (being an average institution), it should be made clear that there is an intimate relationship between this particular group and the educational system of this institution. In the survey itself it will be seen how this system adjusts itself to given social conditions.³ We may give one instance, so as to illustrate our argument. Frequently we find, in the East as well as in the West, that schools in the open country have to use the same textbooks as those in cities; the kind of training that is given to a child in an agricultural area is frequently irrelevant and useless; the child cannot and need not adjust itself to the standards and values of a city-culture; yet it is forced to do so owing to the fact that one population group, even if it is quantitatively smaller exercises an undue amount of influence upon another. This can be observed not only in matters of textbooks but in all matters related to the educational process. If, however, the essential characteristics of the population group is made clear, these regrettable and far-reaching mistakes could be avoided altogether, or, at least, corrected to a considerable extent.

As most of the concerns of a social group today centre around economic activities and as, furthermore, education at present depends almost entirely on the economic capacity of the group to provide education, the investigators should make a survey of the economic assets and liabilities of the institution. As it is of an average kind, the results of this investigation will be most illuminating: for, apart from the actual assets, its expenditure for the various branches of learning will, no doubt, reflect the willingness of the social group at large to provide a suitable education for its children. The percentage of the average expenditure for general administration, salaries, health service, buildings, libraries, laboratories, art-departments, vocational training, newspapers and other reading matter, will show the importance attached to one or the other, and the proper conclusions can be drawn therefrom. If, for instance, the expendi-

ture of an average educational institution for administrative purposes is higher than for its libraries, we may assume that there is something wrong with an educational system where more money is spent for organising learning than for the "learning" itself, and that, consequently, the social group is more interested in the organization of education than in "education" itself. The investigators will observe similar mistakes in expenditure within the various branches of learning. They will be enabled to determine almost mathematically the importance attached to them and to correct possible mistakes, in the interest of the social group. On the other hand, a comparison between school-economics and state-economics (for instance, between the amount spent by the average population group for insurance and for education) will help to realize the role, education and therewith this particular institution plays amongst all the various activities of this community. Only if both the social and economic basis are given the survey proper can begin.

The following five points will have to be considered in details: the administration, the teachers or professors, the freedom of teaching, the curriculum, and the students. Statistics should be avoided as far as possible; a survey of this kind deals essentially with human beings and not with abstract principles: the investigators should, therefore, be on more or less intimate terms with everybody-connected with this school or college.

Those who are responsible for the running of the institution and who most directly represent the interests of the social group will form the point of departure of this survey. It will be necessary, first of all, to investigate whether they are fit to represent the social group, whether—apart from their qualifications and training—they have not detached themselves from the common interests and activities of the community. As educational administration is a matter of social policy, this question should be answered first of all.⁴ Next their training and educational qualifications should be considered. And lastly their social composition and social concepts. It is frequently to be found, for example, that those who are responsible for the administration of an educational service in a city were brought up in agricultural surroundings and that they, consequently, are not fit to represent the interests of a city population

3. R. A. McDonald: *Adjustment of School Organization to Various Population Groups*, 1915.

group. Their social concepts and beliefs cannot adjust themselves to a new environment. The result is a maladaptation of the administrative machinery. This maladaptation can, of course, be studied best in the administrator's everyday interests and activities, in their reading matter, and in their way of passing their leisure time.⁵

A similar investigation can be carried out with regard to teachers. Teachers rather than the administrators are in daily contact with their students and therefore more liable to influence them; here the beginning age of teachers should be taken into consideration, the reasons why they selected this profession rather than any other, and their length of service. One of the commonest observations consists in the fact that teachers today are much too young and inexperienced to "explain" to the students the "meaning" of all the knowledge which they are supposed to carry over from one generation to the next. Frequently also they change their institutions far too often which again handicaps the educational process. A survey of their social composition will help to define the social stratum from which teachers are selected; it will, for instance, be found, that many teachers in cities come from agricultural areas which—as in the case of the administration—leads to maladjustments and maladaptations.⁶ Their social beliefs and attitudes will have to be studied next; this will elucidate the teacher's peculiar position within society and throw light upon his mental activity.⁷ His leisure time activities and interests will complete this picture. It will also be important to establish a relationship between his training and his actual salary; untrained and unqualified teachers being "cheaper" than those who are trained and qualified, it will be interesting to know the percentage of both and to draw the conclusions as to the "standard" of this average institution.

Last, but not least of all, it should be investigated how much interest is taken by the teachers themselves in the freedom of teaching; whether their teaching is only a means for the acquisition of wealth or for some higher intellectual purpose; whether they feel handicapped by outside pressures of a social,

political and religious kind; whether they have any suggestions to make as to the prevention of this outside pressure; whether they resent the restrictions imposed upon them by the local administration rather than those emanating from the vested interests of the social group.⁸ Frequently the investigators will be astonished to find, how ignorant teachers themselves are of the most obvious restraints upon the freedom of teaching and that—should they be aware of them—they usually do not care. Here again much useful work can be done by this survey.

As teaching today depends to a considerable extent on the curriculum, it should be studied very carefully indeed. The average curriculum involves at present a great deal of standardization and mechanization; the methods of teaching should be considered first, whether mass production or individual training is preferred, and the number and attendance of lectures, seminars, discussions, respectively. The same applies to examinations. Here especially mistakes occur more frequently than anywhere else: there are too many examinations and often quite irrelevant ones; preparation for these tests takes place in a most preposterous manner, the students using "annotations" which are dry, abstract, unrelated to the young adult's interests and frequently altogether unreadable. It should be ascertained how many students use these "annotations" and especially what use they make of them. A similar survey should be made of the textbooks in use: their date, and the kind of social, political, religious bias they advocate; their preoccupation with cultural phenomena and civic attitudes, whether they are published privately or by special authorization by the school administration. The textbooks that are used in this average institution will be an index of the current social beliefs, civic attitudes and vested interests within the community.⁹

All the auxiliary teaching material should be considered also: the libraries, the newspapers, reviews, etc., the cinema and the radio, if any. This is, properly speaking, the influence of the environment upon the curriculum, and every educationalist knows only too well that sometimes the leading article of a third-rate newspaper with strong political bias exercise—

a greater influence upon the young adult's mind than, for example, his textbooks in Civics or Politics.¹⁰ Only if the methods of teaching, the textbooks, and the outside influences are combined, the investigators will be aware of the shortcomings of the curriculum proper; they will, for example, realize that textbooks must be related to the child's reality and experience in order to counteract the dangerous influences from outside.

As for the subjects taught, it should be interesting to know how much time is allotted to them, and the percentage of students enrolled in the various classes. Thus it might be found that purely commercial subjects at present attract students more than art or literature, but that, on the other hand, useless subjects (such as Latin in the West) have to be taught not for the sake of knowledge but for all kinds of other purposes. It might also be found that many subjects are taught only for the sake of some competitive examination and that the "knowledge" thus acquired will be of no use in adult life. The investigators should, therefore, aim at an intelligent classification of subject-matters, thereby indicating the particular trend of cultural movements within the social group.¹¹

The part of the survey that deals with the students, is in itself much more complex. Here the investigation is no longer concerned with mature personalities representing some kind of social order, but with human beings at a time of transition and gradual evolution. However, a survey of the students' population in this average educational institution will illustrate the evolution of the social group itself; it is, in fact, nothing else but a survey of the next generation who will be responsible in the near future for the interests and activities of the social group. Here again a study of the economic background will be useful; the first aim, therefore, will be to establish a relationship between the income of the students' parents and the expenditure for the education of their children. The number of scholarships, free textbooks, etc., will have to be investigated next: this will surely be an index as to how far the social group encourages education for poor but well-deserving students. This study on scholarship may also lead to most

illuminating conclusions, those related to educational waste and allied problems.¹² Next the social and religious composition of the students will be subject to a careful investigation. As it is an institution of an average kind, comparisons may be drawn later on between the percentage of students from the various population groups and the percentage of eminence attained by them during or after the educational process. It will, for instance, be found that students who were brought up in a city environment attain eminence rather than those from an agricultural area. This does not necessarily imply a "higher" standard of learning in cities, but rather a wrong application of city standards in agricultural areas; furthermore, it means that there is something wrong with rural schools, that teachers are not properly trained and that not enough money is spent for education in rural districts. Consequently, a study of the students' social and political concepts and attitudes always with special reference to the population group they represent, will help the investigators to realize how far the social aspirations of the community at large are being instilled into the next generation. They will also frequently come across a strange discrepancy between the theoretical aspirations and the actual results. Questions should be put to the students with regard to the most common interests and activities of the group, such as those dealing with political, social, religious, moral, literary, artistic and economic issues; here the influence of outside propaganda rather than that of textbooks will be painfully obvious.¹³ This study may be successfully supplemented by a survey of the students' leisure time interests and activities, their reading matter (what books do they like best, which page in a newspaper do they read regularly, etc.), and the interest taken in games. If the results of this investigation are again compared with the various population groups which the students represent, the survey will be almost complete. The health of the students can be tested easily; as for their "intelligence", it would, perhaps, be better to avoid all unnecessarily complicated and standardized "intelligence-tests". Commonsense will do as much. If, however, tests of this kind seem to be necessary, they should be handled carefully and not too many conclusions drawn from them.¹⁴ If this average institution is on

a co-educational basis more problems of a different kind will have to be dealt with. The investigators being in the full confidence of the students, very appreciable results may be obtained here which may be easily correlated to the preceding points of the students' survey. An investigation in the working arrangements of the department for professional or vocational training will elucidate the interest taken by the social group and the students themselves in their professional life and the way students adjust themselves to existing social and economic conditions.

Here the survey proper ends. A few general remarks have, however, to be added indicating the particular trend of an educational system as represented by this average institution. These remarks will bear upon the relationship between social progress and this educational machinery.

All educational problems centre around the relationship between those who represent the social group, namely, the teachers, and the students. If there is no obvious relationship to be found, the educational system is bound to fail. If teachers do not participate in the communal life of a school or college, the educational process will be to a considerable extent divorced from the "realities" of the social group. The lack of proper guidance will lead as regards the students to social maladaptations of a very serious kind. No "social progress" can be achieved without the mutual consent of both teachers and students. It should be investigated whether this mutual consent exists. If it does not exist the fault lies usually with the teacher: students are always open to new suggestions of a "progressive" kind with regard to social life, art, or morals. Character-building is closely related to this problem. If children or young adults are taught to think about life in terms of intellectual entities and abstractions, character-building will

be replaced by "instruction" and the result will invariably be educational failures. It should be investigated how much "moral" or intellectual pressure is exercised upon the young individual and how much freedom, on the other hand, is left to him to educate himself in a "natural" way by means of personal experiences.¹⁵ If possible, a similar investigation should be carried out with regard to the sexual problems predominating the young adult's life in this average institution. The amount of inhibitions and repressions will be a sure index of the general "moral" health of the students. Should the educational process be successful, these inhibitions and repressions will have to be reduced to a minimum: this alone will guarantee a healthy and normal family life in the future.¹⁶

If this average institution trains its students for an intelligent social adjustment to existing conditions, the educational system which it represents will be invariably successful; if, on the other hand, students are trained to respect tradition and to look upon life in an unprejudiced and open-minded way, no considerable amount of educational failures will be possible; if, lastly, habits of mind tending towards social progress are instilled into the young adults, the community at large will profit by it and traditional cultural values and standards will not be cut short by some pseudo-revolutionary mentality, as it so frequently happens at present, but will go on evolving in a normal, healthy, and natural way.

To make this evolution clear and, if necessary, to prevent possible distortions and maladaptations, should be the aim of such an educational survey.

FOUNDATION OF A KEY INDUSTRY IN INDIA

Electrolytic Manufacture of Soda and Chlorine

By SIR P. C. RAY

ONE great difficulty in India of starting big industries is that she is called upon all of a sudden to face fierce competition from the long established, highly developed industrial organisations of Europe, America and Japan. Foreign products are dumped into the country at rates which defy competition and thereby indigenous industries are throttled out of existence. Needless to say, price are again enhanced after the local enterprise has been crushed out to make good for the temporary losses of the foreigner. The difficulty is now further increased when England herself, under the new constitution, in the name of Imperial preference or some other euphemistic epithet, is entering the field by jumping over the tariff wall. Just now this is our unfortunate position. Gigantic British industries incorporated in England, such as the Imperial Chemical Industries Ltd., are opening branches in India. But if unhappy India is to exist at all she must be prepared, dwarf as she is, to fight with the colossal giant.

Hitherto in India only a single attempt has been made by Indians to start a big key industry, the Tata Iron and Steel Works Ltd. It has outlived its infancy and has come to adolescence. At the outset it had the financial backing of the late J. N. Tata and latterly of the Bombay capitalists. When the great war broke out and the supply of foreign steel was cut off, our government realised the supreme importance of an indigenous industry and of making India self-contained as far as possible in her needs. But the Tatas at that time behaved like spoilt children. Once while presiding over an industrial conference Sir Dorab Tata boasted that his expert was drawing a pay higher than that commanded by the Viceroy of India. The criterion of efficiency had thus been judged by the concern by the salary of its expert. Things went on merrily for a time, but, a crisis arose when peace was concluded and the efficiency of the experts was tested in the fire of foreign competition. German and Belgian steel produced from a much lower grade iron ore began to pour into the market at a much-reduced rate. A cry was raised for the support of an infant industry and a national backing was secured for the con-

cern for its protection and subsidy. It is needless to proceed further. Suffice it to say that Tata Iron and Steel Works got something like a crore a year from the Imperial coffers and latterly under the Imperial preference somewhere near about eighty lakhs a year. In other words the poor peasantry of India were taxed for their commodities, such as corrugated sheets and implements of husbandry, and the country had to pay seven or eight crores of rupees to cover the losses of inefficient running of this concern. Still the cost is not too high if the concern thereby becomes efficient and completely Indianised.

These preliminary remarks may seem irrelevant to many but they have an important bearing on the subject proper which I now introduce.

India is yet in her infancy in industrial progress and capital is naturally very shy and she lacks in organising power. Hence undertakings of colossal scale as obtain in highly developed industrial countries do not appeal to her and are at present beyond her means. Therefore the example set by an Asiatic country naturally appeals to her.

Japan has developed to a remarkable extent during the last decade in her industrial activities in diverse fields, following the example of European countries. In the metallurgical industries, such as, copper mining and copper refining, she started from a very small beginning; now she occupies practically the second place in world production. Last year in an article published in *The Electrical World*, Dugald Jackson, Emeritus Professor of Electrical Engineering of the Massachusetts Institute of Technology, gave a survey of Japanese electrical plants. He states that practically all the power stations both hydro-electric and thermal are now run by Japanese generators. The sizes of these generators and their efficiency are quite on a par with those of other nations. Electric locomotives that run in Japan have all been manufactured in Japanese factories. A number of Japanese lamp factories have been started and the productive capacity of one of them could be compared favourably with some of the biggest factories in the world, having a daily output of three lakhs of lamps.

In Electro-Chemical industries her development has been remarkable. By the electrolysis of common salt she not only supplies her need for alkalis and bleaching powder and liquid chlorine but manages to export large quantities abroad at a price much lower than that produced by other nations. She produces the artificial fertilisers needed for her agriculture by the atmospheric fixation of nitrogen and even exports considerable quantities abroad. Though she lacks in aluminous ore which is imported mainly from our country, she has within the last six years developed a big Aluminium industry. Her textile industry, silk industry, rayon industry, rubber industry have developed within the last decade to such an extent that they excite the envy of people who had been pioneers in those and have considerable experience.

The secret of these undertakings in their inception and growth may be attributed to many causes, but it may be pointed out that she is now almost independent of foreign manufacturers regarding the equipment of her industrial concerns. Japan now is in a position to equip almost all her factories with machinery and equipments developed in Japan and a considerable number of them are of higher efficiencies than those developed abroad. This is the finding of an eminent foreign engineer, a teacher of a renowned engineering institution and no mean observer in the world progress in the engineering line.

Japan has to import pig iron and scrap iron from India; she readily converts them into steel and now her grand mercantile marine and her powerful naval equipment including battle-ships, cruisers and submarines, aeroplanes for commercial navigation and warlike operations and all the ingredients for war purposes are secured from the steel of her own making. The textile machinery is entirely of her own production. The development of the rubber trade and of the rubber products both in variety and in price has been remarkable. One really looks for the basic factors which have led to this astounding progress and one finds that a spirit of self-determination and self-confidence to produce the elements of her industrial equipments independent of foreign countries form the foundations of her industries.

Things are different here in India. One can cite the case of sugar industry. Thanks to the prohibitive duty on Java sugar we have had a rapid growing up of an indigenous sugar industry. Already there is over-production and rate cutting and loud complaint against the excise duty on home-grown sugar.

Here is an example of the effects of ill considered excessive protective duty. But the important fact must not be overlooked. Any one who examines the custom duties on imported machineries will be surprised at the enormous quantity of machinery worth several crores introduced into our country from abroad, from England, the continent of Europe and the States.

This comparison would surely indicate the secret of Japan in a nutshell. As soon as her period of probationership was over, she with commendable foresight turned a new leaf in her chapter of industry. She realised that she must manufacture on the spot her own requirements and has managed the same on an economic basis. She is no longer dependent on foreign countries. She charges wages for labour from a coolie to an expert in a scale which would puzzle us. She is a rice-eating nation like ourselves and her cost of living is not of the standard of European countries. An expert technician or a college professor serves on a pay which appear to us ridiculously small. But unlike us she takes advantage of her asset of brain and brawn for her own benefit. There is no tendency for job-hunting and service securing in Japanese youths. While we are frittering our energies in securing paper qualifications without any definite end in view, thus running to waste our potential brain wealth, Japan had been utilising to the fullest extent her intellectual elements for the development of her industries, her commerce and other avocations of modern national life. Though in the beginning she like other oriental countries had been stunned by the force of impact of science on society, she rallied quickly and set up an organisation to equip herself to meet the altered conditions. And further her government gave well-planned and highly efficient financial and technical backing to her enterprises during their infancy.

In explaining the industrial growth of Japan we have diverged from our main theme regarding the difficulties of initiating new industries in our country. It is well known that there are a number of industries which are essential for the development and growth of other industries. Of these key industries one finds alkali manufacture has an unique position. Soap has been stated by Liebig to be an index of modern civilised society and though India situated in the tropics abounds in vegetable oil and has within the last twenty five years grown an indigenous soap industry it may be pointed out that she is entirely dependent on imported alkalis for the same. The quality and price of

soap are naturally found to be affected by the fluctuations in the price of this imported alkali. Within the last forty years India has been growing a textile industry mainly for her home consumption and it is not realised how far the industry is dependent on the imported alkali. The growth of an Indian paper industry, apart from other causes, is handicapped not to an inconsiderable extent due to cheap alkali. In a modern paper mill established in the neighbourhood of Calcutta we have the information that the annual consumption of alkali runs up to about 3,000 tons a year. These are only a few examples to illustrate the nature of this key industry. Alkali manufacture can be traced back to very olden times, but the modern methods can be said to originate from the processes well known to students of chemistry—the Leblanc and Solvay processes,—about the beginning of the last century. With the development of electrical energy the electro-chemical decomposition of sodium chloride to produce caustic soda, chlorine and hydrogen has been evolved and within a short period of twenty years the long established older processes have received a check. In America specially, the electro-chemical process soon supplanted to a considerable extent the older industries. More particularly, since then its bye-product chlorine, transformed either into bleaching powder or into liquid chlorine, is finding considerable use for disinfection and other sanitary purposes.

As we discussed about the industrial development of Japan we found that her secret of success lay in devising means to build up her own equipments without external aid. For some time there has been an attempt to design a suitable electro-chemical plant for the production of alkalies and bleaching powder locally and it may now be said that there is every chance of installing a successful plant for the purpose. For more than a couple of years the untiring effort of a band of workers, who

for reasons best known to them do not like to give their names away to the public, had been engaged in the problem and they feel that the successful establishment of this important key industry may not be very far off. The experimental plant is a very modest one with a small output but it shows signs that it is capable of large expansions. It has as its competitor one of the biggest world organisations, namely, the Imperial Chemical Industries, subsidised by the British Parliament, opening its new branch here, but there is reason to believe that India has a scope not only for such big organisations, but also for small ones. If the spirit of self-confidence, self-sacrifice and efficiency in organisation can be combined such small concerns may not lose heart to face the competition. In these days of motor lorries and quick transport, even in the streets of big metropolis hand carts have not ceased to ply their trade. But apart from plain and honest competition, there are other methods of killing an infant industry practised here, chiefly by foreign concerns, or "Indian" concerns that are "Indian" only in the location of their industrial machinery. Zonal price cutting, threats to purchasers or wholesalers of non-supply by the European concerns, if they purchase from Indian concerns, and similar octopus methods of strangling infant Indian industries are practised here with impunity. Such practices must be regarded as criminal and penalised. The foreigners have stipulated and obtained their safeguards. It is up to us to agitate for and secure anti-trust laws and other safeguards against the destroyers of Indian enterprise.

The dawn of a new era in the industrial development of India would certainly begin when this and other important key industries take their footing in the indigenous soil and be entirely developed by us unaided by extraneous help.

THE IRON AND STEEL INDUSTRY IN INDIA

By A. R. DALAL

IN spite of the abundance of raw materials in India and of India's relatively high importance a thousand years ago in the world's supply of wrought iron and steel, India did not effectively take up the manufacture of iron by modern methods until fifty years ago, when the Barakar Iron Works were established at Kulti in Bengal, about 140 miles north-west of Calcutta. Since that time these works have, almost without interruption, continued the production of pig iron and iron castings, under the ownership of the Bengal Iron Company, which has now been acquired by the Indian Iron and Steel Company. Over thirty years ago the Bengal Company attempted the manufacture of steel at Kulti, but did not succeed in overcoming the many difficulties which had to be faced; the plant was closed down after about two years and was ultimately completely dismantled.

Although the Barakar Iron Works were the pioneers in their line small foundries for the production of iron castings from pig iron existed in several places in India before the establishment of the former. Those foundries have developed steadily but inconspicuously apart from two offshoots of an unusual nature. Over forty years ago the iron foundry of what is now the Metal and Steel Works of the Army Department at Ichapore, a short distance north of Calcutta, undertook the manufacture of steel in a small open hearth furnace. This plant, which has since had a moderate growth, is the pioneer of modern steel-making in India. It was followed after a few years by a similar development at the Jamalpur Works of the East Indian Railway. It is doubtful whether either of these plants ever produced 30,000 tons of ingots in any one year. Neither of them made steel for the commercial market. About nine years ago the Jamalpur plant was closed down, as the Railway found it more economical to purchase the small quantity of billets it required for its rolling mill, which is still retained.

The most important development of the Industry, however, was due to Mr. Jamshedji Tata who prepared the schemes which led to the formation in 1907 of the Tata Iron and Steel Company. Two blast furnaces and a steel plant with rolling mills were erected at

Jamshedpur with a capacity of 1,20,000 tons pig iron (of which the greater part was absorbed in the steel plant) and about 80,000 tons of rolled steel annually. Production of iron began in 1911 and of steel in 1912. The output has developed practically without check, and extensions of the Works have been almost continuous for the last 20 years. For some years it has been the largest steelworks in the Empire on a single site. The extensions now in hand will bring its capacity by 1940 to about 1,200,000 tons of pig iron, almost the same quantity of ingots and nearly 8,50,000 tons of rolled steel for despatch to customers.

In 1918, another enterprise, the Indian Iron and Steel Company, was formed and two blast furnaces, the necessary coke-ovens, etc. were erected at Hirapur, a few miles from Kulti. This Company acquired the Bengal Iron Company, and its works now have a combined capacity of about 8,50,000 tons of pig iron annually, together with foundries capable of producing 100,000 tons of cast iron pipes, sleepers and general iron castings. The amount of pig iron required by the general Indian market being very small, the Indian Iron Company has hitherto depended mainly on the export of pig iron for its market. A new Company, The Steel Corporation of Bengal, Ltd., was registered in 1937. This Company will take all its requirements of pig iron from The Indian Iron and Steel Company, Ltd. The production aimed at is 2,00,000 to 2,50,000 tons of finished steel per annum.

The next enterprise in this line was invited by the Mysore Government who erected a small iron works at Bhadravati over 16 years ago to produce charcoal pig iron on the scale of 20,000 tons per year. They are making cast iron pipes which absorb about 7,000 tons of pig annually. The scheme has never been financially profitable and a small steel plant with an estimated capacity of about 15,000 tons of bars and small sections and 5,000 tons of hoops has recently been added, in order to afford a means of utilising the iron produced.

Recent important factors in the growth of the industry are the Tinplate Company of India and Indian Steel Wire Products, Ltd., both of which have their works adjacent to

those of the Tata Company and depend upon the latter for the supply of tin-bar and billets respectively. The former Company has in recent years produced over 50,000 tons of tinplate annually and the latter is producing over 40,000 tons of steel rods, small bars, wire (black and galvanised) and wire nails. Besides these, an interesting recent development is the understanding between the Tata Company and Messrs. Stewards and Lloyds, the largest British producers of tubes, for the formation of a jointly-owned Company which will make tubes in India to the maximum extent practicable in the conditions of the market.

Apart from the above several concerns are operating re-rolling mills, mainly for bars and small sections, in Calcutta, Bombay, Lahore, Cawnpore, Negapatam and elsewhere. Some of the Mills work on such scrap as is locally available, while others operate on billets. India also possesses three small foundries for the manufacture of steel castings for the general market, two in the Calcutta area and one in the coalfield area.

Both the Tata Company and the Indian Iron Company possess enormous reserves of high grade iron ore within economic distance of their works. These deposits lie in the Singhbhum District, which is one of the richest iron ore areas of the world. India, however, does not possess correspondingly large reserves of the equally necessary coking coal. Both Companies possess reserves of this coal, those of the Tata Company, however, being much larger than those of the Indian Iron Company.

So much for the supply side of the question. As for the demand side, India's consumption of steel is mainly in the form of sheets, bars, rails, structural sections, plates, sleepers, tinplate, hoops, tubes, wire and rods. There appears to be no other form of steel which is consumed to an extent reaching 20,000 tons per year in normal times. Since 1923 the aggregate Indian consumption of all the products specified above has averaged about 1,000,000 tons annually. All these products are, or will, within the next two years, be, made by the Tata Steel Company and its immediate associates to an extent aggregating about fourth-fifths of the whole. The position of this Company in the industry thus appears to be one of unusually great strength.

Further development of the industry in India depends mainly on the growth of demand. It need not be doubted that the effective demand will grow. The growth may, however, not be so rapid as is expected in some quarters. The

world consumed over 50 per cent more steel in 1928 and 1929 than in the best pre-war year 1913. India, however, reached its peak in 1927 with a consumption 40 per cent greater than in 1913, which was also India's best pre-war year. The consumption rapidly declined from 1927 and although the last four years have shown some improvement, the consumption in 1936 was barely 60 per cent of its previous record, whereas in 1936 the world as a whole passed its previous record of 1929. Thus, although there is good reason to regard the Indian steel market as sound, it must be recognized that it has limitations in its present demand and that expectations of its future rate of growth should not be pitched too high.

India has not yet appeared in the steel export market to any important extent. It is, however, and has for many years been, one of the major exporters of pig iron on the world market. For the manufacture of basic steel and for certain kinds of foundry work Indian pig iron has established a high reputation for quality in many countries. The principal buyer is normally Japan but the United States and the United Kingdom have for years been fairly steady buyers of Indian pig iron while smaller quantities are despatched each year to a large number of other countries.

As in other countries, the Indian steel industry has experienced large fluctuations in its fortunes and in 1924 it became necessary for Government of India to grant the industry fiscal protection, partly by import duties and partly by subsidies. The subsidies were removed after less than three years and have not been re-instituted. The protective duties were revised in a downward direction in 1927 and again in 1934. At the present time the duties on British steel are only 10 per cent ad valorem and those on non-British steel vary between about Rs. 25 and Rs. 43 per ton. An unusual feature of the situation is that since the end of 1934 Government has levied an excise duty of Rs. 4 per ton on all steel ingots produced in India and an excise countervailing duty of Rs. 5½ per ton is added to the import duties on finished steel of the protected kinds. Billets, however, are free from import duty and the excise countervailing duty is only Rs. 4.

At its last inquiry the Indian Tariff Board estimated that by 1940 the Tata Company would be able to produce rails at a "works cost" of about Rs. 47, billets about Rs. 38, bars at Rs. 52, galvanised sheets below Rs. 99 and other products at correspondingly low costs. The Company has naturally not pub-

lished its recent costs, but all the indications are that it has made substantial progress and will make further progress in the next two or three years. It is expected in competent circles that a further prolongation of protection will not be required and that by 1941 the protective duties will be removed. In the main the re-rolling industry has depended on the unusual combination of a high duty on bars and the free importation of billets. The cessation of protection would tend to put the production of bars, etc., where it economically belongs, *i.e.*, in the primary steelworks, which in India can produce billets more cheaply than they can be imported and can convert them into bars on high-capacity mills more cheaply than the small re-roller.

Turning to the question of financial strength, the Tata Steel Company has a share capital of Rs. 10.52 crores. As it expects to be able to finance out of its own resources the extensions referred to earlier in this article, its capitalisation may be regarded as distinctly moderate in relation to the large capacity indicated, the more so as the Company has not written down its capital at any stage, a process which has occurred only too frequently in the industry. The capitalisation also covers the cost of a large town and the very rich ore mines and collieries already mentioned. Practically the whole of the plant now in operation is less than 15 years old, the original equipment having been almost entirely superseded. This has been made possible by the conservative policy of the Company in the matter of depreciation. For example, Rs. 501 lakhs have been set aside out of profits on this account in the five years ending March 1937.

The capital of the Indian Iron and Steel Company, as re-constituted at the end of 1936, is £2,000,000 in debentures and Rs. 181.16 lakhs in shares, the share capital representing a substantial writing down of the original amounts raised by the two Companies which have been amalgamated into the present Company. The Company possesses four blast furnaces of modern type (two large and two of medium size), the necessary coke ovens and auxiliary plant, large foundries, two small townships, collieries and the extensive iron ore mines referred to above. It is understood that the Company has sufficient reserves to enable it to modernise those parts of its plant which are not reasonably up-to-date. Further capital of Rs. 40 lakhs was issued for the purpose of

participating in the new steelworks. The capital of the Steel Corporation of Bengal, Ltd. is £1,000,000 in debentures and Rs. 370 lakhs in shares.

The Tinplate Company of India was formed with a capital of Rs. 75 lakhs of which two-thirds was furnished by the Burmah Oil Company and one-third by the Tata Iron and Steel Company, with which the Tinplate Company has a long-term contract for the supply of tin-bar. The reports of the Company are not publicly available but the latest accounts of the Burmah Oil and the Tata Companies show that the Tinplate Company is paying satisfactory dividends.

The works of Indian Steel Wire Products Limited were originally in private ownership. The public Company was registered in 1936 and has an issued capital of Rs. 10 lakhs in debentures and Rs. 50.00.000 in shares. The Company owns a modern mill with a capacity of about 45,000 tons of small bars, rods, etc. for which it obtains the billets from the Tata Company under a long-term contract. It also has fairly extensive wire-drawing and nail-making plant. The Company is believed to be operating with satisfactory financial results.

Apart from the above, there are re-rolling mills operated by the Eagle Rolling Mills Company, Guest Keen Williams, Ltd., the National Iron and Steel Company and the Indian Steel Rolling Mills, Ltd. In addition to these there are a few smaller mills in various parts of India mainly under private ownership. Little information is available about the operating results.

It can be gathered from this short survey that India appears to be within a very short distance of reaching practical self-sufficiency in the more generally used forms of steel, if this be judged on the basis of past consumption. It has achieved this position on a sound financial and economic basis and there is little reason to doubt that the industry in India will be able to maintain its position. If there should be a rapid increase in the consumption, there might well be a time-lag before the Indian industry expanded to meet it and imported steel might for a period be required on a larger scale, but the dependence of India on the United Kingdom and the Continent for large supplies of steel has passed and is not likely to return. Beyond this, the stage may prove to be not very far distant when, during times of low local demand, the Indian Steel Industry will be able to make an effective entry into the export market.

CIVIL AVIATION INDUSTRY IN INDIA

By SURESH DESAI, M.A., LL. B.

THE remarkable development of air transport in post-war years has assumed added importance at the present day. It is indisputable that Civil Aviation is no mere commercial proposition. Commercial air-fleets, it is well known, are an auxiliary to military air-craft, and are calculated to play a vital part in the chain of imperial communications. The role of Civil Aviation as a key-industry in the defence and economy of the country has been recognised by modern States through heavy subsidies and other forms of assistance extended to their national air services.

India, having a peculiar geographical position on the map of the world and with its long distances came early to be considered as an important playground by foreign air services. Not only does India hold a strategic position in the aerial links of the Empire between London and Brisbane but it also commands an equally important position in the aerial connections between the East and the West and incidentally, in the round-the-world service *via* Hongkong over the Pan-American Airways Trans-Pacific route. The Government of India established their Civil Aviation Department in 1927. Private enterprise was allowed to operate air services in the country, but active State assistance was not forthcoming. Whereas a number of foreign countries were quick to appreciate the importance of air transport from the military as also from the economic viewpoint and heavily subsidized this industry, which by its very nature required such aid, no steps were taken in India to attract or encourage capital to be invested in this industry. It is interesting to note here that the Advisory Committee on Civil Aviation in Britain in its Report on 'Imperial Air Routes' while recommending the establishment of certain main-trunk lines, pointed out that "the proper place for initial action was the route to India" and that the development of these Imperial routes "should be by private enterprise backed by State assistance". Next year, the Committee recommended that 'direct financial assistance should be paid to companies operating on 'approved routes'. The Controller-General

of Civil Aviation also emphasised in his first report that if 'civil aviation in England is to be regarded as one of those industries which is unable to stand on its own feet and is yet so essential to the national welfare that it must be kept alive at all costs', some form of 'direct State assistance was necessary'.² In India, on the other hand, neither were training facilities in aeronautics made available to Indian youths, nor what was more important, was any effort made to develop air-mindedness in the Indian public.

It was not long, however, before the question arose of India's participation in international aerservices. The Standing Finance Committee of the Central Assembly who dealt with the question in 1929, arrived definitely at the conclusion that in any new concern to be started to operate air service, India should have 75% of the voting rights, that three-fourths of the Directors should be Indians, whose appointment should be subject to the approval of the Government and that an express stipulation should be made to ensure full control over the affairs of the company, including the power to remove the Managing Agents, in the hands of the Board of Directors and the shareholders. It may be noted that Sir George Schuster, the then Finance Member, stated before the Standing Finance Committee that "he had come to the conclusion that not less than 75% of the voting rights would give the Government the desired control over the affairs of the company". Sir George also explained the method by which 75% of the voting rights be secured while the Government need only find 50 of the capital. What the public in India was insistent upon was that in the vital industry of Civil Aviation, Indian controlling interests should be assured and maintained. In 1931, the General Purposes Sub-Committee of the Indian Retrenchment Advisory Committee also recommended that "no non-Indian conducted air service should be allowed

development of Civil Aviation," 1920. This Report also contains a 'Brief summary of the more important steps taken by the Air Ministry for the assistance of Civil Aviation.'

2. "Synopsis of progress of work in the Department of Civil Aviation."

1. "Report on Government Assistance for the

to start the Indian link in the East and the West through air run" but that the Government of India should themselves unhesitatingly inaugurate the Indian State Air Service, if such a course be considered necessary, to avoid the establishment of non-Indian controlled service. The Sub-Committee even went further and suggested retaliatory measures. They stated:

"But against pressure and threats from any powerful non-Indian commercial interest, the Sub-Committee consider that the Government of India, at the limit of withdrawing all their ground organization and meteorological facilities (the latter up to the borders of Persia) are not without effective weapons."

British commercial interests meanwhile were somewhat perturbed over the slow progress of Civil Aviation in India and they requested the Government "to take immediate steps towards the inauguration of an air mail service between Karachi and Rangoon" even by relaxing the conditions laid down by the Government regarding the development of Civil Aviation in India. Indian commercial bodies, on the other hand, took exception to any such relaxation, for the conditions laid down by the Government were not only according to the general policy of discriminating protection laid down by the Government of India as an outcome of the Fiscal Commission but were also sanctioned by the recommendation of the External Capital Committee about the imposition of such specific conditions and stipulations whenever bounties, subsidies and similar pecuniary assistance were granted by the State. In 1932, the Federation of Indian Chambers of Commerce and Industry passed the following Resolution at their Fifth Annual Session:

"That this Federation is of opinion that in any scheme for the development of civil aviation in this country, the Government will strictly adhere to the conditions laid down by them about reserving a substantial majority—75 per cent—of share capital and directorate for Indians in all branches of its works and will not relax these conditions on any account."

It was contrary to the understanding arrived at in the Standing Finance Committee in 1929, and against the considered views of the Retrenchment Sub-Committee and despite the definite Indian commercial and public opinion on the question, that the Government of India entered into an agreement with the Imperial Airways in 1933 in respect of the Indian Trans-Continental Airways Ltd. wherein they assigned the major portion of the capital to the Imperial Airways, thereby establishing the control of non-Indian interests in a vital key-industry of the country. The Government of India kept 24% of the capital, 25% were given to the Indian

National Airways, while the Imperial Airways—a foreign concern—were assigned 51% of the share capital. This anti-national action of the Government in passing over 51% of the share capital of the new concern to the Imperial Airways was adversely criticised both inside the Legislature and outside. Sir Frank Noyce during a debate on the question in the Assembly on the 20th September, 1933, tried to explain that

"the holding of 51 per cent by Imperial Airways was a fundamental condition of the whole arrangement, especially of the grant of the subsidy and if it had not been accepted, it would not have been possible to start the service."

It cannot, however, be gain-said that had the Government of India adopted a strong attitude on the question and declined to yield to the unreasonable demand of the Imperial Airways, an agreement could have been concluded wherein the controlling interests would have been Indian. Moreover, there was no reason to be in such a haste to establish the aerial contact between the East and the West even at the cost of sacrificing the interests of the country. As a last resort, as suggested by the Retrenchment Sub-Committee, a State service could have been inaugurated by the Government even if private Indian capital was not forthcoming. However, there is no doubt that if the opportunity had been given, Indian capital could have been found for investing in the Aviation industry as evinced by the successful enterprise of the Tatas, who have built up a highly efficient internal airmail service without any subsidy from the Government. But Sir Frank Noyce assured the Assembly that

"these arrangements are subject to the provision that in 1939 the Government of the day will be at perfect liberty to reconsider the whole position."

Public opinion in India had, therefore, no option but to wait for further five years.

Adieu Paniers, vendanges sont faites—says the old French saying. The Empire Air Mail programme loomed in the air. The arrangements which were due to expire in 1939 were replaced by the arrangements for the operation of the Empire Air Mail Scheme. The Indian Trans-Continental Airway cease to operate between Karachi and Singapore and their operations have been transferred to the England-Calcutta Section, on which they would operate half in conjunction with the Imperial Airways. The capital of the Company will also be increased from Rs. 10 lakhs to Rs. 32 lakhs. *But the proportion will remain the same, that is the 51% dominating*

interest of the Imperial Airways, a non-Indian concern, over the vital industry of Aviation has been perpetuated and will continue uninterruptedly for the next term of 15 years. It hardly needs to be explained that the entire Aviation policy of the Government would as a consequence continue to be dictated by the Imperial Airways and would not, therefore, be necessarily determined in accordance with public opinion in this country. After the strong expression of protest at the time of the last agreement, the least that the Government of India were expected to do was to see that the new agreement eliminated the 51% foreign domination clause and provided for the major part of the capital in Indian hands, both private and Government. Non-Indian vested interests have been consolidated in a vital sphere, which is of defensive, no less than of economic value.

And how is it explained? The Government of India have sophistically stated that the arrangements were placed before the Standing Finance Committee and were accepted by it at its meeting on the 27th February, 1937, and were subsequently formally approved by the Legislature which accepted the necessary demand. It should be made clear, however, that three members of the Standing Finance Committee, Messrs. Asaf Ali, Sait and Gadgil, dissented from the proposal and as for approval by the Legislature it was simply a formal voting of the grant. That the Government of India ought to have consulted the Indian Legislature and the public at the time when the proposals about the Empire Air Mail scheme were submitted by His Majesty's Government cannot too much be emphasised.

At the time of the negotiations about the Trans-Atlantic Air Service between U.S.A. and the Imperial Airways, it was stated that "understandings had been reached with America based on the principle of full reciprocity which it was hoped would bring about as soon as possible the establishment of the service" (*italics are mine*). In December last year, Sir George Beharrel, Chairman of the Imperial Airways Ltd., speaking at the annual general meeting, said:

"In Europe this is not the case. If a British Company secures a contract from the British Post Office for the carriage of mails, outwards from Great Britain, it hardly ever follows that the same company secures a contract for carrying the inward mails from the foreign countries to Great Britain. The contract for the inward mails is usually and not unnaturally, awarded by the country concerned to its own national company."

Perhaps Sir George has forgotten the 'unnatural' agreement imposed upon India by

the Imperial Airways. And about the absence of reciprocity, is it not true when he says, 'In Europe, this is not the case'?

Another feature of the new agreement is that India will take no direct part in the operation of the Sea-plane services, though she would co-operate in the provision of the ground services, as according to the Government "India's interest in the development of sea-planes is comparatively small". In fact, there is hardly any justification for circumscribing the activities of the Indian Trans-Continental Airways to the operation of land-planes and excluding thereby trained Indians from employment in the sea-plane services. India has got a long coastline and large navigable rivers and the training received by Indians in the operation of sea-plane services could have been utilised with much benefit in the development of this important branch of Civil Aviation. It is surprising that the Government of India have attached so little importance to sea-plane aviation while every other maritime country considers it of special defensive value.

Under the new agreement, Imperial Airways will be paid by His Majesty's Government an agreed sum for the carriage of mails and an additional payment by way of subsidy. India's share in the total payment will be £102,500 or Rs. 13.7 lacs. It may be of interest to note that the Australian contribution, on the basis of not more than 40,000 lbs. of mail letters a year, will be £40,000 sterling subsidy and £32,000 sterling for mails. The *intelligentsia* in India wonder as to why the controlling interests in the Trans-Continental Airways have been taken away from Indian hands even though such a heavy burden of Rs. 13.7 lacs a year has been imposed upon the Indian tax-payer.

In the Memorandum submitted to the Standing Finance Sub-Committee on the 27th February, 1938, the Government of India have been at pains to explain "the expansion of opportunities for employment of Indians in Aviation" as a result of the new arrangements. It is stated:

"The Government of India have made arrangements for the employment and training of the largest number of Indians reasonably practicable, on the services operated by the Trans-Continental Airways. Further, Indians will not be debarred from employment in any capacity in the services operated by Imperial Airways, provided they possess the qualifications, experience and other qualities which are considered essential."

The public in India has, however, ceased to be enraptured over these vague assurances and platitudes. They have only recently seen how

the process of "de-Indianization" is working in the higher services under the Government of India. Moreover, is it not the primary duty of the Government of the country to see that its nationals are equipped with full training to repel aerial attacks? What India wants, however, are not a few jobs but the control of a key-industry.

Meanwhile, the Indian National Airways, the Tata Air Service, Irrawadi Flotilla and Airways Limited and the Air Services of India ply on

their internal operations. The first company holds 25% of the share capital of the Indian Trans-Continental Airways. But is it strictly an Indian concern?

It is said that the new arrangements with the Imperial Airways whereby the controlling interests in the Indian Trans-Continental Airways are handed over to the foreign concern, will expire after 15 years and the agreement will stand to be revised. But who knows? History may repeat itself.

BANKIM CHANDRA CENTENARY CELEBRATIONS

Karnataka Sahitya Parishat, Bangalore

(Contributed by the Secretary, Karnataka Sahitya Parishat)

A PUBLIC meeting was held under the auspices of the Parishat on Thursday, 30th June, at 5-30 p.m., to celebrate the Centenary of the birth of Sri Bankim Chandra Chatterjee, the celebrated novelist of Bengal, and to commemorate along with it, the services rendered to Kannada by the late Mr. B. Venkatachar, who popularised Bankim Chandra's novels in the Kannada Country, through his delightful translations. Prof. B. M. Srikantia, M.A. B.L., Vice-President of the Parishat, presided. There was a good and representative gathering present. Portraits of Bankim Chandra and Venkatachar were exhibited on the occasion.

The function began with the singing of "Bande Mataram" of Bankim Chandra by Mr. K. C. Sampathkumarachar, B.A., B.T., well-known Gamaki. Mr. B. M. Srikantia, with a few opening remarks in the course of which he referred to the appropriateness of the celebrations and the unique significance of "Bande Mataram," called upon the persons who were to speak on the occasion.

Mr. D. K. Bharadwaj Vidyabhushana, well-known Kannada writer, presented a brief study of "The Personality of Bankim." He said that Bankim was a true patriot who was able to preach the gospel of love towards one's own country and language, through his novels and writings. Mr. Masti Venkatesa Iyengar, M.A., Excise Commissioner to Government of Mysore, renowned short-story writer and poet, author of "Rabindranath Tagore" in Kannada, spoke next on "The Place of Bankim Chandra in Indian Literature." He said that Bankim no doubt wrote in Bengali for the Bengali people, but the national spirit which he enshrined in his works escaped the borders of Bengal and caught fire in distant lands, and today he is regarded as the Father of Modern Indian Literature. "Bande Mataram," a little song, has now become the great symbol of the worship of our Motherland. Then Mr. L. Gundappa, M.A., Literary Assistant in the English-Kannada Dictionary Office of the Mysore University, read a few passages

from the Kannada translations of Bankim's novels with a view to illustrate the style and manner of Bankim's writings, the vividness and naturalness of his portrayals of characters and the greatness of his sentiments. Mr. A. R. Krishna Sastry, M.A., Assistant Professor of Kannada, Central College, Bangalore, contributed a refreshing speech on "The Modernity of Bankim." The speaker referred to Bankim as the forerunner of modern literature in India, particularly prose literature. His "Krishna Charitra," a rare work, fully reveals the modernity of a mind trying to understand the historicity and greatness of a "mythical" personage.

Sri S. Shalman then read out a paper, being a sketch of the "Life and Work of Mr. B. Venkatachar."

Mr. B. M. Srikantia, in his closing remarks, stated that what Bankim was to Bengal Mr. Venkatachar was to the Kannada Country. Bengal was the first and foremost to catch the spirit of the Indian Renaissance, and led the other provinces in India. She produced many worthy sons, geniuses in religion, literature, arts and science, the most endeared of them all to the Kannada Country being Bankim Chandra. It was no exaggeration to say that Venkatachar created among the public the love of reading Kannada literature. Both of them stood for the uplift of the people through the vernacular.

After thanking the lecturers, Mr. Srikantia availed himself of the opportunity to acknowledge publicly the token of sympathy and goodwill shown by the Shrimant Rajasahab of Jamkhandi to the Parishat in the shape of a donation of Rs. 101 to the Parishat, in response to its request. Mr. Srikantia also referred to the recent announcement made by the Jamkhandi Durbar recognising the principle of making Kannada the official language of the State in due course. The gathering expressed warm appreciation of the generosity and the sympathetic outlook of the Shrimant Raja Sahab of Jamkhandi.

THE PERFUME INDUSTRY OF FRANCE

An Example for India to Emulate

By PROF. V. SUBRAHMANYAN, D.S.C., F.I.C., F.N.I.

Department of Biochemistry, Indian Institute of Science, Bangalore

A CONSIDERABLE part of the world's perfume industry centres round Grasse in the south of France. The town is situated on a hill slope and can be easily reached by road from either Cannes or Nice. The surrounding country is famous for its delightful climate and wonderful scenic beauty. There is also abundant production of flowers, which are utilised to maximum advantage.

GRASSE, THE PERFUME CENTRE OF FRANCE

The town has a population of about 12,000, most of whom are engaged in the perfume industry. There are about fifty factories in and around the town and some of them are world-famous for their high class perfumes.

Two classes of perfumes are produced—pure and blended. The pure ones are just essences from perfume-bearing plants. These are prepared with the greatest care so as to ensure the maximum retention of the original flavour. The blends are generally mixtures of pure oils and are done according to recipes, which are closely guarded trade secrets.

METHODS OF MANUFACTURE

The pure oils are extracted according to well-known methods. The most delicate perfumes (which cannot stand strong heating) are first absorbed into fat (beef or pork fat being used for the purpose). In some cases, warm fat is used, while, in others, only cold fat is employed. The perfume which is present in the fat is next taken out with alcohol in which only the perfume dissolves. This process, though apparently simple, still involves a number of technical difficulties, which have to be skilfully overcome.

Some of the perfume is always left unextracted in the fat. This is turned to advantage by using them for the manufacture of toilet soaps. Some of the brands of soaps thus produced are famous for their rich perfumes.

Perfumes which can stand stronger heating are taken out by either direct distillation with water or by the well-known method of steam distillation.

The pure oils from some of the flowers like the gardenia, the rose and the jasmine are nearly as popular as the blends. High prices are also paid for them because they are pure and are always of the same quality.

THE ART AND SCIENCE OF BLENDING

Blending is partly art and partly science. It is not merely an intelligent combination of various perfumes to obtain the most pleasing effects, but it also involves a special technique for obtaining and preserving the desired quality. In some cases, the blended-materials have to be allowed to age, while, in others, they have to be shaken intermittently for several months. The chemist and the blending expert work together and are continuously striving to produce newer and more pleasing effects.

There is probably no place in India (except, perhaps, in some parts of Kashmir) which can compare with Grasse for the profusion and variety of flowers, but there is no doubt that there are several small areas, which are famous for their abundance of individual flowers. It should be possible, with proper organization and expert assistance, to develop small industries in such areas and to supply the pure essences to the consumers. If they can be produced cheaply, they can even be exported in spite of the heavy duties levied by various countries. Blending can be developed at a later stage. With some intelligence, practically all the well-known blends can be closely imitated.

INDIAN PERFUMES ARE GENERALLY OF POOR QUALITY

When making the above suggestion, it is realised that there is already a small perfume industry in the country and a fairly extensive perfume trade. Unfortunately, most of these aim at cheapness, with the result that quality has suffered considerably. It is in this direction that there is need for better organization and more effective control, so that Indian products may gain a reputation for *genuineness and good quality*.

The principles of the methods used for the extraction of perfumes are well known, but there is still considerable need for expert scientific assistance. The conditions will have to be specially standardized for each perfume-bearing material so that (a) the original perfume may not, in any way, be altered during extraction, and (b) the maximum possible yield of perfume may be obtained. There is also need for periodical checking of the composition of the products so as to maintain uniform quality.

THE INDUSTRY SHOULD BE REORGANISED WITH EXPERT ASSISTANCE

A few experienced investigators like Mr. B. Sanjiva Rao of the Indian Institute of Science, Bangalore (who has had over 20 years of experience in the line) are already available. If the industry is to expand adequately, many more such experts will be needed. There is also need for proper organization, so that all the available resources of the country will be efficiently collected and skilfully utilised. Some surveys have already been made by Government departments, but more systematic investigation of the raw materials is still needed. The best kind of extracting equipment should be obtained and the most up-to-date methods followed.

Enormous sums of money are spent, every year, by the Indian consumers on foreign perfumes which are imported either in the pure or blended form. Perfumed chemicals (synthetic or otherwise) suitable for blending are also being imported under various trade names. A large part of this importation can be avoided and the major part of the money retained in the country

if an indigenous perfume industry—with reputation for quality—can be built up. A few suggestions for the organization of the industry have been made and it is hoped that before long, both the Government and the leaders of industry will take some interest in the subject and initiate the necessary organization.

THE INDUSTRY WILL NEED PROTECTION IN THE EARLY STAGES

The young industry will, of course, require some protection in the early stages, for, otherwise it will be swamped out by foreign competition. In this connection, one is reminded of the extremely stringent regulations adopted by the French Government, even today, to discourage the importation of foreign flowers and other perfume-bearing materials into their country. The following case will be of some interest. Not very long ago, a French gentleman and his wife had gone on a visit to San Remo on the Italian side of the Riviera. There they are presented with a small bunch of flowers which they were naturally anxious to take home with them as a memento of the visit. As soon as they reached the French frontier, however, they were searched and charged 20 francs, which was about five times what the flowers were worth! This shows how even a country like France which already commands a considerable part of the world's perfume market takes drastic steps to protect her industries! Even the raw materials—let alone the perfumes—are not allowed into the country. A similar and perhaps, even stronger protection will be needed by the Indian industry, when it is properly initiated.

TECHNOLOGICAL TRAINING IN INDIA

CHEMICAL ENGINEERING IN INDSTRY: ITS NEED FOR INDUSTRIALISATION

By GOPALDAS G. GULRAJANEY, B.Sc. TECH., CH. E., B.Sc. CHEM.

THERE is pretty well complete unanimity in all quarters on the necessity of industrialization of this country. The authors of the *Report on Constitutional Reforms* as far back as 1918, said:

"On all grounds a forward policy in industrial development is urgently called for not merely to give India economic stability, but in order to satisfy the aspirations of her people who desire to see her stand before the world as a well-poised up-to-date country; in order to provide an outlet for the energies of her young men who are otherwise drawn exclusively to Government service or a few over-stocked professions; in order that the money now lying unproductive may be applied to the whole benefit of the community; and in order too that the speculative and literary tendencies of Indian thought may be bent to more practical ends. These are political considerations peculiar to India itself. But both on economic and military grounds imperial interests also demand that the natural resources of India should henceforth be better utilised".

Although there are undoubtedly great potentialities in this direction, so far nothing worthy of the name of an 'Industrial Revolution' appears to be taking place. The following table will reveal how backward is India in regard to industrial development in comparison with other countries, despite the fact, as observed by the Industrial Commission, that she produces nearly all the raw materials necessary for the requirements of a modern community!

| me ntr. | No. of Establishm | est in | ross value in industrial output (Rs. lacs) | Population proportion, p.c. of India | with |
|------------|----------------------------|--------------------------|--|--|----------|
| India | 9,422 (incl. States) | 700 (bulk British) | 800.0 | | |
| U. K. | 1,07,500 | 7,607 | 4,269.0 | 13% | 23 times |
| U. S. A. | 1,74,136 | 23,000 | 19,444.0 | 35% | 75 " |
| Canada | 24,020 | 1,445 | 952.5 | 3% | 5 " |
| Japan | 13,711 | 1,009 | 1,905.0 | 19% | 3 " |

TECHNOLOGICAL TRAINING IN INDIA

There are innumerable points to be considered in connection with the slow and tardy industrial development in this country. But in an article of this nature, one can only deplore the fact that India still suffers from grave deficiencies with regard to the technological education. Obviously, no great progress in industrial development is possible until we have

within call an adequate supply of trained personnel. The growing problem of unemployment in this country has, however, focussed public attention on this point; and now more than ever, a great need has been felt for provision of facilities in technological education which, besides industrial advancement of the country, could find effective employment for the youth of India. Under provincial autonomy, each province has to aim at becoming self-supporting in regard to those industries which give food and work to a large portion of the population. Under the circumstances, each province should encourage vocational and technological education by establishing technical schools and polytechnics. I am told that this line of action is to be soon followed by the 'Congress Provinces' in this country; and a beginning has already been made by the U. P. Government by establishing certain 'flying' tuitional courses. It is, however, gratifying to note that the Karachi Corporation has been the first among the City Councils to have displayed special interest in industrial and technical training by its recent decision to open a polytechnic school at Karachi. It is also gratifying to note that the Bombay University has recently opened "a national department for the benefit of the whole country". This Institute, which goes under the name of the University Department of Chemical Technology, has been established, to quote the authorities themselves, "to build the super-structure of industrial development in this country" by training 10 well-grounded graduates in Science from all over India in Chemical Engineering. The starting of the Technological Department will always be a landmark in the history of the Bombay University; it has given a status and reputation to this University, being regarded in all its essentials to be equal to the best equipped technological adjunct of any University in the world. It satisfies at long last a long-felt want by training young men in Chemical Engineering.

CHEMICAL ENGINEERING

The people of this country have, however, not yet understood the full significance of this

profession. Often I have been asked: "What is Chemical Engineering?" I am not at all surprised at the query; for this field of engineering, which had its origin only two decades back in the Continent, is still in its infancy in this country, having birth under pressure of events, which have necessitated each and every country to cry for self-sufficiency. This particular bug has bitten not only the countries largely deficient in raw materials, but even those plentifully supplied in many ways.

CHEMIST-ENGINEER

The continuously disturbed state of the world demands careful exploitation of all natural resources in raw materials. It is not surprising, therefore, that the need should be felt for men capable of translating "grams into tons, beakers into tanks, and flasks into autoclaves". Such then is the justification of the Chemical Engineer, who has been defined by the Institute of Chemical Engineers, London, as "a professional man experienced in the design, construction and operation of plant and works in which matter undergoes a change of state and composition."

He has also been described in terms of approbation by both the Chemist on the one hand and the Engineer on the other. It is sometimes stated that the Chemical Engineer when in the company of Chemists is an Engineer, and when in the company of Engineers is a Chemist. Accordingly, Chemical Engineering need no longer be regarded as has been done till recently even in advanced countries like Germany as *Maschinenkunde für Chemiker*.

WEIGHTY CONSIDERATIONS

In the actual practice of Chemical Engineering as a profession, the economic and business considerations are usually controlling. Of course, the proposed process must in itself first be developed; but given one that has been developed to the stage when production is to be begun, the remainder of the problem depends upon recognition of economic and business principles as they apply to that particular project. In short, Chemical Engineering relates to the development of a project to the point of sustained commercial success. Naturally, therefore, the Chemical Engineer has to answer the following typical questions before launching on any scheme:

- (1) Are the raw materials and intermediate products involved the cheapest which may be used?
- (2) Which process requires the smallest amount of equipment as well as the least expensive type?
- (3) Is the equipment required highly specialised and

is it, therefore, likely to prove expensive to construct and replace?

(4) Which process will consume the least power in the form of heating or cooling facilities, mechanical agitation, communication, etc., etc.?

(5) Which process will best fit with existing methods of manufacture from the standpoint of building and equipment which may be available?

(6) Which process will be the most economical in its labour requirements?

NECESSARY TRAINING

The above account touches only very briefly and in a general manner some of the many problems, which the Chemical Engineer has to solve, and to do so not only efficiently and economically but within the law as well. To be a success, he has to keep himself in touch with a great number of fundamental sciences unlike the case of other engineering professions. The training of such a man, therefore, should be made on a broad basis, involving a sound knowledge of such subjects as, Technical Chemistry, Engineering,—Mechanical, Electrical and those branches of Civil Engineering dealing with the strength of materials and factory design and construction,—together with principles of economic production, including, factory organisation and management, with a thorough grasp of the "Laws of Negligence". A man so equipped should be capable of fulfilling the requirements of a Chemical Engineer.

It must have been apparent by now that the course for Chemical Engineer has been of a general nature, based on a sound general training. It is deliberately made so, since it is felt that special training for a particular industry limits one's outlook and does not give him the breadth of vision, which will enable him to adapt to the equipment of one industry to the needs of another. Moreover, if special training is adopted, one cannot be sure that at the end of such a course vacancies will occur in the industries for which the training is designed and one is handicapped thereby in obtaining a suitable post.

INDIA'S NEED

It is an admitted fact that almost all the raw materials with but few exceptions undergo chemical change as well as change in physical form and appearance. Naturally, therefore, Chemical Engineering plays a vital part in many industries. It is much broader than either chemistry or engineering alone, and utilises both through the medium of the so-called unit operations, which in proper sequence and co-ordination constitute an industrial process. If a need was felt for it and was found useful in the

Continent, how much more so should it be in India, which is craving to be self-supporting!

It must be admitted that until the supply of trained men has been greatly augmented, the cost of technical staff to the modern scientific industries must necessarily remain exceptionally high. Extension of vocational and technological education should, therefore, precede a policy of industrialisation. It may be objected that in the West, especially in England, technological

education has succeeded, not preceded the establishment of industries. But in the West, the whole movement towards industrialisation was spontaneous, whereas in India the attempt is being made deliberately to graft Western methods and organisation into Eastern society, so that it will be necessary to take special measures to ensure adequate supply of "managers and foremen, experienced in the practical management of shops and factories".

COMMENT AND CRITICISM

Compulsory Hindi

On pages 708-9 under the heading of 'Linguistic Hungerstrike' in *The Modern Review* for June 1938, there is a note, which condemns a cartoon representing the Premier of Madras as stabbing his mother (tongue), which disapproves the fast observed by Stalin Jagadisan for about fifty days till this day breaking the record fast of 21 days of Mr. Gandhi made much of then in all the newspapers of India and abroad, and which doubts whether the Madras ministry are resisting Hindi upon an unwilling public, and longs for information about the majority of Tamil-speaking persons being for or against the introduction of Hindi. There needs be no doubt as to the opposition being wide-spread and spreading daily and heroic unto death, and as to the Premier not moving along the line of least resistance in forcing Hindi on urchins in Forms I to III. Arrests of more than 50 persons till today have been made and they are remanded and are under trial have been made and they are remanded and are under trial for opposing the compulsory study in Mr. Gandhi's wav of fasting and Satyagraha, with a view to ward off an impending misfortune and danger to their mother-tongue. Here below is a summary of the reasons advanced by the ministry during the successive stages of the agitation for the compulsory study of Hindi in schools.

(1) Hindi is a most widely spoken language in North India—a statement seriously contradicted with facts and figures in brochures in English and Tamil.

(2) Hindi study will promote trade and commerce with North India and relieve the congestion of unemployment in South India—as if North India is very prosperous and ready to feed hungry mortals in South India, whereas the introduction of compulsory Hindi in schools of the Madras province will facilitate the immigration of hundreds of Hindi teachers from the North seeking employment.

(3) Hindi study will promote unity and nationalism in India. That Hindi is Protean, that one form of it spoken by one people, is not recognised by another and is a stranger to it, and that it has not united North India as a whole as a *lingua franca*—are stubborn facts. The question is often asked, "Why not North India learn Tamil for the alleged purpose of unity and nationalism?" Is Hindi a compulsory study in North India?

(4) Hindi study is a plank in the Congress programme of the past half century. It is flatly contradicted by Pandit Jawaharlal Nehru himself, though it may be a hobby with Mr. Gandhi, our Premier's *Sambandhi*.

(5) The sturdy Mohamedans *may* study Hindi in Urdu characters while the mild and meek Hindus *must* study it in Nagari script. Why this invidious distinction? Will the different scripts mutually unintelligible contribute towards the much coveted Swadeshi Government? It is thought that the Nagari Script will encourage Sanskrit study.

(6) Politically, Hindi study will enable Southerners to participate in the effective administration of India in the Central Legislature. How many Southerners can have this wonderful privilege? Why crucify thousands of school-going urchins for the sake of a handful of fortune's favourites, when the National Government is *fait accompli*. Still 97 p. c. of the masses do not know their own vernaculars, *i.e.*, read and write them, under the British Government which has fostered mass-education. They are not compelled to study their vernaculars yet.

(7) The children of Denmark learn five languages in their school-going age. It may be true. Why resort to Denmark for defence? Climatic conditions differ as well as political and economical. Indian energies—particularly the South Indian energies—are being sapped and scorched by the burning tropical sun, and premature old age and death are almost the order of the day. Why then overload them?

(8) Hindi study will not affect promotions from class to class but attendance in Hindi classes is compulsory. How can the urchins acquire basic knowledge of Hindi when they have no mind to learn it? As the proverb has it, you cannot force an unwilling or unthirsty horse to drink. How will it serve to realise political ambition, unity and the national movement?

(9) Hindi literature will enrich Tamil literature! A language comparatively recent with no grammar till two or three years ago and no literature worthy of mention except Tulasidas's Ramayanam is going to enrich an ancient and highly developed and abundant literature of its own, supplemented in many directions by the world-encompassing English literature during the past one century and a half. The Kural in Tamil is a gem unparalleled in any progressive literature in the world, and it is worth noting that Bengali has quite recently absorbed it in translation.

(10) In all ministerial utterances 'Hindustani' has taken the place of 'Hindi,' though Hindustani is not the topic in dispute. Why this disguise? Why this diversion

of public attention? The vexed question is about compulsory Hindi. Is it to appease the wrathful Mohamedans? Why this change of venue? 'Hindustani' was the name of Sanskrit in the past as spoken in Aryavarta.

(11) Our Premier had given his word to a friend in the North to introduce compulsory Hindi in schools if he should become a Minister and he wants to keep his word at any cost having become Premier. The promise is 'too early reckoning without the host.' When it comes to catching the Tartar, why persist in the attempt to displease the Tamil population as a whole against incurring the displeasure (mockery or taunt) of one particular friend? The Premier and his colleagues often boast that they are the *ministers of the people* and yet flout them as ignoramuses and scout their wishes and entreaties. They profess to advance Tamil while they smother it and their playing Dr. Jekyll and Mr. Hyde at once is unworthy of the great trust placed in them by the majority. In extenuation of their murderous scheme, they ascribe the mighty opposition to unnecessarily compulsory Hindi to their political opponents. If their opponents find their mother-tongue strangled, is it not their duty to ward off the crime and save their mother? Is this an argument? Will the Tamil nation gird up its loins at the instance or instigation of a few political opponents?

(12) If the experiment of compulsory Hindi is not successful, it will be withdrawn. Schools and Colleges in South India—most of them are unendowed—will play the Cinderella for the Knife Grinder's six pence in the way of grant-in-aid, irrespective of the uselessness or otherwise of the foreign tongue forced upon them. When once introduced and encouraged by the Government, it will strike root, and to uproot it afterwards will be no easy task. The policy of 'I am Sir Oracle' is tyrannical and

will and must come to an end, all at once or abruptly. 'The voice of the people is the voice of God.'

(13) Thousands of Tamilians have gathered around the banner of the great Hindi opposition. Mass meetings are held in all Tamil districts, and black flags greet the Ministry in their tours. Jails are no menace to them and they are ready to die for their mother-tongue. All policy and diplomacy will be of no avail unless what the Tamil nation demands is granted. In this matter of self-assertion on their part, the Madras Ministers are no better judges than any outsider.

(14) This compulsory Hindi is not a question of parties. The Tamilians include Congress-wallahs, Independents, Justicites and what not of every community. If the devotees of Tamil are found in every one of these sections, it is idle to ignore their demands or leave their grievances unredressed. Schools and Colleges are mostly manned by one section of the Indian population reputed as 'intelligentsia,' but the schoolmasters will be nowhere in number when the whole Tamilian population is taken into account. To conclude with a couplet or two from the Kural, apt and apposite to the point:

'Who not agrees with those around, no moderation knows,
In self-applause indulging, swift to ruin goes.'—474.

'The foes who fought to triumph, find their thoughts were vain,

*If hosts advance, seize vantage ground, and menace the
fight maintain.*'—494.

PATRIOTIC WOMEN'S ARMY ORGANIZED BY NEW DELHI SECRETARY

Lord Reading's Talented Wife as Chief

By MRS. CHAMAN LAL

A WOMAN WHO INVENTED BILLIONS LOTTERY SCHEME. RURAL WOMEN'S CONFERENCE.

A former Secretary in the Viceroy's Home in New Delhi is organizing the Patriotic Women's Army for the coming war. With more than usual secrecy the Government has surrounded its plan to organise a national emergency corps of women for service in war time, but this week the news leaked out. With it came hints that the woman in charge was to be former Private Secretary, efficient, much-travelled Dowager Lady Reading.

Compulsory military service has never been stomachied by Britons. But it will operate in the next war, if any, and accordingly the Chamberlain administration has concocted a scheme

for filling war time jobs at home wherever possible by women. Pseudo-pacifists will thus not be able to insinuate themselves into safe positions miles from the firing line. The project provides for enrolment of "Women Territorials" throughout Great Britain. On emergency, all existing Women's organisations would be merged into a central body.

Last week, the Marchioness of Reading made a start on her job by sounding officials of the National Council of Girls' Clubs and the Young Women's Christian Association as to whether they could help, provide recruits for Air Raid Precautions.

The Marchioness has been Chairman of the Personal Service League, since her husband's death.

"SILLY COLONELS"

On a somewhat narrower women's topic this week *ex-Daily Herald Editor*, Hamilton Fyfe dilated in *Reynolds News*:

"This silly business of women colonels should be ended. . . . the general attitude towards war makes people shudder to think of women pretending to be part of the military machine."

Photographs of Queen Mary as the "Colonel" of a British regiment and of the Duchess of Gloucester "inspecting a military guard of honour" inspired vitriolic Mr. Fyfe's candid comment.

LADIES, YOU MAY NOT SMOKE

The will of Miss Annie Faulder, of Buxton, who disinherited any person of the female sex who contracted the habit of cigarette-smoking, was pronounced valid by Mr. Justice Farwell, in the Chancery Division last week. Of the beneficiaries six had said that they had never smoked, and one said she had smoked on occasions only.

RURAL WOMEN'S CONFERENCE

Women leaders of Rural England are meeting in London this week-end. From the stone hamlets, from mining villages, from valleys, from the red-brick country towns and from the white fishing ports, more than 7,000 women are

gathering in the Albert Hall for the annual general meeting of the Women's Institutes.

They come from the big house and the village shop, from the farm and the labourer's cottage; women whose families have done service to the State for generations, women whose grandmothers never moved beyond their own market town—all have made the journey to London to represent their own Women's Institute at their great meeting. In 5,000 villages during the last few months, country women have been making up their minds for themselves about the questions which are to be discussed here. Some of these are matters of internal Government. The Women's Institute Movement is a true democracy, and there can be no changes made in its rules without the assent of the whole body of members.

The subject which is of most personal interest to many of these women of the countryside is the new method of relieving pain in child-birth. There are now in existence various patterns of gas and air machines which give a woman in labour relief from pain without making her unconscious. An apparatus of this sort has been approved by the British College of Obstetricians and the Central Midwives' Board, and is now in use in Queen Charlotte's Hospital.

WIVES FORM A TRADE UNION

DEMAND WEEKLY WAGE FROM HUSBANDS—"KILLING A CHILD BY TENDERNESS"—
CHILDREN'S PARADISE—A NEW SCHOOL EXPERIMENT—HOW ENGLAND PROTECTS
CHILDREN

By MRS. CHAMAN LAL

WHILE the Hindu civilization nominally regards the wife as the ruler of the home, and in practice she has very little rights, the women in England generally run the home and they are practically masters in the domestic atmosphere. Still they are not satisfied with the present conditions and a new marriage slogan has become popular.

In return for promising to love, honour and obey, young brides may soon be asking their grooms to sign agreements and guarantee them a fixed weekly wage. This is part of a campaign to be organised by the newly-formed wives' trade union, which has the support of many prominent women workers.

The union, known as the Married Women's

Association, has been started to protect the interests of Britain's wives. Miss J. Frances, champion of women who have husbands to contend with, stopped enrolling new members yesterday to explain the objects of the enterprise.

"By law, housewives are entitled only to food, shelter and clothing," she said:

"Many of them work their fingers to the bone for husband and children, yet they have no rate of wages, no national health insurance, no set holidays, with or without pay, no days off and no limit to the number of hours they work. Just think of some of the jobs working housewives have to do—and do well.

"They have to be experts on dietetics, housework, cooking, dressmaking, laundering, mending, nursing, infant rearing, and a host of other subjects. And yet, although many wives work under conditions that would

set most men's unions howling in protest, not a single women's organization has raised its voice against this state of affairs. We hope to get an act passed giving wives the right to claim a proportion of the family income. In other words, we aim at making marriage a partnership instead of the ownership of the wife by her husband."

The idea of partnership is no doubt the ancient Hindu ideal, but the weekly wages for wives is not so good an idea, since I believe that all income must go into the hands of the wife who should run the home.

"KILLING CHILD BY KINDNESS"

How many thousands of mothers, especially rich mothers in India, kill children by kindness? Some actually die, while others become invalids or spoilt during their whole life. These mothers should be punished by law. In England such a mother is hated by society and prosecuted by a law. Only yesterday a mother was prosecuted for "killing a child by too much kindness".

Mrs. Rebecca Burman, forty-six year old widow, is to lose the custody of her only child—a boy of eleven whom, it was alleged, she was almost "killing by kindness". A jury at Lindsey Quarter Sessions yesterday found her guilty of neglecting the boy so that his health was injured. She was bound over for three years, and order was made putting her son in the care of the local municipality.

PARADISE FOR CHILDREN

"DO AS YOU PLEASE" SCHOOL

England has started a new experiment in order to make children bright and active. A new school where mischief and all the forbidden pranks of childhood are encouraged was opened in London last week.

The lucky pupils are allowed to slide down the bannisters instead of using the stairs, daub the walls with paint and comic drawings, squirt water at each other in special leak-proof rooms, and generally have the time of their young lives. No one ever says "Don't" or "You mustn't". In fact, the naughtier they are the more they are encouraged.

Psychologists believe that this new method of education gets rid of complexes and repressions that hamper the progress of nervous and backward children. The new school, built by the Institute of Child Psychology in Bayswater, represents the last word in training centres.

There is one room that must seem like paradise to the child who likes to play with paint. There they can have as many pots of sticky paint as they like and daub its specially prepared walls to their hearts' content. They are never told not to make a mess. The more

paint they splash over the floor and walls the better. And the staff never clean up while children are in the room in case it should make them feel guilty.

In another room, dressed in macintosh overalls, they can squirt hoses at one another, play with taps and leave the floor running with water without being scolded. Modelling rooms filled with trays of damp sand, boxes of toy soldiers and building materials keep them happy for hours. The things they build there and the comic pictures they scrawl on the walls of the "paint pot paradise" help psychologists to analyse the kiddies' difficulties and decide why they are sulky, violent or backward.

Dr. Margaret Lowenfeld, in charge of the new centre, believes that lack of opportunity to "let off steam" is behind a good deal of juvenile delinquency.

HOW ENGLAND PROTECTS CHILDREN

Here is a tip for our Congress Ministers and Women legislators who care to protect children working in large or small factories. England has just granted a Charter to Young People.

To-morrow 2,50,000 factories in Britain will begin their first full week's working under the Young People's Charter, which came into operation on Friday as part of the new Factory Act. There will be a 48-hour week for all women and young people in factories, and not more than nine hours can be worked in any one day. For children under sixteen, overtime will be absolutely prohibited. Those over sixteen may work certain overtime, under strict regulation, but this must not exceed 100 hours in a year. From July next year, the 48-hour week for children under 16 will be reduced to a 44-hour week.

OVERTIME RULE

Women, young people and children are also protected from having to work early in the morning or late at night. No child under sixteen is to work after 6 p.m. This is planned not only for health reasons, but in order that children shall be able to attend evening schools. General restrictions on overtime for all classes of workers are introduced, and no factory may work systematic overtime for more than 25 weeks in any year.

Many laws for the protection of women and boy workers exist in India but they are seldom obeyed by greedy factory owners who bribe factory inspectors.

London,
July 4, 1938.

Book Reviews

BOOKS in the principal European and Indian languages are reviewed in *THE MODERN REVIEW*. But reviews of all books sent cannot be guaranteed. Newspapers, periodicals, school and college text-books, pamphlets, reprints of magazine articles, addresses etc., are not noticed. The receipt of books received for review cannot be acknowledged, nor can any enquiries relating thereto answered. No criticism of book-reviews and notices is published.
—EDITOR, *THE MODERN REVIEW*.

ENGLISH

TWISTING THE LION'S TAIL: By B. Attem.
Frederick Muller Ltd., 29, Great James Street, London W.C. 1. Price 5s. net.

The publishers say that Mr. Attem's book may irritate English readers, it will almost certainly amuse them, but it will undoubtedly stimulate them. A non-English reader has not, of course, found it irritating. But it is undoubtedly interesting and in some passages amusing.

The publishers say the book is a glorious and all-embracing indictment of the national characteristics of Englishmen, their sports, their women and even their boasted forms of government. This is partly true. But there is sufficient praise of England in the book to please Englishmen who are not inordinately conceited. For example, take the following sentences.

"England can say with justifiable pride that she has influenced the world."

"The English have given many sports and sporting words to the world."

"The East has created the spiritual man, but England has created, in a certain sense, the political and the social man." "He [the Englishman] is the father of the Parliamentary system of government in the world."

"The Englishman is reliable. If an Englishman promises you that he will do something for you, you may depend upon it that he will keep his word."

"Although the English are very young in their ideas of social life, of art and literature, sports, and several other subjects, they are absolute adults in the art of government."

As regards indictment, take the following sentences:

"The English have for centuries cherished the fond delusion that in sexual matters they are more virtuous than the Continental Nations."

"The English are almost always bragging about their country."

"The English have a positive genius for turning a blind eye to their own defects and for pointing out the defects of other nations."

"The English are not an intellectual people. Nor are they an industrious people."

"The English judges are incorruptible, but they are by no means impartial, for they are swayed much by class, sex, and race prejudice."

"Doctor Arnold of Rugby knew the character of his people when he said, 'My great fear is that the English are indifferent to justice when it is not on their side.'"

Indians and other orientals will find the last three chapters of the book—"England and the East," "England's Influence and Place in History," and "Future," particularly interesting.

In the concluding chapter the author writes that England's financial and naval supremacy have gone and she is not as prosperous as she was before 1914. There are some 3,000,000 unemployed men in her midst.

"Indians do not like the British Government. The new constitution which England has given to them divides the Hindus from the Mohammedans and gives them only the shadow of real self-government. They will, therefore, not be satisfied until they have a new constitution which will bring the two great communities together, enable them to Indianize the army rapidly, and control the foreign policy of their country. And if England does not satisfy their wishes, they might seek the help of Japan—and perhaps of Russia, since there is a fairly large number of open or secret Communists in the country—for regaining their independence. Those two countries are likely to help her. General Araki and some other Japanese leaders have openly declared that it is the duty of Japan to help India to be free, and it has been the policy of the Soviet Government since the days of Lenin to help Eastern nations in their fight to be free against their Western masters."

Indians have no confidence in Japan, and Stalin's policy is no longer that of Lenin.

NATIONAL CONTROL OF THE MANUFACTURE OF AND TRADE IN ARMS: *League of Nations Information Section. Price 7s.*

This volume of 241 pages, which has just been published by the Secretariat of the League of Nations, is the result of a request to the Secretariat by the Bureau of the Disarmament Conference in May, 1937, to collect any useful information available on methods of national control of the manufacture of and trade in arms in the principal countries.

A separate monograph is devoted in the volume to each of fourteen countries: Belgium, United Kingdom, Czechoslovakia, Denmark, France, Germany, Italy, Netherlands, Norway, Poland, Sweden, Switzerland, U. S. A. and U. S. S. R. A summary of the whole situation is given for each of these countries and is followed by extracts from its relevant legislation. The information for each country is arranged under the headings: A. Arms and Ammunition—with sections on manufacture, external and internal trade—and B. Explosives.

The volume shows the degree to which authorization, licences or permits for the manufacture of arms and armaments, as well as systems of centralized supervision, control and inspection, or partial or complete nationalization, exists in the countries mentioned. Similar information is given in respect of the external and internal trade.

The sections on explosives show that special legislation on this matter is in force in all these countries and usually antedates by many years the legislation dealing

with arms and ammunition. The State as a rule exercises stringent control over the manufacture of and trade in explosives.

D.

INDIA—A SHORT CULTURAL HISTORY: By H. G. Rawlinson, C.I.E. The Cresset Press, London, 1937. Price 30s.

In this nicely got-up volume of 418 pages, with thirteen maps, twenty-three plates, and forty-five illustrations, the author has made an attempt 'to present in a popular form an outline of the cultural history of India,—her literature and philosophy, her great religious movements, her art and architecture, from the time of the Indus Valley Civilization up to the establishment of British rule.' It must be admitted at the very outset that it is a formidable task, and can only be successfully achieved by one who has made a special study of the history and antiquities of both ancient and mediæval India, and is fairly conversant with its language and literature. Dr. Rawlinson has earned reputation as a scholar by his monographs on some particular aspects of Indian history, and we naturally expect a scholarly treatment of any subject which he takes up as a special study. The book before us, however, does not satisfy the high hopes which the name of the author raises in our minds. It is a readable book and interesting in many ways, but it lacks in accuracy and perspective. The author has no first-hand information on many of the topics he treats, and does not possess any intimate knowledge of the essential features of Indian culture. He has brought together much interesting information in his book and thrown valuable side-lights on various aspects of Indian culture; but he has failed to grasp its inner meaning and to present it in its proper perspective and historical development. This may be illustrated by his treatment of the Bhagavad Gita. In course of discussion of the religion of the Gupta period he remarks:

"The most popular of the Avatars under which Vishnu is worshipped in modern India is Krishna. Krishna first appears in the Mahabharata as the charioteer of Arjuna and in his mouth is put that remarkable poem, the *Bhagavad Gita*. Arjuna is agast at the prospect of a conflict . . . Krishna consoles him by propounding the theory of *Karmā* (sic) Yoga . . ."

"The *Bhagavad Gita* has been to generations of pious Hindus what The Imitations of Christ has been to Christians, and some authorities have detected Christian influences in its teaching" (p. 126).

Here the author's ignorance about the contents of the Bhagavad Gita is equalled only by his ignorance about the history of Krishna-cult and the place of both in the development of Hindu religion. It may be noted in passing that the word '*Karmā*' is not a printing mistake but used throughout the book in this form.

Want of space does not permit us to enter into a discussion of other points, but the following few sentences, taken from the same Chapter illustrate the author's viewpoints about Indian religion:

1. Krishna, the "dark" God, is probably non-Aryan, . . . (p. 126).

2. The salagrama, a fossil ammonite found in the Gandak river, is supposed, on account of its resemblance to the discus to be sacred to Vishnu (p. 125).

3. Jainism and Buddhism were never the religion of the masses (p. 123).

4. The Mahabharata was originally a secular poem describing the fate of the Kurus at the hands of the treacherous Pandavas (p. 130).

The quotation No. 1 is specially objectionable, as in course of his discussion of Indian ethnology, the author

has accepted the views of Eickstedt that "there are no Aryans and Dravidians, though there are Aryan and Dravidian languages and cultural usages" (p. 9). As regards 4, it hardly fits in with the author's description of the Mahabharata given on pp. 323. These passages specially Nos. 3 and 4 show how ill-equipped the author is for writing on Indian religion and Indian culture, which is based on religion.

The author's knowledge of the political history of India is very poor and he has wisely restricted himself to an extremely brief outline of important events. But even this short sketch is full of errors. Not only has he no first-hand knowledge of the subject but he has not even cared to study the up-to-date historical writings. We shall quote a few instances only, by way of illustration.

1. '125,000 people, Asoka tells us, were carried away captive' (from Kalinga) (p. 76). In Asoka's inscription, the number is given as 150,000.

2. "The Secret Service of Chandragupta was now mobilised into a body of 'Overseers of the Law'" [by Asoka] 'whose duty it was to report upon religious progress in all quarters of the Empire' (p. 76). This is a travesty of facts and it is a pity that the author did not even care to read the English translation of Asoka's inscriptions.

3. 'A reaction, doubtless fomented by the Brahmins, set in' (p. 80) [against the Mauryas]. The author is evidently unacquainted with the views of a large number of scholars who have opposed the theory.

4. Kanishka 'erected a lofty wooden tower, over six hundred feet in height' (p. 99). While the opinions of Chinese travellers vary regarding the height of the building, Hiuen Tsang and others have definitely described it as a stone stupa.

5. Chandragupta II 'transferred his capital from Pataliputra to Ayodhya' (p. 107). Of this there is no evidence.

6. The chronology of the later Guptas (p. 110) is out of date, and has been given up even in the latest edition of V. A. Smith's History on which the author usually relies. His statement that the Imperial Guptas were tributaries of the Hunas (p. 111) has no foundation of truth. The reference to 'the iron pillar at Delhi erected by Kumaragupta I in A.D. 415 in honour to his father' (p. 141) betrays ignorance of the vast literature on the subject.

7. The author makes very curious mistakes about Harshavardhana. He says that after the campaign of the first six years Harsha 'was able to reign in peace for thirty years, without striking a blow' (p. 112). But we know from Hiuen Tsang that he carried a campaign in Kongoda about 642 A.D., more than thirty years after his accession. On p. 121, the author quotes a passage from Rajatarangini describing the end of Harsha's reign. But this king Harsha is not Harshavardhana, as the author supposes, but a king of Kashmir who flourished about five hundred years later!

8. 'From A.D. 732 to 1250 Middle Java came under the rule of the Sailendra dynasty' (p. 150). This is quite wrong and the author contradicts himself when he says on the very next page that 'in the middle of the tenth century the power of the Sailendra rulers in Java seems to have come to an end.'

9. 'The Chalukyas were almost certainly of foreign origin' (p. 160). There is no evidence to justify this assertion.

10. The author's view that the numerous clans that came into power after the death of Harsha 'called themselves Rajputs' (pp. 199, 202) is utterly wrong. This term does not come into use until a much later period.

11. 'In the middle of the eleventh century the Palas were succeeded by the Senas' (p. 206). This is absolutely wrong, and antedates events by more than half a century.

12. 'Raja Jaichand Gahrwar (c. 1040) restored Kanauj to its ancient position as the premier city of Northern India' (p. 209). Jaychandra ascended the throne in 1170 A.D., i.e., 130 years later than the date given, and the credit, attributed to him, really belongs to Govindachandra. We do not know of any Gahrwar power in 1040 A.D., the dynasty having been founded towards the end of the eleventh century A.D.

13. Muhammad Tughlak's 'expedition for the conquest of China' (p. 233) is an exploded myth.

14. The author's attempt to summarise the events of history sometimes leads him to commit serious errors, as the following passage will show:

"In January, 1316, Ala-ud-din died or was murdered, and was succeeded, after the usual interval of disorder and murder which followed the death of a strong ruler, by Muhammad Ibn Tughlak (1325-1347). This eccentric monarch was as fanatical and unscrupulous as his predecessor" (p. 229).

By the word 'predecessor' the author certainly meant Ala-ud-din Khilji, but between him and Muhammad Tughlak, ruled two of his sons, then Khusrū, and lastly Ghiyas-ud-din Tughlak who founded the Tughlak dynasty. It may be pointed out that Muhammad Tughlak ruled from 1325 to 1351, not 1347.

I owe an apology to the readers for this long list of errors, but it is necessary in order to substantiate the somewhat unfavourable opinion I have expressed about the quality of the work of an author who enjoys a great reputation for his scholarship.

The author's imperfect knowledge of Indian history and culture is rendered worse by the superiority complex, unhappily so common in European writers. Take for example the following passage:

"But Alexander was no mere casual raider, like Tamerlane or Nadir Shah, intent on nothing but plunder. A pupil of Aristotle he conceived it to be his mission to westernise the East" (p. 62).

There is nothing on record to show that Alexander made any attempt to westernise the East. Rather we know that he fell a victim to the charms of the east. The reference to Aristotle is not quite easily intelligible, and is in any case unnecessary; for have not the modern Alexanders like Mussolini taken up the noble task of westernising the east even without having the advantage of a liberal education? Two thousand years hence a remote successor of Dr. Rawlinson, writing the history of Abyssinia, would no doubt advance the same claim for Mussolini, but he would be in difficulty to cite any source of liberal ideas like Aristotle. As a matter of fact, it is time that this cant about Alexander's civilising mission in the east is definitely put an end to. In this connection we draw the attention of the readers to the very frank discussion in Cambridge Ancient History (Vol. VI, pp. 357-8) as to 'the primary reason why Alexander invaded Persia.' The following passage from this work gives a clue to the real motive of Alexander's invasion:

"Greeks certainly objected to barbarians attacking themselves, but the best thought of the time saw no reason why they should not attack barbarians whenever they liked; . . . Aristotle called it essentially just and told his pupil to treat barbarians as slaves."

The writer of this passage does not associate Alexander's invasion with any pious reforming zeal and has the candour to admit that "to the best modern thought, the invasion is quite unjustifiable."

In conclusion we may draw attention to numerous

printing mistakes in the book such as 'Dandaranyaka' (p. 6) for 'Dandakāranya'; 'Saka Era of 78 B.C.' (p. 93) for '78 A.D.'; 'Bāla (p. 102) for 'Bala'; 'Maghavarmān' (p. 106) for 'Meghavarna'; 'Vidhusaka' (p. 135) for 'Vidusaka'; 'Kādaram' (p. 182) for 'Kadāram'; 'Lokatya' (p. 118) for 'Lokāyata' etc.

R. C. MAJUMDAR

ART AND ARCHAEOLOGY ABROAD: By Dr. Kalidas Nag, M.A., D. Litt. (Paris). University of Calcutta. Pp. ix & 125, pls. i—xix & Frontispiece.

Dr. Kalidas Nag, M.A., D.Litt. (Paris), of the Calcutta University, was invited by the International Educational Institute (under the Carnegie Foundation, New York) to deliver a course of lectures on Indian art and archaeology as Visiting Professor to the Institute for the year 1930-31. He was simultaneously invited by several other institutions from Geneva. He not only did ample justice to the various important engagements in the course of his several months' stay abroad, but a great deal more was done by him. To say in his own words, 'he studied the special arrangements and provisions for the collection and co-ordination of the data of arts and archaeology as well as the methods of teaching of those subjects in some of the important centres' of Europe and America. The outcome of these studies undertaken by him is this useful report, which should be of immense help to the students as well as the teachers of this branch of Indology.

It sometimes happens that the Indian students and researchers in this field primarily devote their attention to the study of these subjects in its relation to India alone, their association with the same of various other countries of the world being a secondary one only to that extent which helps them in understanding correctly and evaluating properly the arts and archaeology of their own country. Rarely, however, they take the trouble of acquainting themselves with the progress in the study of the various branches of these subjects in the different countries of Europe, America and the Near and Far Eastern countries. Again, there are many earnest Indian students who are hardly aware of the numerous facilities which the various countries outside India offer for thorough and systematic studies in this respect. They are on no account to be blamed, however, for this, because no good handy book was there which could help them in the acquisition of this knowledge. Dr. Nag's work has thus removed a long-felt want in this respect.

The book is divided into several sections which deal respectively with the art and archaeology in France, the activities of other nations with regard to these subjects in the Near East, in the Mediterranean world and Greece, art and archaeology in Italy, United States of America and Latin America. By far the largest single section in this work deals with the position of the study of these subjects in the United States of America. It, by the way, throws an interesting sidelight on the respective numbers of the Museums in the various countries of the world. We are told that the world altogether possesses as many as 8,000, of which about 6,500 are in Continental Europe, the British Isles and the U. S. A., of which again Germany and the U. S. A. are far in the lead in numbers with more than 1,500 museums each. 'But India with historical and archaeological sites far exceeding in number and importance shows a really poor record of 90 only after five centuries of European contact and over three centuries of relations with Britain.' No further comment on this is necessary. It is a matter of satisfaction that Calcutta University has taken the lead in founding a museum of art and archaeology—the one fittingly commemorating the late Sir Ashutosh Mukherjee.

one of her most illustrious sons, who did so much for the study of Indology here.

It will be impossible to take stock of all the important features of this book in the short space of this review. However one can not but remark that Dr. Nag's lucid account touches an intimate personal note in many places which is very refreshing. The accompanying illustrations are worthily reproduced and the Calcutta University is to be congratulated on the excellent get-up of this neat little volume.

JITENDRA NATH BANERJEA

THE POETRY OF THE INVISIBLE: By Syed Mehdi Imam. Published by George Allen & Unwin. Price 6s. 6d.

Modern criticism reveals two forms of approach. Discriminating minds in many countries are attempting to compare genuine artistic experience and to arrive at some universal standards of literary evaluation. There are others, again, for whom the application of some provisional scientific theory, or of some formula of faith appears to be the main incentive. This book belongs to the latter school; it is an attempt at occult criticism of poetry. Presumably those who share the author's faith would find justification in discovering concrete symbols and significance in poetry that the merely literary person would not only leave undiscovered but consider it irrelevant to discuss. "Secret Cycles," "The Radiant Body," "The Out Soul," etc. are mentioned, and such diverse poets as Keats, Browning, and Abercrombie,—to name only a few and their productions are diagnosed by the author in the light of such terms. To call this approach Indian or Eastern would not be correct, it would be found in groups, of the same persuasion, in Western countries. The author feels deeply and has saturated himself in poetic lore but his concern is not literary, it is identified with a particular faith. Without in any way reflecting on his convictions, readers of his book can legitimately demand that confusion of categories should be prevented, that poetry be judged by canons of poetic principle and technique. Peculiarly dangerous is the author's handling of science: there again the basis of his arguments lie in special revelations; knowledge of physics or astro-physics rests on occult sanctions, and is free from mathematics and scientific training. The author's enthusiasm is unmistakable, but in this book he has given no chance to most of his readers to share it.

AMIYA CHAKRAVARTY

THE EASTERN CALUKYAS: By D. C. Ganguly, M.A., Ph.D. (Lond.), Benares, 1937. Price Rs. 4.

The Calukyas played an important role in ancient India. They were divided into a number of branches. One of them, which settled in the Andhra country, is known to the modern scholars as "The Eastern Calukya Dynasty." Eastern Calukyas ruled the Andhra country from A.D. 615 to A.D. 1172. Subsequently they held sway over the Cola country till A.D. 1272. Dr. Ganguly gives the history of this branch of the Calukyas in his book. He has collected all informations from the epigraphic and literary sources. The usefulness of the book has been more enhanced by the addition of a chapter on the Cultural history. A list of inscriptions of the Eastern Calukyas has been given at the end of the book. The subject has been treated scientifically, and the conclusions are well-balanced. It may be, in a sense, called a pioneer work as nobody before Dr. Ganguly has published a complete monograph on the subject.

RADHAGOVINDA BASAK

THE CRUCIAL PROBLEM OF IMPERIAL DEVELOPMENT: Published by the Royal Empire Society, with a Foreword by the Right Hon. Malcolm Macdonald, M.P., Secretary of State for the Dominions. Longmans, Green and Co., London, 1933. Pp. xiii+201. Price not mentioned.

In November, 1937, the Chairman and Council of the Royal Empire Society invited many persons of acknowledged position to meet in Conference to review the problems of Imperial development. Among those invited to participate in the deliberations were Mr. F. L. McDougall, Chairman of the Imperial Economic Committee, The Marquess of Dufferin and Ava, Parliamentary Under-Secretary of State for the Colonies, Sir George Schuster, formerly Finance Member of the Executive Council of the Governor-General of India, Sir Frank Noyce, formerly member of the Executive Council of the Governor-General of India, Sir John Wardlaw Milne, M.P., Sir Henry Page-Croft, M.P., Prof. N. F. Hall of the London University, Prof. N. Bentwich of the Jerusalem University, Prof. F. W. Fetter of Haverford College, U. S. A., Mr. H. V. Hodson, Editor of the *Round Table*, and Sir Firoz Khan Noon, High Commissioner of India. The proceedings of the Conference are now published in book-form under the title, *The Crucial Problem of Imperial Development*.

It appears from a perusal of the proceedings that no resolutions were submitted and none were passed, although the speeches and discussions were planned on a comprehensive scale embracing different parts of the Empire, including India. The main theme developed by all the speakers was that Empire development as well as world economic betterment could be sought not in artificial restriction of production to meet a depressed level of consumption, but in the expansion of consumption to meet the enlarged productive capacities which had, for the moment, run ahead of their markets. Although somewhat divergent views were expressed on the organized restriction of supply, the emphasis on the need for higher consumption was almost unanimous.

To an Indian reader the papers reprinted in this volume will perhaps give the impression that the Empire is a business concern to be developed for the benefit of its Imperial shareholders, and that the welfare of the millions of people in backward countries like India is important only in so far as it can be of advantage to the British vested interests. The Under-Secretary of State for the Colonies stated in the course of his address, "We have no desire whatever to make either the individual Dependencies or the Empire as a whole self-sufficient." Will this not mean the perpetuation of Imperial exploitation in some form or other? The pursuit of self-sufficiency may be a selfish, and at times, dangerous policy, but this does not imply that the Dependencies of the Empire should be denied full opportunities for industrialization.

The hard-headed Imperialists should realize that in the relief of poverty through greater industrialization of the backward Empire countries, rather than in preferential treatment or selfish exploitation, lies the best hope for the future growth of British trade with them in the long run. In other words, Britain must, in her own interests, make considerable sacrifices for the economic progress of the subject peoples, because true Imperial solidarity can be secured only by raising the standard of living amongst the half-starved millions who compose the British Empire today.

NANDALAL CHATTERJI

SELF-ABNEGATION IN POLITICS : By Late R. B. Lal Chand. Published by the Central Hindu Yuvak Sabha, Lahore. Second Edition, 1938. Prices annas eight only.

The book was first published in 1909 by way of protest against certain tendencies in the Congress movement which its writer could not approve—specially the attitude of granting concession and making unsolicited friendly advances towards the Muhammadans which Lal Chand pronounces to be disorganizing and vicious. Hindus he found in a disorganized condition and that for their liberality or “self-abnegation in politics,” and the need of the hour was, for him, organization of the Hindus. Hindu press, Hindu Defence Fund, Hindu Sabha—for these he puts in a vigorous plea, and in this way it is a remarkable pamphlet anticipating much of the present Hindu Sabha Movement and emphasizing its faith in the possibility of a real unity only when all the parties desire to make a united stand.

R. B. Lal Chand knew very well how to express his views clearly and with vigour, and the pamphlet is a model of lucid exposition from its own viewpoint at the same time that it is the earliest writing on the subject it deals with: though, it must be said in this connection, that we may combine strength with sympathy and understanding, and the Congress, he it said to its credit (and even the latest, the Jinnah-Nehrur, correspondence shows it), is trying to win the co-operation of the Muslim League without weakening. Nationalism is the need of the hour, but real nationalism tries to see things in their proper perspective and to gain recruits in apparently impossible quarters.

FURTHER UPWARD IN RURAL INDIA : By D. Spencer Hatch. B.Sc., M.Sc. in Agr., Ph.D. Oxford University Press. 1938. Price Rs. 2-8.

Dr. Spencer Hatch's book, “Up from Poverty in Rural India” has been already reviewed in this journal and noted with approbation, which it deserves. He follows his subject further, and his practice has kept pace with the ideals which prompted him to the duty of rural reconstruction, a hackneyed phrase by now. The author's experience of bold leadership in Young India grows; the principles and methods he has advocated are in favour with large-sized Indian states and even across the seas. There is the seed of life in his Rural work centres, for they are multiplying, and we may assure ourselves that the nine hundred leaders trained by him will soon change the face of India. The secret of his success lies in the soundness of his ideas which are open to examination. Among other things he believes in a comprehensive programme, and in the spiritual basis of life, and in many of the items of his creed his viewpoint resembles Mahatma Gandhi's. One may confidently quote from him: “No Rural Reconstruction Centre can afford to accept a government grant if the grant has strings on it which restrict the freedom of the workers.” Again: “For Rural Reconstruction in India we want workers who are rich in the things they can do without.” Another delightful observation: “Toleration of the second rate is one of the most common and serious sins in India, while this persists, people must remain poor. We find little realization of what high quality means.” The experiences are suggestive, the author's way of approach is stimulating, and the reader feels inclined to repeat with a certain visitor: “Well, this is indeed great!”

P. R. SEN

THE GANDHIAN WAY : By Acharya J. B. Kripalani, General-Secretary, Indian National Congress.

Published by Vora & Co. Publishers Ltd. 8, Round Building, Bombay 2. Pages 183. Price Rs. 2.

This is a remarkable book in many ways—remarkable for its grasp of the Indian problems, for the perspicuity and boldness of its exposition and the ardent faith of the author in what he calls “the Gandhian Way,” i.e., the national programme as chalked out by Mahatma Gandhi.

So far as Gandhi's political philosophy is concerned, the exposition given here is both able as well as authoritative. The author points out how the Gandhian way in politics came to capture the imagination of the people and seeks to establish its superiority in comparison with other opposing tendencies, such as socialism or the Congress left wing. The topics discussed are often controversial. It is not for the reviewer to take sides in a controversy, or, to enter into the merits of the views on either side. We can, however, unhesitatingly say that Acharya Kripalani presents his viewpoint in an unambiguous and attractive manner and he is not unfair to his opponents.

So far as Gandhi's hold on the masses is concerned, no one can deny that it is not entirely due to the merits of the way pointed out by him but is largely due also to the unquestionably great, inspiring and magnetic personality of the man. It is difficult to think of Indian politics remaining exactly what they are, with Gandhi off the canvas. Yet one should not be blind to the intrinsic value of the way pointed out by him. Acharya Kripalani tries to establish this point, we would not say, without success. Even the programme of *Khadi*, which according to many, is only a fad of Gandhi, is shown by Acharya Kripalani to be a sound economic proposition, provided of course its meaning is properly understood (pp. 11, et seq.).

His remarks about Brahmoism (p. 2), may possibly be resented in some quarters: and the reason assigned by him for the greater popularity of the Ramakrishna movement may not be accepted by all as sufficient. But some of the propositions laid down by him seem to us to be exceedingly sound. The first problem in India, according to him, “is not a revolutionary programme of reconstruction as is implied by industrialization and socialism, but a radical programme for the capture of power” (p. 81). The division of the Congress into Left Wing and Right Wing, is therefore, premature. Such division bring in their trail a weakening of the national forces, of which a third party is sure to reap the advantage.

People who desire to understand the philosophy underlying the Congress movement will find this book of very great help.

SELF-REALISATION : By B. V. Narasimha Swami. Published by Niranjanananda Swami, Tiruvannamalai (Madras).

This is the story of the life of a Saint of Southern India. Viewed from outside, such lives have few incidents to narrate. There is the usual renunciation of the world with attendant pains in the mind of the relatives, and a wandering in search of a preceptor or *guru* who is at last found, and then the gradual collection of an increasing group of disciples, and, at last, the eventual establishment of an *asrama* or hermitage which wears a wealthy look enough to attract even robbers. The life before us also contains the same series of incidents.

The internal history of the man, bent on self-realisation, for whom no austerity is too severe, is not open to public gaze, and, unless depicted by the man himself, can seldom be known. Though the secret influence of such men on the lives of many others cannot

be denied, it were perhaps greater wisdom not to regard the meagre incidents of their mere physical life as of much historical importance. Such men might well be spared the glare of lime-light. They do not want it and their disciples and admirers ought not to force it on them. To leave them to their quiet solitude would be showing better honour to them.

U. C. BHATTACHARJEE

BRADLEY AND BERGSON—A COMPARATIVE STUDY: By Ram Murti Loomba, M.A. With a Foreword by Prof. N. N. Sen-gupta, M.A., Ph.D. The Upper India Publishing House Ltd., Lucknow. 1937. Pp. xi+187. Price Rs. 2-8.

Metaphysical quests often have a tendency to follow beaten tracks. It is refreshing, therefore, to note that the young author of the work under review has freed himself from philosophical orthodoxy and found a problem worthy of pursuit in a sphere where many would have seen none. Writing in a pleasant and easy style Mr. Loomba has attempted to show that the idealism of Bradley and the mysticism of Bergson are not radically different but that both have a common 'visionic' element. The standpoints of these two eminent philosophers are but two stages in the total idealistic trend of thought, and each standpoint when persistently worked out is found to involve the other. The logic of Bradley, facing the Absolute, turns into anti-intellectualistic idealism, while the intuitionistic view of Bergson, in order to receive a philosophical formulation, stands midway between mysticism and idealism. By judicious selection of relevant passages from texts and by clever interpretation, the author has been able to uphold his thesis. In the Foreword Prof. Sen-gupta clearly states the position of the author in a few words and lends his support to the central idea.

S. K. BOSE

MODERN SWEDEN: Chief Editor Dr. Erik Nylander. Published by the General Export Association of Sweden, Vasagatan 2, Stockholm. Pp. 470. 1937. Printed on art paper and profusely illustrated.

This interesting compilation is a review of the great changes, both social and economic, which Sweden has undergone during the past fifty years. Within this period Sweden has developed from an agricultural country, dependent for its public undertakings and manufactured goods on the capital of richer and more highly industrialised foreign countries, to a country teeming with diversified industries of indigenous development. The establishment of saw mill industry has contributed to the industrial upliftment of the country, while mining and metal, the chief industries of Sweden, have helped her to maintain its balance in foreign trade. Detailed figures are given to show the remarkable progress achieved by Sweden in import and export trade during the period dealt with. Besides a general survey of the people, institutions and natural resources of the country, the book also gives detailed information about all the present-day export industries of the country. Credit is due to the chief editor and the publishers for the compilation and publication of this useful and informative book.

SOUREN DEY

INDIAN COMPANY LAW: By Mr. M. J. Sethna, Barrister-at-Law. Published by D. B. Taraporevala Sons & Co., Hornby Road, Fort, Bombay. Price not mentioned.

In this book although the learned author has given a full text of the Indian Companies Act 1913, as amended upto Act II of 1938, he has failed to incorporate therein

the provisions under the Government of India (Adaptation of Indian Laws) Order, 1937, as a result whereof several sections have been omitted from the book. We give below a few of such instances, viz. 'trading corporation' has not been defined: Sections 2A, 12A and Section 289A have been omitted from the book. With reference to Section 109, the following important provision has been omitted viz. "In this Section 'British India' does not include Burma or Aden, whatever the date of the mortgage or charge in question."

The book however is on the whole a good exposition of the main principles of company law. The law students will find this book as a help book for their examination. Businessmen as well as lawyers will also find this book useful to them. The book contains a very instructive Introduction dealing with the merits of the Act and showing how it benefits shareholders, members of registered companies, creditors, debenture-holders and all other interested persons. Within the short space of 258 pages, the learned author has very clearly and carefully dealt with all the various topics of company law, with the help of useful cases. The book also contains the rules framed by the Governor-General in Council under Section 151(4), together with the Forms and Tables.

JUDENDRA NATH BOSE

1. MY TRAVELS IN THE EAST 2. ACROSS THE NEAR EAST: By Khsitish Chandra Banerjee. Published by the author from 130, Bowbazar Street, Calcutta. Rupees Two and Rupees One and annas Eight respectively.

The young author of these fascinating travel notes started on his adventurous career as a "globe-trotter" about five years ago when he chanced upon some books of travel and adventure and was inspired to "do something which would testify to the fact that the adventures and enterprising spirit was not dead in India and that there were young men in India who could brave any difficulty;" and he has amply justified his claim. He started on his first tour (recorded in *My Travels in the East*) in December, 1933, with the princely sum of eleven rupees in his pocket and travelled widely in Burma, China, Manchuria, Japan, Philippine Islands, Bali and Java, and returned to India in March, 1936. After a brief period of rest, he set out on another journey which took him to Iran, Iraq, Syria and Lebanon; impressions of this second tour are detailed in *Across the Near East*.

P. B. S.

SANSKRIT-ENGLISH

RAJA-DHARMA-KAUSTUBHA of Anantadeva, edited by Mm. Kamala Krishna Smrititirtha, Guckwad's Oriental Series No. Lxxii. Oriental Institute, Baroda, 1935. Price Rs. 10.

The work is an extensive compendium, in four Dīdhitis or parts as they are named, of kingly duties, but it includes in its scope a great deal of miscellaneous, though relevant, matters, and devotes practically a whole section to Vyavahara or judicial procedure. It thus shares with Nilakantha's Mayukha the reputation of being a standard work of Hindu religious law and custom in Western and Central India, to which part of the country the author, himself a Mahārāstra Brahmin, belonged in the second half of the 17th century. He was the son of the well-known Apadeva, author of the *Mīmamsā-nysya-prakāsa*, while his great-great-grandfather was no less a person than Ekanatha, the famous Maratha saint. Though a comparatively recent work, it is yet an interesting and important digest of the subject from various points of view, compiled and systematised with great

learning and acuteness. The first *Didhiti*, called *Pratistha*, deals with the building of temples and consecration of images, as well as of construction of forts and royal buildings. The second *Didhiti*, called *Prayoga*, proceeds with the rites and ceremonies incidental to the building and consecration already described. The third *Didhiti*, called *Rajyabhiseka*, contains a detailed account of the coronation ceremony as it obtained in later times, and discusses incidentally such connected topics as succession to the throne, qualifications of the king, queen, ministers and priests, and so forth. The fourth *Didhiti*, called *Praja-palana*, deals with *Raja-dharma* proper, with special reference to *Vyavahara* or administration of justice in its various details. The work has been edited with care and scholarship; but a melancholy interest attaches to it from the sudden death in 1934 of its editor, the veteran Pandit, who could see only a part of it through the Press. There is a synopsis of the contents of the work in English by the editor's learned son who undertook the completion of the work, and an index of citations; but a somewhat more detailed description of the character and value of the manuscript-material utilized would have been welcome.

S. K. DE

PORTUGUESE-ENGLISH

PORTUGUESE VOCABLES IN ASIATIC LANGUAGES from the *Portuguese Original of Monsignor Sebastiao Dalgado*, translated with notes and additions by A. X. Soares. *Gaekwad's Oriental Series No. lxxiv. Oriental Institute, Baroda, 1936.*

This work is also written by an Indian scholar and linguist (d. 1922), whose mother-tongue was Konkani and whose ancestral cognomen *Desai* is hidden under the unmeaning and alien *Dalgado*. Of his numerous learned writings, mostly written in Portuguese, his Konkani-Portuguese Dictionary is perhaps better known; but this work, published at Coimbra in 1916, is of much larger interest and is rightly characterized by Sir George Grierson as "a monument of erudition." It is the result of a quarter of a century's intensive study, research and travel, undertaken in the midst of constant physical sufferings, oftentimes of an excruciating nature, but with unflinching zeal and devotion to scholarship and with an inspiring love for India and Portugal. Although the subject has been partially touched upon in such works as Yule and Burnell's *Hobson-Jobson*, it is the first systematic and scientific examination of Portuguese words adapted in a great number of Asiatic languages spoken by peoples with whom the Portuguese came in more or less direct contact, from the 15th century to the present day, in respect of places extending from Ceylon to Japan. Incidentally the work throws a great deal of light on the civilizing influence of the Portuguese, and the author has taken great pains to bring together in the course of his linguistic discussion of the condition and character of the borrowing of the various words a large amount of political, sociological, ethnical and cultural matters which are of great interest. Even the average educated Bengali is perhaps not aware that such commonly used words as

আলাকাঁরা, আনারস, আলমারি, আলপিন, কেদারা, জানালা, কিতা, গিরিচ, গামলা, বাজতি, চাবি, প্রেক, etc. originate from Portuguese. Although learning of a varied kind is displayed on every page, there is no pedantry, and each article on the various words of this brilliant work of 400 pages is fascinating reading. Of the fifty-two languages taken into account, Konkani naturally occupies a larger space, but other Indian languages are not neglected. Although the author stayed

for some years (1887-90) in Bengal, some of the Bengali words listed are hardly Bengali, while one would notice omission of some well-known words. It is really a task which it is difficult for one man to accomplish, but the painstaking scholar has not ignored any relevant source.

The author undoubtedly occupies an honoured place in the rank of Indian Orientalists, but his learned works, being written mostly in Portuguese, are hardly known outside a limited circle. It is a happy idea to translate the work into English and include it in the well-known Series; and the translator, who has supplemented the work with notes and comments of his own, deserves the thanks of all interested students for the conscientious and excellent way in which he has discharged his arduous task.

The above two exceedingly interesting and important publications maintain the high reputation of the Oriental Series to which they belong, and reflect great credit on the editor and the translator respectively.

S. K. DE

HINDI

IS JAGAT KI PAHELI : Translated by Mr. Madan Gopal Garodia. Published by the Sri-Aurobindo Granth-mala, 4, Hare Street, Calcutta. Pp. 124. Price annas ten.

Some papers of Sri Aurobindo on spiritual truths written in English are collected and translated here under the caption of "The Riddle of the Universe". The original is characteristic of Sri Aurobindo. The translation is commendable. The publication of the works of Sri Aurobindo in Hindi, which is the aim of the publisher, is specially interesting. The get-up and the paper unmistakably show that the author has both taste and respect for the topic dealt in the book.

JNAN KI UDYAN MEN : By Swami Satyadevi Paribrajak. Published by the Satya Jnan-Niketan, Jwalapur (U. P.). Pp. 454. Price Rs. 2/-.

The author, who is a well-known traveller, has put together his thoughts on various subjects, education, politics, art, etc. and his experiences and impression in the course of his travels. These latter relieve the monotony of the serious thoughts.

SRI RAMAN CHARITAMRITA : Translated by Pundit Vakatesvar Sarma, Sastri of Kasi Vidyapith. Published by Swami Niranjanandaji, Sri Ramanasram, Tiruvannamalai. Pp. vi+444. Price not mentioned.

The life, teachings and the Asram of Sri Raman Maharshi are described in this book from the viewpoint of a devotee. The sage of the Arunachalam is closely studied and literature is quoted. There are several illustrations in the book.

RAMES BASU

GITA KA VYAVAHARA-DARSANA (PRACTICAL PHILOSOPHY OF THE GITA) : By Seth Ramgopal Mohita. Published by Sri Satyamaryam Printing Press, Freer Road, Karachi. Sent free of cost against ten annas stamps to cover postage.

The charge often laid on Indians in general of being so engrossed with intellectual subtleties as to lose sight of mundane realities, is not totally without foundation. It is characteristic of our genius that even the *Gita*, the world's most remarkable code of practical ethics, has at the hands of our scholars become a forum for the exhibition of metaphysical acrobatics. The countless interpretations and expositions have only served to increase our metaphysical pre-occupations and thus defeated the very purpose of the *Gita*, which was to give us a new ethic of action.

Seth Ramgopal Mohta is not the first to seek to cut through the gigantic mass of the dead structure of pedantry to the living core of thought. He has illustrious predecessors. Lokamanya B. G. Tilak's scholarly treatise is well-known and much respected, though unfortunately not very widely read. Syt. Mohta has written his book for everyman, who rarely has the patience or the capacity to work through a tome of such proportions as Tilak's work. Perhaps it is because of this that there is much irrelevant matter and many unnecessary and even pointless illustrations of the argument: but on the whole the book is very readable and instructive. It will go a long way to restore the Gita to its rightful place as a guide for human endeavour. Syt. Mohta deserves our thanks.

S. H. V.

BENGALI

BANGALA BHASHAR ABHIDHAN, or A Dictionary of the Bengali Language. Second Edition: By Jnanendra mohon Das. Indian Publishing House, 22-1 Cornwallis Street, Calcutta. Two Volumes. Price Rs. 10.

In this edition this lexicon has been thoroughly revised and greatly enlarged. In the first edition the number of words explained was 75,000; in the present edition it is more than 1,15,000. An exhaustive dictionary of the Bengali language would include perhaps more than double this number. The number has been kept down to make the volumes handy and suitable for ready reference.

Of all Bengali dictionaries completely published up to date, this is the largest. The introductions to the two editions, the appendixes and the supplement are valuable.

Of the new features of this lexicon perhaps the most notable is the pronunciation of words given in it. The author was the first to introduce this feature in a Bengali dictionary in his first edition. In the second the words explained have been printed in self-pronouncing forms by the use of diacritically marked types specially cast for this work. A key to the pronunciation of the letters so marked is printed at the bottom of the page at every opening. As the pronunciation of many Bengali words differs in different districts, this feature is really necessary and useful. It will be particularly useful to non-Bengali readers of Bengali.

Some of the other features of this work may be mentioned here. It is not a dictionary, for the most part, of Sanskrit words alone used in Bengali; it includes other current Bengali words also, though a very few have escaped his notice. Sentences have been quoted from books and periodicals to illustrate the different meanings of words. In a very few cases, some meanings of words have escaped the author's notice. The system of transliteration adopted has been explained in the introduction and an appendix. Derivations of words have been given wherever necessary and possible. The number of foreign words adopted in Bengali, 'provincial' words, legal and other technical words, proverbs, idioms, synonyms, antonyms, mythological allusions, etc., are large. The transliteration of foreign names is a useful feature.

As the work, practically of one man, the author, it is a very remarkable and splendid achievement. But had the lexicon been the result of team-work, the achievement would have been no less remarkable even in that case.

RABINDRA-SAHITYE PALLICHITRA, or, Village Pictures in Rabindra Literature. By Bijaya Lal Chattopadhyaya. Naba-jiban Publishing House, 195-2, Cornwallis Street, Calcutta.

Curiously enough there are still some Bengali readers to be found who erroneously think that Rabindra-

nath Tagore, being a city-born and town-bred aristocrat, has written and sung only of fashionable city folk, but has no knowledge of village life and village folk. The author has shown by extracts from the Poet's works in prose and verse how extremely wrong such a notion is. The Poet has loved the scenery and life of rural Bengal and derived exquisite pleasure from them. His sympathy, born of first-hand knowledge, for villagers, has not been merely academic and book-page-deep. It has taken practical shape.

His short stories and many of his poems are veritable portrait galleries of village folk and landscape galleries, too, of village scenery.

All this the author has shown in his attractive and flowing style. He is quite right in observing that "in this democratic age the time has come to study from a new angle the literature created by him who has encircled the brow of Bengali Literature with the garland of victory of democracy."

D.

GUJARATI

SOUNDARYA NI DRISHTIYE: By Gijubhai. Published by the Dakshina Murti Prakashan Mandir. Illustrated paper cover. Pp. 100. Price annas five (1937).

Gijubhai, known in Gujarat and Kathiawad, as the children's friend par excellence, describes in this little book, the most common and every day occurrences of life in his inimitable interesting way, such as would surely please children. A trip in a stream launch, the universal verdure in countryside after the cessation of the rains, a feri and other such matters are most attractively described.

LAGN PRAPANCH: By Narsinhbhai Ishwarbhai Patel. Published by the Prasthan Karyalaya, Ahmedabad. Cloth bound. Pp. 644. Price Rs. 3-8 (1937).

The writer is well-known in Gujarat as one who has derived inspiration at Shanti Niketan where he resided with his family. A man of liberal views Mrs. Patel was given perfect independence in family matters by Mr. Patel. Once while husband and wife were talking, Narsinhbhai, who was wholly content with life as enjoyed till then said that he was so satisfied with everything that he did not wish for a rebirth. His wife said, "On the contrary I desire to be reborn as your husband, so that you as a wife may realize what the life of a woman really means." The genesis of the present substantial volume of research in the Institution of Marriage is to be found in this incident. The writer has tried to establish, citing chapter and verse for every statement, that the caveman instinct of the male sex has from the beginning tried to keep the female sex under its heel, and under the influence of that feeling of inferiority and submissiveness, she has seen nothing wrong in being treated as a chattel. He has all along acted as the woman's advocate and he wishes women more than men to read his analysis of the situation and stand up for her rights. Mr. Mashruvala has contributed one whole section and in his moderate language and also from a thinker's point of view, supported many of the conclusions of the author. In short it is a well-preached crusade against the tyranny of men over women.

K. M. J.

TELUGU

BHARATA NAUKA PARISHRAMA: By Karra Sita Ramaya. Pages 147. Price Re. 1. Can be had of the author, Vizagapatam.

The book records the history of the shipping industry, the coastal and the overseas trade in India from the

Vedic times to date. The exhaustive and able treatment of the subject deserves praise.

MOYILU RAYABHARAM: By *Cerla Ganapati Sastri*. Pages 38. Price annas eight. Can be had of the author, Nidavole, W. Godavari Di.

A Telugu rendering of Kalidas's immortal classic "Meghadutam."

BRAHMANIKAM: By *Gudipati Venkatachallam*. Yuva Karyalayam Series No. 7. Pages 132. Can be had of Yuva Karyalayam, Patapet, Tenali. Price annas four.

The work depicts the life of an orthodox widow, culminating in marriage, poverty, sufferance, and fall from the heights of piety and innocence to the deplorable depths of corruption. An ordinary story from an extraordinary angle of thought.

WORLD AFFAIRS

EUROPE has for the last few weeks known a period of comparative ease, and that means no doubt that the world too has been allowed a relief from the perpetual high tension in which European politics made it live for months. Of course it does not indicate an end of any of the crises, major or minor. In two parts of the world, July witnessed the anniversary of two wars—on the 7th that of China, on the 18th that of Spain,—which start on another fateful year of bloodshed and barbarism. The problems remain unsolved, the world stands where it was; and, to quote the German phrase on the prospects of the agreement for withdrawal of volunteers from Spain, any settlement arrived at 'can be torpedoed within twenty-four hours.'

FIRST YEAR OF THE CHINESE WAR

On the 7th of July last both China and Japan celebrated the first anniversary of the 'Chinese Incident.' China took the resolve to fight to the finish, Japan published the list of her gains in China, in guns, aeroplanes, and territories, and declared that Chiang Kai-shek can hope for no consideration from Japan nor

Japan would relent until the whole of China has been brought to the heel though that might mean a war for ten years. An anniversary celebration is the occasion for such dramatic pronouncements which the people expect of its Government. But to vow ten years of war is to indulge in heroics. We have on the last occasion noted what a long war would mean to China and to Japan both. Mr. Vernon Bartlett, fresh from the Far East, in the *News Chronicle*, gives a very careful but similar estimate of the forces. China will probably hold out—"but she may lose too," concludes the writer:

But it is quite obvious that guerilla warfare involves the return to power of those local war lords whom the Generalissimo succeeded in displacing after much prolonged effort. A period of intense military centralisation there must give way to one of decentralisation, with all its dangers. Some of the war lords will fight the Japanese, but some of them will undoubtedly go back to banditry. "Unless the European powers and the United States show a little vigour in respecting international law and seeing that others respect it, then the war in the Far East may drag on until Japan breaks into revolution, China reverts to chaos and all those young Chinese who have returned to their country with

western ideas of democracy may sink into oblivion, and all Western financial interests disappear."

I would therefore repeat my conviction that Japan cannot win in this war, but would also add the warning that China too may lose it.

Japan should know as well that she has other enemies, mightier and more dangerous, who would not fail to come down on her when they find Japan weakened by this Chinese war. Are we already hearing the distant rumbles in the Mongolian and Korean border? Soviet Russia has not forgotten the sinking of her gunboat or the Amur islands that Japan forcibly occupied when they were busy with purge of the generals. Is Russia slowly moving now to pay back the old scores?

The atmosphere on the Soviet-Manchukuo border is described in Tokyo as very ominous. It is feared that the alleged violation of the Manchukuo border by Soviet troops occupying a hill in the south of Hunchun may develop into another Liukouchiao incident which led to the Sino-Japanese war.

The Manchukuo and Korean frontier authorities have demanded the immediate withdrawal of the Soviet troops, threatening determined action in the event of non-compliance.

Meanwhile the Manchukuo-Soviet negotiations for a settlement of the incident on the spot are stated to have broken down.

On the Chinese war front Hankow is being bombed. The army pushes along Yangtse. Japan may wreak her savage fury on the Chinese; but the war must be finished quick if she is to escape the danger from Russia. The preparations of the Soviet in Siberia are known to be amazingly thorough. As noted some time ago by Mr. Mills of the Associated Press of America:

Soviet Russia has an army of 400,000 of its best troops, 2,000 tanks and 900 aeroplanes along the 2,000-mile frontier between Soviet Russia and Mongolia and Manchukuo.

It has also elaborate poison gas equipment at important strategic points for use in emergencies. The entire civil population in towns along the Manchukuo border not only have arms, but are equipped with gas masks.

In anticipation of a possible attack by Japan the Bolshevik defence authorities have constructed hundreds of concrete pillboxes and other fortifications along the border, which the Moscow authorities believe make Far Eastern Russia virtually impregnable.

The Russians have completed the double-tracking of the great Trans-Siberian railroad all the way to Vladivostok, and a steady stream of war supplies is moving over the line day and night.

And Russia is not the only enemy Japan should count;—there is Britain who, if freed from the European complications, might take a strong line too.

EUROPEAN RESPITE—CZECHO-SLOVAKIA

No settlement in any sense is, however, in sight of any of the two urgent problems of Europe—the Spanish War and the Czecho-Slovakian question. Hopes are no doubt entertained of the solution of both. Dr. Hodza's Nationality Bill along with other measures of a similar nature is shortly to be published, and so the German grumble on its delay is to be silenced or awaits only the signal to break forth into a more vigorous denunciation. *The Times* diplomatic correspondent speaks of the measure as 'being a compromise which would give each side 75 per cent of what it is now seeking.' But it is difficult to reconcile the Henlein point of view, as every body knows, with Czecho-Slovak independence. The former certainly demands the Czecho-Slovak State to enter the great German orbit. The latter certainly would not agree to forgo 'connection with Russia' and thereby decree its own annihilation. Even as the talks proceeded Dr. Hesse in the presence of the Fuehrer spoke of the country as a danger, of the 'Bolshevizing tendencies' evident in Czecho-Slovakia, and Germany as a great bulwark of Western culture and Aryan heritage, must disapprove of this. Dr. Hodza has to negotiate not with Herr Henlein but in fact with Herr Hitler, the Fuehrer of the German people wherever they be. Berlin has to be satisfied, otherwise Britain and France would press for more concessions. They are said to be now doing so. The recent *démarche* from London wants the Prague Nationality Statute to widen itself more so as to satisfy Henlein and Hitler. We are already hearing of mobilization in the frontier alleged by the German press against Czecho-Slovakia. It has been stoutly denied by the Czechs. But all this can be hardly a prelude to conciliation and compromise.

There is of course, it is recognised at the same time, less chance of the Nazi army promenading into Bohemia as they prepared themselves to do two months ago under the full flush of their success in Austria. Czecho-Slovak politicians saved their State by a cool courage, determination and statesmanship that have since then raised their stock in the world. British *démarche* also had for once its weight with the Fuehrer; it was wiser, he decided, to leave the situation to ripen of itself through the peaceful gains of the Sudetendeutsch. Moreover, Britain was likely to consider her conscience sufficiently cleared by this step to allow her to witness even Hitler to march into Bohemia against,

what by her standard she would judge, the Czech failure to satisfy the German minority demands. Czecho-Slovakia would any way be disintegrated from within, and Hitler will win his way without risking hostilities with any one. Czecho-Slovakia, Russia and France would otherwise be drawn closer still and British friendship for France be further strengthened. Chamberlain and Halifax serve their Nazi-Fascist friends too well to merit such rebuff. Since then Nazi rashness too is said to have received a little necessary check from the military advisers of the Fuehrer whom he was reported to be consulting during the critical days of May. Of course the Fuehrer works, as he declared after his Austrian coup, with 'divine inspiration' as his sole guide—almost a Gandhian spirit in the 'real politics' path! The gods however have not yet spoken on the Czecho-Slovakian question, and the mortal light of his military advisers was therefore availed of for the hour. Hence, a period of comparative calm in *Mittel Europa*. "But," to quote a French writer, M. Ludovic Naudeau in *L'Illustration* (June 4, 1938), "One should bear in mind that, though delayed, the intention of Germany is not changed; all the acquiescence of the moment that she might give now are of doubtful value, and we are exposed to surprises: the failure of the Agadir coup in 1911 could not prevent the German conflagration that blazed up in 1914."

REICHSWEHR AND AUTARCHY

The Reichswehr may decide if there is to be a blaze so soon. It is gaining power.

One of the effects of the last war, according to some military writers like Captain Liddell Hart, has been the smashing of the claim of military men to all wisdom in matters connected with war. Civilians have learnt to question it ever since. Herr Hitler and his lieutenants who suddenly donned on the glorious uniforms of generals and marshals overnight made the soldiers look still more foolish. The unceremonious dismissal of Von Fritsch and Bloemberg in February last completed the disgrace of that all-powerful body, the German Reichswehr. Perhaps it is being recognised now slowly that these soldiers also possess some gifts worthy of the Nazis to examine. It is believed that the Reichswehr is gaining by little the lost ground, Nazi impetuosity and rashness of Goering could not blow away the counsels of caution and care of General Von Keitel. The Nazi *Drang nach Osten* must rule out all premature and precipitated action in the direction of Ukraine or Roumania, etc., before the *Reichsautobahn*

system of roads across Austria is extended, the General Staff reminded. Divine inspiration must bide time unless it is to end in some Himalayan miscalculation. It is also pointed out that a prize essay of the German Military Academy by Colonel Conrad, Chief of Staff to the 18th Army Corps, concludes that an attack on Czecho-Slovakia to succeed must be so quick and stunning as to complete the capture of Prague in fourteen days in order to release troops to deal with the French offensive on the Rhine at the time. A prize essay in Nazi Germany could not have the honour if its views were not approved by the authorities. And all foreign military experts hold that the German army would require at least six weeks to knock out the Czecho-Slovak army as it stands now.

The recent warning of Major-General Thomas, head of the "Military Economics" section of the German High Command, against the German economic policy of barter and self-sufficiency and open criticism, however mild, of Goering's Four-Year Plan, seem to indicate that the Reichswehr is an influence again in German politics. The speech reported in the *Daily Telegraph*, is a public confession of the weakness of autarchy, which earlier had made Dr. Schacht grow doubtful of its soundness and resign. Maj.-General Thomas said:

The country, must recover her position in normal world trade. Major-Gen. Thomas admitted that, in spite of the Four-Year Plan, Germany was still unable to cover 20 per cent of her food requirements by home production. A large proportion of Germany's profits from exports was therefore required to guard against a food shortage.

This was equally the case with raw materials. Although the Four-Year Plan had led to an expansion of German production of iron and other raw materials, the materials which she lacked could, in case of emergency, only be obtained, if at all, by payment in foreign exchange.

"The world war," he said, "has shown us that the countries playing the most active part in world trade, Germany and England, had a greater power of resistance than countries which depended more on self-sufficiency."

"The effort to obtain the greatest possible degree of independence from foreign countries must not lead to a withdrawal from world trade; otherwise, the products which are unobtainable at home cannot be imported."

Major-General Thomas said that the economic war waged by Britain against Germany in the world war, and the subsequent policy of the victorious Powers, had done much to destroy confidence in world trade and to encourage the belief in self-sufficiency. But the fact remained that, apart from the Soviet Union and the United States, all countries were short of certain essential products.

"A policy of creating reserve," he continued, "is absolutely necessary where foodstuffs are concerned, and also in the armaments industry, so as to bridge the period before the factories have reached their highest war-time capacity."

"How far individual States are going in the storage of food reserves is shown by England, where large

amounts of grain, whale-oil, meat, sugar and other provisions have been and are being set aside."

"The same is true of raw materials. France, England and many other States are storing large quantities of fuel and important metals."

None of these measures, however, would, he added, make it possible to dispense with international trade.

The warning may serve to intensify the Nazi demand for return of the Colonies as Germany requires sources of raw materials.

SPAIN COMPLETES SECOND YEAR OF WAR

On the 18th of July Spanish Rebellion entered its third year of struggle. An agreement just preceding it on the withdrawal of foreign volunteers from Spain, it is supposed, has opened the way for a relief of the European tension on the question. But the Spanish Tragedy has dragged on too long even to continue a strain on the emotions of the people of Europe. Emotion in this case gave room to cynicism; faith in cherished ideals faded, the grim reality of this conflict lost its tragic depth. The terribly big issues involved in this ideological clash received no solemn examination they demanded. Cold misanthropy blankly saw the portends of a struggle in which powers and politicians stand out in all their nakedness to prove that ethics and agreements, patriotism and humanity are of no consequence to the ruling classes when their very power, their profits and interests as the ruling classes, are anywhere, even outside their national borders, questioned by the 'under-dogs' of the present social system. Man's mind has been clouded and confused by the shameless play at the make-believe of non-intervention and the heartless connivance of all violation of the codes of international morality and obligations by the strong. More even than the dictators Britain and France have proved that terrible doctrine of social revolution, that democracy is merely a facade of capitalistic society, a device to hoodwink the masses that the ruling class will throw off the moment it fails to achieve its purpose. If the part that Britain has played in the Spanish tragedy is rightly assessed it would be seen that it has not so much ruined the prestige of the British powers as denuded the British ruling class and the British people of their favourite window-dressings—faith in liberal thought, in democracy and in democratic institutions. Spain these two years has thus really proved a tragedy to the liberals and believers in democracy and in popular rights. Their faith has been gassed out in Abyssinia, bombed out in Spain, undermined above all by the betrayal of Britain. So, as the second year of the war ends and a scheme of withdrawal of foreign volunteers is evolved, no

body cares to set any store by that. For one thing it is clear that really the end of the struggle is known, the 'settlement' demanded by Mussolini can not be refused. In spite of the Non-intervention Commission, the world knows, Italy could defiantly send men and armament, bombs in the name of Franco open towns on the Republican side, and, even after the signing of the Anglo-Italian Agreement, help in the sinking of British vessels to the Republican ports. Italy, therefore,—and Germany too, though less flagrantly, would not hesitate to 'torpedo' the present agreement within twenty-four hours if that impedes the victory of Franco and Fascism. M. Blum in the columns of *La Populaire* lost no time to point out that the scheme, which shut the Pyrenees against the Republicans immediately, leaves the Portuguese coast open for the Insurgents, and is thus unjust to the former. Justice or humanity, in the conflict, the old gentleman knows, it is too late in the day to talk of. And the Spanish Republican note to Britain alleging that Italian troops are to be kept in the Spanish Foreign Legions under assumed Spanish names and Italian General Staff advisers are to remain there to carry out their duties in mufti, clearly foresees a position which everybody anticipates. *The Times* correspondent of Rome supplies from the Italian journal *Stampa* figures, evidently taken from official records, in regard to the activity of the Italian squadrons in Spain:

For example in June, when Castellon was captured, there were 3,103 flights in 5,838 hours, 718 tons of explosives were dropped and 40,542 rounds fired. A total of 291 tons of explosives were dropped in April and 381 tons in May. The correspondent adds that, from the numbers of aeroplanes employed, it is evident that an appreciable section of the Italian Air Force is now engaged in Spain.

Majorca is known to be the base of the Italian air forces, and practically admitted to the position of an Italian port, as it were. It is to remain immune from any attack of the Republicans because of the recent British and French advice to them. That Government had notified Britain of its intentions of reprisals on Italy for the bombing of the Spanish non-combatants. Their objective, not revealed at the time, was likely to be this Italian base in Spanish territory, supposed to be in the Insurgent hands. Britain, however, at once informed Italy of the Republican idea, and Rome was indignant at the prospect of any other party playing its game at its cost. Its reply would be—War. Britain and France quickly therefore tried their influence on the Spanish Government lest the real conflagration is started straight by Mussolini. So the Italian air base at Majorca is to remain safe as if Majorca

belonged to Italy. And Il Duce has no territorial ambitions in Spain, the Anglo-Italian agreement declares.

The third year of the Spanish war begins with celebrations by both the parties and a congratulation from Mussolini to Franco:

"Fascist Italy is proud to have given her contribution of blood and material to your victory over the destructive forces in Spain and Europe," says Signor Mussolini in a telegram to General Franco on the occasion of the second anniversary of the Spanish war.

The telegram predicts victory for General Franco within the next year.

The year is likely to see the victory of the Fascists in Spain. Some of the deep implications of the war of these years as indicated above may be easily read. Events of these two years proved further that freedom of the seas will no longer be accepted as a principle by the power which can flout it, that merchantmen will be subjected to bombing attacks even though they carry only foodstuff to the enemy country; and that even the civil population of a remote town is as much exposed to the bombing operations as the soldiers in the front or fortified areas. These are of vital significance to Great Britain too in case she is thrown into any major war. Mr. Chamberlain, however, by his pitiful attempts at explaining away, or at virtual condoning of all these Fascist war methods, has lent his support to these new standards of military ethics. Britishers of different parties view this as a danger to the general interest, and, worse still, a betrayal of the more sacred thing—the British interests.

BRITISH FOREIGN POLICY

British patriotism or imperialism considers itself humiliated, at what it thinks to be vacillation, surrender to blackmail, and a defeatist pacifist mentality of the present National Cabinet. The opinion gains ground more and more in Britain and the Chamberlain-Halifax (or should we call it the Cleveland group?) policy of armament and appeasement—proves to be unsatisfactory.

More and more British people are waking up to this stern fact. Even *The Times* now admits the necessity under pressure of the forces of reconstructing a National Cabinet with a new combination of efficient members from the ranks of the other parties. *The New Statesman* warns that such a body under the Conservative leadership will prove to be the old National card, which the Conservatives have played too long to be of any service to them any longer. Hence, the trick of a reshuffle to have the old advantage under

a new name. Only the Labour leadership, according to the paper, of such a combination can save the country from war and Fascism.

Peace at any price, it is seen today, means peace nowhere, peace to no one; it means peace at the cost of others.—of Spain, of Austria, of Abyssinia, and possibly of Czecho-Slovakia and the Balkan and Baltic States; finally it means peace at a higher price, through the loss of the Mediterranean Empire route, the betrayal of the League and collective security, and loss possibly of the former German colonies. It results in the weakening of the strategic points of one's own and strengthening the power of the aggressors all the time, until peace at an price leads to war at too late an hour, under too hopeless conditions.

British foreign policy, in view of this proves a puzzle even to the Britishers themselves. No wonder therefore if the Chatham House arranged for lectures and debates on it by Lord Lothian, Prof. A. J. Toynbee and other distinguished students of international affairs. The last two quarterly issues of the *Journal of the Royal Institute of International Affairs* contain these which show the different facets of the policy and the problems. It may however be noted that in spite of every thing that can be credited to the account of Chamberlain and Halifax the policy can claim no improvement in the European position. The 'realist' policy is at best a policy of drift, if it is not something deeper and more sinister—a strong 'anti-Red' feeling, a conscious Fascist leaning.

In fact liberal Englishmen have themselves made frequent references expressing their fear and suspicion that the Sedition Acts, the Official Secrets Act, measures to put industries on war footing, are already placing so many shackles on British liberty that the passing over to Fascism may be said to have already begun in Britain. For her the democratic screen need not be torn off. It makes the journey safer, smoother.

The foreign policy of the British Cabinet shows its true colour faithfully enough. It is undoubtedly decided on the exigencies of the imperial interests. But that does not disprove the fact that it is Fascist in its leanings and objective. Fascism has no quarrel with Imperialism. On the contrary, Fascism, as the natural growth of an aggressive nationalism, is an ally of Imperialism. "Fascism", as Pandit Jawaharlal reminded his Kingsway Hall audience, "is near relative to Imperialism". Pursuit of imperialistic interests naturally, therefore, emerges in the age of the breakdown of the old system as Fascism.

G. H.

INDIAN PERIODICALS

Science and True Religion

It is the scientific method alone that offers hope to mankind and an ending of the agony of the world. Essentially the major conflict is between the method of science and the methods opposed to science. Writes Pandit Jawaharlal Nehru in *The Indian World*:

Science and academic halls have not known me for many a long year, and fate and circumstance have led me to the dust and din of the marketplace and the field and the factory, where men live and toil and suffer. I have become involved in the great human upheavals that have shaken in recent years this land of ours. Yet in spite of the tumult and movement that have surrounded me, I do not pretend to be wholly a stranger. For I too have worshipped at the shrine of science and counted myself as one of its votaries.

Science has brought all these mighty changes and not all of them have been for the good of humanity. But the most vital and hopeful of the changes that it has brought about has been the development of the scientific outlook in man.

In the early days of science there was much talk of a conflict between religion and science, and, science was called materialistic and religion spiritual. That conflict hardly seems real today when science has spread out its wings and ventured to make the whole universe its field of action, and converted solid matter itself into airy nothing. Yet the conflict was real for it was a conflict between the intellectual tyranny imposed by what was deemed to be religion and the free spirit of man nurtured by the scientific method.

Between the two there can be no compromise. For science cannot accept the closing of the windows of the mind, by whatever pleasant name this might be called; it cannot encourage blind faith in someone else's faith. Science therefore must be prepared not only to look up to the heavens and seek to bring them under its control, but also to look down, unafraid, into the pit of hell. To seek to avoid either is not the way of science. The true scientist is the sage unattached to life and the fruits of action, ever seeking truth wheresoever this quest might lead him. To tie himself to a fixed anchorage, from which there is no moving, is to give up that search and to become static in a dynamic world.

Perhaps there is no real conflict between true religion and science but, if so, religion must put on the garb of science and approach all its problems in the spirit of science. A purely secular philosophy of life may be considered enough by most of us. Why should we trouble ourselves about matters beyond our ken when the problems of the world insistently demand solution? And yet that secular philosophy itself must have some background, some objective, other than merely material well-being. It must essentially have spiritual values and certain standards of behaviour, and, when we consider these, immediately we enter into the realm of what has been called religion.

It is time we brought up our minds in line with the progress of science and gave up the meaningless controversies of an age gone-by.

It is true that science changes and there is nothing dogmatic or final about it. But the method of science does not change and it is to that we must adhere in our thought and activities, in research, in social life, in political and economic life, in religion. We may be specks of dust on a soapbubble universe, but that speck of dust contained something that was the mind and spirit of man. Through the ages this has grown and made itself master of this earth and drawn power from its innermost bowels as well as from the thunderbolt in the skies. It has tried to fathom the secrets of the universe and brought the vagaries of nature itself to its use. More wonderful than the earth and the heavens is this mind and spirit of man which ever grows mightier and seeks fresh worlds to conquer.

Gandhiji as a Psychologist

According to P. Spratt, whether the future of India is to be capitalistic or socialistic, Gandhiji's example of self-training through ascetic renunciation is valuable. Incidentally he compares Gandhi with Hitler and contrasts his method with that of Hitler. He observes in *The Indian Review*:

Any popular leader must be something of an expert at psychology. That great demagogue Hitler evidently is. Hitler and Gandhiji have something in common, but they obviously differ greatly. In particular Hitler is far more deliberate about it. He has that intuitive faculty, which Gandhiji also has, which enables him to know what the masses feel and how they will behave; but unlike Gandhiji he has a general theory of propaganda, and devotes much care to working out his appeal in the light of its principles, laboriously arranging even minor details of party propaganda, slogans, uniforms, badges and what not. Gandhiji's appeal also extends to these things. His khadi, his poverty, his style of speech, all might have been designed to further his purpose. But probably they were not designed. He has not sufficient cynicism. In all these cases he does what seems to him right, and what he thinks right usually not always - happens also to be politically useful.

Gandhiji then, while a supremely good judge of Indian mass psychology, has little to say about it in general terms. He has stated that when speaking to a crowd he can tell how they are reacting by looking at their eyes. But he has never gone into any detail. His spirits are much affected by mass-feeling. When the people are united and agree with him, he is buoyant and confident. When they are divided he suffers a distress evidently more directly felt and more acute than the

regret of more calculating politicians. He then says that he feels a sense of weakness, or has lost power. Similarly when he is separated from the people by jail or going abroad, he loses confidence. Most interesting of all is the idea suggested by some remarks of his that he becomes more sensitive to mass feeling when he fasts.

His moral ideal is attacked not only as impossibly difficult, but as intrinsically wrong. Dr. Tagore voiced this criticism many years ago, and the Marxists, especially Mr. M. N. Roy, have emphasised it recently. The ideal of renunciation, they say, is radically unsound. Life must be accepted, and enjoyed.

Dr. Tagore and Mr. Roy criticise Gandhiji's as an ultimate ideal. I think they are right; but I believe that any ideal acceptable to them would involve a substantial element of Gandhian asceticism. Gandhiji is to be criticised not as ultimately or wholly wrong, but as taking a one-sided or extreme view. He is after all a propagandist.

Indian Federation and Constitutional Unity

'The constitutional unity' wherewith Lord Lothian seeks to hypnotise India into acceptance of an ill-conceived constitution is a solemn sham. Observes K. S. Pathy in *The Hindustan Review* :

Indian Federation is the integration of two compacts, the British Indian Provinces and the feudal princedom. The provinces are autonomous entities functioning on democratic lines, whereas the States are still vestigial of feudal autocracy and just on the threshold of democratic consciousness. The fusion of the two under a unified Federal scheme is as ludicrous an affair as harnessing a pack-horse and a racer. The British Imperialistic constitution, though democratic in its machinery, is yet monarchical in form, and it is beyond question that the compact of the States by its inherent affinity, can ill-afford to keep away from the protective influence of the British Crown. On the other hand, the avowed aspiration of the British Indian Provinces is the progressive achievement of absolute independence. In an all-India Federation, the entire mass of States will be a drag upon the ambitions of the provinces. Prof. Keith says : "If Dominion Status were at once to be enjoyed by the Federation, the Princes would be precluded from entering it. Their adherence is now possible because the Crown retains in respect of executive government and legislation final control over executive authorities."

Lord Lothian, in the course of his statement to the press on the conclusion of his recent visit to India, has said :

"There are very strong arguments against the common proposal that British India should federate first and that the States should be left to come in with a representation to their population when they become democratic. The greatest single advantage which India enjoys today is its constitutional unity. The unity is derived from the fact that the ultimate responsibility both in British India and in the States has rested in the same person—the Viceroy."

Lord Lothian has, perhaps, too numerous arguments to set forth against the supposedly common, but supremely wise proposal of bringing about a Federation of British

Indian Provinces alone for the present. The constitutional unity of India resulting from the residence of ultimate responsibility in one and the same person the Viceroy, which to Lord Lothian, is a mighty factor is, after all, the unity of executive control from Westminster and not the singleness of Indian political endeavour. There need be no fear that if Federal government of British Indian provinces alone were to come about, the constitutional unity of India will be impaired. The Government of British India on the advice of Ministers responsible to the Federal legislature and Paramountcy in Indian States exercised in responsibility to the Secretary of State on behalf of the Crown can subsist side by side without detriment to either. The unity of British India and the unity of Indian States are rendered real and workable by making them separate and self-coherent. The imposition of a formal and fictitious unity by the ultimate centralization of executive and legislative control is a betrayal of all democratic aspiration. An inchoate grouping of unallied entities is a greater impairment of constitutional unity than the clear division of the constituents into organic and homogeneous systems.

'The constitutional unity' which to Lord Lothian is a distinctive merit of Indian Federation, is but the tightening of the fetters from which there is no extrication.

There is already a growing apprehension in the minds of the people of India, at least in the most progressive section of them, that the present-day Congress policy is fast drifting towards a passive constitutionalism. Now that Provincial Autonomy has been rendered workable by the imposition upon it of a sort of change by oral assurances between the Government and the party in power, there is sufficient cause for anxiety that the Federal Scheme also may be set into operation by conciliatory tactics of a similar nature. It is, therefore, the prime duty of the Congress organization to stand firm on its original principles and convictions and not temporize over this momentous issue.

International Understanding Through Education

Principal P. Seshadri concludes his address delivered at the World Conference on Education (as published in *The Indian Journal of Education*) with the following remarks :

One of the great tenets of my own religion is that God is one, though He may be called by many different names. Our scriptures have proclaimed, repeatedly, that just as many roads lead to a great city, many faiths lead to the same God. As the same sun is reflected in many waters, the same God can be discovered in many religions. Like the string running through the many pearls of a necklace, the same God is in all the religions of the world. This is a lesson which must never be forgotten in the class-room.

Travelling in America the other day, I happened to be in a Parlour Car, talking to a Negro attendant on a Sunday morning. He had just said his prayers, and was reading the Bible with a devotion which many of his betters could emulate. I was apparently so nice to him, that he asked me if I was a Christian. I told him

that I was not a Christian, but a Hindu, but the boy said with a happy smile, "But you look like a Christian!" I should be, similarly, able to say when I look at a good Christian, 'you look like a Hindu,' for so long as the qualities prized by mankind are there, it matters very little what religion they profess.

A common mistake which people often make is to imagine that there is some kind of necessary conflict between nationalism and internationalism. Rightly understood, however, it is not so, as true patriotism is only a step in the direction of universal brotherhood. As Rudyard Kipling has said, God gave all men all earth to love, though "he ordained for each, one spot should prove beloved over all." It may be that you and I are very fond of the places and the sights of the places to which we belong, but that does not necessarily mean that we should be incapable of appreciating beauty in other parts of the world. If I am proud of the Taj Mahal at Agra, I can also be fond of the Parthenon at Athens. If I admire the Himalayas of my own land, I need not be lacking in appreciation of the grandeur of the Rockies on the American continent. If I appreciate the grace and charm of the women of my own country, I can also be an admirer of beauty even elsewhere in the world.

I should like to commend to you in conclusion, that it is necessary in the best interests of mankind to instil this sense of international understanding in the young people all over the world. It is a mistake not to love one another, because we happen to be different in colour or feature, or happen to live on either side of a boundary which is sometimes not even a river or a mountain, but an entirely imaginary line. I have no doubt that teachers have an important part to play in this work, and let us hope that when the time comes for a consummation of this ideal, these periodical world-gatherings of teachers will be found to have played no mean part in the achievement.

China and India in the Historical Period

In the course of his article on problems of Chinese Art and Archæology in *The Calcutta Review* Dr. Kalidas Nag observes :

The problem of the first definite historical contact of China with India is very complicated, as I discovered while consulting the eminent French Sinologist Paul Pelliot who gave me valuable suggestions relating to the appearance of the name China in the Arthashastra of Kautilya generally assigned to the Maurya period. Pelliot thinks that the Sanskrit form "China" can only be derived from the Chin dynasty (255-106 B.C.) founded by Shih Hwang Ti, a contemporary of Asoka. Dr. Laufer somewhat differs from Pelliot and is inclined to admit the possibility of earlier contacts. Laufer's book *Sino-Iranica* has opened our eyes to many unsuspected facts about China's contacts with the West—a line of investigation which has been carried further afield by Rostovtzeff in his *Iranians and Greeks in South Russia* (1922) and by Hirth in his *China and the Roman Orient*. However, there is little doubt today that from Circa third century B.C. to third century A.D., specially during the Hun dynasty (206 B.C.—220 A.D.), India and China vigorously collaborated spiritually as well as culturally for Buddhism, which linked up the two great nations, was the vehicle of spiritual ideas as much as of artistic inspiration. What remains tantalizing and vague, however, is the striking resemblances in the literature of

the two countries, specially in philosophy and political science of the pre-Hun or late Chou period. The diplomatic mission of Chang Kien (130 B.C.) followed by the invitation of the Chinese emperors of the Han dynasty to the learned Indian Buddhist monks definitely prove that the cultural collaboration was in full swing and it was carried on gloriously by the Wei (Turkish), the Tang, the Sung and the Yuan (Mongol) dynasties. Dr. Laufer's *Chinese Pottery of the Hun Dynasty* opened a new vista just as Ed. Chavannes gave us his archaeological findings of inestimable worth.

Two outstanding branches of arts, Sculpture and Painting, which developed under Sino-Indian collaboration have been discussed by hosts of scholars, Okakura and Omura, Fennellosa and Laurence Binyon, amongst others.

In conclusion Dr. Nag says :

Visiting China in 1924, in the company of our national Poet Tagore and of our great painter Nandalal Bose, I had the privilege of being introduced to over so many groups of indigenous Chinese artists and art critics, many of whom could not speak English and who were interpreted by our late lamented friend, the Chinese poet Su Tsumo. I shall also remember with gratitude in this connection the fraternal co-operation offered by our esteemed friend Dr. Li Chi (of the Academia Sinica, founded after our departure). He was my friend, philosopher and guide while I set out with Nandalal Bose from Peking to visit the various historic sites and pilgrimages of Chinese Buddhism. While visiting the various collections and temples of Peking, we discussed now and then of pre-historic China but we never dreamed that within a few miles from our Peking lodge will be discovered the remains of the earliest man of Asia traced so far.

Thus the pre-historic and the historic, the classical and the medieval in Chinese art and culture entered into our being as were led from site to site, monument to monument, revealing through a flash of intuition, as it were, the Eternal China. Sometimes she was great, sometimes degraded, but she never failed to suggest that there was an inexhaustible vitality which will triumph over occasional lapses and temporary degradations. China supplied us with some of the most valuable tools of human material progress. She has given us also a literature, philosophy and an art which will survive the shocks of history and will be cherished as the permanent heritage of humanity. It was China and her culture that civilized Korea and Manchuria and through which regions Japan derived some of the permanent elements of her spiritual and artistic life.

India in World Culture and World Politics

India is as large as the whole of Europe, except Russia; and it has a population of more than 300 millions. Ancient Indian history is contemporaneous with, or perhaps older than that of Egypt. Dr. Taraknath Das writes in *Prabuddha Bharata*:

Through the researches of Western and Indian scholars and archaeologists, it has been definitely established that some 5,000 years ago, before the pre-Aryan conquest, a great civilization, in many ways

superior to contemporary Egypt, flourished in the North Western part of India.

In his recently published *Creative India*, Professor Benoy Kumar Sarkar of the Calcutta University, has dealt with some of the creations of the Indian peoples in personalities, ideas, institutions and movements during the period of approximately 5,000 years (3,000 B.C. to 1935 A.D.). Among other things, he has discussed, literature, art and social philosophy of the Indian people, the influence of Indian culture all over Asia and other parts of the world.

While study of Indian cultural history is receiving attention among scholars, the question of Indian struggle for freedom is one of the great problems of the twentieth century, affecting world politics and world peace. Of course the late Rev. Dr. Sunderland's classic work *India in Bondage and Her Right to Freedom* (New York) should be studied by all students of Indian politics. Mr. Chaman Lal, an Indian journalist of international standing in his recent work, *The Vanishing Empire*, gives his views regarding Young India's struggle for freedom, during recent years. The work is eclectic; yet Mr. Lal's attitude may be regarded as an expression of the younger generation of India and therefore this book will be helpful to those who wish to understand the trend of Indian thought regarding the political future of the land.

India's cultural heritage is a valuable asset to humanity and India's political future is bound up with the progress of the nation and the trend of world politics.

The Buddhist Tantric Literature of Bengal

Dr. S. K. De prefaces his article on the Buddhist Tantric (Sanskrit) Literature of Bengal in the first issue of the recently published *New Indian Antiquary* with the following introductory remarks :

By far the most extensive literature which Bengal produced in the whole course of its literary history, and which has also an importance and interest of its own, concerns itself with the large number of Buddhist writers, whose works, however, are mostly lost in Sanskrit but are preserved in Tibetan translation in the *Bstan-hgyur*. They flourished in Bengal under the Buddhist Pala kings in the 10th and 11th centuries, or perhaps a little earlier. The works belong to the different Yanas which developed out of the Mahayana, and are loosely called Buddhist Tantra (*Rgyud*), as opposed to the Buddhist Sutra (*Mdo*) inasmuch as they teach esoteric doctrines, rites and practices in a highly obscure, and perhaps symbolic, language. That Bengal had been pre-eminently a land of Buddhism even before the 7th century is known to us from the testimony of the Chinese pilgrims, who refer to the existence of Buddhist monasteries as centres of later Buddhistic culture; but neither Yuan Chwang nor Yi-tsing makes any reference to Buddhist Tantrism, which could not have developed so early. Taranatha tells us that during the reign of the Pala kings there were many masters of magic, Mantra-Vajracaryas, who being possessed of various Siddhis, performed miraculous feats; and his testimony of the prevalence of Buddhist Tantric culture is borne out by the hundreds of works produced on this subject, not a small part of which presumably belongs to Bengal. It was during this time that the monasteries of Nalanda,

Vikramasila, Jagaddala, Somapuri and Pandubhumi were renowned seats of Buddhist learning, with which the composition or translation of many of these Tantric works are associated. The second of the Viharas named above, which is said to have been situated on the banks of the Ganges, most probably had its location, like that of Nalanda, in Magadha; but the other Viharas, no less distinguished, were probably situated in some parts of Bengal, although their exact situation is a matter for speculation.

Many of these Vajrayanist writers and thaumaturgic Siddhacaryas of medieval cults, whether directly Buddhist or indirectly of Buddhistic origin, belonged undoubtedly to the east and most probably to Bengal in these centuries. Some of them travelled beyond Bengal and were so transformed into deified or legendary figures that all trace of their place of origin and activity was obliterated. Although the descriptions are often insufficient or obscure, the Tibetan sources sometimes definitely mention the locality of some of these works and authors; and of them alone we can be reasonably certain that they belonged to Bengal.

Elizabeth Barret Browning and her Sonnets

Writing in *Triveni* about the premier English poetess whose *Sonnets from the Portuguese*, as the expression of a woman's soul, stands unrivalled in the domain of English poetry, Dr. D. W. Dodwell observes :

"A soul of fire enclosed in a shell of pearl." This is how an American friend described Mrs. Browning, of whose death today is the seventy-seventh anniversary. Another American wrote of her : "She is a great loss to literature, to Italy, and to the world—the greatest poet among women. What energy and fire there was in that little frame, and what burning words were winged by her pen! With what glorious courage she attacked error, however strongly entrenched by custom, how bravely she stood by her principles! Never did I see anyone whose brow the world hurried and crowded so to crown, who had so little vanity and so much pure humility."

That Mrs. Browning is the greatest woman poet among those who have written in English can hardly be disputed, and it is unlikely, I think, that any other literature possesses a woman poet who is her equal. Her finest achievement is probably the *Sonnets from the Portuguese*. This series of forty-four sonnets describes with exquisite sincerity and tenderness the development of her feelings towards Robert Browning up to the time of their secret marriage, when she escaped at the age of forty from the tyranny of her barbaric father and her chronic ill-health to a life of freedom, achievement and perfect happiness in Italy. Her love story is like a fairy tale come true.

Browning insisted that the sonnets ought to be published, since they were too good to be withheld from the public. In those early Victorian days his wife thought that to publish such frank expressions of her innermost feelings would appear immodest, so she chose the title *Sonnets from the Portuguese* in order to give the poems the appearance of being translations.

The sonnet is a short poem of fourteen lines with a special rhyme pattern first used with great effect by Petrarch and other Italian Renaissance poets. Mrs. Browning's devotion to Italy makes it very fitting that

her greatest work should be in the form of sonnets. Though it was born in Italy, the sonnet soon became naturalised in England, and has been a favourite form of expression with many of our poets. A few of them in an occasional sonnet reach even greater heights than those of the *Sonnets from the Portuguese*, but there is no other great sonnet-sequence in English except Shakespeare's. Sonnet No. 43, the last but one in the series, is a typical example of Mrs. Browning's best sonnets :

How do I love thee ? let me count the ways,
I love thee to the depth and breadth and height
My soul can reach, when feeling out of sight
For the ends of Being and ideal Grace.
I love thee to the level of every day's
Most quiet need, by sun and candle-light.
I love thee freely, as men strive for Right;
I love thee purely, as they turn from Praise.
I love thee with the passion put to use
In my old griefs, and with my childhood's faith.
I love thee with a love I seemed to lose
With my lost saints,—I love thee with the breath,
Smiles, tears of all my life ! and, if God choose
I shall but love thee better after death.

The Modified Crest of the Calcutta University

The Journal of Arts and Crafts discusses the modified crest of the Calcutta University "not from the communal standpoint but purely from the artistic " :

The arrangement of the design of the crest reminds us of the arrangement of circular *Alpana*, which consists of a central lotus, surrounded by a creeper and the *Kalasis* on the other edge. But what a great pity it is to find a gulf of difference between these two things as regards their quality and composition. The woman artist of Bengal achieved a great success in combining the three parts of the design in *Alpana* with bold and simple lines which harmonise the whole by creating a distinct and definite character. On the other hand, the thing which strikes one most in the crest of the University is an eclecticism of motifs of different individual character.

Firstly, the central lotus in the crest is oblong, and with its plastic quality disturbs the whole design, particularly the adjacent stylised lotus-creeper drawn in the flat and the outer band which is nothing but a repeated geometrical motif, perhaps representing the rays of the sun.

Secondly, the combination of black and white in the crest is poorly distributed, resulting in a separation between the outer band of sunrays and the inner lotus

ring and the central lotus. The detailed dissection of numerous black lines lessens the due proportion of white space in the outer band; on the other hand, the inner motifs are profusely enriched by white spaces.

Thirdly, the lettering on the outside with its Sanserit character destroys the unity of the whole design.

So far as the symbolical meaning of the crest is concerned, we are absolutely helpless in getting at its meaning unless we have an explanatory note from the authorities of the University.

The note concludes with an appeal to the University to change the crest once again "for the sake of artistic dignity."

The Pursuit of Happiness

Self-expression is the most active source of mental satisfaction. Writes K. N. Dutt in *The Aryan Path* :

Perhaps the greatest antidote against dejection is self-expressions. Self-expression needs two things the idea and the medium. The painter and the sculptor are essentially similar persons, but their mediums of expression, are different, colour and stone. Music, body-rhythm as in dancing, clay, wood, are all mediums through which ideas can be expressed. We cannot properly say that the plain carpenter who joins a simple chair is expressing an idea, as we cannot say that the garrulous fool who rhymes a ditty has expressed an idea in the way that Byron expressed one in his "Isles of Greece," or the fourteenth century woodworkers have in the Venetian Cathedrals. No work almost wholly mechanical can be called self-expression. Yet it would be foolish to condemn all work which falls short of the standard of Byron and Venice, as non-expression. There are degrees descending into non-expressive, mechanical efforts and also ascending beyond measure.

Self-expression not only counteracts dejection, it produces new happiness. By not expressing something of your own (and this is the way most people go through life), you leave unexplored an active source of satisfaction; if you leave unexpressed something really strong and clear in you, something that is urging for an outlet, like lava in the earth's bowels, then you will be miserable. It is usual for persons with such marked tendencies to discover a medium and use it. Nothing can restrain them. But the plain man must, with conscious effort, try to increase self-expression as he would increase his physical fitness with exercise.

FOREIGN PERIODICALS

The Genius of Indian Sculpture

In Hindu Sculpture, apart from its spiritual and symbolical character, there are certain plastic qualities (observed Sir William Rothenstein in the course of the Sir George Birdwood Memorial Lecture delivered to the Royal Society of Arts, London, and published in the *Journal* of the society) of breadth, volume and poise which seem to be unique. No people, continued the speaker, has been so profusely inventive as the Indian People: their iconography is the richest, the most exuberant ever evolved from human brain. There is a tendency to pass too lightly over this prolific creation of forms, of gestures and attitudes perfected by the Indian genius, but this creative fertility is in itself an astonishing, a supreme achievement, the more so since the Indians showed, in the forms they conceived for their gods, an equally abundant plastic inventiveness.

Nowhere have the plastic qualities of the human form, both male and female, been better understood and rendered than by Indian sculptors. They are early apparent in the heavy Mauryan figures, and again in the reliefs at Bharhut and Sanchi. In all these we see the subtle use the Indian carvers made of jewellery and ornament, which in contrast to their rigidity gave a quality of radiant breadth and smooth roundness to the nude form. This sense of the part which jewelled ornamentation can play is apparent in every phase of Indian art, Buddhist, Brahminic and medieval. I have in mind the enthusiasm of Degas and Rodin when I showed them, late in their lives, photographs of the great Mathura figures. Here was an art which was the reverse of spiritual. Never has the radiance, the unity of form, been better expressed in sculpture than in these strangely fascinating sensual figures. Here, indeed, one gets the sense of volume, so often referred to by writers on art today, but volume combined with grace.

The early carvings of Bharhut and Sanchi, flatter in relief than the Mathura figures though many of them are, show a similar sense of volume. Buddhist art was concerned less in its earlier phases with philosophical conceptions than with episodes of the life and legendary existences of the Buddha. But already in Buddhist art appear the Ariel-like Apsaras, at the same time so delicately spiritual and sensuous, which appear throughout Indian art. In the Apsara figures the artist was able to express the grace of the feminine spirit detached from homestead or household. The Apsaras take an equally important place in the Buddhist, Brahminist and Jain carvings. A conception so racial was not to be changed with the forms of religious dogma.

If the Gupta carvings show less profound sense of form than we see in the figures from Mathura, they

have a peculiar refinement. The grace and subtle charm which they gave to the figures, standing or seated, of the Buddha had a permanent influence on the Buddhist art of Java and the further East.

After the refined art of the Gupta period, a refinement which often accompanies the later stages of a once powerful movement, there was now to arise, with the return of Brahminism, a vigorous religious impulse, which finally drove Buddhism from the continent of India, to find a permanent refuge in Ceylon and to flourish anew in Java, Cambodia and Angkor.

The story-telling of Sanchi and Bharhut, the subtle and complex spirit of Amaravati and Sarnath, are now to give place to a new dynamic conception of the universe. The range and audacity of this movement in sculpture, consequent on the return of the older religion, is astonishing. If ever there was meaning in the legend that images lie hidden in blocks of stone awaiting only the blows of the sculptor's mallet to be set free, then the cave carvings of Elephanta and Ellora show the truest form of sculpture. Not from single blocks of stone or marble, but from solid hillsides complete temples were hewn. Elsewhere, figures have been applied to buildings. In India the entire fabric, with its halls and courts, its roofs and supporting shafts, its sculptured figures and enrichments, was conceived and produced from the womb of the earth itself.

Were today a great expressive art within our compass, there could be no fitter interpretation of our present atomistic conception of matter and energy than these carvings of Elephanta and Ellora.

The Indian craftsmen served many masters, giving permanent form to what was fluid and transient. The same genius which perfected the rapt contemplative repose of the Buddha also evolved the symbol of perpetual movement. These two inventions, with their many variations, have formed the body and spirit of Far Eastern art. Not the least original of these forms were conceived when Tantric ideas were giving a new shape to Hinduism. In the medieval temples the Apsaras become so prolific as almost to overwhelm the gods and goddesses they serve. To me, the mastery displayed in these stone carvings which, on account of their number, must have been executed by ordinary craftsmen, is astonishing. In each of these figures, playing in and out of the light and shadow of the mouldings, there is unflinching plastic beauty, a strange, somewhat disquieting sensuous energy and subtlety of movement; while the sense of design and rhythm concentrated in each of the hundreds of figures used to enrich mouldings, plinths, capitals and door-jambs in a single temple is unflinching.

Soviet Wages

Vera Micheles Dean discusses in the *Foreign Policy Reports* some problems of labour in the U. S. S. R.:

Critics of the Soviet system declare that the Soviet government—sole employer of labor in the country—pays workers and office employees starvation wages.

The Soviet authorities point out that, in addition to his nominal wages, the worker receives "socialized wages," which include social insurance benefits, vacations on full pay and, in some cases, reduced rent and free light and fuel.

While Soviet nominal wages followed a rising curve after 1928, the cost of food rations in government stores and factory "closed shops" steadily increased until 1935, and workers found it difficult to obtain many necessities of life except in the open market, where exorbitant prices prevailed. The real wages of the Soviet worker in terms of purchasing power were thus frequently much lower than his nominal wages. On January 1, 1935, following two excellent harvests, the government abolished bread cards, permitting the workers to purchase bread freely in government and co-operative stores. To counteract the rise in the price of bread, which was fixed midway between the old breadcard prices and those prevailing in the open market, the government decreed an increase in workers' wages. On October 1, 1935 all food cards were abolished, and the prices of many foodstuffs were reduced 30 per cent. The Soviet authorities expect that, with the increased production of consumers' goods anticipated under the third Five-Year Plan, prices will be further reduced, leading to a marked rise in the workers' purchasing power. Some foreign observers contend that, in the meantime, the prices of most consumers' goods are so high that the budget of the average worker's family is sufficient only to cover the bare necessities of life, without allowing any margin for entertainment, education, medical service or expenditures on extra clothing and furniture.

While it is true that some foodstuffs and most consumers' goods remain out of reach of the average worker's family, rents in the Soviet Union are relatively low. Housing, however, is as yet wholly inadequate, both in old cities like Moscow, which suffer from overcrowding while undergoing reconstruction, and in new industrial centers, where housing has not kept pace with the influx of workers. New apartment houses erected for workers are built on utilitarian lines, and furnished with such modern conveniences as baths, gas and electricity.

Expenditures for various forms of social service were estimated at nearly 6 billion rubles under the 1938 plan. Of these 654 million will be spent on the care of children; over one billion on sanatoria, rest homes and health resorts; two billion for temporary disability; and one billion for maternity pensions and subsidies to large families—as compared with 376 million in 1936, when abortion was prohibited. The government also provides free education and medical service, stipends for students, and other benefits. Due to the relatively slow development of construction for social welfare as compared with heavy and defense industries, these benefits are as yet restricted to a small percentage of the workers. Thus, according to the 1938 plan, passes to rest homes, resorts and sanatoria will be issued to 2,700,000 out of about 26 million industrial, office and other workers eligible to social insurance benefits.

Where Japan rules in China

The China Weekly Review publishes a typical account of the misery of the Chinese districts now under Japanese occupation, from which only brief extracts can be made here. Robbery, burning, rape, murder: everywhere it is the same story:

Along the public road (in a rural area of the lower Yangtze Valley), a large number of farmers' cottages were burned as the Japanese progressed. More than a hundred peasants, young and strong, who tried to run for safety upon sighting the Japanese, were indiscriminately shot to death on a length of road about ten miles. In the city, doors, partitions, tables, chairs, and window-frames were the soldiers' fuel. Fires for heat continued day and night, and the soldiers never cared whether the houses they occupied were consumed or not. If one house caught fire, they moved to the next. From a great distance, one could see distinctly the smoke of fire by day and the light of flame by night. Many a time soldiers deliberately put incendiary materials in houses, laughing loudly.

The record of killing is equally appalling. The people of the interior had never before heard that a person might be killed at will by anybody. One ordinary civilian was instantly killed because he gave a military salute to a soldier, intending to show his cleverness and to impress the soldier that he knew the manners of the guild. Two women jumped into the water and were drowned while trying to escape from raping. Three brothers were simultaneously shot because the soldiers saw a picture of a uniformed person in their home. The head of one pao (unit of a hundred families) lost his life because a stray group of soldiers did not succeed in extracting money from the people in a remote village, where there were strong militia units.

Except for one market town in which life and property remained relatively intact, the whole district was thoroughly looted. Not a single house escaped the visitations of soldiers. Many houses were ransacked numerous times in one day. All the bedding with good covers, and the iron kitchen pots, were taken away to other place in heavy trucks. Rifling of pockets was the universal habit in those days. A person who failed to keep some money on his body was liable to be whipped and kicked. The peasants who came into the city with vegetables or rice for sale were many times robbed by the

The China at War publishes an account showing how two Chinese girls avenged the murder of their father, who was bayoneted to death by Japanese soldiers. The story is related by a surviving cousin:

To my great astonishment, the girls acted in what seemed to me the most disgusting way towards the Japs. They acted as if they were their sweethearts. One of the soldiers saw me and wanted to kill me but the girls smiled at him and took hold of his arms before he could strike. I ran back to tell my wife and my cousin's sister-in-law. We all sighed in disgust. We waited till they went away and fled to a neighboring town ten miles away.

On the third day after we had arrived there, I met one of the girls, who was evidently fleeing from danger. I asked her what had happened and what had become of her sister. The story she told me revised all my opinion about her and her sister.

When the girls heard of the tragic killing of their father, they decided on a revenge. So they set their mind on two of the Japanese. They took the Japanese out to a place near the river, where they played all sorts of games. Finally they agreed to play hide and seek by tying their feet to a long string. One of the girls sneaked away the bayonet belonging to one of the Japanese and hid herself behind a tree on the bank of

Japanese atrocities in China: execution of Chinese civilians

the river. When the Japanese came near her, she drove the bayonet through his heart with all her might. She then cut off the string and pushed him into the river. Then followed a struggle between them and the other Japanese who was tied between the two girls. The result was that all fell into the river. When she was rescued by a passing boat, both her sister and the enemy had been drowned.

Workers' Education in France

E. and G. Lefranc, secretaries of the Workers' Education Centre of the General Confederation of Labour, bring out the special aims of workers' education as organised by the Confederation, in a paper contributed to the *International Labour Review*. The workers' education movement of the Confederation has three aims: to encourage the use of leisure for educational purposes, to strengthen trade unionism and to develop a new humanism:

THE USE OF LEISURE FOR EDUCATIONAL PURPOSES

The legislation of 1936 introduced the 40-hour week and holidays with pay—advances of inestimable value for the dignity of the working class. The dangers involved in the utilization of the additional spare time, however, rapidly became clear. Efforts must be made to protect the worker against idleness on the one hand, and on the other hand against a false conception of leisure in which the free time is used for odd jobs with a view to earning some additional money. In the choice of recreation also there are many errors to be corrected. The worker is often attracted by entertainments of poor artistic quality or of dubious moral character which are brought to his notice by flashy advertisements. He cannot be expected to avoid this danger if he is left uneducated and with his taste untrained.

Another serious problem is that of combating a craze for sport among the younger generation of workers:

The present writers fully appreciate the value of enthusiasm for sports, which means enthusiasm for health and healthy contact with nature. But this enthusiasm must not be all-absorbing; the sportsman's joy in his own strength must not be allowed to lead to overtaxing that strength and, as happens more frequently than might be thought, to a scornful indifference for every type of intellectual recreation. It is therefore important to counterbalance this craze for physical activity during spare time by a movement in favour of intellectual activity.

STRENGTHENING TRADE UNIONISM

The main purpose of the system of workers' education organized by the Confederation is naturally to strengthen the trade union movement.

DEVELOPMENT OF A NEW HUMANISM

The third, and by no means the least important, of the aims of workers' education is cultural enfranchisement. The workers must be made to understand that they have to fight to abolish the monopoly of knowledge which has in the past made such abnormal differences between individuals. The worker who has been unable to continue his school career as he would have wished, and who has only fragmentary and confused recollections of his school subjects, must be helped to free himself from the resulting sense of humiliation. That is the purpose of the labour colleges, which give the worker an opportunity of developing his personality more completely.

What is true of enfranchisement individually is also true collectively. The working class demands new rights, but there are no rights without responsibilities and duties. The working class cannot hold what it has gained or make further advances unless it shows itself competent to accept new responsibilities—those of the supervision and management of economic life.

Censorship in North China : Suppression of Liberty in Japan

The Japanese military authorities have issued strict instructions to the Chinese press in North China, detailing what is forbidden and what must be published. Some of these instructions are reproduced here from the *Manchester Guardian* :

Setbacks to Japanese troops may not be published in editorials or news.

It may not be published that Japanese soldiers occupying a place are unable to preserve the peace.

It may not be published that Chinese soldiers are victorious.

It may not be published that Chinese airplanes bomb a place.

Defeats suffered by Japanese troops or things connected with them may not be published.

Foreign news telegrams may not be published if they are unfavourable to the Japanese.

It may not be published that peace does not reign, as according to wild rumors.

Financial disturbances may not be mentioned in the press.

No notice shall be taken if attempts should be made to put business men out of work, or if workmen and students should go on strike.

It may not be published if Japanese soldiers living in certain places pay less rent than was paid before, or if workmen receive lower wages, or if persons are dismissed, or if salaries are reduced, or if it is feared that there will be scarcity of food.

Nothing may be published concerning alleged Japanese teaching of licentiousness, reviling in depraved language, acquiring of bad manners, or corruption of good ones.

The press must be guided by the following considerations :

That the Japanese soldiers are fighting for a very high ideal by punishing and destroying Chinese opponents and the Communists. The Japanese want to create peace in the Far East, but decidedly they do not want to be hostile to the good Chinese people. All these points have to be understood clearly by the Chinese.

That the Japanese have come with a patriotic idea, because they are good friends of the Chinese people.

That they have left Japan for the heat and cold of China without their wives and children; that they have to undergo fatigue and all kinds of hardships; that they have to march through the rain of bullets; that they throw their lives away without hesitation.

That they do all this in order to make the Chinese people and future generations happier.

That the Japanese exert themselves for the sake of liberty and that under no circumstances have the Japanese any other intentions.

That, therefore, the Chinese people must co-operate with the Japanese Army. If this sacred duty is fulfilled by our joint efforts, then we will stabilize the Far East for a hundred years to come.

You cannot suppress liberty abroad and maintain it at home, as the following news item about attempts to crush liberal ideas in Japan, reproduced here from the *World Youth*, shows:

Considerable feeling has been roused in Japan by mass arrests of the intellectuals and students during the past weeks. In Nagasaki, last December, 372 persons, mostly writers and professors, were arrested. In February, 32 more suffered the same fate. Among them were Hyoye Ouchi, Professor of Economics of the Imperial University of Tokyo, and eight other professors of the same institution.

In a February session of the Japanese Diet Dr. Kotaro Tanaka, eminent scholar and head of the Faculty of Law at Tokyo University, was accused of "lack of piety" in his book, "Law, Religion, and the Sanctuaries of Shintoism."

In his attack on Dr. Tanaka, Admiral Suesugu, Minister of the Interior, declared, "I shall not hesitate to crush whatever liberal ideas may still exist in Japan. I shall proceed without mercy, above all against the Imperial University of Tokyo, which is a veritable nest of liberalism." Most of the imprisoned professors are graduates of Tokyo University, and enjoy, according to the press of Tokyo, a great popularity among students.

The police maintain a strict surveillance over all the universities of Japan, to the resentment of students.

Recently, due to a considerable resistance among students against being recruited for the war in China, the police raided cafes and other meeting places in Tokyo and arrested 2,800 young men, many of them students. This action was characterized officially as a "spiritual mobilization" intended to "save those demoralized youth who are unwilling to consecrate themselves to the national cause."

A NEW METHOD OF FILMING

The Pioneer Olympia Film

The great two-nights film of the Olympia Games in 1936, by Leni Riefenstahl, entitled "Olympia, Festival of Nations, Festival of Beauty," was shown in Berlin for the first time in Hitler's presence, on the occasion of his birthday, April 20th, in a thoroughly festive performance. But it was not the brilliance of the surroundings which stamped the performance as unique, but rather the impression of a real work of art, which the film left behind.

Frau Riefenstahl's Olympia film comes to us as a pioneer in a sphere which is hardly opened up, and yet perhaps holds the greatest future—that of the artistic recording of actual facts and incidents.

No higher or more difficult obligation falls on art than to develop the actual reactions of life to external stimuli. No one who sees the Olympia film will doubt that Frau Riefenstahl has fulfilled her task beyond all expectation. The

Schnitt and travelling film cameras exhibit the Grecian plastics in an entirely new light. The immortal figures of Achilles, Paris, Alexander the Great and Aphrodite, although photographed just as they are, appear to be alive, and it seems to be a sheer accident that the camera shows them in a single pose. Out of the concentrated strength and easy grace of the Disc Thrower of Myron, appears the figure of his modern counterpart—an artistic possibility known only to the film—the transition to present time is there.

The kindling of the Olympia Fire, and the running torch-bearers in their symbolical simplicity are worthy successors of their Grecian prototypes in the lonely valleys of Hellas. Again in very singular trick photos, one follows the succession of torch-bearers through the different countries right up to the Olympia Stadium in Berlin; here the eager expectancy of the assembled spectators is conveyed by a single aerial film.

In this film symbolism and realism are harmonised, and this is perhaps its highest achievement.

We lived through every phase of the 1500 metre race, won by Lovelock's clever tactical husbanding of his strength, as also in the 10,000 metre race where the three Finns, acting as if they were a team, defeat the plucky Murakoso from Japan, and in the officers' exciting contests in the modern five matches, and above all in the Marathon race. Not only the exterior struggle, but rather the inner emotional reaction on the gruelling track of 42.195 kilometres, until the final burst of fanfares proclaim Sieger Kitei Son the victor, while the remaining runners as they arrived, were acclaimed, not indeed for their victory, but for their endurance.

Then again the absolutely beautiful pictures of the gymnasts—of both sexes, and the artistic high diving in the swimming contests, where the tenseness of struggle has been discarded in favour of the rhythmic beauty of a perfect physique. The harmonising of art and technique—of which we have heard so much from the very first—here celebrates its ideal triumph.

AN EXHIBITION OF NAGESH YAWALKAR'S PAINTINGS IN AMERICA

By K

A display of modern Indian art was put on in Boston recently, at Doll and Richards' galleries. This was the one-man show of paintings by Nagesh Yawalkar, 23 year-old Indian artist who has been sent on a world journey by the Maharajah of Gwalior, noted patron and connoisseur, of whom a portrait appeared in the show. James G. Reardon, Commissioner of Education of the State of Massachusetts, formally opened the exhibition to the general public. Mr. Yawalkar had held his initial American display in New York.

The artist is the son of Trimbakrao Yawalkar, a prominent Indian sculptor, who carves statues in stones for temples and other important places. Beginning at the age of nine, the younger man learned drawing, painting and modelling under his father. His studies were completed in Bombay and Paris.

Most striking characteristic of his work is its variety. Of about fifty of his paintings of contemporary Indian Life, portrayals of Hindu

subjects and folklore. The Boston exhibit included thirty-seven oil and water-colors which were mostly appreciated.

"Lasya Dance," an indoor figure study, comes out in enamel-like detail and delicate rhythmic flow. Such panels as "Buddha" and "Dance of Siva" reflect the flat style and pure abstract feeling of ancient oriental art.

Numbered among the Boston sponsors were Sir Herbert Ames; Mr. Hugh Alexander Ford, British Consul, Charles Frederick Weller, Executive of the World Fellowship of Faiths, Charles Hammond Gibson, Arthur F. Musgrave, F. B. A. Rundall, Mrs. Courtenay Crocker, Mrs. Charles R. Codman and Mrs. James R. Hooper.

In his search for true expression, Nagesh Yawalkar has made use of Chinese, Japanese and western tradition as well as his own. Any technique, he feels, becomes natural to the artist who can use it appropriately. "It is in this sense," he said, "that art is international."

WHAT IS BIHAR SOIL?

By P. R. DAS

As it is claimed by the Congress Ministry in Bihar that the Biharis are the children of the soil of Bihar and are entitled to all the privileges which appertain to them as such children, it is necessary to enquire into the question,—what is Bihar soil? I have elsewhere contested the proposition that there is any such thing called the Bihar soil; but I will assume for the purpose of the present enquiry that there is such a thing called Bihar soil of which the Biharis are the children. The question still remains,—what is Bihar soil?

I may point out that for centuries, Bengal and Bihar have been under one government. Maulavi Abdus Salam, the learned translator and editor of *Riyaz-us-Salatin*, has shown that from the days of Bakhtiar Khilji portions of Bihar and Bengal formed one government. In the time of Bakhtiar Khilji and his immediate successors, South Bihar was included in the Bengal viceroyalty. South Bihar was separated from the Bengal viceroyalty by Emperor Altamash in 622 H, and was placed under a distinct Governor named Alauddin Jani. On withdrawal of the Emperor, Bihar was again annexed by the Bengal ruler Ghiasuddin. It continued to be a part of the Bengal kingdom till 1320, when Emperor Ghiasuddin Tughlak again separated it. Bihar belonged to the Sharqi kingdom of Jaunpur from 1397. Again under Ibrahim, Bahadur Khan, son of Darya Khan, assumed independence in Bihar with the title of Shah Muhammad at about 1498. South Bihar again became more or less subject to the Musalman Kings of Gaur, Hussain Shah and Nasrat Shah. Under the early Moghul Emperors, Bihar was again formed into a distinct Subah but under the later Moghuls, it again became incorporated along with Orissa in the great Bengal viceroyalty. North Bihar appears to have been generally included in the Musalman kingdom of Bengal. (See *Riyaz-us-Salatin*, page 59, footnote). It is clear from the above narrative that it is somewhat difficult to separate Bihar soil from Bengal soil. For good or for evil, the history of Bihar was bound up with that of Bengal for many centuries. Still an endeavour must be made to ascertain what in fact is Bihar soil.

For these purposes, we must obviously go to *Ain-i-Akbari*. My reference throughout will be to Gladwin's edition. In *Ain-i-Akbari*, Subah Bihar has been divided into seven Sircars. (1) Sircar Bihar, which obviously included the modern districts of Patna and Gaya; (2) Sircar Monghyr, which included Bhagalpur; (3) Sircar Champaran; (4) Sircar Hajipur; (5) Sircar Saran; (6) Sircar Tirhoot, and (7) Sircar Rhotas. Later, Sircar Rhotas was divided into Sircar Shahabad and Sircar Rhotas. It is clear that we do not find either Purnea or Chota Nagpur or Santhal Parganas in Subah Bihar. So far as Purnea is concerned, there is no difficulty whatever; for Purnea is one of the Sircars in the Subah of Bengal. (See Vol. II, page 198). It is clear that the river Kosi formed one of the boundaries between Bengal and Bihar.

So far as Chota Nagpur is concerned, it is said that it has been shown in *Ain-i-Akbari* as part of Sircar Bihar. So far as I know, this theory is based upon a passage in a learned paper contributed by Prof. Blochmann to the *Journal of the Asiatic Society of Bengal*. As I shall have to refer to this paper constantly, I may say that this is to be found at page 111 of Volume 40 of the Journal. Professor Blochmann says at page 117:

"Of Ramgarh, I have hitherto found no notice in Muhammadan historians. It must have been at an early time dependent on Bihar because Chai Champa, according to Ain, was a parganah belonging to Bihar."

It is significant to note that there is nothing in the Muhammadan historians to suggest that the hilly tracts of Ramgarh were subjugated by the Muhammadans. I do not myself find Chai Champa mentioned as one of the Mahals in the Sircar Bihar. I find, however, that Jacy Chempa is shown as a Mahal of Sircar Bihar. What ground is there for suggesting that Jacy Chempa is the same as Chai Champa of Hazaribagh District? I do not think that the reference is to Chai Champa of Hazaribagh for the following reasons:

(1). There is no record at all of the subjugation of Ramgarh by the Muhammadans at all. This is admitted by Prof. Blochmann.

(2). If Chota Nagpur was part of Subah of Bihar, the reference would not have been to

Chai Champa. I do not find Chai Champa even mentioned by name in Hunter's *Statistical Account of Bengal*, Vol. XVI. On the other hand, Chota Nagpur was well-known to the Muhammadan historians as Jharkhand. The domains of the Maharaja of Chutia Nagpur were also well-known to the Muhammadans by the name of Kokrah. It is quite impossible to accept the theory that Chai Champa, even if mentioned as one of the Mahals of Sircar Bihar, means Chota Nagpur, since the Muhammadan historians knew Chota Nagpur as Jharkhand and the domains of the Maharaja of Chutia Nagpur as Kokrah.

(3). Chutia Nagpur was over-run by the general of Akbar for the first time in 1585. (See Prof. Blochmann's paper, page 130.) Raja Todar Mull's Settlement of Bihar was in 1582, so that it was quite impossible for Raja Todar Mull to include any part of modern Chota Nagpur as part of Subah of Bihar.

I contend, therefore, that so far as *Ain-i-Akbari* is concerned, there is no pretence whatever for supposing that the modern division of Chota Nagpur was treated as part of Bihar.

Here I must sound a note of warning. Chutia Nagpur as the Muhammadans knew it, must not be confused with the modern Chota Nagpur. This is made clear by Prof. Blochmann at page 112, where he points out as follows:

"The Fifth Report on Bengal Finances under the E. I. Co. by Grant has still Chutea Nagpur. On Rennel's maps, we find 'Chuta Nagpur' and only in modern times, do we find 'Chota Nagpur,' as if it was 'Lesser Nagpur' in contradistinction to the Nagpur of the Central Provinces. But Chutia (near the modern Ranchi) was the residence of the old Raja and was selected as capital by the fourth in descent from Phani Mukuta, 'the serpent crowned,' the legendary ancestor of Chutia Nagvansi Rajas. Abul Fazl calls Chutia Nagpur by its old name Kokrah, which is still the name of one of its Parganahs. . . Kokrah was known at the Moghul Court for its diamonds and it is evidently this circumstance which led the generals of Akbar and Jehangir to invade the district."

It is necessary to remember this, because I have seen in responsible newspapers, the invasion by Akbar of Chutia Nagpur or Kokrah being referred to as the invasion of Chota Nagpur. This is a pure delusion. The Muhammadan emperors had no charm for the hilly tracts of Chota Nagpur. They were attracted to Kokrah or Ranchi because of its diamond mines; and, as I shall presently show, there never was an occupation of Chutia Nagpur or Kokrah by the Moghul Emperors. Their invasion meant the taking away of the diamonds from the dominions of the Ruler of Kokrah. At the present moment, it is sufficient to say that

Chutia Nagpur means Kokrah or the zamindary of the present Maharaja of Chota Nagpur and did not include either Ramgarh or the rest of the modern Chota Nagpur.

I think I am right in pointing out that Bihar, as Emperor Akbar knew it, did not include Chota Nagpur. The following passage on page 447 of Hunter's *Statistical Account of Bengal*, Vol. XVI, is of interest:

"The hilly country now comprised in the Chutia Nagpur division remained independent both in name and in fact, during the Muhammadan period, until the Musalman Governors of Bengal and Bihar failed in their attempts to push their conquests farther to the east and therefore turned their arms towards the west and south. Their earliest inroads, however, were directed not against the frontier chiefdoms of Ramgarh and Palamau but against Kokrah or Chutia Nagpur proper, which was celebrated at the Moghul Court for the diamonds to be found in its rivers."

On page 450, it is pointed out that "natives of Bihar were considered foreigners in Chutia Nagpur." It is now said that the Biharis are the children of the Chota Nagpur soil.

It is to be remembered that Chota Nagpur properly belongs to the aboriginal tribes who have nothing whatever in common either with their neighbours of Bihar or with those of Bengal. Sir Hugh McPherson (as he afterwards became) points out as follows in his *Final Report on the Survey and Settlement Operations in the District of Santhal Parganas* on page 12:

"The striking proportion of the aboriginal elements marks the district out at once as a place apart from its neighbours in Bihar and Bengal. It finds its counterpart in the more retired districts of Chota Nagpur, being more strongly aboriginal than the two nearest districts of that division, Manbhum and Hazaribagh, which connect it with the great plateau of Central India."

Mr. Grand in his celebrated *Historical and Comparative Analysis of the Finances of Bengal* refers to Chota Nagpur, namely Palamau and Chota Nagpur, as "foreign dependent Government." He says that these districts are inhabited by people "who are an original savage race differing extremely in appearance, religion, language and manners from the Hindus."

If Chota Nagpur had ever become annexed to Bihar, it could only have become so annexed by conquest, and it would be ridiculous to say that Biharis are children of the soil conquered by the Muhammadans and annexed to Bihar for purely administrative reasons.

I now propose to deal with the different districts of modern Chota Nagpur division. I will first begin with Manbhum. The name Manbhum is of course the creation of Regulation

XIII of 1833. Pacheet was, however, familiar to the Muhammadan administrators. It is not mentioned in Todar Mull's Settlement at all; but Sircar Madarun is shown as the frontier Sircar of Subah Bengal. (See *Ain-i-Akbari*, Vol. 2, page 179.) Jaffar Khan's Settlement of 1722 shows that Pacheet is in Bengal. As is well-known, Todar Mull's Settlement divided each Subah into different Sircars. But Jaffar Khan adopted a different plan; he divided each Subah into different Chucklehs. Chuckleh Burdwan was formed out of Sircars Sharifabad, Madarun, Peschush, the greater part of Salimabad with a portion of Satgong and included the rich zamindary of Burdwan and one-third of Birbhum and the whole of the tributary districts of Bishenpur and Pacheet. (See Firminger's Edition of Fifth Report, Vol. 2, page 189.) At page 198, Pacheet is described as "the large and western zamindary of Bengal, bounded by Chutea Nagpur and Ramgur the southern districts dependent on the Subah of Bihar." Pacheet is throughout shown as part of Bengal (See pages 248 and 259, 2nd Vol. Fifth Report) and situated in Sircar Madarun, Chuckleh Burdwan. (See Fifth Report, Vol. 2, page 398.)

It is clear, I think, that Pacheet was part of Bengal in Muhammadan times.

In British times, there is no doubt whatever that Pacheet was part of the Dewanny lands inserted in the Settlement of Mohammad Reza Khan (See Appendix to the Minute of Mr. Shore dated 18th June, 1789, Fifth Report, Vol. 2, page 128). It is to be noted that Mr. Shore, as he then was, was dealing purely with Bengal in his Minute dated 18th June, 1789. We then find that Pacheet was included within Birbhum. (See *District Gazetteer*, Manbhum, page 61.) This is distinctly acknowledged in Regulation XVIII of 1895 which brought into existence the jungle Mahals carved out of different districts. Section 2 of the Regulation provides as follows:

"The districts called jungle Mahals constituted in zillas of Birbhum, Burdwan and Madarun shall be separated from the jurisdiction of the magistrates of these zillas and placed under the jurisdiction of a district officer to be denominated 'Magistrates of the Jungle Mahals'."

Section 3 shows that Pacheet was taken out of the zilla Birbhum. It is clear that upto 1833 Pacheet was in Bengal.

Regulation XIII of 1833 placed certain tracts of countries under an officer denominated Agent to the Governor-General. By this Regulation, the District of Jungle Mahals was broken up and the estates of Sainpaharee, Sheergarh and Bishenpur were transferred to Birbhum and a new District called Manbhum was constituted

including, besides the present area of the district, the estates of Supur, Raipur, Ambika Nagar, Simla Pal, Bela Diha, Phul Khusma, Shamsunderpur and Dhalbhum. (See *District Gazetteer*, Manbhum, page 65). In 1838, the headquarters was removed to Purulia described then as "lying in the centre of the jungles." It follows that Manbhum was first created under Regulation XIII of 1833. It included not only Dhalbhum but also a large part of the present district of Bankura and Sheergarh now part of Burdwan. In 1845, Dhalbhum was transferred to Singhbhum. In 1871, Sheergarh with part of Pandra was transferred to Burdwan, and Chatna, etc., were transferred to Bankura. In 1879, Pargana Supur, Raipur, Ambika Nagar and certain other parganas were transferred to Bankura, thus reducing Manbhum to its present limit. By Act XX of 1854, the agency to the Governor-General was abolished and Chota Nagpur was formed and Manbhum became one of the districts of Chota Nagpur division.

I do not think that it can be doubted from the above recital of facts that Manbhum has from the earliest times been part of Bengal. It is said that Manbhum is part of Chota Nagpur. But this again is a delusion. It is a part of Chota Nagpur for administrative purpose by Act XX of 1854. Geographically, it is not part of Chota Nagpur. River Subarna Rekha forms the boundary between Manbhum and Chota Nagpur. The distinction is pointed out by Grant at page 399 and again at page 433, Fifth Report, 2nd Vol. He begins his analysis of the Finances of Bihar at page 432. He says that Subah of Bihar is naturally divided into nearly equal portions of territory, north and south of the river Ganges. So far as the northern part is concerned, he points out, that the Subah of Bihar is bounded on the east by the District of Purnea in Bengal. The other division according to him extends to south of the Ganges, 60 miles to the range of hills, and is divided from Bengal, on the east by a branch of the southern hills which, curving to the north, forms at its extremity near the banks of the Ganges, the boundary pass of Terriagharri on the confines of the district of Raj Mahal. I shall have to refer to the pass of Terriagharri hereafter to show that this was the boundary between Bengal and Bihar. But apart from these two grand divisions, he says, there is a third division, an elongated adjoining region still farther to the south which forms a part of Subah of Bihar, and which includes the modern subdivisions of Palamau, Ramgarh and Chutia Nagpur bounded on the west by Subah of

Allahabad and on the south by Orissa and on the east by Bengal.

I shall have to deal with Mr. Grant's point that Palamau, Ramgarh and Chutia Nagpur form parts of the Subah of Bihar; but it has to be pointed out at once that Chutia Nagpur is not the modern division of Chota Nagpur, as I have already shown. He is clearly referring to the modern district of Ranchi which was anciently known as Kokrah, famous for its diamond mines. The most important point in this statement is that Manbhum is not only not shown as part of Bihar, but is distinctly shown as part of Bengal. Mr. Grant has throughout shown Pacheet as in Bengal, and, in this passage, he says that Bengal is to the east of the highland district of Palamau, Ramgarh and Chutia Nagpur. We know that Manbhum is to the east of Ranchi district.

At page 390, dealing with Pacheet, after pointing out that it is situated in Sircar Madarun, Chuckleh of Burdwan, he says as follows:

"In the gross medium settlement of 1184, Raja Raghoonath Narain, the actual payment of Pacheet with the recent territorial annexation of Jilda stands rated only for 69,027 rupees exclusive of the rental of Sheergauty, Bellaghaut, comprehending the whole or part of the hilly districts of Ramgur, Nagpour etc., being Kokerah of Bihar, and therefore properly belonging to that Subah."

Here again Mr. Grant is drawing a line between Pacheet on the one hand and Ramgarh, Nagore (another name for the domains of the Maharaja of Chota Nagpur) etc. on the other hand. According to him, it is clear that Pacheet is a part of Bengal, whereas Palamau, Ramgarh and Chutia Nagpur are parts of Bihar. There is no warrant for the suggestion that Manbhum has at any time been part of Chota Nagpur. As a matter of fact, there is no geographical entity known as Chota Nagpur before the Act XX of 1854. As I have already pointed out, Chutia Nagpur means the domains of the present Maharaja of Chutia Nagpur.

I can find no evidence whatever that any part of Manbhum was at any time part of Bihar. Evidence is conclusive that from the time we find Pacheet at all mentioned, it has always been regarded as part of Bengal. The census of 1931 shows that out of a total population of 18,10,890 in Manbhum, no less than 12,22,689 are Bengalees. Yet a Bengalee living in Manbhum is treated as an alien in Manbhum, whereas a Bihari is regarded as a child of the Manbhum soil. It is significant to point out that the Pacheet Raj family is governed by the Bengal School of Hindu Law. (See I.L.R. 4, Cal. page 91, and 42, C.L.J. at 402.)

As against the mass of evidence to which I have referred, there is in *Padishanamah*, the following passage:

"Bir Narayan the zamindar of Pacheet, a country attached to Subah of Bihar, was under Shah Jehan a commander of 700,300 horses and died in the 6th year (A.D. 1632-33)."

I have however shown that in *Ain-i-Akbari*, Pacheet has nowhere been shown as in Subah of Bihar whereas in all the subsequent Settlements, it has distinctly been shown as in Sircar Madarun, Subah of Bengal. As I have already pointed out, Chutia Nagpur, properly means the domains of the Maharaja of Chota Nagpur, which is in Ranchi district. This is pointed out in all District Gazetteers that I have been able to consult. For instance, we read in the *District Gazetteer* of Manbhum at page 53 that "Akbar about 1585 sent a force to subdue the Raja of Kokrah or Chutia Nagpur proper a country celebrated for its diamonds". In the *District Gazetteer* of Ranchi at page 59, speaking of the dialects spoken in Ranchi district, it is said that "the dialect is generally known as Nagpuria, or the language of the Chota Nagpur proper. In the Statistical Account of Bengal, dealing with Lohardaga, Vol. XVI, pages 362, it is pointed out that

"with the exception of a few villages belonging to the Ramgarh estate, the revenue payable is paid in Hazaribagh. The only estate in Chutia Nagpur proper paying revenue direct to Government is that of the Maharaja of Chutia Nagpur."

In Palamau District Gazetteer, at page 35 in dealing with the proposal to constitute Palamau as a separate district in order to secure greater efficiency of administration, the learned author points out

"that the people taken as a whole were as different from the inhabitants of the remainder of the district as the latter from the neighbour on the east and that the land tenures were as different from those in Chota Nagpur proper as the latter were from those in Lower Bengal."

It is clear that Chota Nagpur takes its name from Chutia Nagpur, which was anciently known as Kokrah.

Now coming to Chota Nagpur proper, that is the modern Ranchi district, the land of the Munda and Oraon races, I have already shown by reference to the paper contributing by Prof. Blochmann to the *Journal of the Asiatic Society of Bengal*, page 111, that Chutia Nagpur means the domains of the Maharaja of Chota Nagpur. Mr. Grant uses the name Kokrah as equivalent to Chutia Nagpur. Neither historically nor geographically nor ethnically is Ranchi a part of Bihar. This, I do not think, will be denied.

It will, however, be contended that Kokrah was conquered by the Muhammadans and was annexed to the Subah of Bihar. Assuming that the contention is correct, Ranchi soil nevertheless remains Ranchi soil. Let me take an illustration. If China is conquered by Japan today and is administratively made a part of Japan, can it be suggested for a single moment that the Japanese are the children of the Chinese soil? I do not think that anyone will answer the question in the affirmative. Let me consider, however, how far it is correct to say that Kokrah was conquered by the Muhammadans and made part of the Bihar Subah?

I turn again to Prof. Blochmann's paper in the *Journal of the Asiatic Society of Bengal*, which so far as I can see is the basis of the different accounts we get in the different Gazetteers. We find that in 1585 Shahbaz Khan Kambu sent a detachment to Kokrah which was famous for its diamonds and his men carried off much plunder. The Raja became a tributary. This is hardly a conquest. It was pure plunder and nothing more. We then find that in 1616 Ibrahim Khan, the Governor of Bihar, overran Kokrah and took possession of its diamond washings. The quotation is from *Tuzuk-i-Jehangiri* and it is said, "this district belongs to Subah Bihar and the river which flows through it yields diamonds." The Governors of Bihar sent frequently detachment into Kokrah but as the roads were fortified and the jungles impenetrable, the Muhammadans were satisfied with a tribute of "two or three diamonds." The exploits of Ibrahim Khan are then given in greater detail. It is said that Ibrahim Khan was preparing to invade Kokrah, and according to custom, the Raja sent a few diamonds, but Ibrahim was dissatisfied and invaded the district before the Raja could collect his men. Ibrahim deprived the Raja of the diamonds in his possession and also captured 23 elephants. Jehangir then says as follows: "The district is now subject to me and the diamonds found in the river are forwarded to Court." From another account in the possession of Col. Dalton and which is quoted in Prof. Blochmann's paper, it appears that Durjan Sal, who was then the ruler of Kokrah, was captured and taken a prisoner; but twelve years later, he secured his release, owing, it is said, to his ability in testing the diamonds and agreeing to pay an annual tribute of 6000. The possession of Kokrah was made over to the Raja and he was restored to his former rank including the right to sit on a chair in the presence of the Emperor. This is all that we get of the conquest

and annexation of Kokrah to Subah of Bihar. We read in the District Gazetteer of Ranchi at page 134 that "the subjection" of Kokrah "to the Moghuls was at first purely nominal. The Moghuls exacted no yearly tribute and were content with occasional raids into the country and carrying off as tribute a few diamonds which were found at the time in the Sankh river." After referring to the exploits of Ibrahim in the reign of Emperor Jehangir, the learned author says:

"Even after this, the Mahomedans exercised but little control over the internal affairs of the district and were content if they received a portion of the stipulated tribute."

In my opinion, it is quite impossible to say on the narrative which I have just given, that Kokrah was annexed to Subah of Bihar. It must be remembered that there was no occupation of Kokrah by the Moghuls but they merely imposed a tribute just as the British Government imposed tributes upon the feudatory states in India. In fact there was great doubt at one time as to whether the position of the Maharaja of Chota Nagpur was not that of a feudatory Chief. This is dealt with at page 188 of the Gazetteer. The claim was based on a Resolution of 1789 which exempted the District from the Regulations and also on the fact that in the early days of the British administration, the Raja was given a free hand in the internal affairs of the district, the only interference being by the despatch of small detachments to secure the arrest of a criminal or to assist the Chief in realizing his dues from his subordinate tenure holders. The question was finally disposed of by the orders of the Government issued in 1824 in which it was held that the District had only been exempted from the Land Revenue Regulations and that the General Regulations applied to Chota Nagpur in the same way as to other parts of the Province.

There is no evidence at all that Kokrah was made an administrative Mahal of Subah of Bihar. Indeed from the admitted history, it could not have been so made. Admittedly the Moghuls did not occupy Kokrah nor did they interfere in the internal administration. They were at first satisfied with "a diamond or two" and later imposed a tribute and they were wholly satisfied if they could exact a portion of the tribute. I do not think that it is possible to argue that Kokrah ever became a part of Bihar so as to give the children of Bihar the right to claim Kokrah soil as Bihar soil.

But at the same time, it has to be admitted that the tribute was payable to the Governor

of Bihar and that, in this sense, it was "dependent on the Subah of Bihar". I have already said that Mr. Grant regarded Palamau, Ramgarh and Chutia Nagpur as parts of Subah of Bihar; but it is clear that he regarded them as parts of Bihar in the sense that they were tributary States and that the tributes were payable to the Governor of Bihar. They are throughout referred to as "foreign dependencies." For instance at page 198 (Fifth Report Vol. 2), he describes Chutia Nagpur and Ramgarh as "dependent on the Subah of Bihar." At page 399, he describes the hilly districts as "being the Kokerah of Bihar and therefore properly belonging to that Subah." He clearly used the word "Kokerah" as implying a foreign dependency. The word "therefore" is significant. The fact, according to him, is that it is a dependency of Bihar. He draws the inference that it properly belongs to that Subah. At page 433, he describes it as "a foreign dependent Government." The position is clear beyond doubt. Both Chutia Nagpur and, as I shall presently show, Palamau had to pay tribute to the Governor of Bihar; but the Governor had nothing to do with the internal administration, which throughout was in the hands of the local chief. This is the fact. If from this, it is legitimate to infer that the soil of Chutia Nagpur and Palamau became Bihar soil, then the inference can be made. But I do not think that it is possible to draw this inference.

I now come to Ramgarh. We read in the paper contributed by Prof. Blochmann at page 117 that

"Of Ramgarh, I have hitherto found no notice in Muhammadan historians. It must have been at an early time dependent on Bihar, because Chai Champa, according to Ain, was a parganah belonging to Bihar."

I have dealt with the argument of as to Chai Champa and I do not think that it can be said that the reference is to Chai Champa, as it is not even mentioned in Vol. XVI of the *Statistical Account of Bengal*. But it is most significant that there is no record that Ramgarh was ever conquered by the Moghuls and annexed to Bihar. If there is any such reference, I should like to hear of it. In my opinion, Ramgarh could at no time attract the Moghuls for the reason they never made any attempt to subjugate these hilly tracts. It is pointed out by Sir Hugh McPherson in his *Final Report on the Survey and Settlement in the Santhal Parganas* that the Moghuls made no impression on the hilly country. Kokrah attracted their notice because of the diamonds it possessed, but Hazaribagh possessed no diamonds and coal was not

thought of at that time. At any rate, if there was any attempt made by the Moghuls to subjugate Ramgarh and to annex it to Bihar, there must be records of it somewhere. If Prof. Blochmann is right that there is no record at all of any such subjugation, then I think, it must follow that Ramgarh retained its independence and was saved by reason of the fact that it was situated in a hilly and somewhat inaccessible part of the country.

We get a clue as to the true position from the manner in which Hazaribagh was dealt with directly after the Dewanny. We read in Vol. XVI of the *Statistical Account of Bengal* that in 1755 Mukund Singh was the Raja of Ramgarh and the recognised chief of the country (See page 18). His relative Tej Singh had the control of the rural levies which made up the local army. If this be a correct account, then it is hardly possible that Ramgarh was administratively a Mahal of Bihar in 1755. We read at page 18 that in 1771, Tej Singh "turned a traitor" and asserted his claim before Capt. Camac. Traitor to whom? If Ramgarh was a Mahal of Bihar and was transferred to the E. I. Co., by the Dewanny, then there was no question of treachery to Mukund Singh. The narrative proceeds to say that Tej Singh returned with a force under Lt. Goddard. Mukund Singh fled and Ramgarh was made over to Tej Singh for a tribute of 40,000 a year. This is the first time that we hear of the subjugation of Ramgarh in history. I think it is clear that Capt. Camac took advantage of the feud between the two cousins and succeeded in imposing his authority in Ramgarh. In Mr. Shore's celebrated Minute dated 18th June, 1789, respecting the Permanent Settlement of the land in Bengal Province, Ramgarh is treated as part of Bengal (See Fifth Report, Vol. 2, page 92, paragraph 428). Ramgarh could hardly have been dealt with as part of Bengal if prior to Dewanny of 1765, it was part of Subah Bihar. Then there is a celebrated Regulation dated 23rd November, 1773, only a few years after the date of the Dewanny. This Regulation is of the utmost importance in determining what was regarded as part of Bengal and what was regarded as part of Bihar. By these Regulations, the Provinces were formed into certain grand divisions. The first grand division was to be managed at Calcutta. We are not concerned with it. The second grand division was to be managed at Burdwan and was to consist of, amongst others, Pacheet, Ramgarh, etc., the districts under the management of Capt. Camac. We know that Capt. Camac had much to do with the subjugation

tion of Ramgarh. In my opinion, this important State paper is conclusive upon the question that Pacheet and Ramgarh were both regarded as part of Subah of Bengal directly after the Dewanny. I do not for a moment contend that this shows that Ramgarh was part of Bengal. It cannot be part of Bengal because obviously it was conquered by Capt. Camac in or about 1771 and was annexed to Bengal purely for purposes of administration. I proceed with the Regulation. The sixth grand division under these Regulations was to be superintended by the present Chief and Council at Patna and to consist of the whole Province of Bihar with the exception of the separated districts as above mentioned. This is important. The fourth grand division contained amongst others Bhagalpur "including the annexations lately made to the latter from Monghyr." It is quite clear that the famous Regulation of 23rd November, 1773 considered that all the territories mentioned in the grand divisions first, second, third, fourth and fifth, appertained to Bengal except "the annexation made to Bhagalpur from Monghyr", which was part of Bihar although it was administered from Murshidabad. I must not be misunderstood. I am not for a moment suggesting that all the different districts shown as part of Bengal are in fact Bengal soil. That is not my point. It is obvious that the territory conquered and annexed to Bengal merely for the purpose of administration cannot be regarded as Bengal soil. But I rely upon it for the purpose of showing that neither Pacheet nor Ramgarh could properly be regarded as part of Bihar. This is, in my opinion, conclusive on the Regulation of the 23rd November, 1773, which will be found at page 200 of Colebrooke's Supplement. To sum up the position as to Ramgarh:—

(1). There is no record anywhere that Ramgarh was at any time conquered by the Moghuls and annexed to Bihar.

(2). On the other hand, we know that in 1755, Mukund Singh was the Raja of Ramgarh and the recognised chief of the country.

(3). We know that Capt. Camac took advantage of the quarrels between the two cousins and succeeded in imposing his authority upon Ramgarh.

(4). We know that directly after the Dewanny, Ramgarh was treated administratively as part of Bengal.

This is important. It could not have been so treated if it were part of Bihar.

I now come to Palamau. Sheista Khan marched upon Palamau in 1641-1642. Partab,

the Ruler, submitted. He offered to pay a tribute of 80,000 rupees. Sheista Khan accepted it and returned to Patna on the 12th February, 1642. In 1643, the tribute not having been paid, Zabardast Khan attacked Palamau. It is quite clear that up to 1643 notwithstanding two invasions, the Muhammadans had exacted nothing but promises from the Rajas. This will appear from Col. Dalton's note annexed to the paper submitted by Prof. Blochmann. (See Vol. 40 of the *Journal of the Asiatic Society of Bengal*, page 31.) The third invasion in 1660 by Daud Khan, the Governor of Bihar, was more complete. Daud Khan left Palamau in charge of a Muhammadan Fouzdar. The latter was removed in 1666 and Palamau was placed under the direct control of the Viceroy of Bihar. The Muhammadan influence did not last long having regard to the inaccessible nature of the country. The Muhammadans treated the country as a fief and did not interfere so long as the tribute was paid. To the south, the Chero Chiefs retained their independence, the north-west was controlled by the Muhammadan nobles (See *District Gazetteer*, Palamau, p. 24). There is an interesting passage quoted from *Sair-ul-Mutakharin* in the Palamau Gazetteer at p. 25. Nawab Hedayat Ali Khan, the father of the author of *Sair-ul-Mutakharin*, was at one time Deputy Governor of Bihar. The Nawab undertook in 1740 to subdue the chieftains of the hilly country. The quotation is as follows:

"As he sought to raise his character and to acquire a renown, the Raja of Ramgarh became, of course, the object of his attention. This Raja was the most powerful Gentoo zamindar of the hills and so considerable and warlike, that the Viceroys of the Province had hardly any control over him. He was joined in that design by Raja Sundar Singh and Raja Jai Kishun Rai, both zamindars of the Palamau country as well as by some other zamindars of Siris, Kutumba, Shergati. Supported by such a confederacy, he laid siege to the fortress of Ramgarh and at last took it, after which he advanced some journeys more into the hilly country, and having settled it, he was taking some rest from the fatigues of that expedition, when on a sudden intelligence was brought by some trusty persons that Raghuji Bhonsla Pandit had sent his own Pradhan at the head of 40,000 horse to conquer Bengal, and that in a few days, they would pass close to him through the hills on their way to that country. He held consultations with his friends, as the forces he had with him were by no means equal to the task of barring the passage to such invaders. They all advised him to quit the hilly country, and he accordingly descended and encamped at the foot of that chain."

From this, it is quite clear that Ramgarh had never been subjugated by the Muhammadan and they treated Palamau as a fief. The tribute was paid to the Governor of Bihar

and if from this, it can be argued that Palamau became a part of Bihar, then the argument must prevail. I do not myself take that view. Palamau soil remained Palamau soil. It had its own chiefs who were virtually independent so long as they paid the tribute to the Muhammadan Governor of Bihar. The position of Palamau with reference to Bihar Government differed in no respect from the position of the feudatory chiefs in India to-day with reference to the Government of India.

At the date of the Dewanny, Palamau was practically independent. We read in the District Gazetteer of Palamau at page 26 that for a long time, the country had been in a state of disturbance owing to the struggles between the rival factions for the chieftdom. In 1722, a rebellion broke out in which the ruling Chief Ranjit Rai was murdered and his place taken by Jai Kishun Rai. A few years afterwards Jai Kishun was shot in a skirmish with some of Ranjit Rai's relatives. Jai Kishun's family fled to Gaya district and took refuge with one Udwant Ram, but in 1770, he took Gopal Rai, the grandson of the murdered Raja, to Patna and presented him to Capt. Camac as the rightful heir to the Palamau Raj. Capt. Camac promised the assistance of the British Government and it happened that about the same time, Jjunath Singh, Dewan under Chatrajit Rai, had declared before Mr. Bellam at Aurangabad that the Raja of Palamau would neither become a vassal of the British nor grant supplies to any British troops that might pass through the country. This declaration reaching Capt. Camac's ears, considerably hastened matters, and shortly afterwards, the British force appeared before Palamau forts. Palamau was formally taken possession of as a British Province in 1772.

My reading of the history of Palamau is this: it remained independent until 1772, although it had been conquered three times by the Muhammadans. It no doubt came under the sphere of influence of the Governor of Bihar. It never became annexed to Bihar. The utmost that can be said is that it was a tributary state in Bihar.

I now come to the position of Santhal Parganas. Santhal Praganas, as a district, came into existence in 1855, as a result of Act XXXVII of 1855. It was carved out of Bhagalpur and Birbhum districts.

Rennel's map of jungle terry of 1779 shows that the jungle terry district of 1772-79 as administered by Capt. Brooke and Brown included almost every portion of the present

Santhal Parganas and in addition a considerable tract to the west and north-west. Sir Hugh McPherson in his Settlement Report at page 12 says:

"The striking proportion of the aboriginal elements marks the district out at once as a place apart from its neighbours in Bihar and Bengal."

In Santhal Parganas, we find a historical boundary between Bengal and Bihar, Teliagarhi, 7 miles east of Sahibganj (See District Gazetteer, Santhal Parganas, page 284). Maulavi Abdus Salan points out in his translation of *Riyaz-us-Salatin* that the passes of Teliagadhi Sakrigali were considered the 'key' to Bengal (See page 139, foot note). In *Aini-i-Akbari*, Vol. 2, page 28, we read that "in Sircar Monghyr, is a raised stone wall extending from the Ganges to the mountains and this wall is considered to be the boundary between Bengal and Bihar." There is reason to suppose that this wall referred to in *Ain-i-Akbari* is the pass of Teliagadhi. In the Fifth Report, Vol. 2, page 373, we read that

"Raj Mahal was an important military Government, on the confines of Bengal towards Bihar commanding some of the mountainous passes into either country, particularly the famous barrier Terriagully, the possession of which was deemed of so much consequence in times of the hostile independence of the two neighbouring Subahs."

Raj Mahal as we know was the capital of Bengal for some years up to 1606 and it again became capital of Bengal when Shah Sujah became Governor of Bengal in 1637. In every financial statement that we get in the Fifth Report, Raj Mahal is shown as part of Bengal; and it could hardly be otherwise, because we know that Raj Mahal was for many years the capital of Bengal. The Regulation of 23rd November, 1773, to which I have already drawn attention is almost conclusive upon this point. We have in this important State document a complete definition of what was Bengal and what was Bihar. As I have already said, the Provinces of Bengal and Bihar were formed into grand divisions. The first grand division was to be managed at Calcutta. We are not concerned with this. The second grand division was to be managed at Burdwan and was to consist of, amongst others, Pacheet and Ramgarh districts under the management of Capt. Camac. The third grand division was to be managed at Murshidabad and was to consist amongst others of Raj Mahal and Bhagalpur including the annexations lately made to the latter from Monghyr and Jungle Terry districts under the management of Capt. Brooke. The fourth grand division was to be

managed at Dinajpur and was to consist of amongst others Purnea. The fifth grand division was to be managed at Dacca and we are not concerned with this. The sixth grand division was to be superintended by the present Chief and Council at Patna, and was to consist of the whole Province of Bihar except the separated districts of Monghyr as above mentioned.

My point is this. We have here a complete definition of the Province of Bihar which included all the territories except those mentioned in the grand divisions number one to five; but it included the separated districts of Monghyr, etc., although for administrative reasons, they were to be managed at Murshidabad. It is clear that Bengal included Pacheet, Ramgarh, Raj Mahal, Jungle Terry districts under the management of Capt. Brooke, and Purnea. Sir Hugh McPherson's Settlement report at page 9 tells us that the jungle terry districts included almost every portion of the present Santhal Parganas and in addition a considerable tract to the west and north-west. Sir Hugh McPherson points out that Renne's map of Jungle Terry prepared within a few years of the assumption of the Dewanny is a most valuable index to the condition of the country in the first years of the British administration. I ask with all humility, how can Santhal Parganas be regarded as Bihar soil?

It is unnecessary for me to pursue the point, but I respectfully ask anyone interested in the question to peruse Sir Hugh McPherson's Report. He points out that the south of Raj Mahal was

the division of Kalikapur, which coincides more or less with the present sub-division of Pakur and that the northern portion of Kalikapur coincide with Pargana Ambar and that the south with Pargana of Sultanabad and that Ambar and Sultanabad formed part of the zamindari division of Rajshahi (See page 25).

He also points out that southern and south-western portion of the district formed part of the zamindari of Birbhum which was included in Sircar Madarun, which as we know, was a Sircar in Subah Bengal. Sir Hugh sums up the whole position in these words at page 24: "Of the district as we know it, five-sixths appertained to the Subah of Bengal", and yet the whole of this territory is considered to be Bihar soil to which Biharis have a natural right.

From a reference to the different authorities to which I have referred, we can draw the historical boundary between Bengal and Bihar. In the north, River Kosi was the boundary, Purnea belonging to Bengal. Lower down, Teliagadhi pass was the boundary, and five-sixths of the modern Santhal Parganas was within Bengal including the important places like Raj Mahal, Pakur, Dumka and Deoghur; and lastly river Subarna Rekha was the boundary between Bengal and Chutia Nagpur. My conclusions are that Purnea, five-sixth of modern Santhal Parganas, and the whole of Manbhum were parts of Bengal, and that the rest of the modern division of Chota Nagpur and one-sixth of modern Santhal Parganas did not belong either to Bengal or to Bihar.

THE TRAGEDY OF THE INDIAN MATCH INDUSTRY

By X

THE match box—a very common article of necessity in our modern life—will after some time be supplied to the people in India entirely by foreign concerns. Perhaps, the statement sounds surprising but if the course of events in the Indian Match Industry is examined a little more carefully, the truth of the remark will be evident.

It was in March 1922 that the Government of India increased the revenue duty on imported matches to Rs. 1-8 per gross. The duty amounted to 100 to 200 per cent *ad valorem* and Indian industrialists were quick to perceive the advantage it held out if an indigenous match industry was started in India. Machinery was soon imported and genuine match factories began to work at various centres in the country. Since pre-war days, however, the large Indian market for matches was supplied by Japan, Sweden and various other European countries. In 1912-13 out of the total imports of 15.12 millions gross of boxes in India, about half *i.e.*, 7.29 millions were supplied by Japan. In the years of war, imports from European countries practically ceased and Japan consolidated her position in the Indian market by claiming 10.74 millions out of the total Indian imports of 11.11 millions in 1918-19. Sweden, however, could not afford the loss of the Indian market and the several Swedish Companies which combined and formed the Swedish Match Company in 1917 soon prepared for the grim struggle to recapture the Indian market from Japan. The year 1923-24 found Japan losing much of the ground covered during the war years, for imports into India from Sweden had risen to 5.15 millions whereas those from Japan stood at 5.55 millions gross—the proportion of both the countries being nearly equal. The imposition of the revenue duty by the Government of India in 1921 and its increase to Rs. 1-8 in 1922 gave a filip, as observed above, to the Indian Match Industry which came as a powerful rival both to Japan and Sweden. But it was not long before Sweden found out the way, usually followed by manufacturing countries, of circumventing the protective duty by establishing factories within the tariff wall. Between 1924 and 1926 six factories were started at various

places in India by the Swedish Match Company. In 1926-27, the total market secured by Sweden by way of imports was about 50% while imports from Japan were reduced to about 6% of the Indian demand. The 44% of the demand lost by Japan was supplied by the factories of the Swedish Match Company in India and of the Indian Match Manufacturers, who had only recently entered the field. It will be evident that the Indian Match Manufacturers had therefore, now to face competition principally from the Swedish Match Company.

The name of Ivar Kreuger needs no introduction. It was through his efforts that two of the largest and the oldest of the match factories in Sweden known as the Jongkoping Company and the Vulean Match Works formed a combination and absorbed also five more concerns. Eleven other companies formed a second combination called the United Swedish Match Factories. In 1917 when Sweden had lost much of its foreign trade, the two combinations united under the name of the Swedish Match Company with Ivar Kreuger as its Chairman. It will be interesting to form an idea of the huge resources and the political influence, this company can wield. In 1927, the capital of the Company stood at £15,000,000. The Swedish Match Company with its subsidiary company—the International Match Corporation, incorporated in U. S. A., have acquired a dominant control over the capital invested in the manufacture of matches in more than 30 countries of the world. Not only are some of the most powerful Banking organisations in London and New York interested in the Swedish Match Company and the number of subsidiary companies brought into existence by it, but Governments of various countries also take loans from them. About 80 million dollars have been advanced to the French Government at 5% by the Swedish Match Company and in the balance sheet of the International Match Corporation for 1926, it was shown that advances to various other Governments amounted to about 22½ million dollars. It is no wonder, therefore, that the Company enjoys a number of privileges, concession and monopolies throughout the world. It is estimated that about 70% of the total world's

demand has been supplied by the Swedish Match Company. In more than 25 countries, the Company has either a complete monopoly granted by the Government or a virtual monopoly acquired in different ways. It may be mentioned here that the Western India Match Co., and its allied concerns working in India are the subsidiary companies of the Swedish Match Company.

The Indian Match Manufacturers had therefore now to contend against these Swedish concerns and one Japanese concern established in India called the Calcutta Match Works Ltd. With their vast resources and experience of over 80 years, the competition from these concerns which the Indian Manufacturers have had to face is decidedly formidable. The Swedish Company claims that it has a moral right to extend its operations in the Indian market. The late Mr. Ivar Kreuger in his memorandum regarding the match trade in India said :

"For half a century the Swedish Match Industry has had a firmly established trade in India. Under such conditions it seems that the Swedish Match Company has a strong moral claim to participate in the Indian Match trade and the efforts made by the Swedish Match Company to maintain or strengthen its position in India ought not to be regarded as unjustified or aggressive."

The measures adopted by the foreign companies in India, however, appear to be directed more towards killing the Indian Industry than towards a fair participation in the Indian market. It was as far back as 1935 that Indian commercial bodies drew the attention of the Government of India to the unfair competition and the price-war waged by the foreign match concerns in India. The undercutting of prices has been such as would leave no margin of profit to the Indian Manufacturers. Match boxes containing sixty sticks have been sold at Rs. 2/1/- per gross and if the Excise Duty of Re. 1/8/- per gross paid to the Government of India under the Act of 1934 is deducted, it can be seen how the sale price has been reduced to the lowest margin. Both the Western India Match Co., and the Calcutta Match Works have undercut the prices so much that the Indian Factories have found the competition practically ruinous. Moreover, several rebates and discounts are offered by these concerns to the dealers and vendors of matches, if they undertake not to sell matches manufactured by any other factory. Such rate or discount is generally paid at the end of the year. Moreover, when a further reduction in price is effected, the same is calculated on the stock

already sold and at times such a refund is given to the dealer only if he undertakes to buy more cases. This procedure induces the match dealer to confine his orders only to these concerns. It needs hardly be added that only on account of their vast resources the foreign concerns can afford to give so many concessions. It will be interesting to note here that in a recent circular issued by the Western India Match Co., even prizes are offered to the match dealers. For instance any person who buys 25 gross of the 'sea fisher' matches—one of the labels of the Company—is deemed to have secured half a point and is awarded a silk *chaddar*. Similarly a person buying 500 gross i.e., 10 cases would be entitled to 13 *chaddars*. Moreover, the propaganda carried on by these foreign concerns by means of circulars, cartoons, etc., is surprising. The Tariff Board on the Match Industry remarked in their report :

"At the same time we have seen advertisements of the Swedish Match Co., which in some cases explicitly, in others by implication, condemn the products of all Indian Match Factories without reserve. We must confess that it strikes us as curious that a foreign firm should repay the hospitality offered to it by India by belittling the quality of Indian Manufacturers as a class, or indeed that the Swedish Match Company considered that its interests were best served by methods of advertisement which could not but stir up animosity".

This unfair competition which the Indian Match Manufacturers have to face has already resulted in about 25 to 30 Indian Factories having been closed. About 17 Indian Factories have been closed in Bengal alone. The following figures would give an idea of the growing production of the Western India Match Co.:

| (In cases of 50 gross) | | | | | |
|------------------------|----|------------|--------|-------------|--------|
| Year. | | Indian | | Percentage, | |
| | | Factories. | Wimco. | Wimco. | Indian |
| 1935 | .. | 50,860 | 61,311 | 45% | 55% |
| 1936 | .. | 39,113 | 38,694 | 50% | 49½% |
| 1937 | .. | 58,743 | 28,888 | 67% | 33% |

The remaining Indian factories also find it very difficult to face the unfair competition and the relentless price-war from such powerful rivals. Moreover, the Match Excise Duty Act, 1934, has fixed the minimum duty as Re. 1/- per box of not more than 40 sticks. The result, however, has been that the foreign concerns have got an additional advantage. Indian manufacturers hitherto sold two half-size boxes for a quarter of an anna. But the duty being the same now, the purchaser whether he buys half size or full size match box has to pay the price of one pice and the full size boxes are

MARBLE

FOR_____

STAIRS
FLOORS
DADOS

1. Our Marble Factory is the biggest and the only concern of the East which is equipped with the up-to-date machineries for Sawing, Cutting Polishing, Chipping and Air machine for ornamental work, and therefore surest guarantees it holds for first class workmanship.

2. Our import on the Port of Calcutta is more than half of the whole import in these lines.

3. **Economic point of view :—**

- (a) Sawing machine saves the duty on the sawing charges of Italy as well as helps in employing Indian labour.
- (b) Chipping machine is to utilise even the smallest broken pieces.
- (c) Even the dust is sold. So the Company has no wastage whatsoever.

4. **Our employees are all Indians and the capital is also Indian.**

5. The quality of our work is shown by the work at Nawab Sir K. G. M. Farouki's house at Store Road, Ballygunge, the Alipore house of Mr. P. R. Das, Patna, Mr. H. C. Ghose's house at Rash Behari Avenue, etc.

consequently sold in larger number than half-size boxes, which the Indian factories manufactured. In order to comply with the public demand the Swedish Match Company floated a subsidiary enterprise a couple of months ago. Even in this concern, only half the issued Share Capital has been offered to the public in India for subscription while the controlling interests and the management are retained in the hands of the Swedish Match Co. But as clearly pointed out in the Resolution of the Congress Working Committee in April last, no company can be considered to be genuinely Swadeshi unless, not only its capital but also its management and controlling interests are in Indian hands.

It cannot be gainsaid that the time has now come when the Government of India should examine the whole position created by such unfair competition. As early as 1927, the Tariff Board stated :

"We do not think that in the present circumstances any action is called for against the Swedish Match Company on the ground of unfair competition. But taking into account the vast resources of the company and the policy pursued by them in other countries, it is necessary that future developments of the company in India should be watched. Should such developments indicate that the company is acquiring undue control to the detriment of the Indian Industry, we recommend that Government should take steps to safeguard the Indian Industry."

The avowed object of the Swedish Company is to secure a position in every possible market of the world, which would enable it eventually to regulate prices. It is natural that the acquisition of merely a major part of the demand of a country will not enable it to achieve this object. If no measures are taken to check the unrestricted competition offered by the foreign concerns, it is clear that the Indian concerns operating in the field would soon be eliminated. The severe competition entered into by the company in Belgium before it acquired a virtual monopoly in that country should serve as a reminder to the Government of India. The President of Belgium Match Manufacturers stated in 1927:

"The price-war which the cartel (meaning the Swedish Match Co.) is capable of carrying on during years in all countries to which Belgium can hope to export matches is formidable. It is a matter of public notoriety that last year a Belgian Factory was compelled to go into liquidation on account of the price-war; the assets realised in the liquidation were not enough to pay even 10% to the shareholders."

The Indian Tariff Board has also stated that

"it must be admitted that the resources of the Swedish Company are sufficient, if it is so desired, to crush for a time all competition from Indian firms and capture for itself the whole of the Indian market."

The need for intervention of the Government to help the Indian Manufacturers to carry on their legitimate activities can therefore no longer be doubted.

An important aspect of the question which should not be lost sight of here is the production of matches as a cottage industry. Though the Tariff Board dismissed the matter perfunctorily the question needs to be examined and carefully studied.

What Indian commercial bodies had proposed to the Tariff Board was that

"a Central Sale Organisation should be started which should be entirely Indian in management and capital and that it should control the manufacture and sale of matches, both local and imported. This sale organisation should fix a price for the purchase of the products of manufacturers such price being fixed separately for each manufacturer on the basis of his cost price plus a percentage of depreciation etc., provided such price shall not be unreasonable having regard to the average cost of manufacture by Indians. All the match factories should be licensed and a quota should be fixed according to the capacity and output of each factory. In the case of the Swedish Match Co., provision should be made for the reduction of the quota so as to ensure the cessation of production within five years".

Only if some such bold and comprehensive scheme is adopted can the Indian manufacturers hope to survive.

Meanwhile factories after factories being unable to withstand the relentless competition of these foreign concerns are closing. But is their cry heard by the Government? One wonders.

TATA SONS, LIMITED

AVIATION DEPARTMENT, BOMBAY.

GROWTH OF AN INDIAN AIR LINE

It is interesting to trace the growth and present position of the Tata Air Service.

KARACHI-MADRAS AIR LINE

The Aviation Department of Tata Sons, Limited was created in the middle of 1932, in which year the Company entered into an agreement with the Government of India to operate a weekly air mail service between Karachi, Ahmedabad, Bombay, Bellary and Madras.

The progress of this service has been a rapid one. In 1932, the Aviation Department operated the whole Karachi-Madras service with two light aeroplanes, two pilots, one Ground Engineer and a few unskilled assistants. From this small beginning has grown the present network of air services operated by the Company today, totalling a route mileage of about 3,600, entailing the ownership of a fleet of 14 aeroplanes ranging from 4-seaters to 8-seaters, capable of speeds of 160 miles per hour, and a staff of over ninety men.

In January 1935, the frequency of the Karachi-Madras service was doubled. In the same month this service was diverted from Bellary to Hyderabad by arrangement with H. E. H. the Nizam's Government. Later with the assistance of the Government of Kutch, Bhuj was included as a regular halting place on the line.

BOMBAY-TRIVANDRUM AIR LINE

With the collaboration of Travancore State, a weekly air service between Bombay and Trivandrum was established in October 1935. The service shows a remarkable saving in time over surface transport—as much as 48 hours being saved by an air journey between Bombay and Trivandrum—and offers special attractions to tourists. This line is now extended from Trivandrum to Trichinopoly, thus forming a complete link round South India.

BOMBAY-DELHI AIR LINE

In November 1937 a bi-weekly air service was established between Bombay and Delhi *via* the States of Gwalior, Indore and Bhopal.

The service, which was made possible by the support of the States served, provides the first regular air link between Bombay and the Capital of India, and the timetable has been prepared to allow passengers to make a quick return visit or a more leisurely trip between Bombay and Delhi and intermediate points, or *vice versa*.

The service also provides through air travel between Delhi and South India in connection with other Tata services.

EMPIRE AIR MAIL SCHEME: COLOMBO-KARACHI AIR LINE

The Tata Air Lines are also participating after long preparation in the Empire Air Mail scheme.

The frequency of the Colombo-Karachi Service is four

times a week in each direction and later will be increased to five times a week in each direction.

As regards the future, it is hoped, at a not too distant date, to establish a regular nightly air service between Bombay and Calcutta for passengers and mails, thus linking together the two largest centres of commerce in India.

The progress made up to now in the development of these air services is largely due to the constant support which Tatas have received from the public as users of their Air Mail, Passenger, and charter services.

The Colombo-Karachi route is 1,900 miles long, as far as from England to Egypt.

The Bombay-Trivandrum route is 780 miles long, further than from London to Vienna.

The Bombay-Delhi route is 800 miles long, as far as from London to Madrid.

The total route mileage in regular operation by Tatas today is about 3,600, as far as from Paris to New York.

Tata aeroplanes have flown 1,500,000 miles (a distance equal to sixty times round the world), carried 3,28,000 lbs. of air mail, and have maintained during five years an average regularity of 99.4%.

The growth and progress along the lines of efficiency of this service holds out hopes that given the requisite support it may gradually develop into a continental service of a calibre comparable with the great air-lines of Europe and America, as the beginnings most certainly compare favourably with them.

Undoubtedly there are great handicaps in the way of such progress, and the greatest of them is the conflict of interest with all-powerful "Empire" concerns. Just as road transport has been most unfairly crippled by the retrograde policy advocated by the short-sighted advisers to the Railway Board of the Government, it is to be feared that outside influences may considerably affect the development of really Indian air-transport concern.

The question of aviation and that of road transport brings to the fore that of fuel. In the case of military exigencies consequent on war, the problem of finding sufficient sources or reserves of petrol and other fuel oils near at hand becomes very acute. In certain countries in the West, the governments are providing subsidies and grants for the industrial production of synthetic petroleum from coal. But so far as can be gauged from latest reports, the cost of petroleum from such sources is so high that it can only be used when the natural product is unobtainable in quantity. The petroleum production of India and Burma is as yet not adequate to meet the peace-time demands of the country, although the Burma Oil Co. is undoubtedly doing its level best to further its reserves.

In view of the enormous scope for expansion of road and air traffic in this country there is no doubt the market will expand rapidly in the near future.

Progress

Progress to-day is the key-note of the economic wealth of the Indian and the British Empire. Great commercial organisations have played their part in bringing the necessities and amenities of life to every corner of the land, and amongst these organisations the Burmah-Shell Oil Storage and Distributing Co. of India, Ltd., and its Associated Companies, have for nearly half a century played a prominent part. Petroleum products ranging from Aviation Spirit through Motor Spirit, Kerosene and Industrial Oils, right down to the heaviest Petroleum products, such as Asphalt, can to-day be obtained in every province, district, city and village of India, and the Burmah Oil Co., Ltd., and SHELL trade marks carry everywhere with them a guarantee of quality and service.

The Burmah-Shell organisation keeps ahead of the times, and, in meeting efficiently the Petroleum requirements of India, will, as in the past, continue to be closely identified with the prosperity of the country.

INDIANS ABROAD

ON HIS return to India Sir Raza Ali, lately the Agent-General for India in South Africa, gave an account at Simla of the condition of the Indians in that part. It is highly informative and a fair description of the social and educational improvements that have been slowly secured by the Indians during many years of patient struggle and suffering.

INDIANS IN SOUTH AFRICA

Twenty years ago Mahatma Gandhi said in a speech in Madras,

"The hotels refuse us admission. Indeed, there are cases in which respectable Indians have found it difficult even to procure refreshments at European places." In Mr. Gandhi's time 'the railway and tram car officials treated the Indians as beasts.'

But, according to Sir Raza Ali, no first class hotel in Durban, Johannesburg, Capetown or Pretoria, would refuse to admit Indians, nor Indians travelling in any municipal bus or car should be interfered with now.

In respect of their education the Indians have today better facilities and can show better results than before. This we hope will be followed by more vigorous efforts in the coming years and thus ensure a secure position of the settlers in the body-politic of the Colony. We should recognize, as *The Leader* of Allahabad reminds in taking note of the speech editorially:

This improvement in the position of Indians socially and educationally is mainly the result of the efforts of the Agents-General, specially Mr. Sastri, and Sir Maharaj Singh. And yet there is a section of Indians in South Africa who express the opinion that the Agent-General far from being of any use to the community is a source of danger to their interests, and that the post should be abolished. Fortunately the majority of the community and the Government of India do not agree with that opinion. And it is to be hoped that the post will be maintained and that the Agent-General will continue to receive all the support and encouragement that the people and Government of India can give him.

"A VOTELESS COMMUNITY"

"I have no doubt that most of the disabilities from which we suffer in South Africa arise from the fact that we are a voteless community," said Sir Raza Ali on his arrival in Bombay, and, at Simla he could not relate any encouraging or assuring facts regarding the economic or political condition of his countrymen in South Africa. The Indian demand for franchise is neither unjust nor extraordinary; it only signifies a return of the right they have been deprived of during the last forty years as race prejudice became stronger day after day when the economic need of the

Indian to the development of the colonies diminished. But the just demand of the Indian community is not likely to be conceded so early or so easily. On the 15th instant last, Mr. R. Stuttaford, Minister of the Interior in the Union Government, came out with the statement, in reaction to some talks in India, that he "was not aware of any intention on the part of the Union Government to give the Indian community in South Africa some form of Parliamentary representation." Sir Raza Ali, therefore, pleads for the grant of a limited franchise, to begin with in Transvaal, where, the Indians form a small community, and, the concession may therefore evoke less jealousy. He argues:

"Let me at the same time make it clear that it will not be practical statesmanship for our people to insist on adult franchise. It is true that even in Natal if adult franchise is conceded to Indians, the quality of the electorate in point of intelligence will not be far inferior to the general level of intelligence displayed by some of the existing electorates in the Blackveldt of the Transvaal. But, even so, it is up to us to disarm hostility by not putting our demands too high. If Indians are admitted to the common electorate on the basis of property, educational or other qualifications, it will not be open to the most rabid European to say that the demand of the Indian voters would constitute a threat to European predominance."

Bitterly as any demand for reforms in the racial relation of South Africa is bound to be resented, any broad vision of Imperial relation as *The Statesman* (July 25) insists, would call for the concession of many.

One of the ways in which the domiciled Indian community in the Union can be retained as loyal and peaceful citizens of South Africa is to concede some of the minimum legitimate demands put forward on its behalf.

The indigenous African has three European elected representatives each in the House of Assembly and the Senate of the Union Parliament to specifically represent his interests. Important amendments are now contemplated by the Union Government to the Representation of Natives Act to make its provisions more effective.

The Natal Indian Congress has recently petitioned the Provincial Administration to have the 1924 Ordinance so amended as to restore to Indians the municipal franchise which they had long enjoyed. The National Liberation League of Non-Europeans has also reiterated the demand for citizenship rights. The Cape Indian community possesses a restricted form of franchise, and the least which the South African Government could do is to extend it to the other three units of the Union.

Eighty-five per cent Indians in South Africa are local-born. They possessed the franchise at one time. They are law-abiding and useful citizens. These are qualifications of an eminent order, meriting the grant of civic and parliamentary franchise. It is still not too late to hope that the Government of South Africa would recognize the necessity for making minimum concessions

to the nationals of the future Sixth Dominion of the British Commonwealth resident in its territory for nearly one hundred years.

These are hard facts which call for patient and united action of Indians. But unhappily the situation is further complicated by the disunity of our people, which will be evident from the following account of *The Leader* as it closes its notice of Sir Raza Ali's account :

Economically and politically however the position of Indians has deteriorated. Sir Raza Ali said that the number of Indians employed in industry had gone down during the last 20 years. This he ascribed to the 'aggressive racial policy which is being pursued in that country.' So also politically while there were formerly only two laws, *viz.*, Law 3 of 1885 and the Gold Law of 1908, which discriminated against Indians, now a number of them have been placed on the Statute Book and they are more stringently applied than used to be the practice formerly. Sir Raza Ali thinks that no substantial improvement in the condition of the community is possible unless they receive the right to vote. 'Having granted representation to the natives,' he said, 'I fail to see how the Union Government can indefinitely continue to keep our people deprived of the same.' Of course, the demand for the vote has our full support, but we do not believe in separate electoral rolls for Europeans and Indians and Africans. There should be one common roll. 'One thing,' said Sir Raza Ali, 'is most important. India should take a keen and active interest in the fate of our people whose grievances are very real and substantial.' That the people and Government of India have been taking keen interest in the question cannot be denied. But it is also very important that the Indian community should maintain unity and not quarrel among themselves. Mr. L. W. Ritch who has been one of the oldest friends of the Indian community says, 'The unhappy truth is that since Gandhiji ceased to hold the people together and to inspire them, their morale has steadily deteriorated.' Let us hope that the present Agent-General will succeed in bringing about unity among the members of the community.

The sad story of this fissiparous tendencies fills many of the pages of the South and East African papers to hand. Mr. Rama Rau, Sir Raza Ali's successor, should not console himself with the idea that the Indians stand united because most organisations joined in welcoming him to the Colony. All efforts at effecting a unity between the South African Indian Congress and the Colonial Born And Settlers' Indian Association, another Indian body, failed though the Congress has for its President Swami Bhawani Dayal and its Secretary Mr. I. Kajee, two very sincere and energetic workers in the cause of their fellow Indians.

IN EAST AFRICA

In East Africa, too, as the East African Delegation that visited India told us some time ago, the Indians politically or economically are in no better plight. Their future, we learn from a member of the Delegation, Mr. Amin,

speaking at Lucknow, is likely to be darker still:

If in the next ten years the Indians in East Africa did not obtain the support of the people and press of India, all the ground covered by the efforts of the Indians there was likely to be undermined, and once the position was lost it would not be possible to retrieve it or advance further—warned Mr. Amin.

POLITICAL CONDITION

Referring to the standard of living of the natives in East Africa he said that natives were helpless, could not even build up their own homes at present and though something in the way of education was being done they could not stand on their own legs. If Indians did not fight for their betterment not only would they betray their own cause but also that of the natives, who were not strong enough to safeguard their own interests. Continuing Mr. Amin said that the natives were not elected to the Kenya Legislative Council but were represented by two Europeans.

Indians, who numbered 40,000 had only 11 seats. Their existence was hardly recognized except in the case of difference between the Europeans and the Government when Indian opinion was valued.

ECONOMIC POLICY

Dwelling at length on the economic policy, he said that steps were contemplated that would drive all Indians out of profitable trade. The Transfer Control Bill, the Dairy Control Bill and similar other measures were likely to be introduced which would be detrimental to the interests of the Indians. The chief object of the policy of the Government was to make life more expensive for the Indians.

He referred to retail trade which, he said, had been mainly in the hands of Indians so far. But a Marketing Bill was now being introduced by which Indians would be forbidden to purchase goods from natives direct. This would ultimately place the natives at the mercy of the Europeans.

THE HIGHLANDS

Mr. Mehta, another member of the delegation spoke on the Highland problem. He said that in 1903 Europeans launched a move to secure all cool and fertile lands for themselves. And it was after a very strong opposition put up by the Indians that an assurance was given to them that nothing of the kind would be done.

But that pledge was broken in 1906. No Indian was allowed to purchase land from Europeans. Concluding Mr. Mehta remarked that it was the duty of Indians to see that the native population of Africa was not exploited by Europeans and if Indians rose to power care should be taken that they in their turn did not exploit the natives.

The new danger of reserving the Highlands for the European settlers has indeed to be countered by all means, as we have been maintaining always. Mr. Isser Dass, a member of the Kenya Legislative Council, who came to India as a delegate of the East African Indian Congress in a joint statement with Mr. C. F. Andrews suggests a London Deputation on the question.

KENYA LEADERSHIP IN INDIAN BUSINESS

At a meeting of the Kenya Indian merchants, they requested Mr. Ismail, the Agent

for Dar-es-Salem, for a united leadership for themselves in business over the settlers in Uganda and Tanganyika. The *Tanganyika Opinion* strongly pleads against the same on the ground that such leadership has been really of economic disadvantage to the Indians in general. Says the journal:

"The economic position of the Indian community today is distinctly weaker than it was in 1927. Everywhere the leadership of Kenya has resulted in a monopolistic organization of commerce and the elimination of the small Indian trader and middleman. There has been no corresponding adjustment in the economic life of the country for hundreds of Indian businessmen and traders who have been thrown out of work and employment owing to monopolies and marketing laws. The leadership of Kenya has resulted in the organization of local and intermediate civil services, in the emasculation of the Indian dhow and transport trade, in the elimination of Indian storekeepers and produce buyers in the hinterlands, in the unemployment of the Indian cotton store-owners in Uganda and the mandated territory and in the attrition of the railway and harbours of Tanganyika. No, Mr. Ismail has eyes wide open to see all this and we have the fullest confidence in him and are quite sure that he will singlemindedly devote himself to his great task of building up a highway of commerce and exchange of culture between the two great continents of the world that Nature designed for one another.

INDIAN LABOUR IN BURMA

Burma is now separated from India, and the twelve lakhs of Indians over there are now "abroad" from India. Vast numbers of them are, as elsewhere, labourers who left the overpopulated Indian villages in expectation of a more hospitable land. Perhaps they are not altogether disappointed. They manage to get a living. But this cannot go on long, the unrestricted labour emigration is to continue only up to 1940. *The Statesman* Emigration Correspondent points out in an informative article some of the problems that the labour situation in Burma has already shown. The strikes in the Yenangyang and Chauk Oil Fields as well as that at Syriam refinery of the B.O.C., have focussed public attention on the labour situation and the Burma Oil Fields Labour Bill of 1938 proposes to give effect to some of the recommendations of the Whitley Commission with regard to housing, hours, wages, etc. The writer refers to the unhomogeneous character of the Indian labour and its disunity as well as to the question of the restricted vs. unrestricted labour, and concludes:

The major problems awaiting Mr. Sattinadhan's (the Agent nominee for Indians in Burma) scrutiny need to be emphasized here, since he is expected to take over his office in Burma in a few days' time. In the first place, he has to properly advise the Government of India on the manner in which the Indian Emigration Act is to

be extended to that country. Secondly, he has to make up his mind on the question whether restricted or unrestricted Indian labour emigration is justified in the circumstances prevailing in that country. Thirdly, the *moisture* system, industrial and social legislation and other important issues have to be examined by him. It is hoped that the establishment of the Indian Agency in Burma, prior to the lapse of the *status quo* period, will operate for the benefit of Indian emigrant labour, while meeting the need of Burma herself.

LEASE OF LAND IN FIJI

The following statement from Mr. C. F. Andrews on July 9, refers to the trouble of the Indians in Fiji.

"News has just reached me from Fiji that leases which had been obtained by the Indians during the years 1917-1921 are now beginning to fall in and the Fijian chiefs with their tribes are unwilling to renew them except on extravagant terms.

"These leases were obtained by the Indians with the consent of the Government either for the cultivation of sugar or else for the building of premises for retail trade close to the Fijian villages.

"Land in Fiji is very difficult to obtain because the greater part of it is owned by the Fijians themselves on a tribal basis. The Government rightly protect their land ownership. But since the Indian population now numbers about 45 per cent of the whole of Fiji it would be unjust to prevent the Indians from purchasing land and it would be very unwise to do so: for they are born agriculturists.

"The colonial sugar refining company owns some of the best alluvial soil and Indians have obtained short leases from this company, but these are not sufficient for them. The problem therefore has become acute. Indians who have given their best energy and industry to the cultivation of the soil of Fiji are now likely to be thrown out of employment unless some remedy can be found. It is necessary therefore, for a commissioner to be sent out to Fiji as early as possible in order to get better terms with regard to the renewal of Indian leases. He should at the same time take up the question of higher education.

INDIANS IN MALAYA

An A. P. I. message from Madras of July 24, reads:

"The suggestion that an organization should be started in Malaya and another in India to look after the interests of Indians in Malaya, was made today by Mr. T. A. Ramalingha Chettiar, a member of the Madras Legislative Council, in a talk on his impressions of his tour in the Dutch East Indies and Malaya, at the Cultural Association of the Central Co-operative Institute.

Mr. Chettiar said that Indians had been responsible for developing the mines and estates in Malaya, which was the most suitable place in the world for Indians to settle.

The speaker condemned the wage reductions that had been effected in Malaya.

Referring to the policy pursued by the Government of India, he said it was not enough to stop emigration of State labourers. Recruitment of all kinds of labour must stop.

The s.s. *Rohna* which arrived in Madras harbour yesterday from the Straits Settlements landed 447 repatriates from Malaya.

HITLER'S VISIT TO ITALY

Army review on the occasion of Herr Hitler's recent visit to Italy. More than 50,000 men took part

All the latest weapons of warfare were shown in the course of this review

INDIAN WOMANHOOD

SREEMATI BIBHA MAJUMDAR, M.A., Professor of Mathematics, Victoria Institution, Calcutta, has been awarded the Premchand Roychand studentship of Calcutta University, this year, on the merit of a thesis on Astrophysics. She is the first lady to achieve this distinction, by dint of an original research work, in Science.

She is the daughter of Mr. Dwijendra Mohan Sen Gupta, retired Headmaster of Barisal Government High School and is the wife of Dr. R. C. Majumdar, M.Sc., P.R.S., Ph.D., of Bose Research Institute.

She stood first in Sanskrit in I.A. Examination and secured the Nagendra Medal, being the best lady-candidate securing highest number of marks in Bengali, and the Pachete and Saradaprasad prizes for standing first in Sanskrit. She obtained first class honours in Mathematics in the B.A. Examination, standing second, and secured the Bankimchandra Gold Medal for the best Bengali composition at the examination. She also obtained the Padmabati Gold Medal in that examination having stood first among the successful lady-candidates taking up honours in different subjects.

Sreemati Bibha Majumdar

NOTES ON INDIAN ENTERPRISE

WHILE the development of Key-Industries is the most essential factor in the economic progress of a country, it is at the same time extremely important that the far broader field of everyday necessities of a civilized nation be economically and efficiently produced within the country.

This is the age of steel, and steel is penetrating in all directions in industry, commerce and the household of the people. The firm of Godrej is a bright example of what can be achieved in this line by Indian enterprise and skill. It was founded by the late Mr. A. B. Godrej about half a century ago. At the beginning the personnel consisted of one mistry in search of employment, and the "works" of a diminutive shed. Now the works can boast of being the largest of its kind in the east and it provides employment for over 1,200 workmen. The production ranges from locks to vast safe-deposit vault doors, covering in its scope steel furniture and equipment, of a number of varieties for household, office and factory use, of a quality that challenges foreign competition.

Another example of the organizing capacity and enterprise of Indians is the manufacturing concern producing electrical goods under the

name of India Electric Works Ltd. This concern also started from very small beginnings in 1924, when it was a private concern. At present they are employing over 900 persons and are producing highly finished and very efficient electrical utility goods, such as fans, telephone and telegraph instruments, etc. A special feature is that almost every part of these articles, from the tiniest nut to the largest part is manufactured, finished and finally assembled by Indian labour under Indian supervision. The fans specially have proved to be highly efficient and reliable and are rapidly taking the place of the imported article.

Talking of imports, until very recently one item that went largely into the construction of the houses of wealthier Indians, was (and still is) almost entirely imported in bulk from abroad. This article, namely, marble, was not only imported from abroad, but the handling of the imported article in bulk as well as the cutting and finishing was in the hands of foreign firms. Recently however, Indian commercial enterprise has extended to this section of imports also and is making good progress on the lines of developing the business to its utmost.

NOTES

Political Subjection and Length of Life

From the number of persons, male and female, who die at particular ages in different countries, statisticians have prepared tables showing how long on an average persons of particular ages in those countries may expect to live ordinarily. Actuaries who are concerned with life-insurance business prepare such tables and are guided by them in fixing rates of premium. Many statistical year-books publish such tables of expectation of life at different ages in those countries in which records are kept of births and deaths. The latest of such tables available is to be found in the *Statistical Year-book of the League of Nations* for the year 1937-38, published in July last. It supplies figures for expectation of life of males and females at birth and at the ages of 1, 10, 20, 30, 40, 50, 60, and 70 years of age in many countries. It will suffice for our purpose to quote the figures of expectation of life at birth in these countries for males and females.

EXPECTATION OF LIFE AT BIRTH IN YEARS

| Country | Males | Females |
|------------------------|-------|---------|
| Egypt | 31 | 36 |
| Canada | 58.96 | 60.73 |
| U. S. A. | | |
| (white population) .. | 60.72 | 64.72 |
| (non-white population) | 50.82 | 53.74 |
| India | 26.91 | 26.56 |
| Japan | 44.82 | 46.54 |
| Germany | 59.86 | 62.81 |
| Austria | 54.47 | 58.53 |

| Country | Males | Females |
|-------------------------|-------|---------|
| Belgium | 56.00 | 59.83 |
| Bulgaria | 45.92 | 46.64 |
| Denmark | 62.00 | 63.8 |
| Estonia | 53.12 | 59.60 |
| Finland | 50.68 | 55.14 |
| France | 54.30 | 59.02 |
| Ireland | 57.37 | 57.93 |
| Italy | 53.76 | 56.00 |
| Latvia | 55.39 | 60.93 |
| Norway | 60.98 | 63.84 |
| Netherlands .. | 61.9 | 63.5 |
| England and Wales .. | 60.13 | 64.39 |
| Scotland | 56.00 | 59.5 |
| Northern Ireland .. | 55.42 | 56.11 |
| Sweden | 61.19 | 63.33 |
| Switzerland | 59.25 | 63.05 |
| Czecho-slovakia .. | 51.92 | 55.18 |
| Soviet Russia in Europe | 41.93 | 46.79 |
| Australia | 63.48 | 67.14 |
| New Zealand | 65.04 | 67.88 |

It will be seen that the expectation of life in all European and American countries and in Australia and New Zealand is very much higher than in India. It is much higher in Japan than in India. Even in Egypt it is higher than in India. Most of the countries where it is higher than in India are independent. Canada, Ireland, Australia and New Zealand are practically independent. Even Egypt, which is not fully independent, is much freer than India, and is autonomous in almost all internal affairs.

This shows that length of life depends to a very great extent on political freedom.

independence, autonomy, or whatever other word may be used to denote the desirable political condition of a country. Why so?

Some of the things which make for long life are sufficiency of nourishing food, house and clothing conducive to health, knowledge of the laws of hygiene and sanitation and the economic competency to observe them, satisfactory maternity conditions, availability of medical treatment in periods of illness, power to prevent and combat epidemics, &c. Most of these things depend on the nation and the nationals being well-to-do. The economic condition of no country can be even tolerably satisfactory unless it possesses at least a substantial measure of freedom. Unless the people of a country are literate and educated they cannot know the laws of hygiene and sanitation. Practically universal literacy can be attained only if the country is free. Imperialist governments of subject countries try every direct and indirect means to keep their people ignorant. And even if these people have some knowledge of some hygienic and sanitary rules, their poverty stands in the way of their following all of them. The sanitation of villages and towns and the country as a whole depends on the people of the country having full control over its revenues through their elected representatives. This presupposes political freedom.

We do not mean to say that if a country possesses political independence that itself will make its inhabitants long-lived. What is meant is that political freedom gives the people of a country the power to secure all those conditions which make for their longevity, and that without such freedom those conditions are not all attainable.

So we want to be independent, because we want to be long-lived. Of course, there are other reasons why we want to be free. In fact, no reason need be assigned for the desire for freedom. Freedom is everyone's birthright, and it is natural for everyone to be and remain free. Even tiny tots do not like to be constantly carried in the loving arms of their fond parents and caressed. They would prefer to totter, fall down, and get up and totter repeatedly. We do not mean to suggest that the imperialist rulers of the people subject to them are fond parents of the latter!

Why Wish Long Life

If life is at all desirable, long life also is desirable. A miserable life, whether short or long, is not desirable. Freedom is a *sine qua non* for escape from misery.

Those who do not consider life desirable need not live, bond or free.

But those who think it is desirable prize life for the attainment of some object, either consciously or unconsciously. And that object, whatever it be, can be attained to a greater extent in the course of a long life than in the course of a shorter one.

Bose-Jinnah Unity Correspondence

Srijut Subhas Chandra Bose, president of the Indian National Congress, has, with the consent of Mr. M. A. Jinnah, president of the Muslim League, released through the United Press of India the correspondence which passed between them in relation to the problem of communal settlement.

We have already said in a previous issue that, as there are other Muslim organizations, the Muslim League cannot be considered the sole and exclusive Muslim body representing all Indian Mussalmans. As for Mr. Jinnah's claim that in all negotiations the Muslim League should be considered equal in standing and status to the Congress, it cannot at all be admitted. Even if it represented all Indian Mussalmans, which it does not—the Shiah and many Sunni organizations having repudiated its claim to represent them, it would not be equal to the Congress. The Muslim League's membership is confined to Mussalmans, whereas anyone belonging to any Indian community, irrespective of the religion one professes and in spite of one's not professing any religion, may join the Congress. Both the actual and possible numbers of members of the Congress are vastly larger than those of the Muslim League. The Muslim League is concerned only with the interests, as it understands them, of Mussalmans alone. The Congress works according to its lights for the welfare of all Indians, irrespective of creed, colour, caste or race. Congress has been actually fighting for the freedom of the whole country and of all sections and classes of the people, numerous members of the Congress of both sexes having already made immense sacrifices for the purpose and undergone great sufferings. The Muslim League has never actually fought for the freedom of even the Muslim community. What the Congress has done even for Muslims alone, *e.g.*, for those of the N.-W. F. Province, and for Zanzibar Muslims engaged in the clove business, the Muslim League has not done. So any equality of status between the two bodies is out of the question. The only equality which can exist and does actually exist is that the

Muslim League can negotiate with the Congress, not as a suppliant or a subordinate body, but as a separate and independent organization perfectly free to suggest its terms and consider the terms offered by the Congress and to accept, if need be with agreed modifications, or reject them.

Mr. Jinnah says in his letter to Mr. Bose, dated the 2nd August :

"The Council is fully convinced that the Muslim League is the only authoritative and representative political organization of the Mussalmans of India. This position was accepted when the Congress-League Pact was arrived at in 1916 at Lucknow, and ever since, till 1935, when the Jinnah-Rajendra Prasad conversation took place, it has not been questioned."

Assuming, without admitting, the correctness of what Mr. Jinnah says, it must be borne in mind that the Congress of the present-day is not what it was in 1916. In 1916, all Congressmen, including the so-called 'moderates' and the so-called 'extremists,' jointly did what they thought proper. The Congress of the present-day is not substantially the body which existed in 1916. It has a different constitution, a different political goal, and different methods. After or about the time of the declaration of Non-co-operation, many Congressmen combined to establish the Indian National Liberal Federation. If a continuation of any express or implied understanding of the year 1916 be insisted upon, the assent of these secessionists also will have to be obtained. Just as the Indian National Liberal Federation, which came into existence after 1916, will have to be consulted, so those Muslim bodies which have come into existence since 1916 will also have to be consulted. What is more, the Muslim League will have to observe all the terms of the Lucknow Pact of 1916. The Communal "Award" is a direct infringement of that Pact. It has given the Mussalmans more than they were entitled to according to that Pact and taken away from the Hindus much of what they were entitled to according to it. Evidently, Mr. Jinnah wants to invoke the aid of the Pact only when it suits him and his party, and at the same time welcome its breach also when it suits them! The Communal "Award" has buried the Lucknow Pact a hundred fathoms deep with the gleeful consent of all or almost all Mussalmans, including the Muslim League. Nevertheless Mr. Jinnah must needs invoke its ghost!

Mr. Jinnah continues :

Besides, the very fact that the Congress approached the Muslim League to enter into negotiations for a settle-

ment of the Hindu-Muslim question, pre-supposed the authoritative and representative character of the League and as such its right to come to an agreement on behalf of the Mussalmans of India.

The Council are aware of the fact that there is a Congress Coalition Government in N.-W. F. P. and also that there are some Muslims in the Congress organization in other provinces. But the Council is of opinion that these Muslims in the Congress do not and cannot represent the Mussalmans of India, for the simple reason that their number is very insignificant and that as members of the Congress they have disabled themselves from representing or speaking on behalf of the Muslim community.

Not being in the confidence of the "high command" or low command, or rank and file of the Congress, we cannot say why the Congress *approached* the Muslim League—or why, for that matter, Mahatma Gandhi decided to *wait upon* Shri Jinnah. Evidently the English words 'approach' and 'wait upon' have had an unsettling effect upon Mr. Jinnah's mind and deprived him of his sense of humour—of which we hope he had a sufficient quantity before the 'Unity Talks' with him started. But it cannot be denied that the fact of the Congress having approached him and that of Gandhiji having waited upon him have increased the plausibility of his claim. Let us pass on, however.

We presume, and it is not improbable, that the Congress wanted to tackle all the Muslim organizations one by one, and began first with the Muslim League because perhaps it was the most anti-national, or perhaps because its leader was once believed to be a nationalist, or because—well, we do not really know what. The Congress does not deny, nobody denies, the representative character of the Muslim League: it does represent its members and probably some other Mussalmans. What is denied is that it represents all Mussalmans and that no other organization represents any Mussalmans.

Mr. Jinnah gives two reasons why the Muslims in the Congress "do not and cannot represent the Mussalmans of India." One is that "their number is very insignificant." The other is that "as members of the Congress they have disabled themselves from representing or speaking on behalf of the Muslim community." It has been claimed on behalf of the Congress—by Pandit Jawaharlal Nehru among others, that the Congress claims a hundred thousand Muslims as members and that this number is much larger than that of the members of the Muslim League. The correctness of this statement has not been disproved. Neither the Congress nor its Muslim members claim that

they represent the entire Muslim community of India. But they certainly represent a section of that community, and, therefore, they have as much right to speak on behalf of that section as the Muslim League has to speak on behalf of the section which it represents. That Muslim Congressmen are members of the Congress no more disables them from representing and speaking on behalf of the section to which they belong than the fact that some Muslims are members of the Muslim League has disabled them from representing and speaking on behalf of the section to which they belong.

If Mr. Jinnah really believes that membership of the Congress disables Muslims from speaking on behalf of the Muslim community, he ought also to believe that the Hindu members of the Congress are also disabled from speaking for the Hindu community. But he has all along asked the Congress, which consists mostly of Hindus, to negotiate on behalf of the Hindu community!

As we have said in a previous issue, the Congress should have referred the claim of the Muslim League to be the sole representative of the entire Indian Muslim community to that community itself for acceptance or rejection. If it be decided to revive the "Unity Talks," the first thing that ought to be done is either for the Muslim League to make all other Muslim organizations explicitly or implicitly accept its sole representative character, or for the Congress to refer the claim to the whole Muslim community organized under various names. If neither of these two methods be adopted, parleying with Mr. Jinnah is bound to be a more futile endeavour than ploughing the sands.

As the Congress does not represent the whole Muslim community, so does it not represent the whole Hindu community. If the Congress desires any possible settlement with the Muslims to be accepted by the whole Hindu community, the numerous Hindus outside the Congress fold—particularly those who are absolutely opposed to the Communal Decision, should be consulted beforehand. And, of course, all other minorities besides the Muslims should also be consulted.

As we have stated in previous issues, there are two logical courses open to the Congress. (1) As a national organization, it may lay down the terms of a communal settlement without consulting any community; (2) it may do so after consulting the representative bodies of *all* communities.

Muslim League's Attitude At the Time of the Lucknow Pact

In our foregoing note on the Bose-Jinnah correspondence, we have assumed but not admitted the correctness of one of Mr. Jinnah's statements. Here is a statement, contradicting Mr. Jinnah's assertion, made by Dr. P. N. Banerjea, M.L.A. (Central), who has a first-hand knowledge of matters relating to the Pact:

"The publication of the Bose-Jinnah correspondence reveals the fact that Mr. Jinnah and the Muslim League urged certain conditions precedent which were to be agreed to by the Congress before actual negotiations for settlement should be commenced.

"I do not wish to enter upon a discussion as to whether the Muslim League was justified in insisting on these conditions or whether the Congress was right in declining to accept them. But I wish to point out that the statement made by Mr. Jinnah in his letter, dated August 2, 1938, namely 'This position (that is, the Muslim League is the only authoritative representative political organization of the Mussalmans of India) was accepted when the Congress-League Pact was arrived at in 1916 at Lucknow,' is not correct.

"The Muslim League in 1916 did not lay down any conditions precedent to carrying on negotiations with the Congress. It did not insist on the recognition by the Congress of a status of equality. Nor did the League object to the inclusion on the committee appointed by the Congress of any Muslim member. As a matter of fact there were several Congress Mussalmans, including Mr. Hasan Imam and Mr. Abdul Rasul, present at the meetings of the Joint Committee set up by the Congress and the Muslim League.

"Mr. Jinnah was member of both these bodies. What really happened on that occasion was that the All-India Congress Committee and the Council of the Muslim League met together without any preliminary undertakings on either side and went on with their work in a spirit of friendship and goodwill.

"I was a member of the All-India Congress Committee and also the Secretary of the Bengal Provincial Congress Committee at that time and as the deliberations of the Joint Committee took place in Calcutta, the task of recording the proceedings devolved on me. Three resolutions have now been put forward by the Executive Council of the Muslim League, (1) asserting 'that it is not possible for the All-India Muslim League to treat or negotiate with the Congress on the question of a Hindu-Muslim settlement except on the basis that the Muslim League is the authoritative representative organization of the Mussalmans of India, (2) expressing the view that 'It is not desirable to include any Muslim in the personnel of the proposed committee that may be appointed by the Congress; and (3) declaring 'that the Muslim League is the guardian and spokesman of the interests of all other minorities.'

"I am absolutely certain that in 1916, no such resolutions were passed by the Muslim League or placed before the All-India Congress Committee. Many of the persons who participated in the deliberations of the Joint Committee are now dead or have retired from public life. But two of the distinguished gentlemen who took a very prominent part in the deliberations of the Joint Committee on behalf of the Muslim League are still alive, namely, Sir Wazir Hasan and Mr. Samiullah Beg, and I hope that they will either corroborate or refute my statement.

"I may add that I am and have always been in favour of a Hindu-Muslim settlement and I earnestly trust and pray that all communities in this country will unite and march together towards the goal of India's freedom."—(*United Press*).

Second World Youth Conference in America

The first World Youth Conference was held at Geneva in 1936 under the auspices of the International Federation of League of Nations Societies. This world organization of youth now has about 40,000,000 members on its roll. According to an interesting article in *The Hindu* of Madras by Dr. J. M. Kumarappa,

The Second World Youth Conference meets at Vassar College, which is situated near New York, on the 15th of August, and the session will continue for ten days. Fifty-two nations of Asia, North America, Europe, Australia and South America have agreed to send representatives to this important Congress of youth. But Japan, Germany and Italy, it is reported, have not so far accepted the invitation of the Conference; perhaps they do not believe in making their youth peace-minded. All the same, more than five hundred delegates from the different parts of the world are expected to be in attendance at this session, India being represented by Mr. Prabodh Chandra. Twelve International bodies are also sending their representatives. On their arrival in New York on the 15th of August, the City will welcome the delegates by staging a grand pageant at Randall's Island. Over 1,000 young actors, dancers and athletes, specially trained for the purpose, will take part in this pageant to present the most colourful cultural tendencies in the different countries represented at the Congress.

Vassar College, America's great women's college, is situated in Poughkeepsie, where the late Rev. J. T. Sunderland, America's greatest friend of India, passed many years of his beneficent life.

The writer observes,

the Conference will be an all-American gathering in one particular, and that is in respect of food. American edibles, including corn on the cob, baked beans, codfish balls, will be served to the delegates in order to give them not only a taste of native food but also an insight into American ways of living.

In order to enable Americans to understand the manner of dressing in foreign lands, the foreign delegates will wear their national costumes and thus make the Conference picturesque. Though we use the future tense in this note the Conference will have been over by the time this issue of *The Modern Review* reaches the hands of its readers.

Discussions at the Second World Youth Congress from August 16 to August 24 will be on the political and economic organization for peace, the economic and cultural status of youth and its relation to peace, and the ethical and philosophical bases of peace. The delegates from Brazil, Belgium, British Guiana, Greece, Haiti, Hungary, India, Sweden, Switzerland and other countries will present the peculiar aspects

of the regions they represent. This is an important function of the Conference as it is hoped that this method would enable the delegates not only to learn to know themselves and to find out the truth about their own nation but also to learn the truth, the good and the bad, concerning other countries, their national character, their strength and weakness, vital interests and outstanding grievances. To get the most of this form of discussion, and to avoid the Conference being overweighted by Americans, the United States delegation has been limited to the small number of fifty.

Apart from the above, general questions,—questions such as: Have nations any obligation to co-operate in maintaining peace, even if their immediate interests are not threatened? Can there be any international system for the maintenance of peace if all the countries do not participate? Is world disarmament essential to lasting peace? What immediate steps can be taken in international agreement to stop the arms race? What measures can be taken immediately toward the international and national control of arms manufacture and trade? Should one consider a reconstruction of world economy on the basis of international co-operation, or through economic nationalism?—will be discussed from different angles.

Acquittal of Persons Accused of Crimes Against Women

Though crimes against women have been occurring in many or most provinces in abnormal numbers, Bengal has acquired a disgraceful prominence in this respect owing to causes which need not be investigated in this note. The previous government, before the introduction of "provincial autonomy," did practically nothing to combat this menace to society, and, the present government has done even less—if there can be anything less than zero. And the public as a whole has been irresponsible to the cry of womanhood.

Quite recently in at least three cases persons accused of heinous offences against women have been acquitted by the Calcutta High Court on appeal. In many other similar cases the accused have been acquitted by the district courts.

The most sensational case in which the accused have been acquitted on appeal to the High Court is that known as Bindu Goalini's case, in which the men brought to trial were accused of having ravished and committed unnatural crime upon the unfortunate young widow. They were convicted by the trying lower court and exemplary punishment was inflicted upon them. Appeal to the High Court has resulted in their acquittal.

If in such cases the court of appeal believes the cases to be entirely false, acquittal is no doubt the only order that can be passed. But if there be technical flaws in the procedure of the trying courts, such as misdirection to the

jury, misjoinder of charges, and the like, and if the appellate court believes that some offence has been committed, retrial should be ordered. In Bindu Goalini's case the High Court Bench wanted to know whether the accused would have any objection if retrial were ordered. The reply was in the negative. But when judgment was delivered, it was found that the accused had been acquitted. If they deserved to be acquitted, if they had not committed any offence, if the Honourable Judges believed that the unfortunate widow, Bindu Goalini, had not been wronged in the least by anybody, then of course nothing can be said against the order of acquittal. But in that case it becomes very difficult to understand why the accused were asked whether they would object to be retried.

When acquittal follows in consequence of misdirection to the jury, misjoinder of charges, and the like, the woman victimized, assuming that the case is true, obtains no remedy, and society is seriously injured. No society can exist if crimes against women go unpunished merely on technical grounds. In such cases, it should be obligatory on the part of the appellate courts to order retrial. If the law as it stands does not make such order obligatory, the law should be amended. We are not lawyers, and write as mere laymen. But what we want is that no case of abduction, criminal assault, outraging the modesty of a woman, and the like, must end in the acquittal of the accused merely on technical grounds. If the lower courts trying such cases have been guilty of misdirection to the jury, etc., it is these courts which ought to suffer. The woman grievously wronged—perhaps ruined for life, ought not to be deprived of the poor consolation of justice, merely because some magistrate or some sessions judge does not know the law or the correct legal procedure; nor should society be deprived of the protection against the wrongdoers which the law provides in the form of condign punishment for them.

Some cases there have been and may or will be again in which the evidence is not sufficient. If the trying magistrate or judge thinks in such cases that the police or the executive have been remiss in their duty or can still collect sufficient evidence, fresh investigation ought to be ordered.

We do not, of course, want that the accused should be punished even if there is little or no evidence, or if there is only insufficient evidence. But in such cases direct evidence other than that of the complainants cannot be generally expected and may not be available. But many

a man has been hanged on circumstantial evidence, and rightly, too, as the law stands. In cases of ravishment, 'gang-rape,' etc., the state of mind of the complainant at and after the time of the occurrence must be taken into account in judging of the trustworthiness of their evidence. Minor discrepancies and flaws should not be made too much of. In their disturbed state of mind they cannot be expected to be quite logical and to stand searching cross-examination. It ought to suffice if their deposition be substantially true. In Bindu Goalini's case the evidence of Rahiman Bibi proved that owing to very serious injuries Bindu was in hospital for a long time. There is not the least doubt that she had been ravished.

The honour of women, and sometimes their life also, is not safe in Bengal—particularly in rural Bengal. It is not Hindu women alone who are victimized in large numbers. According to figures placed before the Bengal legislature some years ago by the high officer who is now officiating Governor of Bengal, more Muslim women are victimized in Bengal than Hindu women. If Muslim society and Hindu society had been in a healthy condition, if their moral sensibility had not been atrophied, a single case like many of those which occur every week, if not every day, would have convulsed them. And in free countries such cases would have led to the fall of governments if they failed to take adequate preventive and remedial measures.

It is apprehended that some of these acquittals will embolden the miscreants and deter the wronged and their friends from seeking justice, and may even produce an undesirable effect upon the lower courts.

Is It Shameful Not To Have An Indian Lingua Franca?

Recently in the course of a speech delivered by Srijut Subhas Chandra Bose at Wardha he is reported to have said:

Last year when the speaker was in Vienna, some of the Indians, including Mr. Bose, were invited to dinner by a European friend. There, they began to speak in English among themselves. The European friend was rather surprised, and asked them why they conversed in English, and they had to hang their heads in shame.

We fully appreciate the burning love of independence and the strong desire for national unification of which such sentiments are born. But we are afraid, Mr. Bose and his Indian friends in Vienna felt ashamed rather unnecessarily. People can be naturally and logically expected to be ashamed of some state of things

which is discreditable and for which they themselves are responsible—but not otherwise.

If it be discreditable not to have an indigenous *lingua franca* in India, surely Mr. Bose and his Indian friends were not responsible for its absence; nor are any other Indians responsible. From ancient times India has had many languages. The present generation of Indians did not create them. In ancient times among the educated perhaps Sanskrit served the purpose of a *lingua franca* over a great part of the country, and among the common people perhaps some form of Prakrit. These have ceased to be current. Sanskrit is still cultivated by many educated persons, but rarely spoken.

It is very often said that India equals in area the whole of Europe *minus* Russia. Now in this large area of Europe *minus* Russia the number of the principal languages spoken is larger than that of the principal languages spoken in India—we mean those which have alphabets and literatures of their own. In this large European area, there is no *lingua franca* which is indigenous to each and every country of Europe. This may be inconvenient to Europeans but is not discreditable to them. Many Europeans who are neither Frenchmen nor Englishmen converse with one another in French or English. They are not ashamed of doing so. No doubt, if Europe *minus* Russia did not have so many languages but had only one, or had a common language in addition to the mother-tongue of each country, or if the mother-tongue of some European country had been understood by all the inhabitants of all the other countries, that would have been more convenient for ordinary and commercial intercourse. But Europeans are not ashamed that the state of things is different.

It may be objected that the big area of Europe *minus* Russia is not one state or one country, but consists of many separate independent countries, and it is these separate countries which have different languages; whereas India is one country, one state, and different parts of India, called provinces, have different languages. But considered from the standpoint of the whole of humanity, this difference between Europe *minus* Russia and India is not a fundamental difference. What is a province in one age, century or generation, may be a separate country in another. What were provinces of the vast ancient or mediæval Roman Empire became separate countries afterwards. But such historical argument and speculation need not be

resorted to. Only some two decades ago, Vienna, where Mr. Bose felt ashamed of conversing in English with fellow-Indians, was the capital of one State, the Austro-Hungarian Empire, the then provinces of which are now separate countries. But neither then when they were parts of one State, nor now when they are separate countries, did they or do they have an *indigenous* *lingua franca*—if any. They did not and do not think such a state of things shameful.

Mr. Bose spent part of his exile in Switzerland. In this small country and state three languages are spoken in different parts, German, French and Italian, none of which is spoken or understood by all the Swiss. Besides these Romansch and other languages are spoken there. This is inconvenient, but the Swiss do not consider this state of things a disgrace.

We are not here arguing against our trying to have a common language. It would be convenient if we had one. What we mean is that we need not be ashamed of having no common language. Nor need we be ashamed of using English, the language of the foreign rulers of India. Perhaps, even if India did not come under British rule, many of us would be using it as the independent Chinese and the independent Japanese use it. A Chinese lady, Rose Quong, writes in the *Asiatic Review* for July,

“In the hotel [in China] where I stayed I had a regular procession of boys coming to my room offering to fill up my teapot or water-jug, all in the hope of learning a word of English. Everywhere I found this eagerness to learn what is, as you know, the secondary language in China.”

At one stage of their school education Japanese boys and girls learn English.

We know, of course, the difference between the Chinese and the Japanese learning and using English and the people of India using it. They use it of their own free will and for their own convenience. We have to use it because it is the language of the foreign government. It is this feeling of being obliged to use it which hurts our self-respect. But nothing is gained by being too sensitive.

And after all, are Congressmen really ashamed of using English? Or is it somewhat of a sub-conscious Hundred Per cent Swadeshim pose? When and if the shame becomes deep-seated they will cease to write books, pamphlets, bulletins, newspaper articles, addresses, and the like in English, and cease to converse with one another in English—whether in Vienna or in any Indian town or village.

Will Hindustani Oust the Other Provincial Languages

President Subhas Chandra Bose is reported to have said further:

The public in the Madras Presidency is opposed to the introduction of Hindustani in the secondary schools on the ground that Hindustani will oust or crush the provincial languages. This is a grave misunderstanding. Hindustani is to be introduced only in place of English, as the medium of inter-provincial intercourse.

If we remember aright, it was to the same audience which Mr. Bose addressed that Mahatma Gandhi sent a message to the effect that the object of the Congress was to give to Hindustani the position which has been attempted to be given, without success, to English.

Perhaps extreme Indian advocates of English—we doubt if there is any appreciably large number of them—may desire that it should become the medium of inter-provincial intercourse even among the masses. That desire—if cherished by anybody—can never be fulfilled. At present English is used for the following purposes: as the medium of inter-provincial intercourse among English-knowing persons; as the language of commerce between different parts of India and often of commercial transactions in the same town or province; as the medium of intellectual and cultural intercourse with foreign countries; as the language of law-courts, legislative bodies, law-codes, government offices, etc.; as the language used in the proceedings, discussions, debates, etc., of our own political, social and other associations and organizations; as the language of many of our newspapers and periodicals; and as the cultural language in almost all our colleges and universities.

As Mahatma Gandhi's message was very brief, it did not specify whether Hindustani was meant to be used for all but one of the purposes for which English is at present used, the exception being its use for intellectual and cultural intercourse with foreign countries.

We have tried to show in our note on "The Language of Universities Under Congress Rule" in our last number, page 133, that the logical and natural outcome of making Hindustani the State language of India under Congress rule would or should be to make it the cultural language, too, of those universities in India of which English is at present the cultural language, and they are the majority. If what we have said be correct, the development of the Hindustani language would receive a very great impetus, and at the same time the development

of the other provincial languages would be arrested. For, as we have said in the aforementioned note, "no language, no literature can attain its full stature if it be not the medium of the highest education and culture."

So, if our anticipation be correct, making Hindustani the State language of India under Congress rule will be very favourable for its growth.

Of course, so far as one can peer into the future, Hindustani will not oust the other provincial languages as media of ordinary intercourse and of elementary school education, though it will stunt the growth of the latter.

But as the Congress has not placed all its linguistic cards on the table, prognostication is very difficult, if not impossible.

As the Congress is against secret diplomacy, secret conspiracy, and other secret methods, it should tell the public in detail what position it wants Hindustani to occupy under Congress rule.

Restriction on Advertisement of Medicated Wines

MADRAS, AUG. 16.

In the Legislative Assembly today the Bill to amend the Madras Prohibition Act which was moved by the Premier, Mr. C. Rajagopalachari, prohibiting all advertisements of medicated wines and the like, except in medical journals, was passed into law.

Mr. C. H. Hodgson on behalf of the European group said that prohibiting advertisements would seriously affect the revenue of newspapers of this province.

The Premier in reply admitted that newspapers would lose some revenue, but the Premier thought, it would be negligible in comparison with the loss incurred by the Government on account of prohibition.

Similar legislation is necessary in the other provinces also.

Some Biharis Claim Darjeeling and Maldah

A Patna paper has said that as before the repartitioning of the province of Bengal in 1912 the districts of Darjeeling and Maldah were under the administrative Division of Bhagalpur, these districts should again come under the Bhagalpur Division. This desire has been echoed in some other quarters in Bihar.

The cry for the *status quo* appeals to many. But then why not go the whole hog, instead of only part of the hog? A whole-hogger would say: Before 1912 Bhagalpur Division was in the province of Bengal; so it should go back to Bengal. Or, better still, before 1912 Bihar was included in the province of Bengal, and, therefore, out of whole-souled respect for the

status quo Bihar should again be included in the province of Bengal!

Removal of Depressed Classes' Disabilities in Madras

MADRAS, AUG. 17.

The non-official bill moved by Mr. M. C. Rajah to provide for the removal of civil disabilities of Harijans in regard to appointments to any public office or in regard to access to public well-, ponds, roads, etc., was passed into law today by the Madras Legislative Assembly. Both the Government and Opposition benches welcomed the measure as a great piece of social reform long overdue. Kumararaja Muthiah Chettier, leader of the Opposition, congratulated the Premier and the Ministerial party for accepting the Bill. He hoped this reform would be greeted with whole-hearted approval by the general public and there would be no difficulty in putting it into execution.

The Premier S. J. C. Rajagopalachariar, said, he was glad that much enthusiasm was not exhibited over the measure. That negative phenomenon itself was proof of the stage to which the country had advanced. He hoped, not only would this bill be getting into the Statute Book, but the general public would give it the fullest effect.—A.P.

There should be similar legislation in all other provinces where the depressed classes suffer from similar disabilities.

"Unfortunate Lapse From Correct Democratic Practice"

LONDON, AUG. 13.

The Congress Working Committee was entirely out of its rights in the Khare affair, opine the *Manchester Guardian* in the course of a leader. The paper says: "The Congress, as its leaders frequently affirm, is a democratic organization. Under Congress (and only thus) will India become a democratic State. But the fact that the main goal of the Congress—Independence—has not yet been reached means that the party discipline is severe and the recent incident in the Central Provinces has shown to what exaggerated and dangerous lengths this severity can be carried."

After recounting the circumstances of Dr. Khare's going out from the premiership and the Working Committee's criticism of the Governor's "ugly haste," the paper says:—

"This normal incident of a constitutional procedure is regarded as a shameful act of indiscipline by the members of the Working Committee. It is natural that experienced leaders of the Congress should be anxious to keep a controlling eye on the activities of some of their less experienced supporters in the provinces, but no amount of anxiety can give the Working Committee any constitutional status. To put it bluntly, the Governor was perfectly within his rights and the Committee out of its rights and the incident was an unfortunate lapse from what politicians in India as elsewhere should accept as the correct democratic practice."—*Reuter*.

Resolution for Bombay Assembly Against Communal "Award"

POONA, AUG. 15.

Mr. S. L. Karandikar, M.L.A. of the Democratic Swarajya Party, has given notice of the following resolution—

37—2

tion on the Communal Award to be moved by him in the forthcoming session of the Bombay Assembly:—

"This Assembly recommends to the Government to convey to His Majesty's Government the Assembly's considered opinion that the Communal Award is anti-national and undemocratic and as such it should be immediately replaced by an arrangement which recognizes the equality of all citizens irrespective of caste, creed or colour."—*United Press*.

Similar resolutions ought to be moved in all other provincial legislatures and in the central legislature. It would be an acid test of the nationalism of the members.

Girls' Education in Hyderabad Through Their Mother-tongue

HYDERABAD, (DECCAN).

An important innovation in regard to the medium of instruction in schools for girls in the Dominions, in the shape of imparting instruction through the medium of the mother-tongue of the students, has been introduced by the Government on the recommendation of Mr. Syed Mohammad Hussain Jaffary, the Director of Public Instruction.

While accepting the point raised by the D. P. I., the Government have approved of the introduction with immediate effect of the imparting of instruction through the medium of the mother-tongue in Middle Schools for girls throughout the State. In fact, a start has already been made in this direction in all the districts where girls are being taught in Marathi, Telugu and Canarese. In all these places parallel classes in Hindustani are also being conducted.—A.P.I.

It is to be presumed that previous to this "innovation" girls in Hyderabad had instruction imparted to them through the medium of some language other than their mother-tongue!

Through the medium of what language are the boys in the Nizam's Dominions taught?

"Manchester Guardian" on Frontier Policy

LONDON, AUG. 17.

The *Manchester Guardian* in a leader on Government's double problem in North-West Frontier, namely, where to draw the frontier and what policy to adopt towards the hill tribes, counsels a return to the principles enacted by Lord Curzon, namely,—“the withdrawal of British forces from advanced positions, employment of tribal forces in the defence of the tribal country, concentration of British forces in British territory behind them as a safeguard, and improvement of communications in the rear.”

The paper says:

"Unless the present policy is changed, similar wasteful wars like that dragging on for nearly two years in Waziristan are not likely to be avoided in the future. The policy of troops and subsidies combined has failed and we are left with the necessity for diverting the money at present spent on subsidies to purposes which will achieve some lasting improvement of the tribesmen's lot."

"There are good reasons for trying a new programme now. Firstly, one excuse for a heavily fortified frontier—an aggressive Russia—has disappeared. Moreover, Afghanistan is now peaceful, independent and friendly. Secondly, there is an Indian Government in Peshawar related by religion and race to the neighbouring tribes."

The paper concludes, .

"Emphasis in the immediate future should be on economic improvements, for the problem of tribal areas is primarily economic. A Tribesman may be unlovely and bellicose, for his surroundings made him so, but there are only two possible futures for him. He can either be civilized or exterminated and no one has dared to suggest extermination."—*Reuter*.

Non-Muslims in Frontier Province

In spite of Congress government in the N.-W. F. Province non-Muslims continue to suffer from the predatory raids of the trans-frontier tribes. Non-Muslim women and men continue to be kidnapped, and plundering also goes on. Frontier-Congress fine words do not butter the parsnips of the victims; in fact they have no parsnips to butter.

Bengal Assembly "No Confidence" Motions

Ten motions of "no confidence" had been tabled for being moved in the Bengal Assembly against the ten Bengal ministers, one a piece. Three were moved. But as they were lost, the remaining ones were not moved.

The 25 seats enjoyed in the Bengal Assembly by the British exploiters of India saved the *dal-bhat* ministry from defeat. But though these seats saved the ministry, it would be rather blasphemous to call them a *God-send*. They were a "—send."

If these British birds of passage had no seats or if the voting had been confined to the persons elected by the people of Bengal as their representatives, the Opposition would have had a clear victory. These British members of the Assembly have become the arbiters of the destiny of Bengal and will continue to be such so long as we do not have a really democratic constitution.

But such a constitution cannot be had unless the Congress gives up its "sitting on the fence" attitude of neither accepting nor rejecting the Communal Decision.

There is British Raj in the whole of India, no Swa-Raj. In Bengal there is (1) British Raj, (2) British Bania Raj under it, and, under that again, (3) Muslim Raj à la Fazlul Huq.

Renewal of Agitation Against Communal "Award"

It was on the 18th August, 1932, that the late Mr. James Ramsay MacDonald gave his so-called award on the communal question. Agitation against it was renewed on the 18th August last in Bengal. This was quite in the fitness of things, as this accursed decision of the British imperialists has done its worst to wipe out the intelligentsia of Bengal from the political map of India. The shrewdest and the most sinister imperialist blow has been struck at them, but they have not been killed. Nor are they hors de combat yet. The revivers of the agitation have received support and congratulations from outside Bengal, some expressing the opinion that the Congress ought to have taken the lead in this matter. Officially the Congress in Bengal is not in the fight. That is patent. But many Congressmen have openly supported the renewal of the fight, all pro-Congress organs have written enthusiastically in support of it, and one would have to search in Bengal with the opposite of a Diogenes lantern for the Hindu Bengali Congressman who is not in favour of the absolute rejection of the Communal Decision.

We write, "Hindu Bengali Congressman," in order to be strictly accurate. There are many Mussalman Congressmen also who are against this Decision, and the defeat of the recent "no confidence" motions in the Bengal Assembly must have opened the eyes of many other Mussalmans to the sinister significance of this most effective of imperialistic weapons forged during the whole period of British rule in India. One recalls in this connection that on the 21st August, 1932, the Council of the Bengal Presidency Muslim League passed the following resolutions:—

1. Resolved that the Council of the Bengal Presidency Muslim League most emphatically protest against the Communal Award of the Prime Minister, inasmuch as,

(a) it does not recognize and give effect to the principle of joint-electorate, without any reservation of seats in Bengal, as demanded by the Bengal Presidency Muslim League in its last annual session,

(b) it gives unfair weightage to Europeans and Anglo-Indians, out of all reasonable proportion,

(c) it retains and creates constituencies for special interests, such as landlords, commerce, etc., which are inimical to the growth of democracy in the country,

(d) it deliberately holds in abeyance the questions of representation in the Central Legislature, of separation of Sind, and of unicameral legislatures in the provinces, all of which make it almost impossible to properly the award,

(c) it is silent over the question of personal laws and fundamental rights.

2. The Council of the Bengal Presidency Muslim League strongly disapproves of the conduct of the Mussalmans who accept the mischievous Communal Award and specially of those Mussalmans of Bengal who accept the statutory minority in the Bengal Legislative Council. *The Mussalman*, August 25, 1932.

On the 18th of August last there were three separate meetings in Calcutta, all with enthusiastic audiences. That held at the Albert Hall under the presidentship of S. J. Narendra Kumar Basu was attended and addressed by the writer. He found the main body of the hall, the dais and the galleries filled to capacity. The president made a very effective speech. He did not speak for Hindu Bengalis alone but for the whole people of Bengal, of all communities and classes, as the following extract from his speech will show:

"Gentlemen, when the award was published, one of the great things that was pointed out was the danger, the corroding effect it is bound to have upon our national consciousness. We, the Bengalee Hindus and Mahomedans, if we are to govern our own province we must do it as Bengalees first, Bengalees last, Bengalees every time. There is no question of Hindu interests in Bengal or Muslim interests in Bengal. The interest of the Hindu peasant is the same as that of the Muslim peasant; the interest of the Hindu merchant is the same as that of the Muslim merchant, the interest of the Hindu zemindar is the same as that of the Muslim zemindar. I do not know how, except in the matter of religion, there can be one set of interest for Hindus in this province and another set of interest for the Mahomedans."

That Mahomedan interests in religion are not affected he showed in the second of the following paragraphs:

"The Chief Minister was very anxious to prove to the Britishers in the country that he was carrying on the administration according to the British principles. That, I submit, is a direct effect of the so-called Communal Award. That, I submit, is one of the baneful results of the Communal Award.

"The other result is the cry of religion in danger. You have already had examples of it during the last 16 or 17 months that the present reformed administration has been in existence. That is a false cry, that is a cry which goes beyond the realms of truth. That is a cry which has no place in political administration. But that is also one of the inevitable results of the so-called Communal Award.

Mr. Basu concluded by observing:

"I submit that it is unnecessary to point out to you in any further detail the inequities of this award and the necessity of having it repealed as quickly as possible. I will not talk of amending it. We have had enough of amendments and tinkering. We want it to go lock, stock and barrel. I hope young men will remember the immortal words of Bankim Chandra, 'Who but Bengalees can save the Bengalees?'"

The only resolution placed before the meeting and carried unanimously was moved by S. J. Ramananda Chatterjee.

S. J. Hirendra Nath Datta, S. J. Sanat Kumar Roy Chaudhuri, ex-mayor of Calcutta, S. J. Jogendra Nath Mandal, M.L.A., and Prof. Batukeshwar Bhattacharya also addressed the meeting.

Outside Calcutta and Bengal many meetings were also held in many places on the 18th August to condemn the Communal Decision.

Simla Meeting Against Communal Decision

SIMLA, Aug. 18.

S. J. Akhil Chandra Dutt, Deputy-President, Central Assembly, presided over a crowded meeting of the citizens of Simla organized by the Congress Nationalist Party this evening to protest against the Communal Award. Bhai Paramanand, Mr. M. S. Aney, Pandit Lakshmikanta Maitra, Sir Gokulchand Narang, Doctor Pramatha Nath Banerjee and Sardar Sant Singh spoke at the meeting.

The following resolution was moved from the chair and passed unanimously:

"The citizens of Simla assembled at a public meeting are of definite opinion that the Communal Award is unjust, undemocratic and anti-national. It has divided the nation into warring camps and destroyed the solidarity in the movement of nationalism which has been established by the Indian National Congress. Experience of the working of the Provincial Governments based on the Communal Award particularly in Bengal and the Punjab has clearly demonstrated to what length the communalism can go and injure the cause of nationalism. The meeting therefore expect that all the patriotic elements will put forth united and combined efforts to fight this great evil and danger to the progress of Indian people to the status of a free and democratic nation."

Correspondent of "The Times" on "Divided Bengal"

The correspondent in India of the London *Times* writes thus on the intelligentsia of Bengal under the heading "Divided Bengal":

"Developments in Bengal under Provincial autonomy are apt to intensify communalism, to aggravate political antagonisms, and to emphasize the curious constitutional subjection which the reforms have imposed upon the caste Hindus of the Province. Notwithstanding the slight numerical supremacy of the Moslems in the area, few in the past have regarded Bengal as a Moslem Bengal; but today, by an unusual combination of circumstances, those Hindus who have played so prominent a part in the economic, cultural, and political evolution of the Province have been almost relegated to political insignificance.

"Geographically, linguistically, and racially Bengal is more homogeneous than the other Provinces of British India, but politically it is now bitterly divided along communal lines, which, however, tend to dialectics rather than violence. Moslems, supported by representatives of the scheduled castes, are in political power, and those Hindus who fought valiantly and even violently for constitutional reform, in the hope that they would

man the bureaucracy and control the administration, find themselves faced with what looks like the permanent political predominance of the Moslems. Although the Ministry in power is a coalition, composed of six Moslems and five Hindus, the Hindu representative are not generally thought to reflect that political philosophy which Hindus as a whole have brought to the fore. Thus the Bengali Hindus are in the main despondent over the situation, and view with extreme bitterness the Communal Award and the Poona Pact, which they regard as mainly responsible for their present political degradation."

Killing Communal Decision With Weightage-walas' Consent

There seems to be a fond belief in some quarters that the Communal Decision can be done away with with the consent of those whom it has placed in an advantageous position. *Credat Judaeus Apella!* We are sceptical.

In Sir N. N. Sircar's speeches and pamphlets there is a leaflet on what he calls "A 'Temporary' Permanent Arrangement." It relates to the Communal Decision. Sir N. N. Sircar returned to India after his work as delegate to the Joint Committee in London on August 19, 1933. He sent this leaflet to the members of the committee by post on 27th October, 1933. We take the following passages from it:

I put a question to the Secretary of State (Q. 7223, p. 818 of the Reports of the Proceedings of the Committee) :

Q. "I was going to ask the Secretary of State, if he will permit me: As the communal decision stands it means this: Assuming for the sake of argument one party has got more than it ought to have, it must assent to that being given away *before there can be any change at any time. You have got to get the assent of somebody who has got more than he ought to have?*"

Ans. "If Sir N. Sircar makes that hypothesis, it is so."

On this question and answer Sir N. N. Sircar observes:

Purporting to make a decision, which holds good for ten years only, the authors have shown remarkable ingenuity in making it in effect, and in fact, good for all times.

The leaflet ends with the following passage:

If I were told that I was giving a temporary lease, I would object to the expression if it was a condition that the lease could not be terminated at any time unless the tenant agreed.

But then I am merely a lawyer and not a statesman having the destiny of a community of 22 millions [that is, the Bengali Hindus] in my hands.

Some British statesmen have succeeded in drafting a lease of Bengal for ten years to a community insisting on special electorates—and after ten years the lease cannot be terminated without magnanimous renunciation on their part.

Who can say that this is not a remarkable achievement?

China's Appeals for Help

We are grateful to the China Information Committee of Hankow for their News Releases, which supply abundant information relating to the situation in China and all movements for her rehabilitation. From before we began to get these releases we have been receiving pamphlets and other material from an American lady who at great risk to her health and life remains as near to the front as possible. We cannot be too grateful to her. She sent us successively three packets containing appeals, photographs of Japanese atrocities, and papers bearing on the kind of medical and surgical material which China requires, with a request that we should send them on to the Congress authorities. One batch of these we sent to S. J. Subhas Chandra Bose at his Calcutta address and two to the Foreign Department of the Congress at Allahabad. Though we did not get any acknowledgement of the receipt of any of the three, we hope they reached their destination and were used to good purpose.

China's Appeal for Books and Periodicals

Mr. T. L. Yuan, Chairman of the Executive Board of the Library Association of China, at Hong Kong in the course of an appeal to Dr. Wali Mohamad of Lucknow University, president of the All-India Library Association, says:—

Today the scholarly world in the West must have learned with great sympathy of the wanton destruction of a great number of cultural institutions and libraries in those parts of China which have been devastated by the aggression of the Japanese militarists. Institutions that have been affected cover a large area extending from Suiyuan in the north to Canton in the south. The total loss sustained through Japanese aggression is a hundred times greater than that inflicted by nature on Tokyo in 1923.

According to a survey up to the time of writing, 54 national and private Universities were either totally destroyed or disorganized in addition to a large number of cultural institutions and libraries. The valuable libraries and laboratories of many institutions have been laid waste. Finding themselves unable to function properly, many institutions have been forced to remove away from Japanese domination, leaving behind all their books and apparatuses. We are, therefore, obliged to start the work entirely afresh.

As the Chinese libraries are now compelled to start collecting books entirely out of nothing, we are in urgent need of books and periodicals of all kinds, old or new, specially of institutions working in various fields. Collected and bound periodicals of the type to build reference files are most welcome. Publications of various learned institutes in India would be gratefully received. Fiction, children's literature and magazines of non-scientific type may, however, be eliminated.

As the Library association of China has established an office in Hong-Kong these books and periodicals from

India can be sent to Hong-Kong which is free from Japanese aggression. In order to save you of the trouble of posting these to China, we may suggest that you forward them to the Chinese Consulate in Bombay which would arrange their shipment to us at our Hong-Kong address. The current issues of your serial publications, however, should be sent by mail so that Chinese scholars will be able to keep themselves in touch with your scientific work.

The slogan "Reconstruction while Resisting" is most popular and can be heard in every Province. Taking advantage of the presence of trained personnel from war zones construction work is being carried on in those parts of China which are away from maelstrom of war.

May we hope that the generous spirit on the part of members of your Association will enable libraries in China to carry on with renewed vigour and increased impetus in the time of national crisis.

We cordially commend this appeal to all who can help China in any of the ways mentioned therein.

Medical Mission to China

It is deeply gratifying that India has been able to send a medical mission to China with a small contingent of medical men and with medical and surgical appliances. However humble this token of sympathy, it is sincere, and will be, it is hoped, appreciated by China as such.

Indian Periodicals and Indian Newspapers

Indian newspapers conducted in English do not generally take any notice of Indian periodicals conducted in English. That is not because the conductors of the newspapers dislike the periodicals, but perhaps because they think that notices of periodicals will not serve any useful purpose or interest their readers. Whatever the cause, as our newspapers do not generally notice periodicals, we have to place some facts about our monthly before our readers.

A very small number of our newspapers notice some Indian periodicals. Some of these very few Indian newspapers which notice some Indian periodicals ignore the existence of *The Modern Review*.

There are some Indian newspapers which reproduce entire articles from *The Modern Review*, sometimes without any acknowledgment and sometimes with the name of our monthly printed in small type in the same line with the last sentence of the article, which readers may take to mean that that sentence alone is taken from our journal!

A certain daily of Calcutta, which has

sometimes reproduced, on its leader page, our articles without any acknowledgement, recently performed a remarkable feat. It reproduced on its leader page on the 31st July Professor Dr. M. N. Saha's article on "The Philosophy of Industrialization" in our last (August) number which was published on the first August! It printed the name of our monthly at the end of the article in small type. Subsequently some of its correspondents gave this daily the credit for publishing Dr. Saha's article, and the daily, of course, did not say that the credit belonged to *The Modern Review*!

Some Features of "The Modern Review"

We have said above that very few Indian newspapers notice Indian periodicals and that some of those which do, ignore the existence of *The Modern Review*. Those, again, which notice *The Modern Review* ignore two of its features, namely, its editorial notes, regularly contributed to its pages by the editor month after month during the last thirty-one years and eight months, and its illustrations.

Regarding the editorial notes it would not be proper for us to say anything. If we mention them at all, it is not because we have any exaggerated idea of their value, but because they are perhaps a distinctive feature of *The Modern Review* alone among Indian monthlies.

As regards the illustrations, we are not under any delusion in relation to their quality. Nevertheless a few facts may be mentioned.

So far as our knowledge goes, *The Modern Review* is the only English monthly in India which publishes every month a reproduction in colours of some original painting. We say nothing as regards the quality either of the reproductions or of the paintings themselves. But it is a fact that we sometimes receive requests for reprints or for the blocks of some of these from some Indian editors outside Bengal. What is of greater significance, some of the artists whose paintings we have reproduced have received requests from the office of a famous American illustrated monthly for some of their works. Our readers may also be interested to learn that one of our readers in Brazil, who is not a native of India, asked us to name some of our artists who may be able to supply him with the design for his seal with an Indian philosophical motto.

Our black and white illustrations, too, have not gone unnoticed abroad. To mention

a few facts: We had to supply to a famous American illustrated monthly, at its request, photographs of Jawaharlal Nehru's reception in Barabazar, Calcutta, and of his interview with Rabindranath Tagore at Santiniketan, published in our journal. The same monthly cabled to us for a copy of Satyendranath Bisi's portrait of Mahatma Gandhi published in our journal in May. An American News Service also asked for a copy of this photograph. Rabindranath Tagore's portrait in our last June number was reproduced from a photograph by S. Saha which had been awarded the first prize in an International Photograph Competition in London.

Another fact may be mentioned here. *The Modern Review* supplies a far larger quantity and a greater variety of original contributions than any other English monthly published in India. But as those very few newspapers which notice *The Modern Review* devote to its notice generally the same amount of space as they devote to the notices of other periodicals, they thus unintentionally lead their readers to infer either that our journal contains no more reading than other monthlies, or that, except the few articles mentioned in these newspaper notices, the other contents of our monthly are entirely unworthy of notice.

Bengali Newspapers and Bengali Periodicals

We exchange *Prabasi* with some Bengali newspapers and more Bengali periodicals. Some of the Bengali newspapers which we get notice some Bengali periodicals, but not *Prabasi*. Some of these periodicals are also noticed in some English dailies of Calcutta. But all these Bengali and English newspapers regularly ignore *Prabasi*, as they regularly ignore *The Modern Review*.

How To Stop Crimes Against Women

Bengal has acquired a disgraceful prominence for the number and frequency of crimes against women and for the diabolical character of many of these atrocities. How to prevent these outrages and thus make the persons, the honour and the lives of women in Bengal—particularly in villages, safe and make them feel at ease in their homes and outside, is the gravest social problem in Bengal. From the fact that it is the Hindu public men and the Hindu journalists who carry on agitation—

in a very ineffective and inadequate manner, it must be admitted—against the evil, it should not be inferred that it is Hindu women alone who are victimized. Readers of newspapers who read the news of these outrages cannot fail to have noticed that Mussalman women, too, suffer, and that there have been some cases in which Christian and Brahmo women also have been grievously outraged. Some years ago the Home Member of the Bengal Government, now the officiating Governor of Bengal, placed some statistics before the Bengal legislature which showed that among the women offended against Muslim women were larger in number than Hindu women. There is no means by which the accuracy of these figures can be tested. But it is plain that the evil is a great problem for the Muslim community also.

There are a few organizations in Bengal whose object is to protect women, to bring about or help in the prosecution of the offenders and their conviction, and either to restore to their families the women who have been wronged or to provide for them a home in Ashrams where they can be educated to be self-supporting.

One of these organizations, perhaps the oldest, is the Nari Raksha Samity, or the Women's Protection League. It is no doubt a disgrace that such organizations should be required in any country; but, circumstances being what they are, it would have been more shameful if there had not been any. The Women's Protection League is a thoroughly non-sectarian society which helps women of all communities who require its help, to the best of its ability. It is greatly to be regretted that its funds are inadequate and the number of its workers very small. For this reason it has not been able to render as much help to as many women in distress as is desirable.

In order to call public attention to the evil, to point out and consider the preventive and remedial measures needed, and to appeal to the public to give adequate help to the Women's Protection League to enable it to carry on its beneficent work a public meeting was held in the Albert Hall, Calcutta, on the 19th August last under the presidency of S. Subhas Chandra Bose, President of the Indian National Congress. It was very largely attended. Many ladies were present on the dais. Besides the president, Mrs. Kumudini Bose, Secretary to the Women's Protection League, Mrs. A. K. Saha (a Russian lady), Professor Abdur Rahim, a Vice-president of the League, S. Srimanta Kumar Das Gupta, retired district magistrate

and joint-secretary to the League, Sj. Tarak Chandra Ray, retired district magistrate, Sj. Jatindra Kumar Biswas, additional presidency magistrate, Sj. Sachindra Prasad Basu, and Sj. Ramananda Chatterjee were among those who addressed the meeting.

The president made a powerful and very outspoken speech. He spoke quietly, but the strong feeling and intense conviction which underlay his address could not be mistaken. He said that formerly he thought the problem which they had met to consider was a communal affair. But ten years ago, when he was confined in Mandalay jail, regular perusal of the news relating to crimes against Bengal in the *Sanjibani* convinced him that it was not a communal evil and that both Mussalman and Hindu women were victimized by hooligans. He had travelled abroad and was otherwise acquainted with the state of things in many foreign countries, but he was not aware that in any of them organizations existed for the protection of women. It was a shame that any such organization should be required here. In his opinion the people of this country had in their midst a larger number of men with a larger degree of bestiality in their character than in any other country, and yet we boasted of being a "spiritual" people. There was greater bestiality here than abroad, he asserted. "Do we get indignant, does our blood boil, when we hear of these atrocities?" he asked. Some individuals there may be whose blood boils, but there was no national indignation, no social conscience. If it were not so, how is it that the brutes who are guilty of these heinous crimes are tolerated in society—nay, treated as if they had done nothing wrong, whereas the women who are ruined receive the opposite kind of treatment. He said he did not know that the diabolical crime of 'gang-rape' existed in any other country. He referred to the fact that in Calcutta tram cars there were benches labeled "Reserved for Ladies." These would be quite unnecessary if we were a people who really respected womanhood. He exhorted our young men to see to it that all women could move about freely and to teach a lesson on the spot to any one who dared to annoy or molest any woman by look, word or deed. He exhorted the women-folk, too, to be strong and courageous. Gymnasiums should be opened in all villages and towns for teaching girls and women the arts of self-defence and the use of the dagger and the lathi for defensive purposes. They should reform their dress also, shorten their veils, and walk boldly with firm steps—not as

if their feet were about to be entangled in their clothes and they might fall down any moment. Ruffians would not dare face such women. It is not a mere political revolution that was needed. True revolutionists were out to destroy all bondage, every obstacle to men and women leading free and fearless lives.

As for Ashrams for helpless women, it is not one Nari Kalyan Ashram (Women's Welfare Home) that we require to maintain, but very many of them.

President Bose said that he was opposed to whipping offenders, but made an exception in the case of the scoundrels who ruined women. He would have them soundly flogged in addition to being punished in other ways. He referred to the laws and ordinances meant to crush political agitation and political workers; but where were the laws and ordinances to rid society of these pests?

We have given above the purport of only parts of his speech, which was in Bengali. It were much to be wished that his speech had been reported in extenso exactly as delivered.

Some of the other speakers narrated heart-rending tales of women who had been ravished, and some also incidents in which women had killed their assailants to preserve their chastity. The directions in which the law ought to be changed to make the conviction of offenders surer and casier were indicated. Women who have not completed their 16th year are considered minors. But this age ought to be raised. In extra-marital relations, those below 18 ought to be considered minors. They cannot dispose of any property before they are 18, but the law thinks that they can consent to part with their most precious possession even when they are 16! One speaker suggested emasculation of rapists.

It may be mentioned in this connection that the late Mr. Justice Syed Amir Ali suggested in the eighties (as far as we remember) of the last century that capital punishment ought to be inflicted on the offenders in cases of "gang-rape." The frequency of such crimes in those days in the Rajshahi district led him to make this suggestion. But his colleagues in the High Court did not support him, and so his proposal was not even considered by the government. He cited a precedent for such legislation. There was a time when in the British colony of Australia hooligans, known there as "larrikins", used to commit such crimes. Australians being a self-governing people and their own women being the sufferers, they enacted a temporary law for pronouncing

sentence of death on these offenders and executing them. As the result of such drastic but necessary legislation these crimes completely disappeared in no time, and the law was then repealed.

It has been also suggested that there should be special tribunals for the trial of offences against women, and special and urgent steps should be taken to make the police do their duty in these cases to the limit of their ability and legal powers.

One of the speakers said that wicked men were able to terrorize others and gain their object because they banded themselves and were prepared to take risks and face danger, whereas good men, or those who are considered and consider themselves good, did not combine and did not face danger to frustrate the evil designs of the wicked. He suggested that in all villages in Bengal there should be bands of defenders of womanhood and branches of the Women's Protection League. They should work in their villages and their neighbourhood like the knight errants of Europe of days gone by.

The Women's Protection League has all along extended its help to women in need of it irrespective of the religion professed by them. The secretary and joint secretary mentioned facts at the meeting in support of this statement.

Nari Kalyan Ashram

During the five years 1932-1936 this home has given shelter to and helped in various ways 1,125 women. On an average every month the Ashram gives shelter to, educates and helps in other ways 113 women. The figures given below show how many women from what provinces found refuge here: Bengal 1,012, Bihar 45, Orissa 12, Assam 9, United Provinces 24, Central Provinces and Rajputana 18, Madras 2, Bombay 1, Panjab 2. It is very much cramped for accommodation, and requires a commodious building of its own. Funds are also urgently needed. Sir P. C. Ray is the president of this institution.

Tata Contributions to Indian Charities

We have been asked to publish the following statement, and gladly do so:

"A statement recently prepared by the Trustees of the Sir Dorabji Tata Trust, the Trustees of the Sir Ratan Tata Charities and the Lady Tata Memorial Trust, shows that during the years 1933-1937 inclusive, the combined Tata Trusts distributed Rs. 24,63,815 for charitable purposes.

"Because of the press publicity attending the awards of foreign research scholarships by the Lady Tata Memorial Trust, the criticism has been made that the Tata Charities distribute a disproportionate amount of their income abroad. The fact is that the Lady Tata Memorial Trust, for a reason personal to the founder, was established with particular reference to the encouragement of study and research in diseases of the blood, with special reference to Leukoemias. Grants for this purpose are made to scientists, in any part of the world, whose work appears to give promise of obtaining the desired results. The amount of foreign scholarships awarded by this Trust during the five year period is Rs. 1,56,332 as against Rs. 57,001 awarded to Indian scholars.

"Leaving the Lady Tata Memorial Trust out of consideration, because of its specialized character, the Sir Dorabji Tata Trust and the Sir Ratan Tata Charities have, within the years 1933-1937, given Rs. 22,25,057 or 99 per cent of their total donations, to Indian charities. Education, medicine and social work have been the chief beneficiaries."

Burma Riots

In writing of or referring to the riots in Burma one should be as dispassionate and impartial as possible. So we shall say nothing relating to the origin of the riots. A friend in Burma who knows all the facts has supplied us with definite information on the subject. We do not intend to publish this information. Another friend who, at great risk to his life and limbs, did rescue work, gave relief and rendered medical and surgical aid has sent us a harrowing account of what he has seen. He will not publish his experiences—they may inflame passion; nor will he publish any of the 40 photographs which he has managed to take. When his report is ready he will send a copy of it to the Government of Burma—perhaps with copies of the 40 photographs—and another copy to the Indian National Congress. He desires wholeheartedly to establish peace and amity between Burmans and Indians so that there may not be such riots again.

We transcribe below some passages from Mahatma Gandhi's article on the riots in *Harizan*:

"If the Buddhist of Burma have little regard for Islam and Muslims for Buddhism, the seeds of dissensions are there. They will take little watering to sprout into the savagery such as we saw the other day. I would, therefore, suggest a mutual understanding of these great religions":

Thus says Mahatma Gandhi in an editorial in "*Harizan*" on "Recent Riots in Burma."

"My fear is" continues Mahatma Gandhi, "that at the bottom of the riots there is an anti-Indian feeling due, perhaps, to economic causes. For, though Muslims seem to have suffered most, Hindus too seem to have come in for a fair share of the Burman fury. Therefore, Indian settlers must see to it that their dealings with the Burmans are fair and above board."

Mahatmaji concludes:

"To the Burmese friends one word. When I was in Burma some years ago, Burmese priests were good enough to invite me to their conference and honour me with their address under the shadow of the mighty Pagoda. They were good enough, as Buddhists, to claim me as one of them. It, therefore, hurt me when I read of the mob fury which knew no distinction of sex or age and wreaked vengeance on persons who could never have had anything to do with the offending pamphlet. I have the greatest veneration for the Buddha. He is one of the greatest preachers of peace. The gospel of the Buddha is gospel of love. It passes comprehension how representatives of that faith could give themselves up to savagery, and that on an apparently flimsy pretext. The pity of it is that if the newspaper reports were true, even priests, the repositories of the Buddha's gospel, were to be seen among the mob, not stilling its fury, but actually taking part in loot, arson and murder. Would that the wise men among them would do a little heart-searching and take steps to prevent a recurrence of the tragedy which all right-thinking persons must deplore!"
—A.P.

It is to be noted that, according to Muslim spokesmen, regret was expressed and apology tendered in Burma on behalf of the Muslims there for the book which inflamed the Burmans. It is to be hoped that this reasonable attitude will be in evidence among all communities even when not confronted with the overwhelming fury of antagonists.

London Muslim Procession Against Mr. H. G. Wells

What is called religious toleration can be practised in two ways. One is, not to attack the faith of the sacred books of other communities or the persons and objects revered by them. The other is to bear with such attacks directed against one's own religion. There ought to be reciprocity in these respects among the different religious communities. Reasoned criticism is not attack. But even attack upon one's religion should either be borne patiently or met with facts and arguments.

We have not seen the sentences in Mr. H. G. Wells's book which are considered offensive by Muslims. But the deputation of 200 Muslims in London which marched in procession to Sir Feroze Khan Noon to request him to lay their case against Mr. Wells before the British Government appears to show that what that famous British author has written has thrown them off their balance. In modern times it is only or mostly Muslims who were thought to be hypersensitive in religious matters. But the recent Burma riots have shown that there are others who are not prepared to take the second place in this respect.

These riots ought to teach all communities not to give way to excitement.

The Importation of British Experts

In reply to a question asked in the Central Assembly by Mr. Satyamurti, Sir G. S. Bajpai has stated on behalf of the Government that ten British experts have been imported into India for our benefit. And more will come hereafter. The excuse for bringing them into India is that such specially qualified persons are not to be found in India. But Indians do not admit two things: one is that the services of every one of them are at all required for the good of India, and the other is that the like of any one of them is not to be found in India. Moreover, it goes without saying that India cannot afford to pay the high salaries and allowances fixed for them.

Mr. Ogilvie's Bill Relating to Army Recruitment

Mr. C. M. G. Ogilvie has introduced a Bill in the Central Assembly which, if passed into law, will be known as the Criminal Law Amendment Act, 1938. Its preamble runs thus:

"Whereas it is expedient to supplement the criminal law by providing for the punishment of certain acts prejudicial to the recruitment of persons to serve in, and to the discipline of, His Majesty's Forces."

The statement of objects and reasons is quoted below:

A large number of public speeches designed to dissuade persons from enlisting in the Defence Forces or, in the alternative, to incite would-be recruits to commit acts of mutiny or insubordination after joining those Forces have come to notice during the past eighteen months. The object of the speakers is clearly not the spread of pacifism, but to dissuade would-be recruits from taking part in any war in which the British Empire may become engaged. The Bill is designed to penalise these activities.

We have not heard or read any speech like those described in the first sentence quoted above, and hence are unable to say whether such speeches have actually been made or, if made, whether they are objectionable. Pacifistic writings, mostly extracted from British papers, are sometimes met with in Indian newspapers. We have read of anti-war speeches delivered in India on the Anti-war day. The Indian National Congress stands openly for the principle that India has every right to refuse to take part in Britain's wars, just as the Dominions have. Congressmen have made speeches

and pro-Congress newspapers have written articles in support of this right. It would, we think, be quite easy to make use of the principal section of the Bill, quoted below, to penalize pacifistic writings and speeches and writings and speeches upholding India's right to participate or not to participate in Britain's wars.

2. Whoever—

(a) wilfully dissuades or attempts to dissuade the public or any person from entering the military, naval or air Forces of His Majesty, or

(b) without dissuading or attempting to dissuade any person from entering such Forces, instigates the public or any person to do, after entering any such Force, any thing which is an offence punishable as mutiny or insubordination under section 27 of the Indian Army Act, 1911, or sections 10 to 12 and 14 to 17 inclusive of the Naval Discipline Act as applied to the Indian Navy by the Indian Navy (Discipline) Act, 1934, or sections 35 to 37 inclusive of the Indian Air Force Act, 1932, as the case may be, shall be punishable with imprisonment for a term which may extend to two years, or with fine, or with both.

The two "exceptions" appended to this section are :

Exception 1.—The provisions of clause (a) of this section do not extend to comments on or criticism of the policy of Government in connection with the military, naval or air Forces, made in good faith without any intention of dissuading from enlistment.

Exception 2.—The provisions of clause (a) of this section do not extend to the case in which advice is given in good faith for the benefit of the individual to whom it is given, or for the benefit of any member of his family or of any of his dependants.

The first exception cannot prevent prosecutions for the kind of writings and speeches which we have described above. And as such writings and speeches cannot be said to be "advice given" "for the benefit" of any particular "individual to whom it is given," or "for the benefit of any member of" the writer's or speaker's "family or of any of his dependants," the second exception will not stand in the way of the prosecution and conviction of pacifistic writers and speakers and writers and speakers who uphold India's right to freely decide whether to participate in Britain's wars or not.

For these reasons we consider the Bill objectionable and the opposition of nationalist M.L.A.s to it right and legitimate.

As regards the "extent and commencement" of the Bill, it is provided that

(2) It extends to the whole of British India.

(3) It shall come into force at once in the Punjab; and it shall come into force in any other province on such date as the Central Government may, by notification in the Official Gazette, appoint in this behalf for the province.

The provision for the enforcement of the Bill in the Panjab immediately after its passage is due to the fact that that province is the principal recruiting ground for the Indian army and perhaps also because the military authorities apprehend danger in that quarter.

If and when the Bill becomes law, there is every likelihood of the Government coming into conflict with the Congress. For the latter will not and cannot recede from its position that India is entitled to self-determination in the matter of participation in Britain's wars.

This conflict can be avoided either by Government dropping the Bill or by the British "Home" Government agreeing to India having the "substance of independence"—in Mahatma Gandhi's words.

If India continues to be treated as a subject country, the Congress cannot but stand up for thoroughgoing pacifism—so far at any rate as Britain's wars are concerned. But if she obtains the substance of independence, the Congress may agree to Indians' participation in an *Indian* defensive war when necessary—thoroughgoing pacifism not yet being within the realm of practical politics for most countries at the present stage of human civilization.

These are of course our own personal views, not those of the Congress.

[The second reading of the Bill was passed on August 23.]

Flood in Several Provinces

The nation is faced with disastrous floods in several provinces. The calamity is not confined to north India. In the south also there have been such floods. Along with our contemporaries and leading public men we hope that all those who are not among the actual sufferers will give practical support to relief agencies. The provincial and central governments should do their duty.

So far as our knowledge goes, no large engineering works have been undertaken in India to minimize the destructive effects of floods.

Early Publication of our Present Number

In view of the approaching Durga Puja Holidays, we shall have to publish two successive issues of our magazines earlier than usual. Owing to the early publication of the present number we are unable to record or comment

upon Babu Rajendra Prasad's decision on the Bengali-Bihari question and other similar important matters in it.

Civil War in Spain

The civil war in Spain drags on its weary length—weary for the onlookers. Both parties are fighting as furiously as before with alternating victory and defeat.

Unrest in Palestine

In Palestine the situation has assumed a graver aspect. Sir Charles Tegart's plans have not succeeded. In Bengal he had to deal with only a small number of upholders of the cult of physical force in the midst of a peaceful malaria-sapped population. In Palestine he has to tackle different stuff.

Sino-Japanese War

Japan has been meeting with increasingly stiffer and better organized resistance in China. The prospect of her being able to crush China has been receding farther and farther. No lover of national liberty will regret its vanishing into thin air.

Russo-Japanese Relations

The truly courageous who fight for a righteous cause are never cowed down by superior might. But the frightfulness of the bully undergoes a metamorphosis when faced with greater force than its own. He at once becomes reasonable and kowtows to the mighty.

Such has been the recent attitude of Japan *vis-a-vis* Soviet Russia. Lovers of peace should be glad that another sanguinary war has been averted between two powerful nations. But it is to be hoped that Russia will not directly or indirectly help Japan. That Japan has made up her differences with Russia is due solely to the fact that she is not equal to fighting two powerful enemies on two fronts. There can be no love lost between communist Russia and anti-communist Japan.

Communist Russia has no doubt noted and will not forget that it is because of the combination of the Chinese communists with other Chinese that China has been able to stand up to and make headway against Japan.

Inter-Provincial Appreciation

We are glad to note the celebration of the Tulasi Jayanti (the anniversary of the Hindi poet-saint Tulasidas) in Santiniketan and in

Calcutta at the Senate House, Calcutta University.

In our last issue we recorded the celebration of the Bankim Chandra Centenary by the Karnataka Sahitya Parishad. There has been a similar celebration of this centenary at Surat by the Gujarati Sahitya Mandal.

Annual Report of Visva-bharati

The report section of the Annual Report of Visva-bharati for 1937 is interesting and shows that good work has been done in all its departments. We have not gone through the audited accounts, but have read the remarks of Messrs Ray and Ray, auditors. We hope strenuous and continuous efforts are being made to realize the various outstandings.

Unauthorized Hindi Translations of Tagore's Works

The report of the publishing department of Visva-bharati states that "Twenty-four unauthorized translations in Hindi [of Rabindranath Tagore's works] have been so far traced out and legal actions are being taken." There may be more. Rabindranath Tagore is not the only Bengali author who has been paid this sort of compliment, nor is Hindi the only modern Indian literature in which unauthorized translations of Bengali books exist.

Now that Visva-bharati itself has undertaken to publish Hindi translations of Tagore's works, unauthorized Hindi translations should cease to exist. As for translators into other languages, they should obtain the author's permission.

Chiang Kai-Shek to Tagore

Field-Marshal Chiang Kai-shek, the Chinese generalissimo, has written a letter to Rabindranath Tagore, addressing him as "Gurudev," in which he says how encouraged he and his compatriots feel by the poet-sage's sympathy. The spiritual and cultural bond between the two ancient countries of China and India dates back to antiquity. Rabindranath Tagore has renewed and strengthened it by his visit to China and by instituting Chinese studies in Santiniketan. China has responded by the establishment of Cheena Bhavan there.

Tenancy Bills in the Provinces

Many provincial governments have recently gone in for tenancy legislation. It has not been possible for us to acquire knowledge of the

tenancy laws of the different provinces. But we may state in general terms that we support all legislation which makes for the improvement of the material condition of the actual cultivators of the soil. Generally speaking, such legislation must involve some diminution in the income and prestige of the landlords. As their material condition is far better than that of the tillers of the soil, they are in a position to bear this diminution. They ought to be prepared for such sacrifice. If they be humane, they should gladly undergo such sacrifice. In any case, mere worldly wisdom should reconcile them to this diminution in their income and prestige. They should thank their stars that they have not yet been expropriated outright—considering the present trend of world affairs. Not that we are in favour of indiscriminate expropriation. No landholder should be expropriated without due compensation who has acquired some estate by purchase with money acquired by himself or who has inherited it from some one who purchased it similarly. In the process of doing justice to and relieving the misery of Have-nots another class of Have-nots should not be created. Nor should the Haves be exterminated.

Alleged Draft of Bengal Secondary Education Bill

Once again the *Ananda Bazar Patrika* and the *Hindusthan Standard* have published what is alleged to be the draft, prepared anew, of the Bengal Secondary Education Bill. It is stated to be a bill to provide for the regulation and control of secondary education in Bengal, not for its improvement and extension. The Board of Secondary Education to be established under it will consist of 49 members. Of these 15 must be and are sure to be Muslims. Besides these fifteen, the President may and is expected to be a Muslim, both or either of the Vice-Chancellors of the Calcutta and Dacca Universities will be Muhammadan, the Director of Physical Education may be a Muslim, and of the ten members to be nominated by Government (two of whom are to be from the scheduled castes) the majority are sure to be Muslims. Control of education should not be vested in a body formed on any communal basis. In addition to the communal division the members of the Board may be divided into officials and non-officials, and Britishers and non-Britishers. Those to be nominated by Government may be counted as officials for all practical purposes, and many of the members will be either officials or

persons nominated by Government. And among the officials some will be Britishers. Britishers, officials, persons nominated by Government, and Muslims are expected to vote on one side when cultural progress and the forward march of nationalism have to be arrested and checked directly or indirectly. Considering that it is the Hindus who have worked most and made the largest sacrifices for the educational advancement of Bengal, the control of secondary education will be readily and easily understood to mean the arrest of the further educational advance of Bengali Hindus and, if possible, their compulsory educational retrogression.

In this short note we cannot criticize this noxious draft bill in detail. We shall conclude with pointing out one of the amusing, though unjust, provisions. Among the members of the Board there are to be

“Five Headmasters of approved High Schools elected by Headmasters—two shall be Muslim, two Hindu and one a member of the scheduled castes.”

Now, the vast majority of approved high schools in Bengal have been founded, maintained and managed by Hindus—mostly by “caste” Hindus. Government have done their worst to divide the nation and to separate the “scheduled” Hindus from the “caste” Hindus, and the Huq ministry are following suit. Following this pernicious classification entirely against our will, we have to point out that giving the Hindus three seats out of the five headmasters’ seats, or giving the “caste” Hindus two out of the five, is quite ridiculous. Surely two-fifths of the money, ability, labour and sacrifice lying at the back of the educational progress of Bengal have not been contributed by the Muslims.

We are not sure whether the draft before us is authentic. Most probably it is. Its publication therefore is a service rendered to the cause of education in Bengal.

Dr. Dhar's Researches in Improving Crop Production

Though Dr. Nil Ratan Dhar has gone from his chemical laboratory in Allahabad University to officiate as deputy director of public instruction, which he has been doing with marked ability, his researches for reclamation of ‘usar’ (alkaline) soil have been going on as before. It is stated in an Allahabad message dated August 16,

The researches about the utility of molasses in improving crop production and bringing more land under cultivation, which are the vital needs of India, are

proceeding vigorously under the direction of Dr. N. R. Dhar, who, assisted by his pupils, has been carrying on this work of great practical value for a number of years.

Thanks to the interest of the Hon. Dr. Kailas Nath Katzu in the improvement of agriculture, this research work is being aided with grants from the provincial Government as well as the Imperial Council of Agricultural Research and the experiments are, at present, being carried on not only in the Allahabad University and the Indian Institute of Soil Science, established here by Dr. Dhar, but also in some villages.

Large scale alkali (usar) land reclamation is going on in tahsil Soraon, in this district, on a ten acre plot. It is said that the plants are growing beautifully on the treated fields but they are dying on the fields, not treated with any molasses or press-mud.

Besides U. P. some other provinces have been taking practical interest in Dr. Dhar's researches.

These practical experiments are being extended to different parts of this Province, especially in Meerut, Unao, Gorakhpur, and some other parts of the Allahabad district.

Dr. Dhar and his co-workers have also established definitely that the nitrogen and the calcium contents of normal as well as usar soils are increased by the addition of molasses and thus the fertilising power of molasses appears to be better in many respects than that of ammonium sulphate.

Congress President on Industrialization of India

The publication in our last number of Dr. M. N. Saha's article on "The Philosophy of Industrialization" has stimulated public interest in the question of India's industrialization and led to its discussion by many papers and public men, which is to be welcomed. Interest in the problem will be further stimulated by the speech which President Subhas Chandra Bose delivered on the 21st August last at the annual general meeting of the Indian Science News Association held in the University College of Science. President Bose's observations on industrialization were in reply to some definite questions put to him at the meeting by Professor Dr. M. N. Saha. The questions covered a wide range of subjects, all bearing on our national life, showing the professor's breadth of outlook.

All the questions and answers deserve serious attention. But here we have space only for some passages relating to industrialization. President Bose said :

A distinguished officer in this province recently wrote a voluminous book on a recovery plan for Bengal. But may I urge that the problem we have to face is not industrial recovery but industrialization? India is still in the pre-industrial stage of evolution. No recovery or revival is possible until we first pass through the throes of an industrial revolution. Whether we like it or not, we have to reconcile ourselves to the fact that the present epoch is the industrial epoch in modern history. There

is no escape from the industrial revolution. We can at best determine whether this revolution, that is industrialization, will be a comparatively gradual one, as in Great Britain, or a forced march as in Soviet Russia. I am afraid that it has to be a forced march in this country also.

As regards cottage and large scale industries he observed :

"Though I do not rule out cottage industries and though I hold that every attempt should be made to preserve and also revive cottage industries wherever possible, I maintain that economic planning for India should mean largely planning for the industrialization of India. And industrialization, as you will agree, does not mean the promotion of industries for manufacturing umbrella handles and bell-metal plates, as Sir John Anderson would have us believe.

"I gratefully recognize the fact that your magazine "Science and Culture" has helped to direct intelligent thought in this country towards the problem of industrialization."

He added :

"I must say that so far as the problem of industrialization is concerned all Congressmen do not hold the same view. But without exaggeration I may perhaps remark that so far as the younger generation of Congressmen is concerned their thoughts and ideas have been moving in the direction of industrialization. We believe in industrialization for various reasons. In the first place, we cannot conceive of an adequate solution of the problem of unemployment without industrialization. Though it may be possible and will be possible to increase the production from land by scientific methods still it will not be enough to feed our population."

"If we compare" said Mr. Bose "the figures of agricultural and industrial population in other countries we realize that we shall have to transfer from land to industries a great proportion of our population if we really want to feed the whole population. There is another reason why we believe in industrialization. That is this. So far political thoughts are concerned the younger generation is thinking in terms of socialism. Perhaps their ideas are not clear as to what particular brand of socialism they stand for. But there is no doubt that they think in terms of socialism, whatever brand they may adopt for themselves. There is one common factor that there can be no socialism without industrialization."

Search for Muslim Minister in C. P.

On Maulana Abul Kalam Azad's search for a Muslim minister for the Central Provinces and Berar, *The Hitavada* of Nagpur writes:

Maulana Abul Kalam Azad has made it clear that a seat has been kept vacant in the C. P. Cabinet for a Muslim Minister. Evidently the Parliamentary Sub-Committee has made up its mind that a Muslim has to be taken in the place of Mr. Shareef. We wonder whether the Assembly Party has been consulted in the matter. In the recent Ministerial crisis, there were many Congress members who raised the question that the Assembly Party should be free from the control of an extra-parliamentary authority. It is worth while for the Congress Assembly party members to decide the question whether a Muslim or a scheduled caste member should be included in the Cabinet. There are a number of scheduled caste members elected on the Congress ticket, and no

Muslim has been elected on Congress ticket. There has been widespread criticism since the Congress accepted office that the claims of Harijans for Cabinet preferment have been ignored. If the Congress Assembly party is keen on taking a Muslim member in the Cabinet, as it should be, since Muslims do require representation in the Cabinet, we trust they would not take seceders from the Muslim League into the Cabinet. If a Muslim Leaguer is included in the Cabinet, he should be asked to contest a by-election on the Congress ticket. The Congress of all organizations should set a healthy example by asking those Muslim Leaguers who wish to secure Cabinet preferment to contest by-elections on the Congress ticket. An attempt, though belated, should be made to set up healthy traditions of parliamentary life in our province.

Anti-Hindi Agitation in Madras

From the news supplied to the dailies by the News Agencies one does not get all the information needed to be able to form a correct idea of the Anti-Hindi agitation in Madras. Perhaps if we could all read Tamil and had the Tamil papers of that province our knowledge would be fuller. The newly started *Sunday Observer* of Madras supplies much information. But most probably it is a party paper, as, of course, the pro-Congress papers also are. *The Guardian* of Madras, a Christian weekly, may or may not belong to any linguistic party. It writes:

Nine Ministers out of ten of the Madras Cabinet, two hours of speeches and 70,000 (vide *Madras Mail*) or "over 40,000" (vide *Hindu*) or "at the lowest computation about a lakh" (vide *Indian Express*) citizens were required at the Triplicane Beach last Sunday to counteract the agitation against compulsory Hindi carried on by "a few persons" (vide Health Minister's speech), "a handful of people" (vide Education Minister's speech), "a small section" (vide Premier's speech), "a few friends" (vide Revenue Minister's speech), "some oppositionists" (vide Labour Minister's speech), "a few disappointed persons" (vide Agricultural Minister's speech), "a few disgruntled persons" (vide Publicity Minister's speech).

This is a democratic method of dealing with rebels who defy "the popular will." Administratively 215 persons have been sent to jail in Madras city alone and the Criminal Law Amendment Act has been brought into use.

In the stress of the occasion, the Premier failed to call to aid his favourite and most democratic form of evidence. He did not ask his audience, by show of hands, how many had learnt, were learning or wished to learn Hindi. It was a wise precaution not to have spoilt the enthusiasm of the audience and of the Premier's own case by this feeler. The same premonition banned the use of Hindi in the proceedings of the meeting. Such a discarded exhibition and final answer to anti-Hindi agitation, had it been adopted, might have found the Beach meeting, resolved into a plodding Hindi class of a score or more people, with the Premier a diffident teacher, while his colleagues and the vast electorate were nearer the waters of the sea debating more vital problems of the electorate.

The Servant of India, whose editor's mother-tongue is neither Hindi nor Tamil, observes:

In a meeting organized for the purpose of defending compulsory Hindi, Mr. Rajgopalachari, Premier of the Congress Ministry in Madras, put forth an amazing plea for making use of the Criminal Law Amendment Act against the demonstrations of the anti-Hindi agitators. He said that both the Houses of the Legislature had agreed to the proposal of making Hindi compulsory and therefore those who protested against it were nothing but fools and knaves and should consequently be put down with a rod of iron. We wonder how a Congress Premier could indulge in these fulminations. Every citizen has an inherent right of protesting against a measure which is obnoxious to him, and to prevent him forcibly from doing so is the highest form of terrorisation by the State. We read from the newspapers that those people who cried "Rajajiki Jai" were given free access to the meeting, while the anti-Hindi agitators were at once taken charge of by the police.....

Not only that, he even went further. He delivered a homily to the audience justifying his use of the Criminal Law Amendment Act in which his impotent colleagues quietly acquiesced. It is these people who not very long ago were carrying on a raging and tearing propaganda against all repressive laws prevailing in the country.

While going through the proof of this note we find in *Independent India* a severe criticism of the Madras Premier's defence of his use of the Criminal Law Amendment Act for crushing the anti-Hindi agitation.

International Anthropological Congress

COPENHAGEN (By Air Mail).

The Second International Congress of Anthropological and Ethnographical Science was held at Copenhagen (Denmark) from July 31 to August 6. There were about 700 delegates and members present from different nationalities. Among the eastern countries, Egypt, Iran, India, Indonesia (Java), China and Japan were represented. India was represented by Dr. Suniti Kumar Chatterjee from the University of Calcutta, Mr. R. P. Masani from the University of Bombay and Major P. Bardhan from Calcutta. Dr. Chatterjee took active part in the meetings of the linguistic section of the Congress.

The Congress elected Rai Bahadur Sarat Chandra Ray of Ranchi as member of the Honorary Council of the Congress which is the highest distinction in the gift of this international body for work in the field of Anthropology.

There was a large and varied programme including reading of papers, discussions, lectures and ethnographic films on different aspects of the science in the several sections of the Congress. Representatives also participated in excursions to places of historical interest and visits to museums including the world famous collections of Anthropology, Ethnology, history and art in and outside Copenhagen.—*United Press*.

Sir Nilratan Sircar Research Institute

An appeal has been issued for collecting funds for a research institute to be named after Dr. Sir Nilratan Sircar whose services to the medical profession, the cause of medical education and to suffering humanity for half a century need no recounting.

The institute is to undertake the study of the diseases of the Cardio-vascular system, diseases of metabolism,

problems of nutrition, study of indigenous drugs and other subjects. The utility or importance of such an institute can hardly be overestimated when it is borne in mind that a large majority of our countrymen either suffer from the effects of dietary deficiencies or become subjects at a comparatively young age to such constitutional maladies as Diabetes, High Blood Pressure, affections of the kidney and heart with the result that the average expectations of life in this country is 24 years against 45 in European countries.

The appeal is signed by Rabindranath Tagore, M. K. Gandhi, and a large number of prominent ladies and gentlemen of various communities and provinces. We support it wholeheartedly and hope it will be widely and liberally responded to.

Contributions may be sent to Dr. M. N. Bose, Carmichael Medical College, Calcutta.

Railway Disaster in Madras Presidency

Heavy rains having washed away the line in the Trichinopoly-Madura section of the South Indian Railway there has been a serious disaster, 35 persons being killed and 117 injured—fifty seriously. We deeply sympathise with the relations of the deceased and with the injured.

Refusal of Passport to China-bound Medical Volunteer

Passport has not yet been given, or has been refused to Dr. R. Sen, one of the doctors who had volunteered to accompany the Congress ambulance unit to China—we do not know why. Considering that China is at peace with Britain and that the doctors are going on a humane mission and can have no incentive, occasion or opportunity for any anti-British activity in or near the battle-fields, even if they be inclined that way, of which there is no proof, it is to be hoped the authorities will reconsider their decision.

Personal Revilings in Bengal

Personal accusations and recriminations in and outside the legislature, in newspapers and public meetings, have again been blackening the face of Bengal. She has reason to feel ashamed.

On previous occasions of a like nature, we read little of what appeared in the press, these things being distasteful to us. On the present occasion also we have read only small bits which caught our eyes while turning over the pages of some of the Calcutta dailies and scanning their columns for news in which we were interested. Hence, it would have been beyond our power to write at length on the subject, even if we wanted to, which we do not.

We should like to state our impression only on one point.

If we are not mistaken, one of the charges brought against Sj. Tushar Kanti Ghosh, editor of *The Amrita Bazar Patrika*, in the Bengal Legislative Assembly, was that, though his paper had all along advocated the release of convicted and unconvicted politicals in Bengal, his private opinion, as expressed in conversation with some European or Europeans, was different. Not having read Mr. Sarat Chandra Bose's speech in the Assembly, which is said to have contained this criticism, we do not know what European or Europeans, if any, he mentioned in connection therewith. We presume Mr. Allan Lockhart's name was mentioned. For, he subsequently wrote an explanatory letter to give an idea of what actually passed in conversation between himself and Tushar Babu. This letter, as published in the press, we happen to have read. It did not produce the impression on our mind that, as regards the release of politicals, Tushar Babu's privately expressed opinion was completely at variance with the opinions expressed editorially in his paper.

As regards that journal, as we prefer to judge a paper by what it itself has been and is rather than by the personality of its editor, which in most cases it is impossible for the public to know, we have no hesitation in saying that in our opinion *The Amrita Bazar Patrika's* services to the country during its long life unquestionably outweigh its lapses, of which it alone has not been guilty.

Release of Politicals in Bengal

A good many political prisoners in Bengal still remain to be released. Many hundreds have already been released, including many who were, rightly or wrongly, convicted of crimes of violence. The release of so many hundreds of them has not led to the recrudescence of political offences in Bengal or disturbed the public peace. There is thus a *prima facie* case for the release of the remaining politicals.

The release of political prisoners, including those convicted of terrorism or of armed rebellion, on the restoration of peace or on the attainment of self-rule, is not unknown in history. Many countries have known such occasions. There when the politicals were released, they were not asked as a condition precedent whether they had abjured their faith in the cult of physical force and had become ahimsaists. And the people of those countries

had not for the most part the reputation of being "non-violent." Here in Bengal the bulk of the Hindu community, to which almost all the political prisoners belong, are non-violent by tradition and temperament. And in addition the politicals have assured Mahatma Gandhi that they no longer believe in methods of violence. Hence there ought not to be any difficulty in releasing all of them.

Repression

Under the heading "Repression" Congress Bulletin No. 4 of 1938 mentions "some of the cases of arrests, convictions, internments, externments, searches, gagging orders and the like compiled from the daily Press and the bulletins of the Civil Liberties Union." Bengal supplies 23 cases, Delhi 6, Madras 4, N.-W. F. P. 1, Panjab 39, Sind 1, and United Provinces 5.

The Bulletin bears the date August 16. So it is not quite up-to-date. Nor does it include cases of repression in the Indian States, among which even those having the reputation of being enlightened and progressive, e.g., Travancore and Mysore, have attained notoriety in this respect in recent months and weeks. Yet the record makes disturbing reading.

Muslim Participation in Sri Krishna's Birthday Celebration

In Patna and Arrah prominent Mussalmans took part in the celebration of the Janmashtami festival. In the Patna meeting Mr. Justice Khwaja Mahomed Noor dwelt upon "the great message of love and service inculcated by Sri Krishna" and asked all his countrymen, irrespective of creed and community, to live up to that message. Presiding over the Arrah meeting Maulvi Sayyed Latafat Hossain spoke in similar vein and laid stress on the need for toleration.

Mr. H. G. Wells's Book Burned

LONDON, Aug. 13. (By Air Mail).

Indian Moslems in London, pedlars and doctors and wealthy merchants, prayed in an East End hall yesterday—then denounced a passage in Mr. H. G. Wells's "Short History of the World," and ceremonially burned a copy of the book.

According to Mr. Wells, his opinion of the prophet's personal character in the "Outline of History," where he summed up on Islam, will show that his criticisms were not irreverent, and that he was fully aware of the contributions of Islam to the world's culture. It was unfair, he said, to judge his views by a stray passage in an abridged version.—*Amrita Bazar Patrika*.

It is lucky that London is not Rangoon and that Mr. Wells in not a Burmese Buddhist.

India's Delegates to World Youth Congress in America

In our note on the World Youth Congress in America printed on a previous page, the extract from Dr. J. M. Kumarappa's article does not mention the names of Miss Renoo Roy and Messrs. Yusuf Meherally and Iftekharuddin as India's delegates. Miss Roy's presence has stimulated interest in the problems of Indian womanhood and Indian women's active part in the struggle for freedom.

The Evils of Contraception

In our Book Reviews section, page 370, the reader will find the following passage in the review of the *Statistical Year-book of the League of Nations*:

Fertility has also fallen sharply in almost all countries—not in India, and in many reproduction is no longer sufficient to maintain the population. This fact is masked, because the reproductive middle-age groups happen to be exceptionally large. But the proportion of old-age groups tends to increase. In England, for instance, children under 10 were over one-fifth of the population in 1911, about one-seventh in 1936; whereas people over 50 were less than one-sixth in 1911 and nearly one-quarter in 1936. This is a warning to the advocates of birth-control by the use of contraceptives.

The statistical year-book of the League is not a propaganda book either in favour of or against contraceptives, but a book of hard figures. Nor are we here concerned with arguing against "birth control." What we want is *legislation against the indiscriminate advertisement, exhibition and sale of contraceptives*, many of which are harmful and ineffective. Its absence has been causing bodily and moral injury. Harmless and effective ones, recommended by the medical profession, ought to be available only to married women for whom doctors may prescribe them for reasons of their health. That "the control of birth control" is necessary is shown in Dr. Griffith's *Sex in Everyday Life* (Allen and Unwin).

August 23, 1938.

ERRATUM

The Modern Review for August p. 128, col. 1, l. 26

After enforcing insert anti-Bengali circulars and from all other . . .

The sentence will then read as follows:

They would have done better if they had also appealed to the Bihari Ministers and their government and officials to desist from enforcing anti-Bengali circulars and from all other anti-Bengali discriminatory acts, until Babu Rajendra Prasad published his decision.

THE NATIONAL ART TREASURES AND MUSEUMS OF JAPAN

By DR. KALIDAS NAG, D.Litt. (Paris)

WITHIN 15 years from the accession of the great emperor Meiji, the Imperial Household Museum was opened (1882) in the Ueno Park, Tokyo. Before describing this magnificent museum in detail, I should give the general outline of the policy of the Government with regard to the preservation of national treasures and monuments. During my visit to Japan with Dr. Rabindranath Tagore I had the rare good fortune of being shown round some of the rare art collections, thanks to the kindness and courtesy of great artists like Shimomura and Taikan who personally took Nandalal Bose and myself through many public as well as private collections. Eminent scholars like Prof. Aneseki and Dr. Takakusu also introduced us to the academic group, while the brother of the late Okakura and the poet Yone Noguchi were of very great assistance. So during my last visits to the Japanese collections on my way to and from Honolulu and also while attending the World Conference of Education in Tokyo (1937), I was deeply touched by the spontaneous help offered by my old friends of Japan as well as by eminent archaeologists and art critics like President K. Hamada and Prof. Umehara of the Kyoto Imperial University, and Dr. Jiro Harada of the Imperial Household Museum, Tokyo. I am specially grateful to my friends of the Kokusai Bunka Sinkokai for supplying me generously with their publications and photographic documents and I remember in this connection the help rendered by Count Kabayama, Count Kuroda, Baron Ino Dan, Mr. Aoki and other friends. I was fortunate also to travel to South America to attend the International P.E.N. Congress at Buenos Aires (1936) in the enlightened company of Shimazaki Toson (the Tagore of Japan) and the celebrated artist Ikuma Arishama, from whom I got invaluable hints with regard to the recent trends of Japanese literature and art. I was fortunate to find in Count Kuroda, a real enthusiast in my subject, and he gave me many valuable informations as he was the nephew of Baron R. Kuki, who was instrumental in shaping the policy of the nation. He was almost a contemporary of the builders of modern Japan like Ito and Togo and like them he was sent to the West for specialisation. On his return to Japan, when he

rose to the rank of the Privy Councillor, he drafted the Memorial on the Conservation of National Monuments and introduced a Bill on the National Treasures. Already in 1889 the Imperial Household Department organised a Committee for the investigation of historic and art treasures in Buddhist temples and Shinto shrines. This led in 1897 to the establishment of a definite Code for the protection of national treasures and historical monuments. Meanwhile the Imperial Academy of Japan was founded stimulating the activities along these lines and the Ministry of Education also helped the movement through its department of fine arts financing the exploration of ancient sites as well as the exhibition of ancient and modern art objects. The taste for arts and antiquities is inborn in Japanese men and women and naturally art objects are seen not only in the big Metropolitan Museum but also in private homes and isolated temples. The Museum Association of Japan is a growing institution; it publishes its bulletin and the directory of Japanese Museum for the benefit of those who do not understand Japanese. There are also journals like the *Kokka* and the Year Book of Japanese Art.

Tokyo has several museums and collections: The Oyama Institute of Pre-historic Research shows an important collection of neolithic potteries and stone implements which should be studied with the select specimens of pre-historic antiquities at the Imperial University of Tokyo. Some fine samples of Chinese sculpture and Japanese art are in the Okura Antique Museum. Japanese arms and armours of all ages are in the Yushu-Kwan Museum and in the Yamada collection. Japanese costumes, paintings, etc. are in the Mitsui collection. Chinese and Japanese paintings and sculptures are found in the Nezu and Maeyama collections. The Noh costumes and Japanese pottery of different ages are to be found in the Fukui collection. The Waseda University founded by Count Okuma takes special interest in drama and has, therefore, developed a special Histrionic Museum showing models, colour prints, etc., relating to theatrical performances. Japanese porcelain of different types are found in Shiobara and Makita collections. The Masuda collection offers

important specimens of Japanese painting, sculpture, and industrial arts. Baron Ino Dan in his private residence has made a valuable collection of Japanese painting and folk arts and crafts.

After Tokyo the historic city of Kyoto exhibits valuable art treasures. The biggest collections are in the Kyoto Onshi Museum of Art and also in the University Museum. Most valuable series of ancient Chinese bronzes are in the Sumitomo collection which is so important that two eminent antiquarians like Prof. Hamada and Dr. Harada devoted several years of their life to publishing six volumes of plates with four volumes of introductory notes published as *Senoku-Seisho* (1921). This was utilized by Albert J. Koop in his *Early Chinese Bronzes* (1924). Chinese clay-figures, ancient Korean tiles and samples of Buddhist arts are in the Ito collection. The Hashimoto collection shows fine samples of Chinese pottery and Japanese Buddhist sculpture.

In the provinces there are several important centres, the most important being the Imperial Household Museum of Nara, the Soshō-in and the Temple Treasures of Horyū-ji and the Reiho-kwan Museum on the Koyasan hills. The Osaka prefecture has yielded valuable arms, armours and neolithic implements deposited in Motoyama Shoin-Do Museum. The Ueno collection is near Osaka as well as the Hakkaku Museum of Fine Arts with metal work and Chinese and Japanese porcelain. Valuable objects from Shinto temples are found in the Kokuho Kwan Museum of Kamakura. Historical relics of Shintoism are in the Choko Kwan Museum near the Ise shrine. Mr. Tomitaro Hara who was the host of Dr. Tagore made a valuable collection in his residence near Yokohama. Valuable objects are also found in the treasury of the Nikko shrine. Most of the important temples and castles of Japan that have escaped the ravages of fire and war contain valuable objects of applied arts, mural decorations and cult objects which deserve to be carefully catalogued and studied. A co-ordinated inventory of all the scattered objects of art should be compiled and published in English for the benefit of the lovers of Japanese art who cannot utilize Japanese books or catalogues.

THE ART TREASURES OF HORYUJI

One of the earliest and most important monuments of Buddhism in Japan is the temple group of Horyūji which was founded by the first Japanese Empress and her beloved nephew,

the Crown Prince Uma Yado, whose honorific title was Shotoku Taishi. Founded in 607, its oldest sections continue through 13 centuries. The entire group is divided into the eastern and the western temples comprising about 27 separate buildings: four of the Asuka period, five of the Nara period, two of the Fujiwara period, nine of the Kamakura period and seven of the Ashikaga and Tokugawa periods. It is a veritable city of temples like the Delphi of Greece. The Buddhist sculptures and other objects of art, numbering 421 pieces in all, are listed as National Treasures. The iconography is specially interesting from the point of view of primitive Buddhism in Japan. The central figure in bronze is that of Sakyamuni occupying the southern side of the Kondo or the main hall. The god is accompanied by two Bodhisattvas and the whole group is called Shaka-trinity erected about 621 by the son of Shotoku Taishi. To the east of this group is the Yakushi trinity i.e. Yakushi or *Bhaisajya-guru*, Nikko or *Suryaprabha* and Gakko or *Chandraprabha*. The figures were executed by the order of Empress Suiko and Prince Shotoku. To the west of the Shaka-trinity we find the Amida trinity composed of Amitabha, Avalokitesvara and Mahasthanaprapta. We find also among the minor deities the coloured wooden statues of Sri (Kichijoten) and Vaisravana (Tamonten). We also find the four Dikpalas occupying the four corners of the platform: Dhritarastra, Virudhaka, Virupaksha and Kuvera. Samantabhadra was also worshipped imparting long life to the devotees.

An image of Monju or Maitreya, the presiding deity of wisdom is reported to have been introduced into Japan by a Hindu priest of royal descent, Subhakarasinha who also visited China between 716 and 723. A very famous object is the portable shrine originally the property of Empress Suiko (592-628) which reflected the style of the Asuka period (552-645). On the portable shrine and its pedestal, which are both lacquered in black all over, is displayed the earliest examples of Japanese painting representing some Jataka stories which are also to be found in the five-storied wooden pagoda built about 607. The life of Buddha is also partially represented in clay figures on the earthen pedestal at the centre of the first storey of the five-storied stupa. The Treasure House or Kofuzo contains the precious objects donated by Prince Shotoku and successive sovereigns. This is the only surviving one of the 33 treasure houses reported to have been given to the Horyūji temple. In the eastern temple, there is a beautiful octagonal hall erected about 739 and

called the Hall of Dreams which was named in memory of Prince Shotoku who is reported often to fall into a trance (*samadhi*) whenever he ran against incomprehensible passages while annotating his three favourite sutras: the *Saddharma-Pundarika*, the *Vimalakirti* and the *Srimala*.

The Hall of Dreams is also proud to possess the glorious wooden statue of the saviour Avalokiteswara or Kunze-Kwannon, one of the finest specimens of Far Eastern sculpture, with flowing robes, slim figures of perfect grace with hands holding the Chintamani or wishing-gem and with eyes beaming with mercy. Buddha's bone relics are deposited in the Shari-den. Another very precious image of wood is found in the Chuguji nunnery which treasures the oldest embroidery representing the Mandala of Paradise. It represents Buddhist images, palaces, birds, flowers, etc. embroidered on silk of purple gauze and of yellow damask woven with threads white, red, yellow, green, purple and orange, a veritable rainbow of tapestry. Another wonderful treasure of the nunnery is the image of Chintamani Avalokiteswara or Miroku of rare plastic dignity and mystic charm. Last, though not the least, is the collection of fresco paintings in the Golden Hall of Horyuji. The long band of mural painting is divided into twelve sections, four of which are somewhat larger than the rest measuring about 10 ft. in height and 8½ ft. in width. These four bigger panels represent the paradise with a Buddha in the centre of each composition. On the eight smaller walls we see Bodhisattvas in standing posture. The method followed by the painters has been analysed. The outline of the figures was drawn first in red lines and afterwards shaded in the same colour. On the dry stucco finish of the walls, the following colours were applied: black, vermilion, rouge, ochre, cobalt and verdigris. Some secondary colours were also used and the style strongly reminds of those from Khotan and Ajanta. Japanese experts mostly agree that the expression of the Buddhas and Bodhi-sattvas is distinctly Indian. The outlines of the body and the robe are coloured red, the symbol of life and activity, and in contrast the head and the lotus-throne are coloured green and blue which suggest the feeling of peace and harmony. These invaluable treasures of Eastern Asiatic painting have often been reproduced and recopied and still a most carefully prepared publication on the Horyuji paintings is on foot for which the Government has paid a big subsidy.

Near Horyuji we find two important temples: the Toshodaiji with its dry lacquer image of Vairochana and the wooden statue of

the thousand-handed Avalokiteswara. So the Yakushiji temple contains the bronze statues of Bhaisajya-guru and of the Gakko Bosatsu.

NARA AND ITS MUSEUMS

The sacred city of Nara with its shrines, images, festivals and deer park reminds us of the holy city of Benares. The gigantic Todaiji temple houses the colossal bronze image of Vairochana. It is the main shrine of the Kegon (Avatamsaka) sect. The Todaiji is considered to be the largest wooden building in the world. It was erected between 747 and 752 A.D. It was damaged several times and renovated towards the beginning of the 20th century at the total expense of 75,000 yen.

The gigantic bronze image of Vairochana is 53½ ft. high, probably the biggest in the world. Its casting was begun in 743 and was completed in 749. The face alone measures 16 ft. by 9½ ft. and the whole figure weighs about 500 tons. The statue is seated upon a huge pedestal which is composed of 56 bronze lotus petals, each 10 ft. high. The bronze-caster Kimimaro was an expert from the Kudara province of Korea. In the dedication ceremony of the image, the whole royal family with the court officials and 10,000 priests and nuns reverentially participated. Apart from the huge statues in bronze, wood or lacquer, there are innumerable objects like the lanterns, the bell tower, testifying to the phenomenal growth of industrial arts in that Japanese Buddhist epoch.

THE NARA MUSEUM

Some of the most valuable objects of early Japanese art are treasured in the Imperial Museum of Nara established in 1894. The exhibits are divided into groups of painting, sculpture, illuminated manuscripts and industrial arts, besides a valuable loan collection. Some fine statues of Suiko and Nara periods are treasured in the Museum. The later periods are also well represented. Some valuable paintings, earthen and porcelain wares, terra-cotta figures and other archaeological materials are also exhibited.

SHOSON IN OR THE IMPERIAL TREASURY

When Emperor Shomu died in 765, the valuable art objects in his collection were noted down in a catalogue and presented to the Todaiji monastery of Nara which built the simple treasure house in the Log Cabin style. About 3000 art objects of rare historical value were thus preserved in this building of over 1150 years old. They belonged to the epoch when

Japan was getting from the continent the earliest relics of Buddhist art and culture. Pottery, furniture, wooden and leather boxes, lacquered or inlaid with gold, silver, ivory or different coloured wood, masks, musical instruments, textile fabrics, writing materials, documents and Buddhist scriptures are found in the Shosoin collection. About 50 beautiful bronze mirrors and their designs clearly show that they were of Chinese manufacture and superior to the mirrors of the Greeks and the Romans. But all these objects were foreign things imported from outside, many of them were made by Japanese artists. Even at that early age Japan was capable of assimilating and developing the various art motifs. Buddhism, of course, was the principal source of inspiration and the Buddhist decorative designs are found inlaid on the sandal-wood Vina called Biwa in Japan. Two Kinnaras or human-headed birds are finely depicted and they are characterised by Japanese artists as the Buddhist sacred birds called *Kalavinka* coming from the Himalayas whose songs remind us of the beauty of the Buddha. Distinct importation of Indian musical modes into Japan was proved by Sylvain Levi in his paper "On the Lumbini Orchestra." Some of the textile fabrics, nearly 70,000 of which have so far been mounted, in their designs, colours and technical processes prove them to be of Indian, Persian, Chinese or Byzantine origins or influences. Renowned Japanese art historians have collaborated to produce an excellent *Catalogue of Treasures in the Imperial Repository* (Tokyo, 1932). But they have only examined about one-half of the objects in the cases which are kept open for only 26 days in the year for airing and inspection. The public were allowed to visit the treasury from 1907 and in an inventory of 1908, the objects were classified under 2,794 items which grew to be 5,645 when a more exhaustive catalogue was compiled in Japanese by Mr. Y. Osima, a former President of the Imperial Household Museum.

In the same compound there is a small store-house, the Shogozo, which contains nearly 5,000 scrolls of the copies of ancient Buddhist sutras: 22 scrolls copied in China in the Sui dynasty (581-617), 221 copied in the Tang dynasty (618-906), 1,492 scrolls copied in Japan in the Tempyo period (708-781). The Repository contains many articles which were used in connection with the "eye opening" ceremony of the Daibutsu which took place in 752 (May 26). With a grand solemn ceremony the eyes of the great Buddha were opened by the priest Bodhisena who made gestures of putting in the

pupils of the eyes with sumi and brush and to the brush were tied long cords held by thousands of people. These objects are still to be found in the Shosoin. Buddhist figures are found carved on solid block of copper embossed on bronzes and also painted on silk as well as on hemp and cloth. Not only Mahayana but Hinayana miscellaneous sutras were preserved here as we find from the inscriptions on the bamboo mat-cover called Chitsu. The names of some of the sutras are clearly laid down e.g., the *Suvarnaprabhasa*, the *Mahavaiipulya*, the *Brahmajala* sutra etc. Rosaries of lotus-nuts, rock-crystal, amber and glass are also found. Three-pronged Vajras (really Trisulas) are found as symbols of the irresistible power of prayer, meditation and incantation. Models of Buddhist pagodas of various styles are also found. The seeds of the Bodhi tree are also used as rosaries. Following the example of Asoka, Empress Komyo established here a sort of a charitable hospital for free distribution of medicine to the poor and various kinds of jars and bowls for powders and ointments, minerals, medicinal fruits and herbs were treasured, probably following the Indian *Aurvedic* texts. Coral beads are very scarce and ebony is also rarely used. Ancient Japanese ornaments like the Kuda-dama (tube-jewels) and Magatama (carved jewels) have also been found. The cult of the mystic gem of India, Chintamani (Nyoi-Hoju) had already reached Japan. Relics of Buddhist saints were called Shari (from Sanskrit *Sharira*). Many objects of ivory have been found and the Shosoin collection as a whole deserve to be studied on a comparative basis from the point of view of the evolution of Asiatic arts and crafts. The textile collection has been exhaustively treated in two volumes with 114 plates published in 1929 by the Imperial Household Museum of Tokyo and Dr. K. Dohi has published in English his "Study of Some Drugs Preserved in the Shosoin."

KYOTO TREASURES

Kyoto having been the political and spiritual capital of Japan for centuries, its palaces and temples are veritable museums of Japanese arts and crafts. Some of the finest examples of painting and sculpture as well as illustrated manuscripts have been assembled in the Central Museum of Art (Kyoto Onshi), to the great convenience of those who cannot afford to visit separately the various collections in and about Kyoto. The museum was established by the-

Imperial Household and opened to the public in 1897. In 1924, when we had the privilege of visiting, the museum was given over to the municipality of Kyoto. It is specially rich in painting and sculpture, many of which are marked as national treasures. The oldest style of painting derived from the six dynasties of China is represented by the illustrated manuscript of the Buddhist "Sutra on the Cause and Effect." Although painted in Japan of the Tempyo era (729-748), the figures, costumes and other objects on the scroll represent the types of Northern China in the 6th century. Another richly decorated scroll of the 12th century illustrates the Saddharma Pundarika. Portraits of Seven Patriarchs are ascribed to the Tang dynasty, five being painted by the great Chinese painter Li Chen (Ri Shin) and two by Kobo Daishi. The story of the resurrection of Buddha (taken from the 6th century Chinese translation of the Mahamaya Sutra) is the subject of a unique painting of the Fujiwara period. Buddha is seen rising from a golden coffin and turning towards his mother while angels and demons gaze in wonder. Unlike the Nirvana representation we feel the atmosphere of joy and tenderness in this Japanese masterpiece. From the Kamakura period come the two pictorial biographies of Ippen Shonin and Honen Shonin reflecting the style of the Sung paintings. Honen was the great protagonist of *Bhakti* in the Amitabha and naturally we find a perfectly unique representation of the Amida trinity. A picture of the wind and thunder deities is attributed to Sotatsu and a powerful landscape of Sesshu represents summer and winter. Some of the sculptures in wood and lacquer display rare genius and portraiture. A few Shinto deities are represented in Buddhist pose. Gold lacquer utensils and furniture come from the Kodaiji temple erected by the wife of Hideyoshi and some fine samples of Japanese industrial arts and mirrors with exquisite designs are to be found in the Kyoto Museum which has published a richly illustrated catalogue in 5 volumes. But a volume which I examined wistfully but could not bring to India was an album of Indian and Indo-Persian paintings deposited at the Kyoto Museum by some Japanese art-lover who undoubtedly travelled in India. The old book-shops of Kyoto like the old shops for art materials may offer to patient explorers many such interesting items which are seldom noticed in general books on Japanese art.

Another very important centre of the study of Far Eastern art and archæology is the Im-

perial University of Kyoto. It provides for the systematic study of pre-historic Japan and Korea and their relations with China and Manchuria. Several professors of the University take active part in excavation works which has resulted in a valuable collection of antiquities which should be carefully examined. Prof. K. Hamada, now the President of the University, is the leader of the Kyoto school and during my last visit he helped me to get an idea of the activities of the Kyoto group for which I am grateful to him as well as to his learned colleague S. Umehara. The Archæological Institute of the University has published valuable reports, some of which I note down below:

Ornamented Tombs in Higo (Hamada and Umehara, 1917); Excavations of Neolithic Sites. (Hamada, Umehara, Shimada and Suzuki, 1918); Excavations of Shell-mounds (Kiyono, Sakakibara etc. 1920); A Pre-historic Site at Ibusaki (Hamada, 1921); Ancient Sepulchre at Midzuo (Hamada, Umehara, 1923); Rock-cut Buddhist Images in the Province of Bungo (Hamada, 1925); Remains of Ancient Bead Workers (Shimada, Umehara, 1927); The Pre-historic Site in Suku and a Study of the Ancient Mirrors (Shimada, Umehara, 1930); Study on the Cairns on Mount Iwaseo (Umehara, 1933).

Prof. Hamada is a veteran archæologist who during his studies in Europe worked with Sayce, Petrie and such eminent Orientalists. Prof. Umehara after his studies in Europe passed through Ceylon, as he told me, and takes keen interest in Indian art and archæology. He is an indefatigable worker publishing both in Japanese and in English. He takes keen interest in China and Korea, as I gathered from the translated title of his Japanese monographs: "On the white earthen pottery from the ruins of Honan," "Copper cutleries in ancient China," "Report on the excavation of the ancient tombs near Keishu, Korea." Prof. Umehara very kindly took me through the valuable collection of the University Archæological Museum (opened in 1914). I found the exhibits scientifically arranged: the pre-historic potteries and the stone implements of neolithic Japan; clay-houses and Haniwa figures from the Tumulus period; neolithic implements from Kansu (China) and from Jehol (Manchuria); neolithic relics from Korea; Korean tomb bricks and tiles; ornaments and crown jewels of the Korean royal house; terra-cotta Buddha figures from Korea and Manchuria; relics of the Nara period and many such valuable archæological remains.

THE IMPERIAL HOUSEHOLD MUSEUM, TOKYO

This Museum is the biggest and one of the earliest in Japan, organised in 1872 and opened to the public in 1882. It has several departments managed by a Chairman-Curator attending specially to the Department of Fine Arts. So, special authorities on Japanese art supervise the departments of Painting, Sculpture, Ceramics and Lacquer. Jiro Harada, specialist in the history of Japanese art who returned recently from a lecture-tour through America, has published recently a splendid album on the treasures of the museum, which we shall discuss later on. Another renowned art-critic attached to the Museum is Dr. Yukio Yashiro. He gained international renown by his magnificent volume on Botticelli in which he conclusively proved that many of the artists of European renaissance were familiar with the art of the Far East. He is also the Director of the Institute of Art Research of Tokyo. Returning recently from his English lecture-tour, Dr. Yashiro expressed his regret that with the exception of the Boston Museum of Fine Arts and the Freer Gallery of Washington, very few museums outside Japan, show real interest and judicious selection. The Western minds associate Japanese art with the realistic colour prints which, however, in spite of their excellence, cannot be taken as representative of the varied beauty and grandeur of Japanese art, which is occasionally realistic but mainly symbolical and decorative. "Living in a beautiful country where nature seems decorative, the Japanese people find the sensuous stimulus of ornamentation indispensable to their life. The Japanese sense of the decorative again has two sides: the gorgeous and exciting on the one hand, the simple and silent on the other. These elements appearing with surprising alteration constitute the special enchantment of the decorative art of Japan." China, that melting-pot of Far Eastern culture, was no doubt the land of origins but for that very reason Japan should not be neglected as the land of derivative and later development. For Japan within her shorter historical existence, while drawing from continental sources, nevertheless made her own developments embodying the national character of the race. Japan according to this recent interpretation of Dr. Yashiro is ever representing the incomparable beauty of the land and thereby contributing richly to the art of the world. These observations of the Japanese art-critic should be kept in mind by all those who are privileged to study the masterpieces of

Japanese art in a central museum like that of Tokyo.

The magnificent collection of the Tokyo Museum is administered along with the Museum of Nara, the Shosoin and Shogozo. All these are managed by the central governing body of the Imperial Household Museums. In the case of the special collection of the Shosoin, special rules are framed for the classification and special inspection of the art objects. For the Nara Museum special provisions have been made for field inspection and tours, repairs of national treasures, publication, gallery talks, installation of exhibits, special exhibitions, etc.

The Imperial Museum of Tokyo have several departments, as we have noted above, attending to various administrative duties like accepting and returning loan-exhibits, loaning out objects, special exhibitions, lectures, publications, museum library, conservation and repairing of national treasures, field-work and tours, exhibition of excavated objects. The curators meet regularly whenever questions of purchase, donation or accession in the three major departments of Historical Records, Fine Arts and applied arts arise. Some rare pre-historic Haniwa male and female figures and other objects excavated in the Tochigi and Gumma prefecture are exhibited together with terra-cotta models of contemporary dwelling houses. Clay-modelling tradition continued till the Buddhist epoch, for we see fine specimens of 300 Buddhist clay-figures found near Dai-nichido in Nikko. Some of the sacred robes are of wonderful workmanship and design. The bronze objects and ceramic specimens from China are remarkable. Some of the finest wood-carvings and dated paintings make the Museum of Tokyo a veritable shrine of spiritual beauty: the Bodhi-sattvas of all-pervading wisdom (Fugen) and the Sakyamuni of Fujiwara period, Sung landscapes, animal caricatures of the Kamakura period (1186-1333), such as a large monkey wearing the costume of a Buddhist monk and arguing with a big frog sitting on an altar in the posture of Buddha. Of the same period of the pictures of arrogant monks and hungry devil, the latter are attributed to Tosa Mitsunaga. We see also a concentrated nature study of Sesshu (1420-1506), the Zen priest who was the founder of the Yunkko school and one of the great landscape painters of Japan. When he was 77 years old he painted "Priest Eka Cutting his Arm" which is a national treasure. A gorgeous landscape by Motonobu, "Three Laughters in the Tiger Valley" by Kano Sunraku, "Dragon and Cloud" by Okyo and illustration of

the Japanese romance *Ise Monogatari* by Koriu are some of the masterpieces from the huge collection of the museum. Art objects and furniture in metal and lacquer as well as the ceramic collection are so big that one can only follow them with the help of an expert and in this connection I must remember with thanks my esteemed friend Dr. Jiro Harada who was all attention to me during my stay in Tokyo in 1937. Harada is "friend, philosopher and guide" all in one. Within the museum with its bewildering variety of art objects he was an invaluable guide. But no sooner does he finish the description of the objects than he plunges into the realm of the subjective, making us realise the philosophy of the art phenomenon. And when he finds his guests fatigued with the analysis of objects and subjects, he takes his tired guests into a reposeful Japanese restaurant to enjoy with him a freshly cooked Japanese meal which helps so much in assimilating the lessons of Japanese art. In discussing the wonderful lacquer objects Harada gives copious details about the distribution of lacquer from Siam to Japan. He informs us that lacquer wares of the Han period (1st century B.C.) have been excavated at Lolang, Korea, by Japanese scholars who found them undamaged after 2,000 years. He shows us with just pride the two writing box lids designed by the great artists Koetsu (1568-1637) and Korin (1659-1716), real gems of Japanese industrial art. In dealing with the ceramic objects, Harada confides to us that some of the tea utensils fetched for each piece 4,000 yen while big size bowls were sold for between 165,000 to 180,000 yen. The Tea ceremony or *cha-no-yu* taught the people to adore the beautiful in the everyday life, so much so that the feudal lords of medieval Japan "would exchange their castles for a single tea-caddy of a simple glaze." Ceramic art was possibly imported from China but it was given a rare dignity by the Japanese. Japanese genius in sculpture is best represented in the wood-carvings as well as in the *Gigaku* and *Noh* masks carved in wood and coloured afterwards. In 612 a Korean Buddhist priest introduced a form of musical performance called *Gigaku* where masks were used and in carving them marvellous skill was shown specially in the

Tempyo era (710-784), the Golden Age of Japanese Sculpture. Later on the more introspective *Noh* Drama came into vogue showing a symbolical type of masks which were often superior to made-to-order sculptures. The Tokyo Museum treasures a gilt-bronze Buddha image and *Amitabha* with attendants in copper repousse, both belonging to the Nara period (646-781). The founder of the Nara culture, Prince Shotoku (572-621) was the Constantine of Japanese Buddhism and the patron saint of all branches of national art. His remarkable portrait from the Imperial Household collection is now in the Tokyo Museum. Zen Buddhism is represented by the remarkable monochrome landscape by Shubun (1394-1427) who paved the way for great artists like Sesshu and Masanobu. From the work of such old masters we are taken through the picture gallery to the landscapes of modern painters like Hashimoto Gaho (1825-1908) and Kawabata Gyokusho (1842-1913) showing the continuous tradition of Japanese pictorial art which transmitted some of the profound traits of Esoteric Buddhism. What was religion and philosophy in India came to be visualised in Japan, thanks to the artistic genius of the people. Buddhism joined hands with Taoist mysticism in order to train this highly gifted race of Nippon about whom Dr. Harada has made the following profound observations: "The highest aim of the painter in Japan, as was the case in China also, has been to represent everything he painted in its right relation to the Infinite. Yes, that has always been the supreme aim of our painters. Whatever they painted, be it a human figure, an insect or a plant, they have tried, not only to depict the thing itself but to suggest or imply also its relative position in the scheme of the Universe, revealing it, however trifling in form, as in right proportion to the Infinite. Not only in painting but also in other forms of the art of Japan—such as sculpture, landscape gardening, tray landscapes, designs in pottery or lacquerware, or even in flower arrangement—this supreme aim manifests itself . . . it is this spiritual rhythm or rhythmic vitality which has been the supreme aim of Eastern artists for many centuries past."

REVISION OF BENGAL'S BOUNDARIES

By AMIYA K. BASU

THERE is a lot of confused thinking betrayed in the recent discussions in the Press regarding the actual Bengali-speaking areas in the neighbouring provinces and the demand for their union with the mother province. This demand, I have often noted, has been based on the ground that Bengalis are being discriminated against in the neighbouring provinces. Now, with the advent of provincial autonomy, it is only natural to expect a passing phase of intensified local patriotism. This tendency should be resisted by all means so that it may not become the over-mastering passion of the people, thereby endangering the very idea of India's nationhood. The solution of the parochial tendencies is not to be found in the transfer of territories from one province to another. For even the most carefully arranged revision of provincial frontiers will not be able to transfer back to Bengal all the Bengalis from the adjoining provinces and even if there is only a handful of Bengalis left in the neighbouring provinces against whom discrimination is practised or proposed, there will still be need to oppose such measure in order that the idea of one nationhood does not receive a set-back. Fissiparous tendencies in India are alarmingly frequent and we must constantly be on our guard and do all we can to fight them down. Our demand for the return of the Bengali-speaking tracts from the adjoining provinces to Bengal is really based on positive and fundamental considerations. The cultural life and advancement of a people suffers if it is artificially parcelled out amongst different governments, as the dismembered units are prevented from participating in the cultural movement of the parent community, which also is the poorer on that account. We therefore claim the return of the Bengali-speaking territories, as otherwise, our progress and development as a people are being continuously hampered. And it should be clearly understood that this claim of ours has absolutely nothing to do with the treatment we receive in the provinces concerned and we will not modify our demand in any way even if we are accorded very special and preferential treatment by our neighbours.

I have seen claims put forward that even

whole districts like Purnea and Singhbhum should come back to Bengal. Although it can be legitimately demanded that portions of these districts which are preponderatingly Bengali-speaking should be returned to Bengal, it does not do any good to anybody to make any claim based on ignorance. On the other hand, such a claim merely embitters and exasperates our neighbours and the suspicion that is engendered in their minds that the Bengalis are merely attempting to extend the provincial boundaries considerably weakens our case. Very few thinking people in Bengal, however, desire that areas in the neighbouring provinces which are not linguistically and culturally parts of Bengal should be added to this province. For, such a union can only be a source of weakness. A predominantly Oriya- or Hindustani- speaking territory, if included in Bengal, will not make the people so transferred Bengalis at heart. They and their people across the frontier will always nurse a grievance against Bengal. And who will not hate to create one more minority problem in this country? This does not, however, mean that there is no necessity to examine very closely all claims made by our neighbours that certain tracts are really Oriya- or Hindustani- speaking and should not be joined to Bengal.

Let us now cite some interesting items of facts from the Census Report of 1931:

(a) The Purnea District, which adjoins the districts of Dinajpur and Maldah, has 1,46,000 people speaking Bengali all in the Sadar and Kishanganj Sub-divisions, whose population amounts to 16,72,376. Expressed in percentage, this is equal to 9 per hundred against 88 per hundred shown as speaking Hindustani. Of the latter about 6,00,000 speak the borderland dialect known as Kishanganjia or Siripuria, which, according to the Linguistic Survey of India, is a form of the northern dialect of Bengali. In the Census Report of 1911 persons speaking this dialect were all returned under the head Bengali, while in the census of 1901, 1921 and 1931 they were all or nearly all returned under the head Hindustani. It is surprising that this dialect, which according to the Linguistic Survey, is a form of Bengali, should be returned under Hindustani. The reason is not far to seek. It

is stated in the Census Report that in 1921 the Sub-Divisional Officer of Kishanganj expressed the view that a pure Hindustani speaker would be more at home in this area than a speaker of pure Bengali and therefore the inclusion of this dialect as Hindustani was in his opinion correct. It is strange that the views of a non-descript S. D. O., whose linguistic attainments are unknown, should prevail over the finding of the Linguistic Survey. Is not the latter more authoritative? From my personal experience also I can say that a speaker of pure Bengali has absolutely no difficulty in being understood by the speakers of Kishanganjia. The conclusion, therefore, is inevitable that some attempts have been made to pass off Kishanganjia as more allied to Hindustani than to Bengali. Including Kishanganjia, Bengali is spoken by 7,46,000 persons out of a total population of 16,72,376 returned from the Sadar and Kishanganj Sub-divisions of the district of Purnea. It is again most unfortunate that the Census Report does not show the linguistic statistics of the two Sub-divisions separately. The relevant figures may be available in the files of the District or Sub-Divisional offices. Separate figures, if available, are very likely to show that the Kishanganj Sub-division adjoining the Dinajpur District as also one or two neighbouring thanas of the Sadar Sub-division such as Gopalpur Thana (i.e. the region round about Barsoi Railway station) and parts of Katihar thana (eastern and southern) are almost entirely Bengali-speaking tracts and they should be returned to Bengal.

It may be noted here that the population of the Kishanganj and Sadar Sub-divisions, according to 1931 Census, is 5,60,577 and 11,11,799 respectively.

Speaking about the Kishanganj Sub-division, the Purnea District Gazetteer states as follows:

"It is more nearly allied to the neighbouring districts of Northern Bengal than to Bihar and the bulk of the inhabitants are of Rajbansi or Koch origin, though most of them are now converts to Islam."

Bengal's claim to this Sub-division can therefore be hardly disputed.

(b) Let us now examine the position of the Santhal Parganas. Of a total population of 20,51,412, Bengalis number 2,53,000 and those speaking Hindustani number 8,98,000. The remainder speak tribal languages. The following comment culled from the Census Report will be of interest:

"The Santhal Parganas are the scene of a tug-of-war between Hindustani and Bengali. Although the number

of persons speaking Hindustani as mother tongue is nearly four times as great as the number speaking Bengali, the latter language is more current among the aboriginal people of the district. In the Sub-division of Dumka, for instance, Hindustani is the mother tongue of about 1,80,000 persons and Bengali of only 46,000; yet 14,864 Santhals speak Bengali and only 1,898 speak Hindustani. Again it is noteworthy that taking the district as a whole, 4.2 per cent of the Hindustani speakers have acquired the use of Bengali also, whereas only 1.7 per cent of the Bengali speakers have acquired the use of Hindustani. The influence of Bengali is particularly strong in the Sub-division of Jamtara and Dumka; in Godda and Rajmahal Hindustani is the dominant language, and in Deoghar and Pakaur there is little to choose between the two."

Of the six Sub-divisions of the district, Jamtara, Dumka, Pakaur, Rajmahal, Godda and Deoghar, the first 4 adjoin the Bengal Districts of Burdwan, Birbhum and Maldah, and as will be generally anticipated the great majority of the Bengalis in the district is to be found in these four Sub-divisions.

In the Sub-division of Jamtara, out of a total population of 2,43,858,

| | |
|----------|---------------------|
| 73,000 | speak Bengali, |
| 70,000 | " Hindustani. |
| 1,00,000 | " Tribal languages. |

In addition, 18,000 Hindustani speakers and 32,000 speakers of Tribal languages also speak Bengali as a subsidiary language, while none speak Hindustani as a subsidiary language. This is a strong testimony to the influence of the Bengali language in this Sub-division. There can, therefore, be no question of returning the whole of this Sub-division to Bengal. If, however, linguistic figures by thanas can be had, and they show that it is possible to satisfactorily partition the Sub-division, the dominant Bengali-speaking area need only be transferred to Bengal.

In the Sub-division of Dumka, the position is as follows:

| | |
|----------|---------------------|
| 46,000 | speak Bengali, |
| 1,79,000 | " Hindustani, |
| 2,40,000 | " Tribal languages, |

and 16,000 non-Bengalis speak Bengali as a subsidiary language. Although the Bengalis are a minority, the Census Report says, as already quoted above, that the influence of Bengali is particularly strong in this Sub-division. The south-eastern part of the Sub-division adjoining the district of Birbhum is probably the area where the Bengalis predominate and, if the linguistic figures are available by thanas, it will be an easy matter to draw the boundary line and transfer the Bengali-speaking tract to Bengal.

The case of Sadar Sub-division is quite simple and there cannot be any question of its return to Bengal. The Dhanbad Sub-division, however, presents a slight difficulty in that the Hindustani speakers out-number the Bengalis by 83,000 and Bihar will probably urge her claim and suggest a reference to the linguistic figures by thanas, which may be available in the District offices. But this method is not likely to be of any use as the bulk of the Hindustani speakers is composed of outsiders who have been drawn to this Sub-division in the wake of the development of the coalfields. Geographically and culturally, Dhanbad has always been a part of Manbhum and of Bengal. The phenomenal development of the Sub-division on the opening of the coalfields has caused this disturbance in the disposition of population. The local Bengalis have been out-numbered by the immigrant outsiders. But that is no reason why Bihar should be allowed to possess a share of Bengal, for it should be remembered that practically the whole of the Bengali speaking population numbering 1,76,000 is local and permanent to the district, while the Hindustani speakers represent mainly a fluid lot of temporary immigrants having permanent homes elsewhere. It will, therefore, be wholly wrong for the Biharis to base any claim on this Sub-division on the strength of the mere number of sojourners. The following extract from the Census Report will adequately bear out my contention:

"During the last 50 years the population of this district (Manbhum) has increased by over 70 per cent. It has developed more rapidly than any other British district in the province (Bihar & Orissa) except Singhbhum. Here again it would be a mistake to ascribe this altogether to the development of its industrial activities. Even in 1881-91, when the Jharla Coalfield had not yet been opened up, the population of the district was described as 'a prosperous people' and the recorded increase was as high as 12.8 per cent. In those days, moreover, the district was exporting a fairly large number of its surplus population to the Raniganj Coalfield in Burdwan and the Giridih Coalfield in Hazaribagh. It was in 1894 that the Jharla mines started work, with the result that the next census showed an increase of 25 per cent in the population of the Dhanbad (at that time known as the Gobindpur) Sub-division.

"Between 1901 and 1911 the development of the coalfield went on apace and the tide of emigration now turned in favour of the district. The growth of population was of course more marked in the northern (*i. e.* Dhanbad) Sub-division where in spite of an outbreak of Cholera which caused over 12,000 deaths in the coalfield in 1908 the rate of increase in this decade was as high as 38.6 per cent."

Bengal can legitimately demand, therefore, that the whole of the Manbhum district including Dhanbad should be returned to her.

(d) The next most important portion of Bengal now lying beyond her borders is the Dhalbhum Sub-division of the Singhbhum District. The linguistic distribution of population in this Sub-division, which adjoins the districts of Midnapore and Manbhum, is as follows:

| | |
|----------|---------------------|
| 1,41,000 | speak Bengali, |
| 50,000 | " Hindustani, |
| 45,000 | " Oriya, |
| 1,41,000 | " Tribal languages, |
| 18,000 | " Other languages. |

Of those speaking Oriya and Tribal languages, 18,000 and 64,000 respectively speak Bengali as a subsidiary language.

The figures quoted above leave no room for doubt that this Sub-division should come back to Bengal.

The position in the Sadar Sub-division of the district is, however, entirely different. There the Bengalis number only 6,000 forming only 1% of the population, while the Oriyas and the Hindustani speakers number 1,27,000 and 31,000 respectively. The Sadar Sub-division should, therefore, rightly go to the new province of Orissa.

The Oriyas often claim that the whole of the Singhbhum District should be transferred to their province. To say the least, such a claim is quite preposterous, and Bengal can, under no circumstances, agree to be deprived of her right to Dhalbhum. In this connection we may recall the recent press report regarding the intensified campaign for the propagation of Oriya in Dhalbhum, which shows that our Oriya friends are aware of the weakness of their claim, which they want to strengthen with extraneous aids. Nevertheless, I am of the opinion that Bengalis should not sit quiet and do their best to counteract the new move. Cannot the Bangiya Sahitya Parishad take the lead and arrange to regularly distribute Bengali newspapers and periodicals in the schools, libraries and clubs of Dhalbhum?

This is what the Census Report has to say about the linguistic position in the district:

"From the racial and linguistic points of view the two Sub-divisions of Singhbhum are poles asunder and Jamshedpur City is on an entirely different footing from the rest of the Dhalbhum Sub-division. Outside Jamshedpur, Bengali is the dominant language in Dhalbhum, Oriya comes a very bad second, and Hindustani a poor third. Contrast with this the position in Jamshedpur itself, where Hindustani is the subsidiary language of over 18,000 persons and Bengali of less than 1,800. In the Sadar Sub-division the influence of Bengali is hardly felt at all."

(e) Other territories of minor importance where Bengali is spoken are—

(i) THE CHOTA NAGPUR STATES

SARAIKELA AND KHARSAWAN

| | |
|------------------------------------|--|
| where 45,000 speak Bengali, | |
| 51,000 " Oriya, | |
| 10,000 " Hindustani, and | |
| 79,000 " Tribal languages. | |

Bengalis form 24% of the total population and Oriyas 27%. As these States are bounded on the north and east by Bengali-speaking tracts such as Manbhum and Dhalbhum, it is likely that the 45,000 Bengalis in the two States are concentrated in the northern and eastern ends. Here, however, any adjustment of boundaries is out of the question.

(ii) Mayurbhanj State contains 33,000 Bengalis, forming 4% of the total population. Even if they are all to be found in one or two localities close to the north-eastern border of the State adjoining Dhalbhum and Midnapore, no adjustment of boundaries can be effected.

(iii) Balasore District of Orissa contains 17,000 Bengalis forming 2% of the total population. Linguistic figures by thanas will show whether these 17,000 people are concentrated in parts of the district adjoining the Bengal District of Midnapore. If they are, they can be easily transferred to Bengal. If, however, they are diffused throughout the entire district of Balasore they must remain where they are.

We have examined the position in the districts adjoining the western frontier of Bengal, beginning with the district of Purnea in the extreme north and ending with Balasore in the south. In brief, Bengal should demand the immediate cession of—

the Kishanganj Sub-division of Purnea District
Jamtara and Pakaur of Santal Parganas District
Sub-division

The entire Manbhum District of Singbhum District
Dhalbhum Sub-division

Detailed study of the linguistic figures by thanas is required in the following cases to ascertain the tracts to be claimed by Bengal—

- (i) Amaur thana of Purnea
Kadwa " of Purnea
Katihar
- (ii) Dumka Sub-division of Santhal Parganas
Rajmahar Sub-division
- (iii) Jaleswar thana of Balasore District
Baliapal " of Balasore District
Basta
- (iv) Mayurbhanj State
- (v) Saraikela
- (vi) Kharsawan "

On the eastern borders the province of Assam includes a substantial area where Bengali is the prevailing language, *viz.*, Goalpara, parts

of Kamrup, Sylhet and Cachar. Here, however, the problem is quite different. Taking the province of Assam as a whole, Bengalis form the majority community and there is no danger of their losing their natural characteristic and culture, even when provincial feelings run high and the scarcely perceptible difference between the Assamese and the Bengali is artificially accentuated. Ethnically, culturally and linguistically the Assamese is hardly distinguishable from the Bengali. The difference in the two languages is little more than dialectal variation and Bengali is understood practically all over Assam by the educated and the uneducated alike. The script of the two languages is also the same. Both the people wear their dhoti in the same fashion and very often how difficult it is to tell an Assamese from a Bengalee in a mixed crowd. And at least my experience has been that when I am in the midst of Assamese friends I never feel that I am not with Bengalis but I cannot confess to the same feeling when I am with my Oriya and Bihari friends, although no doubt in case of the former I have discovered a much greater affinity. I have not the least doubt that the petty jealousies now noticeable in the province will die down before long and the two people will be anxious to march together as one and declare an "anschluss", just as the Scotch and the English are proud to merge their identity in the common British in spite of their quarrels and battles in the past. This need not necessarily mean a displacement of the Assamese language. For, do not the Scottish songs and ballads continue to delight the English and the Scottish alike?

If, however, our Assamese friends insist that it is essential for their own development to send the Bengalis away from Assam, Bengal should get back the following territories:

(i) The Surma Valley natural division consisting of the district of Sylhet and the plains portion of the Cachar district. The Census Report says:

"The (Surma) Valley is linguistically and socially a part of Bengal and its inhabitants have few points of contact with the dwellers in the Assam Valley."

(ii) The Goalpara district, excepting the eastern portion consisting of Bijni, North Salmara, Goalpara and Dudhnai thanas adjoining the district of Kamrup. These 4 thanas contain 1,16,413 speakers of Assamese and 64,283 speakers of Bengali. I cull the following from the Census Report:

"Assamese is mostly spoken in the Goalpara Sub-division and Bengali in the Sadar or Dhubri Sub-division. I have had the figures of Assamese and Bengali

speakers in Goalpara extracted by thanas and the results are given in Appendix II to this chapter. The figures show clearly that Assamese (or what the persons who speak it claim to be Assamese) is hardly spoken at all in Dhubri, Golakganj, Gossaingaon, and Mankachar thanas which are all thanas at the Bengal end of the district; that in thanas Goalpara, Dudhnai, North Salmara and Bijni which are all thanas along the Kamrup (or Assam) border of the district, Assamese is spoken more than Bengali and that in the middle of the district—in thanas Bilasipara, Kokrajhar and Lockhipur Assamese and Bengali are both spoken but Bengali predominates.”

I may here remark that the claim for the four eastern thanas to remain united to the province of Assam becomes considerably weakened if one takes into account the phenomenal increase in the Bengali-speaking population in the Barpeta Sub-division of the District of Kamrup. This Sub-division is situated at the extreme west of the district just adjoining the four thanas of the Goalpara District mentioned above. Let me quote from the Census Report:

“Kamrup is now the most populous district in the Assam Valley and with an increase of 2,13,175 in its population has forged ahead of Sibsagar, which was the most populous district in 1921 . . . The percentage of increase in the population of the district works out at 27.9 against 14.2 in 1911-12. The cause of this sudden jump in the rate of increase becomes apparent when the percentage is distributed between the Gauhati Sub-division which shows a moderate increase of 14.6 per cent and the Barpeta Sub-division which gives the enormous increase of 69 per cent. This unprecedented increase in Barpeta—which showed the very substantial increase of 34.1 per cent in 1921—is due almost entirely to the immigration of Eastern Bengal settlers, chiefly from Mymensingh . . . Of the three thanas into which the Barpeta Sub-division is divided Barpeta thana with an increase of 101.5 per cent and Sorbhog thana with an increase of 84.5 per cent are the two which are responsible for the enormous increase in the population of the Sub-division.”

It is thus evident that if we obtain the language figures by thanas, we shall find that in the Barpeta Sub-division Bengalis now predominate and there is a good case for its inclusion in Bengal. This, of course, will depend on the actual and relative strength of the two peoples in Barpeta Sub-division and the 4 thanas of Bijni, North Salmari, Goalpara and Dudhnai of Goalpara District, as the transference of Barpeta Sub-division to Bengal will also necessarily require these 4 thanas of Goalpara District being also ceded to Bengal.

The next important district in the Brahmaputra Valley where there is a large volume of Bengali-speaking immigrants* is Nowgong adjoining the North Cachar Hills. In the district, out of every 10,000 people, 3,437 speak

Bengali against 4,220 speaking Assamese. Language figures by thanas will indicate whether the Bengalis are conveniently concentrated close to the North Cachar Hills, so that together with the latter a portion of the Nowgong district may go to Bengal.

It is often remarked that the number of Bengalis in Assam is not quite as many as the bald Census figures reveal, for the reason that the Assamese call every non-Assamese a Bengali. The following quotations from the Census Report will, however, leave no room for doubt that our claim to portions of Kamrup and Nowgong districts cannot be challenged on this score:

“Unfortunately in Upper Assam the word ‘Bangla’ means anybody who is not an Assamese and there is a well-known tendency for Assamese enumerators to write down a speaker of any foreign tongue as ‘Bangla’ (which simply means something foreign). In fact, a European in the more unsophisticated Assamese villages is sometimes known as a ‘Boga Bangla’—a white Bengali. For this reason the statistics of the speakers of Bengali in the Upper Assam districts are unreliable.”

Again,

“In the Assam Valley (excluding the Frontier tracts) the number of speakers of Bengali has increased from 8,52,000 to 10,86,000, the increases being particularly noticeable in the case of Kamrup (+120,000) and Nowgong (+121,000) neither of which are large tea districts and where the question of Bengali being used by Assamese enumerators to denote a foreign language would hardly arise . . . The great increases in the speakers of the Bengali language in Kamrup and Nowgong is due to the continued immigration of Eastern Bengal immigrants and to the natural increase of the previous immigrants.”

And again,

“In the Assam Valley the statistics of the number of Bengali speakers cannot be accepted as accurate owing to the use of the term Bengali to signify any foreign language. The Kamrup and Nowgong figures should however be approximately accurate as there are few tea gardens in those districts, the bilingual statistics of which are extremely interesting in view of the fact that they contain the bulk of the Eastern Bengal settlers in Assam. The figures show that out of 1,70,000 Bengali speakers in Kamrup and 1,93,000 Bengali speakers in Nowgong only 4,000 in each district can, at present, speak fluent Assamese.”

The qualified claim put forward for the transfer to Bengal of the Barpeta Sub-division of Kamrup and the four eastern thanas of Goalpara is, therefore, quite fair and reasonable.

Of the three well-defined natural divisions of Assam, we have dealt with the two important divisions, *viz.*, the Surma Valley and the Brahmaputra or Assam Valley. Let us now examine the position in the Hills natural division separating the two valleys. This division embraces the Garo, Khasi and Jaintia, North

* In Assam Bengali immigrants are for the most part permanent immigrants.

Cachar (a Sub-division of Cachar District), Naga, Manipur and Lushai Hills. The following table gives the number per 10,000 of the total population who speak the different languages as mother tongue:

| | Bengali | Assamese | Tribal languages |
|--------------------------|---------|----------|---------------------|
| Garo Hills | 1,071 | 292 | 8,443 |
| Khasi & Jaintia Hills .. | 191 | 65 | 8,994 |
| North Cachar Hills .. | 333 | 107 | 8,400 |
| Naga Hills | 29 | 46 | 9,687 |
| Manipur Hills | 51 | 3 | 9,844 |
| Lushai Hills | 107 | 9 | 9,678 |
| Total Hills | 248 | 70 | 9,360 |

From these figures it is abundantly clear that in this natural division the tribal languages reign supreme and both the Bengali and the Assamese languages have an unimportant role to play; but of the two latter languages, Bengali undoubtedly holds a more important position. The total population of this division is 12,62,535 and according to the figures given above, 32,000 speak Bengali and 9,000 Assamese. It will, therefore, be quite logical to claim that this division should join Bengal rather than remain with Assam. This claim should receive further support from the fact that the neighbouring Bengalis in the districts of Sylhet and Cachar plains have innumerable contacts and friendly relations with the hill-men. If, therefore, the Bengali-speaking tracts have to come back to Bengal, we should also demand the inclusion of the hill division in our province. Indeed, Assam can have no claim to it on linguistic and cultural grounds.

It may be argued that shorn of the Surma Valley and the Hills what will remain of Assam

will not justify the continuance of a separate province. There is certainly some truth in this, but that does not concern Bengal and if she has to take back Sylhet and Cachar plains she must also claim Goalpara, probably a slice of Kamrup and even the Hills natural division.

The Indian National Congress, which is wedded to the principle of linguistic provinces, seems to be in no hurry to put its principle into practice. There are, of course, obvious difficulties in setting up new provinces. But the problem of readjusting the boundaries of existing provinces without having to create new ones is comparatively a much simpler affair and there is no reason why Bengal should be expected to wait for an indefinite period for the unification of all her people.

It is often urged that the country has more important and more immediate tasks to occupy itself at the present moment with than undertake the work of readjusting provincial boundaries. Granted even that that is the case if the problem is to be tackled for India as a whole and that we must wait for a more favourable and opportune time for settling the issue, there cannot be any valid argument for refusing to solve immediately Bengal's special difficulties in the matter. If comparatively unimportant planks in the Congress programme such as the spread of Hindustani as the lingua franca cannot brook delay and the language is forced down the throat of unwilling people with the help of government machinery the Congress now controls, I do not see why the grievous wrong done to Bengal in the matter of her boundaries should not be righted without further loss of time.

“WHERE WOMEN ARE HONOURED.”

Impressions of an Annaprasanam Ceremony

By MARGARET E. COUSINS, B. Mus.

TRAVANCORE is nothing if not dramatic and distinctive. This is to be expected in a land which stands out from the rest of the social politics of the world in that it is ruled by a royal family whose lineage for over two thousand years has functioned through the matriarchal system. This unique type of civilisation has built up its structure of laws, customs, social atmosphere and economics through placing predominance on the value and capacity of the women of its people in a way parallel to that of other races which have moulded their structures predominantly through an emphasis on masculine views and powers.

A ceremony which took place in one of the royal palaces in Trivandrum recently, gave a vivid demonstration of one of the ways in which womanhood is honoured in Travancore at a crisis of great significance in her valuable vocation of motherhood, in an event which is treated casually in other lands, but in Hinduism, which sees every detail of life as symbolical, becomes the occasion of high ceremonial celebration. I refer to the *annaprasanam* (rice-giving) ceremony performed for the baby-son of Her Highness Princess Kartika Thirumal, First Princess of Travancore.

Because of the matriarchal system of succession through the female line in the elder sister of the Maharaja, her son becomes the heir-presumptive to the throne of Travancore in succession to the present Maharaja and his younger brother the Elayaraja or heir-apparent. The dainty and beautiful young Princess has, in view of the continuity of the royal line, been the person of outstanding interest in the royal family. And the *annaprasanam* day was one on which the lime-light was thrown on her to show how successfully she had carried through her heavy responsibility and invaluable service to the Life Force by her creative self-offering and her primary power of producing and nourishing the baby Prince till the end of his first six months of life. This was the day on which the baby was given his first taste of rice food. This was the occasion on which began the child's withdrawal from its dependent, almost parasitic, physical

connection and unity with the mother. The baby now begins to turn to Mother Nature and the produce of the earth for sustenance: the human mammal's task is nearing completion. The baby is becoming an individual in its own right. It is thus seen how appropriate and fitting it is that this day is appointed also by the custom of Hinduism in Travancore for the naming of the child. It was the ceremonial celebration of the first public function for that favoured youngster, at which it could sit up and take notice; and due ritual, and kaleidoscopic colouring and grouping of relatives, infantry, mounted body-guard, gaily costumed staffs, levee officers, and visitors, made a truly picturesque setting for his formal reception by Mother Nature as her new son, now to be linked on to her direct, not only through his mother; also not as "baby," but as Rama Varma, Prince Avittam Thirumal, heir-presumptive to the throne of Travancore.

At first sight it seemed strange, but on second thoughts it seemed fitting, that the triple ceremony should begin in the open-air. An oval space had been enclosed neatly with a low fence of matting round a large shady jack tree. This was in the compound of a charming building at Thevarathukoikal, in the Fort, the family seat of the Ranis of Travancore. Along the pathway to the tree from the handsome great gate were lined about 250 of the State infantry whose smart green turbans above their white tunics always sound a note of youthful hope. There were also groups carrying ancient weapons; others with silver-knobbed sticks who are the Brahmin servants of His Highness the Maharaja. In their simplicity of pure white clothing they and the Hindu levee officers, the latter mostly bare from the waist up, were a striking colour antithesis to the infantry and to the rich blues and reds of the cavalry and the red and gold uniforms of the peon staffs.

The State levee officers had first gathered in a room of the Thevarathukoikal, where they were witnesses, I was informed, of the blessing of the rice for the baby Prince by his mother, who entered the room with her simple and charming stateliness, and walked round the

receptacle containing the raw rice with a gesture of benediction, after which the portion of the rice was taken for the ceremonial cooking. From this room the State officers went in procession before the women relatives of the Princes, and the procession closed with the Princess carrying the royal baby followed by Their Highness the Senior Maharani and Maharani Setu Parvati Bayi, mother of the Princess, and finally the grandmother of the baby, the great-grandmother of the occasion, four generations of exalted family life, dignified in simplicity, obviously happy, bringing to mind the scriptural declaration that "where women are honoured, there the Gods are pleased."

The senior ladies and the mother and child were received inside the enclosure round the tree by a couple of grey-haired priests. The procession of ladies, all in simple white dress, bare-footed, with freshly washed hair loosely hanging down the back and twisted into a knot at the end, was somehow reminiscent of a procession of vestal virgins in its simplicity and austerity. A more ornate note had been introduced earlier when a number of young girls had preceded the procession proper dressed in gay colours, with head-dresses of flowers, carrying symbols and vessels for offerings.

Inside the low-fenced enclosure, which the visitors could see from their seats on a raised verandah, the Princess sat on the clean sand with the baby on her lap in front of the old officiating *purohit* (priest). The handsome crimson canopy cloth tied at each end to crimson-tinted stalks of sugar-cane, under which she had walked in the procession, was moved to one side. The two Maharanis stood behind the seated figures, and behind them were the two daughters of the Senior Maharani striking a very modern note with their bobbed hair among the other long coiffures.

After certain *mantrams* (sacred texts) had been recited by the priest, the baby was handed to its devoted grandmother, Maharani Setu Parvati Bayi; and it was then that we all saw the depth of her love for the little one as she gave it such a heartfelt kiss (probably its first in public) that we all felt the waves of that deep affection spreading out towards us and linking us all in that "one touch of nature" that "makes the whole world kin." It was then that we could all see the little fellow kicking his legs about, and hear him occasionally

give a cry, though he was wonderfully good and quiet most of the time. Then he was handed back to his mother, who carried him three times round the honoured tree-trunk to get the blessing of its fruit-giving nature, so that he and she might share its nourishing characteristics. The State National Anthem was then played by the band, and the note of music completed the pageant.

That little baby, with so much of the future wrapped up in him; that slim slip of a pretty and dignified mother, the link with an ancient line of self-governing monarchs, both men and women, brought one face to face with the Mystery of the continuity and sanctity of the One Life, and the dignity, difficulty and responsibility that the Universal Creator has entrusted to world-mothers. Yet in most countries women are prohibited by law from being the official guardians of these same children. Very different is Travancore in these respects! In the way in which this ceremony threw full publicity on the mother and the women of the family, all women were implicitly honoured, all babies were significantly welcomed into the human family. The high thin vibratory cry given by women outside the compound as their way of applause was a mingled expression of wonder, joy and fear, as woman's intuition of such cosmic mysteries should be. The feelings of the men were expressed by the *feu de joie* of the troops as the procession re-formed and returned to the hall from which it had come, and in which His Highness the Maharaja now performed the naming ceremony. This he did, as I was informed, by whispering the new name three times into the ear of the baby, and then calling it aloud three times, after which the name was repeated by the mother and the Maharanis.

Throughout the ceremony and procession the baby Prince's father moved unobtrusively with other male members of the relatives of the baby, yet no doubt feeling proud and happy in the occasion. But Travancore leads the world in giving prime honours on such an occasion to the mother, following out the ancient injunction of the law-giver, Manu—"The *acharya* (teacher) is ten times more important than the *upadhyaya* (pupil); the father is a hundred times more important than the *acharya*; and the mother is a thousand times more important than the father" (Manu, *Smriti*, Ch. 11.)

ECONOMIC INVASION OF INDIA

By SIR RAHIMTOOLA CHINYOI

THE economic invasion of India began with the advent of the East India Company. The origins of British power lie in economic intrusion because it was a trading concern which first established British power in India. The flag followed the trade and the trade was helped by the flag. It is not necessary to go into the early history of the Indian textile industry or the Indian shipping industry in order to realise the truth underlying the criticism of British historians that unfair economic advantage was taken of political power in order to throttle Indian industries with which, at that time, British industries were unable to compete on equal terms. As is well-known, heavy import duties were levied on Indian-made cloth in Britain while the Indian handloom industry was subjected to the full blast of economic competition of the machine-made goods from Lancashire. Ships built in India and manned by Indian seamen were also discouraged and prohibited on the Thames with a view to protect British shipping, shipyards and seamen. The cotton excise duty which was levied on the infant cotton textile industry in India and continued upto nearly ten years ago, constituted as it were a symbol of the economic subservience of India.

The partition of Bengal created a national fervour which was stimulated by the victory of Japan, an Asiatic country, over Russia and this nationalism in the form of Swadeshi and Boycott extended to the economic field. The Industrial Conference which used to be held along with the Indian National Congress tried to focus public attention on our industrial needs and problems. Swadeshi and Boycott were represented to be the obverse sides of the same shield of economic self-reliance and regeneration of the country. As a result of these movements coupled with the outbreak of the last European war, an Industrial Commission was appointed in 1915. In moving the Resolution for the appointment of this Commission in the Imperial Legislative Council, Sir William Clarke, the then Member for Industry and Commerce stated :

"The building up of industries where the capital, control and management should be in the hands of Indians is the special object we all have in view."

He also deprecated the taking of any steps which might

"merely mean that the manufacturer who now competes with you from a distance would transfer his activities to India and compete with you within your own boundaries."

Similarly, Sir Frederic Nicholson said :

"I beg to record my opinion that in the matter of Indian industries we are bound to consider Indian interests firstly, secondly and thirdly. I mean by 'firstly' that the local raw product should be utilized, by 'secondly' that industries should be introduced and by 'thirdly' that the profits of such industries should remain in the country."

It is evident, therefore, that when Indians asked for protection of industries and Government agreed to a policy of industrialisation, they did so in order to promote Indian enterprise with Indian capital and under Indian control and management. The increase in national wealth and the training of the nationals of the country in the management and running of an enterprise are the real justification of a policy of protection and this is not possible unless the earnings of the industry remain in the country itself.

The Fiscal Commission presided over by Sir Ibrahim Rahimtoola also laid stress on this underlying object of protection and came to the conclusion that the Government should make certain stipulations for preserving the Indian character of the companies thus benefited. In fact, the majority of the Indian members of the Commission went much farther than this and rightly pointed out that

"under a policy of protection, the right to establish an industrial enterprise behind the tariff-wall is a concession in itself."

They, therefore, wanted definite conditions to be laid down for companies receiving protection either by means of tariffs or by means of subsidies or bounties in order to safeguard the interests of India. It might be pointed out that in regard to steel industry such conditions were laid down and in subsidising civil aviation Government, in the beginning at any rate, approved the principle of reserving a majority of share capital and directorate as well as controlling interests for Indians. The External Capital Committee also recommended the imposition of similar conditions to safeguard

Indian interests especially where definite pecuniary concessions such as bounty or subsidy are given in accordance with the explicit policy of the Government of India and the Indian Legislature.

It might be enquired as to whether foreign capital is not needed in India since indigenous capital has been shy. The External Capital Committee considered this question and stated in their report that

"India possesses a vast amount of dormant capital awaiting development which would be sufficient to meet a larger part of India's industrial requirements."

It is evident from the growth of the sugar industry as well as from the recent attempts to make India self-sufficient in several spheres such as textile, steel, cement, etc., that once confidence is created by adopting a policy of long-range and adequate protection, there will be no difficulty in obtaining the requisite capital. Besides, as the External Capital Committee observed :

"It is more advantageous to India that its requirements for new capital should be supplied from internal rather than from external sources so far as internal capital is forthcoming."

As the Resolution of the Congress Working Committee recently pointed out, the country would

"prefer to delay the further development of Indian industries if it can only result in the dumping of foreign industrial concerns who would exploit the natural resources of India."

The use of foreign capital to exploit the natural resources of the country which once exhausted cannot be replaced, is most undesirable in the interest of national economy. The conservation of natural resources in national interests is far more important than a rapid development of mines and industries, if they are controlled and managed by non-Indians. Sir Thomas Holland, President of the Indian Industrial Commission, once deplored the use of foreign capital in the petroleum industry of Burma and stated that the drain of profits was an "unnecessary and undesirable tax" which India must continue to pay until she could find her own capital. Even *The Statesman*, the well-known British daily of Calcutta, observed as far back as 1903 that

"the exploitation of the mineral resources of the country by the foreign capitalists stands on a different footing. For, in this case, the wealth extracted is not reproduced and on the not unreasonable assumption that it would sooner or later have been exploited with Indian capital, may unquestionably be said to deprive the people of the country, for all time, of a corresponding opportunity of profit."

These are wise words which should serve as a warning not only to the Government of the country but to the public as well as industrialists and businessmen. I am not opposed to foreign capital *per se*, but there is a feeling that it has been unduly encouraged in the past as a field for investment particularly of British finance. Secondly, although it is true that Indian capital was shy and that the habit of industrial investment needed to be spread, Indian industry could have attracted more indigenous capital if it had been protected from the effects of outside competition. Lastly, in certain key industries, at any rate, we would rather not have the development of enterprises within the country for a few years than permit this vital spheres to be dominated by non-nationals. The penetration of foreign capital without restriction and conditions can only end in the complete political domination by foreign capitalists and will mean a far more subtle and ubiquitous conquest of the country than constitutional subordination.

The whole object and policy of protection are, however, being undermined during the last few years in two ways. In the first place, the commercial safeguards in the new Constitution make it impossible to differentiate between Indians and Britishers, i.e., between nationals and non-nationals. British companies and firms are henceforth to be deemed to be Indian companies for all practical purposes whether located in India or outside and whatever pecuniary assistance is granted to infant Indian enterprises cannot be refused to corresponding British enterprises, however powerful they might be and however keenly they might be competing with Indian concerns. The purpose of protection, namely, the increase of national wealth through prevention of economic drain and the training of Indian talents is completely frustrated by these provisions. That those who are not domiciled or resident in India are given the same rights and privileges is not only an unheard-of thing but is thoroughly inequitable and iniquitous. But even apart from this, the object of protection is being defeated through the inflow of foreign capital and the formation of pseudo-Indian concerns. The great international companies have set up their factories and works in India to escape national tariffs. The reasons are obvious. India's general tariff, although framed for purposes of revenue, was raised from time to time especially after the surcharges on customs duties whereby they afford some degree of protection to various industries. Consequently, non-Indian concerns have been established and have benefited by this revenue tariff as well as

by protective duties. The stores purchase policy of the Governments, Central and Provincial, which give preference to products manufactured by companies registered in India and with rupee capital also encouraged this policy. Besides, by giving it an Indian appearance advantage can be taken of the Swadeshi sentiment which prevails in the country. The disappearance of long term movement of capital in Europe owing to the economic isolationism of Germany, Italy and other States as well as the general lack of confidence, might have also turned foreign capital, particularly British capital, more and more to India in recent years, especially because the field has been carefully preserved through the safeguards in the new Constitution. There is no doubt that the uncontrolled flow of foreign capital creates new and intractable vested interests which will be determined to maintain the privileges granted to them in order to perpetuate their existence and power. This is

a new menace which deserves the earnest consideration of all who believe in the economic independence of the country. There is all the difference in the world between the utilisation of foreign capital in a free country by a people who control their economic destiny on the one hand and the intrusion of foreign capital in a country like India with its political subordination and its incipient Indian national enterprises and its vast undeveloped resources, on the other. As President Wilson once observed, "processes of capital are in a sense processes of conquest." India has been and would continue to be dominated by the capital invested and in so far as foreign capital comes and takes hold, foreign control will come in and take hold at least in our present condition. We have, therefore, to mobilize public opinion and the machinery of as many Provincial Governments as possible in order to resist this new mode of economic invasion of India.

THEATERITIS

By BEN MISRA

SOMETIME ago this ancient reporter went to interview a show king at his picture palace with regard to a talkie corporation in which he was at the moment interested. But that wily old bird turned the tables upon him by a masterly sleight-of-hand, transforming the interviewer into the interviewee.

The magic formula that turned the trick was: "Will you tell me just what is wrong with our pictures?"

Now, I do not belong to the great and growing fraternity of professional reformers and saturnine self-seekers who go about telling people what is wrong with their pictures. A thankless task! But the thing did not come bang out of a blue sky; for then I would certainly not have put my foot into it. No; the fellow was too smooth for that. He led up to it, oilyly, effusively, by easy steps and stages. With rare Old World courtesy—so rare, indeed, that it is now found only in the New—he invited me to attend the opening performance of the "song-hit of the season," and see what I thought of it.

I could not demur, far less decline. It

would have been a scant return for his courtesy to plead a previous engagement. I went. For the first quarter of an hour the film completely baffled me. It was, I suppose, the director's high art that left me high and dry. Then gradually I began to get the drift of the story and at length found myself *en rapport* with the picture.

But just when, seduced by the golden voice and glittering beauty of the star, my interests in the fortunes and misfortunes of the hero and the heroine was at its height, like a flash of lightning from an overcast sky—to my utter annoyance and stupefaction—up went the lights, up rose the audience, and mine host hustled me toward the refreshment room.

The prospect of creamy, dreamy, velvety sweets is always grateful to a Brahman. But for all my inherited sense of epicurism, I was powerless to dispel a feeling of having been hoodwinked and humbugged in being so summarily torn away from the picture when at long last my attention and interest were centered in it and the entrancing creature dancing before me in sheer abandon.

It was not fair to me. It was not fair to the picture and its producers. It certainly was not fair to the fairy of the silver screen. It was positively insulting, if you come right down to it. It reminded me of the penny-dreadfuls that end on page 139 with the legend, "continued in volume second, out on January 13," leaving the hero with a halter round his neck, and the heroine, heading the party of rescuers, still struggling in the woods.

After the refreshment we returned to our box. But for good or ill, the picture seemed to have passed out of our lives like a dream. In its place, a lot of ads, bizarre and boastful, stared us mockingly in the face, vying with one another in their blatant outspokenness and jarring artificiality. There was no help for it. You stared back at them willy-nilly.

Then numerous gleams and glimpses of the coming attractions were flashed on the screen, showing what a wealth of songs and stunts and sex-appeal was in store for the patrons of the palace. And then—when the recess with its light repast, the ads with their bargain prices, and the foreshadows of the coming calamities with their promise of high delectation—had all conspired to kill our interest in "the song hit of the season" and its principals dead, on came the ill-starred picture again!

Kiss of Judas! But that was an un-Christain trick! To build a bridge over those gaping and staring ads and the flashes and foretokens of the joys to come—it could not be done. The spell had been broken. A lot of flotsam and jetsam had choked the slender stream. The thing became a bore. In due course the chequered career of the film came to its weary close—as every thing human must come to its close, sooner or later. The lights went up, the curtain down, and the audience out.

With a look of beaming expectancy mine host turned to me, every lineament of his moonlike face a veritable, "Well, how was that? Great, don't you think?" I could not, for the life of me, damn the picture with faint praise and thereby turn the beatific complacency of that episcopal countenance into chagrin. To be loud in its applause was to slaughter the truth and make mock of my own sentiments. "But why speak unpleasant truths?" the age-old admonition asserted its domain over my heart. And I compromised and praised the picture with faint damns.

It was then that the voice of the tempter spoke with mellifluous accents. "No, no," said mine host, "that is not what I expect

from you. Will you not, as an expert and experienced cineman, from the cinema capital of the world, tell me, tell us, just what is wrong with our pictures?"

I hesitated; and he who hesitates is lost. For the honeyed voice went on: "Will you, in other words, diagnose the ill that besets our talkies, so that we may adopt remedial measures?"

A word, hot from the mint, rose to my lips and escaped.

"Theateritis," I said sententiously, shortly.

"The-ater-itis!" the show king rolled the syllables on his tongue long and lingeringly. "I imagine I know what you mean. But I am not sure. Won't you develop your thesis point by point, or rather symptom by symptom, to give us the benefit of your long . . ." etc. etc., all very flattering without seeming to be so.

I slipped. "If you think it will be any help."

"Of course, it will be!" he boomed.

I was in a state of concentrated emotion and it poured out of me. And here it is for what it may be worth.

I was in Hollywood, (I said to the show king), when the talkies made their debut, and in Washington when, a few years earlier, the radio first appeared on the scene. The radio caused a flutter of excitement in the public; the talkies none to speak of. Both the radio and the talkies came as a matter of course. For years before their advent they had been taken for granted. And when finally they did make their appearance, they were received with a "H'm!" of satisfaction. "Why not?" the public seemed to say.

Not so the cinema circles in Hollywood and elsewhere. Talkies caused a complete overhauling in every department of the movies. Old machines were scrapped and new put in. Laboratory methods were revised and brought in line with the requirements of the new machines. Many stars of the silent days registered a fade-out and new ones rose to fame. New methods of acting and directing came into vogue, and a new type of photoplay was demanded to meet the new requirements.

These changes, tremendous and far-reaching, did not come all at once. Slowly and gradually, first tentatively and experimentally, new adjustments were made in conformity with the peculiarities of the talking machines; and the machines themselves were continually adjusted and improved, as new facts and formulas were discovered. Thus rose in Hollywood a

mass of knowledge which is known as talkie technique—a slow, scientific growth, made in the light of new improvements and innovations.

Not so in India. Talkies came to India as a gift from gods on high—the high gods of Hollywood. They did not grow and develop and attain maturity here; they were imported as a finished product. Result? The Indians did not have, do not have, and, what is worse, do not *care* to have that technical knowledge of the craft which first-hand familiarity with the particular and peculiar characteristic of the talkies alone can give.

Talkies boomed the business, as nothing else could have done. They started a veritable gold-rush. Curious spectators flocked to talkie houses in hundreds upon thousands and stared open-mouthed at the talking screen. Whatever the producers sent out brought in a plentiful harvest of pure gold. The public became film-conscious. Talkie houses and picture palaces multiplied all over the country. To meet the ever-increasing demand for Indian talkies, any number of film companies were floated, and did, and are doing, a roaring business with excellent future prospects.

The Indians imported talking machines, but they did not import, nor acquired for themselves, talkie technique. Before the talkies there had been movies and theaters: theatrical companies that went barn-storming the country. When the talkies burst upon the horizon like a golden dawn, the Indian theater suffered a total, and in my judgment a well-deserved, eclipse. But in eclipsing the theater, the Indian talkies took over all the thunder and theatricality for which the stage had been infamous and put it on the screen, in utter ignorance and total defiance of the peculiar requirements of the talkies, and to their thorough demoralization and detriment.

The results are glaringly patent all over the screen. Who are our veteran photodramatists? The same gentlemen who used to write plays for the theatrical concerns. Now what they write may be anything from pure drivel to passable drama, but it is not photodrama. At best it is middling and maudlin or stagey and melodramatic. Mostly it is mushy and mawkish.

The new recruits have gone one better. They have learned to superimpose long-shot, mid-shot, close-up, and fade-out on their puerilities and call them scenarios, and themselves Scenarists with a capital S. But that is mere imposition. Patch-work on a crazy quilt. It reminds me of the raw N. C. O. who, stepping forth to drill his company, cried: "Lep', rite, lep'; form force, form to deep; right about turn;

Diss-Miss!" to the intense hilarity of his men, who forthwith dispersed in high glee.

"But why not?" objected the show king. "Why can't stage plays be produced on the talking screen?"

"Because they can't be," I replied.

"You are begging the question," he came back with some zeal.

"Don't blame me. Blame rather the limitations of the talking screen."

"Eh?"

"Take a familiar example. Bernard Shaw is, on his own admission, the foremost dramatist of our day: the superior of Shakespeare, I believe, he once boasted. His plays suit the stage to a T. But can they be produced on the screen as they stand? No, siree!"

"No?"

"A camel will sooner pass through the eye of the needle, and a show king the gates of paradise!"

"Oh! Oh!" gurgled the show king. "I am not so rich, I assure you."

"Assure St. Peter!" I told him in light repartee.

The other day I went to see S. starring K. The story was long-winded, patchy, and amateurish. But K. was superb.

"How beautifully she screens!" I remarked to a director friend who was with me. "She can't be as beautiful as all that."

"She is more beautiful than all that," my friend, who had met her, replied.

"Golly! What a gal!" I exclaimed in my native Amerianese.

"You betcha!" the director returned in the same key. "Unfortunately, she has never had proper direction."

"That is clear from the way she acts." I agreed.

Given expert direction, K. would make a marvellous actress. She is neither fat nor foreign, and her voice is sweet, silvery, sheer-musical. But denied skilful direction, she goes through her part as best as she and her directors know how, and then seems to say: "All right, now I will sing you a song." And when she sings—when K. sings—she weaves a spell over her audience, and turns even the most hardened critics into ardent admirers.

Mrs. D. has been far more fortunate in her directors. And she has a fine voice and a fascinating figure, and features admirably suited to a certain type of role in which she has no superior on the Indian screen. But she

has not yet had a story worthy of her histrionic gifts. How I wish I could star Mrs. D. in a photoplay written by me and directed by a really competent director like B. or N.

But it is better to underact like K. than to overact like nobody's business. Unfortunately, we Indians are a pedantic people. We love bombast. We talk in superlatives. There is an over-tone in our make-up. Our foods are heavy and hot like the sting of a hundred adders. Our dresses, loud and dazzling: staring red and peacock blue, shot through with threads of gold and loaded with precious stones or paste, and heavy ornaments, real and unreal. We prefer the gaudy and ornate and regard the quiet and subdued, not as a mark of good taste, but as colourless and lifeless.

In writing, we use difficult, dictionary words, and rolling periods of learned length. In acting we indulge in wild harangue and wilder gesticulations, and shun naturalness as sin. Our actors do not *live* their part, they *act* all too consciously, and, what is worse, *overact*. Yet gesticulating is not acting any more than shouting is singing. But these things have been lifted from the theater, and will continue to bar progress and mar the beauty of our productions until, in a heroic attempt to kill theateritis and portray life, we turn our back on trash and tinsel and take our cue from life itself.

I have said enough to indicate my strong disapproval of what passes for photoplay, but what is, in the great majority of cases, nothing but pure rigmarole, an endless piling of incident on incident without rhyme or reason or rhythm, until it is felt the picture will run through fourteen reels. But every play, no matter how long and rambling, how Indian and amateurish and inept, is bound, in the very nature of things, to contain, as it does contain, some story and sequence, some semblance of unity, continuity, and coherence.

Through this story and sequence, through this continuity and coherence, our show kings and Shoguns run a sharp sword when in the midst of the play they declare an interval, and then thrust a lot of ads and trailers. When the story comes next, interest in it has been smothered dead under a scrapheap of the irrelevant and immaterial and cannot be resuscitated by any manner of means.

Through a stage play, which is divided into a number of scenes and acts, after each of which the curtain drops, you may run a carriage and pair at the end of each act, or

sell peanut brittle or popcorn at the end of each scene, if you are so minded. But such liberties may not be taken with a photoplay which is not *divided* into diverse incidents, but in which diverse incidents are *unified* to form one *undivided* whole. A photoplay is not a five-act-drama or a four-hundred-page novel. It is meant to be seen at one sitting, even as a short story is meant to be read at one sitting.

A photoplay is like a hundred-yard race in which the sprinters start off the mark in a flash, gather momentum at every step, and finish up with a fine burst of speed. It is like a dart speeding straight from the bow to the bull's eye. It has no time to ramble and peep and halt and hesitate and limp and languish and take a nap or two under the wayside banyan tree, arriving home some time before dawn. It is keyed to a quicker tempo. Rain or shine, calm or storm, it must speed on like a mail plane and make the terminus on schedule.

Begin your program with advertisements and trailers of the pictures you have booked, (I told my show king), then introduce shorts, features, newsreels and comics. Then declare an interval, *if you must*, but not, in the name of everything beautiful and artistic, in the midst of the main feature when interest in the story is at its height. It is not playing the game. It is like turning out your guests when they are enjoying their *piece de resistance* most, and telling them what *hors d'oeuvres* shall be theirs at subsequent dinners. It is not hospitality. It is the height of something I hate to name. It is preposterous.

"But," objected the show king, "shorts and comics have not yet come into their own in India, and the main feature is the only feature there is. So that if the interval is not to be declared in the middle of the picture, when and where is it to be declared?"

"That, my dear Sir," I replied laughing, "sounds very much like the French Bluebeard who argued, 'If I don't beat my wife, whose wife am I going to beat?'"

"But why beat your wife at all? Where is the necessity? If your pictures are long, tell Bombay and Calcutta to make them shorter. If they are tiresome and boring, as I know they are, tell the producers to put snap and crackle into them. If you want shorts and comics, insist on having shorts and comics. But do not, for God's sake, if art has no appeal for you, butcher your pictures the way you do them now."

To our photodramatists, alleged, actual, and otherwise, I'll say: "Study life; learn your craft;" to the actors: "Do not *act*, but live your part; be natural and spontaneous, not theatrical, hysterical, or artificial;" to the producers: "Snap out of that matutinal slumber; realize your responsibility to your

public and the high art you sponsor;" to the show kings: "Be non-violent; don't slaughter your pictures so;" to the directors, mighty monarchs of the screen land, whose word is Law, nothing at all: I haven't the courage. I shall simply make my bow and depart. Salam-ale-kum!

PARLIAMENT RISES : PROBLEMS REMAIN

By MAJOR D. GRAHAM POLE

PARLIAMENT has just risen and will not return to its labours again until November. A quarter of a year for a holiday—and on full pay too! However they can flatter themselves that during the past session they have passed a Bill empowering Trade Boards and Agricultural Wages Committees to negotiate the matter of paid holidays for workers. They may well cling to this as one of the few things there are to be glad about; this and perhaps (according to their religious persuasion) the verdict in the Bourne abortion case. Otherwise the outlook is dark indeed. At home unemployment is increasing, prices are rising, agriculture is declining, shipping is declining, crisis is developing in the mining industry. And abroad no one can tell what is going to happen.

As regards the Holidays with Pay enactment, little need be said. Like most Trade Boards legislation it is permissive legislation; the Boards are not compelled to do anything. But where the Boards decide that paid holidays should be given, any employer who fails to give them is liable to a "maximum fine of £20 for each offence." It is strange that at this time of day there should be any employers left who do not regard paid holidays as a good investment in health, goodwill and efficiency. But there certainly are. It is anticipated that no less than 2,000,000 workers will benefit under the new legislation.

The Bourne verdict was received by medical men, assembled as it chanced in Congress, with an outburst of prolonged cheering. Abortion is of course a matter so fiercely opposed in priestly quarters that it is impossible to get anyone owing them allegiance even to *consider* the question. Yet eminent men who have studied the history of abortion, and who hold no brief for or against it, tell us that in the

ancient world abortion was regarded solely as a civil matter. Not until the beginning of the third century was it regarded as a crime. In especial it is worth noting, in view of the attitude taken up by the Roman Catholic Church, that "there is no direct reference in the New Testament to either infanticide or abortion."

The Roman Catholic Church, of course, bases its opposition to abortion on the commandment: "Thou shalt not kill." The child must be allowed to come to birth even if it appears certain that in giving birth to her child the mother will die. This is categorically set down in a Papal Encyclical of 1933. Those who advocate abortion on the other hand—and no one advocates it indiscriminately if only because, all other considerations apart, it is "one of the most dangerous operations in surgery"—are concerned for the life and well-being of the mother primarily. (Though the prospects for a child born in unhappy circumstances must also weigh with them.) They are appalled by the high death rate amongst women resulting from a recourse to unskilled abortionists. It is said that 90,000 abortions are performed in England every year. The medical officer of a London hospital informed Sir Ernest Graham-Little, the M.P. for London University, that in twenty months he had been called to 530 cases of illness caused by improper and unskilled abortion.

Women in this country, at any rate, are seriously perturbed by the abortion figures. The Women's Co-operative Guilds, the National Council of Women, the National Council for Equal Citizenship, have all passed resolutions calling for an enquiry. These resolutions, as also the verdict in the Bourne case, must surely have some weight in promoting humaner legis-

lation. The Catholic attitude might be one worth sustaining—might be one, that is, which women would think it worth dying for—if it were one of universal application. The absolute sanctity of all human life is no mean conception! But the Catholic Church, and those who think with it, take up this stand only in the matter of birth control and abortion. If human life is absolutely sacred to the Catholic Church, why does it not denounce war? To take the more obvious instance of violence to human life, why does it not denounce capital punishment?

The Bourne verdict, it is safe to say, is one of the few subjects that has diverted public attention lately from its constant pre-occupation with foreign affairs. For a time it seemed the Sandys case might succeed in doing that. But for reasons best known to the principal participants it is being pushed into oblivion. Perhaps, just as Mr. Sandys discovered something he ought not to have, the Government and the Opposition have also stumbled on something they would rather walk over altogether! Perhaps, to push matters to a conclusion, might have pointed to the resignation of the Secretary of State for War and/or the Prime Minister, and, at the present time, in view of the ticklish Czecho-slovak situation, that was not to be thought of.

It is a pity that this pre-occupation with foreign affairs is distracting attention from another evil which is right in our midst, the evil of unemployment. Has unemployment ever been in a worse case than it is now? The figures no doubt in the 1931 world slump were worse, but they are increasing now all the time—and that in spite of the men engaged on our rearmament programme. If it were not for that programme, what would the figures be? As it is during the past year unemployment has increased by no less than one-third. In June, the figures were up by 24,107 but at this time last year they fell by 94,732.

The tragedy behind these figures is enough to blot out the sun for anyone who considers it. It is said that, if we take into account the dependents of these unemployed men, five million people are involved. Five million! Thus while we are spending millions upon millions of money on armaments, all these people are living a down-to-the-bone existence. And, as if that were not enough, there is a whisper growing that, in view of all this enormous expenditure, there may have to be a cut in the social services. Truly we have not yet discovered how to use our votes intelligently.

Unemployment, low wages, rising prices—

these three evils are menacing our lives just as surely as the war in Europe and the Far East is menacing our political existence. It was startling to learn a month or so ago, when the Board in charge of Unemployment Assistance issued its Report, that wages in this country are often so low that a man is better off on unemployment assistance than he is in work. Such a state of affairs indicates something rotten in the economic order. Consider just this: the standard unemployment benefit for children under five, we are told, will not even pay for the amount of milk experts say they need—apart from all other needs.

In view of all this, it is not surprising to find that the Committee Against Malnutrition, in a memorandum issued recently, are advocating proposals which can only be described as revolutionary—and which would have put a Labour Government out of office instantaneously if they had ever dared promote them in a Bill. "Analysis of the scales of public statutory benefits," they state (and we would like to add: supporters of the Means Test please note), "show that they are insufficient to provide adequate nutrition." And as regards low wages, they think it is no use raising them—because it would merely lead to a rise in food prices. So they make the socialistic proposal that the vital foodstuffs—milk, fruit, vegetables, fish—should be taken out of the hands of private concerns and put under the control of Food Boards. And there must be no half-measures about it! "The whole process of production, from the marketing of fertilisers to the distribution to the housewife at the doorstep, as well as imports from abroad and their storage" must be the scope of the Food Boards.

It sounds too good to be true.

But if anyone doubts that profiteering has been going on in the food industry, let them study the following figures. For the last three years United Dairies has paid a dividend of 12½%; Spillers (flour) in the last three years paid 15%; Ranks (flour) 18% last year and 15% the two previous years; Hovis (bread) has paid 20% for the last three years. Tate & Lyle (sugar) paid 20% in 1935 and gave their shareholders two new shares for every five held; in 1936, they paid 18%; and in 1937, they paid 18½ on all the shares including the new ones. (With regard to this last item, one might digress to point out the contrast between the dividends which Tate & Lyle can pay and the misery which exists in the West Indies, that sugar-producing area.)

When the Unemployment Board called attention to the disquieting fact that it can be more profitable to be on public assistance than to be in work, were they thinking specially of the miners? A remarkable article appeared the other day on the subject of miners' wages. It was called *Where work means starvation* and was written by Mrs. Barbara Ayrton-Gould. In it she states that in practically all colliery districts the average wage earned by an adult miner is about two guineas a week for a full week's work. But many miners work not a six-day but a four-day week—and for the four-day week they receive the pitiful wage of 26/- a week. "The income of the unemployed man with a wife and several children," she adds, "*is nearly twice that of the miner working four days a week.*"

No wonder trouble is blowing up in the mining industry. Mining, which of all industries should seek to compensate its workers for the strains and stresses and anxieties it imposes, pays less than a living wage! When one reads of the conditions prevailing in the pits today, one seems to hear again the voice of A. J. Cook calling on the miners to unite and free themselves. In 1926, they were defeated. But can the victors be easy in their minds? As a miner said at a conference of the Mineworkers' Federation the other day:

"Isn't it true that since 1927 the industry has passed through an experience unparalleled in its history? Haven't we heard the word *explosion* in the past ten years more than in the 40 or 50 years that some of us here have worked in the mines? Yet nothing practically has been done to prevent it."

The situation is indeed frightening. The accident rate is increasing. It is the worst in Europe, says the Conservative *Spectator*. There have been as many men killed or injured in the last five years as are actually employed in the industry at the present time. Put another way, three men are killed every working day in the year. And out of every 1,000 boys employed under the age of sixteen, 229 are injured. It is said that one reason for this is the increasing use of machinery; the noise it creates adds a new nervous tension to the miner; also it makes for speeding-up. Think of working in a pit to the accompaniment of deafening noise and at such a temperature that the sweat drops from you at a pound an hour (as one delegate described it). In 1926, the Government increased the miners' hours. These hours must be reduced now, if the strain and the accident rate are to be reduced. Also, of course, a reduction of hours would lessen unemployment in the mining districts and so, one

hopes, do away with the 4-day week and 26/- a week wage. (Although, mining being what it is, a 4-day week for a full week's wage of two guineas would not be over-generous. Can life be spacious on two guineas a week for a man and his wife and family?)

More than ten years ago the miners put their case. They told us the accident rate would increase if hours were increased—because the accident rate is always highest during the last hours of the shift—and it *has* increased. Our responsibility is a heavy one. At the least we must put into force at once, whenever they are to hand, the recommendations which will be made by the present Royal Commission on Safety in Mines. And the Commission ought surely to hasten its labours. It has been sitting for *two and a half years*. But the present Government, alas, by its example can give no spur to the Commission to get on and finish its work. When safety in the mines was debated this week in the House of Commons, on the Conservative benches, apart from the Ministers and the Whip, *at no time were there more than four members*. Yet when the Mines Bill was being discussed, the Bill which, in the words of Mr. C. R. Attlee, "was to make the world safe for the royalty owners," it was a different story.

If the proposals of the Committee Against Malnutrition were put into operation they would benefit not merely the unemployed, the under-employed and the badly paid, they would put Agriculture on its feet. It is inexplicable that we should neglect our food supplies while we are pouring out money on armaments—and while, by refusing protection to our own foodships trading to Spanish Government ports, we are proclaiming to the world that any foreign ships which bring us food in wartime will deserve an equal fate. (As Sir Archibald Sinclair has remarked, the statements made by the Government in this connection "will be carefully filed in Germany for propagandist use in time of war.")

Agriculture certainly is in a bad way. In the last eighteen years three million acres have ceased growing crops. The figures for June this year show a fall in the general level of farm prices that brings them to the lowest since August 1936. In particular the heavy fall in sheep prices has set the farmers in revolt. The Prime Minister, in a speech at Kettering, gave them no encouragement. We cannot greatly increase our food production, he argues, because to do so would injure the Dominions and also reduce our own export of

manufactured goods. But, as Lord Addison said, in a debate in the House of Lords, the Prime Minister speaks not for the countryside but for the City mind, "the mind that has dominated our policy for the last fifty years and ruined our countryside."

It is of course nonsense to take this "City" view. In view of the plight of the unemployed, of the under-nourished, it is quite plain that we could vastly increase our food production and still have need of exports from abroad. Turn the whole problem over to a Food Board and they could settle it! The Diminutions need not fear competition—a Food Board, concerned to keep up the food supply, could cut out all competition by setting the same price for all products alike. Or by some other price control: it is a technical problem in such circumstances. But the Government is completely out of touch with realities. Its Minister of Agriculture remarks complacently that we are now producing a larger percentage of our total requirements than before the war. Our *total requirements*! Malnutrition being rampant, no one can *know* what are our total requirements.

Indeed of all the wonders, considering this addiction to the City view, it is the greatest wonder that farmers should be Conservative as they mostly are. But some of them, perhaps, are at last beginning to see that the Conservatives have nothing to offer them. The Somerset Farmers' Union Executive have recommended farmers to study copies of the Liberal and Labour Parties' Agricultural Policies. And the Chairman of the County Organisation Committee has said: "We have sufficient votes to make the Government feel very shaky in 50 or 60 seats."

One man at least must be thankful for the long inter-regnum which the parliamentary recess really amounts to and that is the Prime Minister. At last he has a free hand. And no Prime Minister, not even Mr. Ramsay MacDonald, ever showed a greater determination to keep all the moves in foreign affairs completely under his own hands. Before Mr. Eden's resignation, which he forced, he was exchanging private letters with Signor Mussolini. Before the Royal visit to France he was exchanging letters with the French Premier. For the past few weeks, he has been exchanging letters with Germany; and Lord Halifax, his shadow-Foreign Secretary, has been receiving Captain Wiedemann, Herr Hitler's un-official ambassador. At the moment of writing Lord Runciman is about to proceed to Czecho-Slovakia to act there

as an adviser in the crisis which has arisen in the affair of the Sudeten Germans.

There are those who point out that the Prime Minister is trying to bring off a double event. A few months ago it was said he had staked his political reputation on the success of the Anglo-Italian Agreement. Now the same thing is being said about Lord Runciman's visit to Czecho-Slovakia. But the Anglo-Italian Agreement is not implemented yet (and Signor Mussolini grows more indifferent and more abusive of Britain daily, more subservient to Germany—to spike whose guns on the Brenner was one good object in his eyes of the Anglo-Italian Agreement) . . . All the same, Czecho-Slovakia is not Spain, and the chances of a peaceful conclusion there—though it may only be peace for a few years—are greater.

It may be remembered that in an earlier Letter I quoted that great authority on European questions, Professor Gooch, as saying that peace depended upon one man—Herr Hitler. If he wants peace, there will be peace. If he wants war, war there will be—although no one else in Europe wants war. Whether this is a true view of the case or not, it seems that, for the time being at any rate, Herr Hitler does not want war.

There are many reasons why Herr Hitler should not want to make war at this juncture. For one thing, the recent Royal visit to France has shown him (with an emphasis that is said to have surprised our own Foreign Secretary) that France and England are solidly united. For another, if he has serious designs in Spain—and all the signs are that he has—it is obviously to his advantage to finish his work in Spain before he starts out on his next adventure.

Looking at the scene with his eyes indeed, everything seems to be in favour of waiting *now*. And far from our drawing a sigh of relief at this opportunity for a breathing-space, we may feel that the future will shortly grow darker than it has ever been. Because it is said on all sides now that, with the Czecho-Slovakia crisis out of the way (only temporarily out of the way but we will go on being ostriches and deceiving ourselves), negotiations will begin for a Four-Power Pact. Partners in this Pact will be France, Britain, Germany and Italy. In other words Germany, having in Spain emasculated France by giving her another frontier to defend and by coming within easy striking distance of her munition works, is now out to eliminate France's other great ally—*Russia*.

If we truly knew the things that belong to our peace, we would never consent to a Four-

Power Pact. It has no other object in German eyes than to eliminate Russia.

And we need make no mistake about Germany's and Italy's projects in Spain. They may, by a miracle, fail. The Spanish Government is fighting for the existence of Spain—they see that Franco's Spain is already a colony, exporting its mineral wealth and its largest incomes to Germans and Italians—and people fighting for their existence are very hard to defeat. But Germany is fighting in Spain simply and solely because she wishes to destroy France as a Great Power, as a continental Power. That her intervention in Spain was part of her strategy to that end was recently revealed in the report of a Staff lecture given to German officers. The publication of this report in a London newspaper roused a storm of indignation in Nazi circles. It was denied within a few hours of the publication. But Germany need not bother to make these denials. As fast as she denies her strategic war in Spain, her troublesome ally, Italy, affirms it all. Listen to this, from the Italian Fascist *Resto Del Carlino*, published on June 30th, 1938:

"The solution of the Czechoslovak problem and of the colonial problem will be facilitated from the day when Communism and its blind auxiliary, Democracy, will have suffered a bloody defeat in the Iberian peninsula. *On that day, France, before mobilizing on the Rhine, will have to think of its other frontiers: that of the Alps and that of the Pyrenees.*"

So there we have it. Germany has already re-fortified the Rhineland. When she has secured her aims in Spain, she will be in a position to say to France: Get behind your Manginot line—and stay there. It is indeed a very serious outlook for us. All this is being done to our chiefest ally, France. And now Germany wants us to connive, in a Four-Power Pact, at getting rid of the only other Great Power who might stand up to her—Russia.

We may talk of peace now, but Germany's action in Austria, Germany's action in Spain, Germany's action in Czecho-Slovakia, are not merely a few passing fevered impulses. They are part of a programme which began when he entered into a Non-Aggression Pact with Poland, soon after his coming into power, as a first step towards achieving his objects in Central Europe. The Polish Pact secured him from danger in the East (the Polish Corridor could wait for the time being). The war in Spain, he hopes, will

secure him in the West. That war has not been won as quickly as he anticipated. And France and England are solid at the moment. And Russia is still in the picture. But in a few years time . . . ?

And all those people in England, who have played the Fascist game and are playing it still, who are so concerned for the survival of their class and their prestige that they have fallen for the myth put about by the Dictators that Franco is fighting "communism" in Spain, let them think upon this. If the Dictators have their way in Europe—if they immobilise France and Russia as is their intention—Britain may remain a capitalist State but she will have become a Second Class Power. She will be incapable of resisting German demands, whether as regards Europe or as regards colonies and the British Empire. And the reason she will not be able to resist them is this: once Germany obtains sway over the Central and Eastern European plain, she has access to all the corn, all the oil, all the raw materials she needs. In other words, never again can Germany be defeated by *blockade*.

So our very survival as a Great Power depends upon the independence of Czecho-Slovakia, depends upon whether Europe shall revolve around the democracies or around the dictatorships. Let us be thankful, then, that we are taking a constructive interest in the question and dispatching Lord Runciman "to sit on the lid of the kettle" as the American Press so amusingly describes it! (Although of course, if peace is to ensue, something more is necessary.) It is said that the Runciman mission is due in part to the good offices of Mr. Jan Masaryk, the Czecho-Slovak Minister in London. If only some Spanish representative in London—or America for that matter—could do the same for Spain.

Many people in this country see that the Spanish Government is, after all, fighting our battles, and fighting against odds that we, by our failure to make Non-Intervention a reality, have increased against them.

Surely, at the least, the time has come for us to throw all our influence into the effort to bring about an Armistice.

Westminster, London,
August 1, 1938

ABORIGINES OF ORISSA

By A. V. THAKKAR

BEFORE the Provincial Autonomy was introduced last year as a result of the Government of India Act of 1935, large tracts of the country inhabited by Aboriginal tribes in the provinces of Assam, Madras and C. P. were almost a sealed book to an ordinary student of politics and even to a Hindu social worker. They were no doubt, ideal places to Christian missionaries for their work of proselytisation. Even under the Provincial Autonomy, many of these tracts have been classed as either wholly or partially excluded from the full autonomy. Chittagong hill tracts in East Bengal, Districts of Naga Hills and Lushai Hills and a part of Cachar in Assam and small areas in the Punjab and N.-W. F. P. are wholly excluded areas. The list of partially excluded areas extends to eight major provinces, and it is so big as to contain numerous districts, not only in the hilly and forest areas but also in the plains. The following abridged list will give the reader some idea of the list of partially excluded areas:

Madras.—East Godavary and Vizagapattam Agencies.

Bombay.—A large part of West Khandesh and a small part of East Khandesh, parts of Nasik and Thana Districts and nearly half of Panch Mahals District.

Bengal.—Whole of the Darjeeling District and part of Mymensingh District.

U. P.—Parts of Dehra Dun and Mirzapur Districts.

Bihar.—Six whole districts of Chota Nagpur and Santhal Parganas, out of 16 districts in the province. In other words 37½% of the province.

C. P. and Berar.—Whole of Mandla District, parts of Chanda, Chhindwara, Bilaspur, Drug, Balaghat, Amraoti, Betul Districts, i.e., one whole district and parts of seven districts out of 19 districts in the Province.

Assam.—The whole of Garo Hills District, parts of Nowgong, Sibsagar and Khasi and Jaintia Hills Districts. Thus out of 12 districts in Assam 2½ are wholly excluded and one whole district and parts of three more are partially excluded.

Orissa.—Whole districts of Angul and

Sambalpur, Ganjam and Vizagapattam Agencies, out of seven districts only in the Province.

The list is as any one can see at a glance a formidable one. But Provinces of Bihar, Assam and Orissa are the worst sufferers and have very large portion of their areas partially excluded from the benefits of full autonomy.

Since the last 12 years I have been studying the question of the forest and hill tribes of our country. In 1926 I was able to visit some of the hilly districts of C.P. and Assam. But my ambition to visit hilly districts of Ganjam and Vizagapattam (formerly in Madras, but now in Orissa) could be fulfilled in last April only. The existence of the Congress Ministry in power in Orissa and the consequent wider opening out of those parts to the general public facilitated my tour in these Agency Tracts now called Ganjam and Koraput districts respectively. Besides these, I was also enabled, by the kindness of the Dewans of the States, to tour in the unfrequented parts of Orissa States of Mayurbhunj and Kalahandi at the same time. During these tours I could see something of the aboriginal tribes living in those uplands of Orissa, their life, their manners and customs, their nearness to the Aryan and to our culture.

Ganjam is a coastal district with much of its hinterland hilly and full of wild people. The tribe of Kandhs, misspelt as Khonds, inhabit the taluks of Udaygiri and Baliguda. In the first half of the 19th century, Kandhs were given to human sacrifices for the propitiation of gods of the earth, who were supposed to give them good crops by the human offering. These were stopped about the year 1846 by the British Government who agreed not to charge any land revenue to Kandhs as a class. This complete exemption from land revenue is the privilege of the Kandhs in this tract even upto this date. They brew their own rice beer without any hindrance and liquor shops are not planted in their midst by the Excise Department except in a few places where people from the plains—Agency Oriyas as they are called—have settled.

A large number of primary schools have been opened for the benefit of Kandhs children, who have to be taught in Oriya, a language not spoken by them, their own language being *kui*.

English is just being introduced among them. But the close contact of the plainsmen, who migrate here without their women, has unfortunately brought syphilis in its train and is said to spread very fast. It is hoped that before it becomes too late, Government will take remedial measures for preventing the spread of this terrible disease among these unsophisticated people. The Baptist Missionary Society has been building a very commodious hospital at Udaygiri, and which will be of great help in treating the Kandhs and relieving them of malaria which is very prevalent and the sexual diseases which are steadily and surely attacking them.

Koraput District. This is the newly formed southern-most district of Orissa and is carved out of old Vizagapattam Agency of Madras. It is a very large district with an area of 10,000 sq. miles and mostly forms the Jeypore Zamindari. People here are very backward socially, economically and industrially. Even the revenue survey of the district has not yet been made, and the Orissa Government which has now taken charge of it will soon commence the survey operations. Jeypore Maharaja is trying to develop the area, he has already started a sugar mill, two tile factories, a saw mill etc. The new Railway from Vizianagram to Raipur cuts across the eastern part of this district but on the whole communications are defective, though motor transport has been recently making headway.

Bhuniyas, Bhatras, Parjas, Ranas, Gadabas and similar aboriginal tribes and Doms, Chandals, Mirganis, Medirio, Valmikiis and similar depressed castes form the bulk of the lower strata of the society. Education has just penetrated here in the remote and unfrequented part of Orissa and the poor provinces of Orissa very much deserves a subvention from the Central Government, if for no other reason, for introducing education, enlightenment and industry in this far flung region. Exploitation of agriculturists and labourers is very rampant and *begar* or forced labour is also extracted from them specially by state officials.

But I should not omit to mention the first class museum opened by the State in the town of Jeypore, exhibiting its forest and mineral products, its archaeology, weapons of its aboriginal tribes, its pottery and products of its cottage industries. Such choice collections are rarely to be found even in large towns.

Mayurbhanj State. The proud possessor of the best iron ore in the country and the supplier of raw material to the Tata Steel Works at

Jamshedpur, this State holds the foremost place on this side and is far ahead of other Orissa states. The ruler is not autocratic, as is usual in almost all states, and the State is well developed. Peopled mostly by tribes like Santhals and Kols and who form more than half the population, provided by very good and well made roads and even a light railway of its own, its forests scientifically exploited, the State can easily fall in a line with progressive states like Mysore or Baroda.

Even the backward tribes of Santhals and Kols, Bhuniyas and Bathuris are very keen on education. A majority of its primary schools have hostels attached to them, where boys bring their rations from home and cook their own food. The tribes too have developed a taste for knowledge, and are very fast outstripping the educational facilities provided for them. The solitary high school in Baripada in the whole State is insufficient for the people, who number no less than 9 lacs. The archaeological museum at Khiching, the old capital of the State, on its eastern side is well worth a visit.

I had here the good fortune to meet with two University graduates from the aboriginal tribes, one from Puran and the other from Gond tribe, both employed by the State. But there is no regular organisation, private or by the State, for giving the tribes a helping hand in their rise upwards.

Kalahandi State. This is one of the bigger states of Orissa situated in the hinterland and far away from the beaten track of travellers. Though the recently constructed railway now cuts across the territory, the area as a whole is very undeveloped and even wild. Doms and other depressed classes form as many as 20 per cent of the population, being over one lac in about five lacs. Aboriginal tribe of Kandhs is seen both in the plains and hills of the State. The hill Kandhs are still very wild and do not cultivate the soil by a plough but sow seeds by hand after burning a piece of forest land. They are averse to taking to education and would like to be left to themselves in their primeval surroundings. The chief mode of transport in the State is by bullocks, which bring salt from the coast, and take back grain. The State makes much income from the manufacture and sale of liquor to the people of hills and plains, even small shops in rural parts being auctioned for fabulous sums.

Here I came across an educated Dom, who had recently been converted to Christianity. On my asking him the reason of the change of

faith, he replied that in the midst of Missionaries and their Christian congregation, he found a new world, and met persons of the status whom he could never hope to meet in Hindu society. and was welcomed like a brother. It was the love and the affection of the Christians which attracted him to their fold. True, we Hindus rarely show that love and sympathy to the de-

pressed and the semi-wild people of our country, which one human being should show to another. On the other hand, we shun them and even hate them as if they were not creatures of God with the same feelings and aspirations as ourselves. Whose fault is it if such people found consolation, love and happiness amongst people of another religion, and so embrace it?

A PLANNED ECONOMY FOR INDIA

BY PROFESSOR H. K. SEN, M.A.

ADDRESSING the 21st Session of the Indian Economic Conference as its President for the year at the Hyderabad Town Hall on the 28th December, 1937, Dr. P. J. Thomas of the Madras University laid his surgical hands, so to say, on the two most important plague-spots of Indian life *viz.*, inefficient and inadequate production and inequitable distribution, both of which are as much the cause as the effect of our perennial problem of poverty and an incredulously low standard of living, aggravated by a vicious social system unable to readjust to new circumstances.

The foreign trade of India has expanded by nearly 400 per cent during the last seventy years, and both agricultural and industrial production must have increased by at least half as much; yet according to Sir M. Visveswarayya the per-capita income of the people in this country is about Rs. 55 per annum as compared with Rs. 265 in Japan, Rs. 625 in Germany, Rs. 1,150 in Great Britain, Rs. 1,200 in Canada and Rs. 1,950 in the United States of America. These figures become all the more staggering when we remember that 33 per cent of the wealth of this country is divided amongst 5 per cent of the people, 35 per cent amongst 32 per cent, and the rest of 32 per cent amongst 62 per cent of the people. No wonder that the income of an average agriculturalist happens to be about 2 annas per day or about Rs. 46 per year—to be divided amongst a family of, say, five persons at the least, and dependent upon some 6 acres of land which are expected to give them a sufficiency every two years out of seven, and a surplus in one year out of ten. To these harrowing details must be added the stupendous figures of rural indebtedness estimated at about Rs. 900 crores by the Central Banking Enquiry Committee to get a picture of the appalling condition of the people. This

however, gives a clue to the economic condition of the other classes of people in society—ultimately dependent on them.

In the opinion of Dr. Thomas, "The production system of the country has been clogged by an unjust system of distribution," too large a share of the proceedings going to the hands of the capitalists and landlords and too little going to the hands of the cultivators and labourers; the resultant under-consumption leading to inefficiency and under-production.

The introduction and impact of modern economic life of the western type—with its money economy, *laissez-faire* laws of contract, however suited to a highly industrialised society, have operated harshly on our rural population unable to defend themselves against the rapacity of the middlemen and other Mahajans who have been slow or unable to reinvest their profits in productive enterprises, seeking in usurious loans, land or gold the main outlets of their capital. The Indian capitalists of Bombay and elsewhere either have not been able to evolve the most advanced type of industrial organization that would be conducive to national welfare or will enable this country to effectively compete with others. An increased purchasing power of India's teeming millions, instead of upsetting the balance of world economy, would set all the mills at Paisley and Lancashire hum with work in addition to those of Bombay and Calcutta. But a raising of the standard of living of the Indian masses is to be sought not so much, by equalization of what little sparrow's meat we have, but by a persistent effort to increase the wealth earning and producing capacity of the people, along with a more wholesome distribution of wealth.

The question, therefore, is how to bring about the economic regeneration—whether by mechanization of agriculture and industries or by insistence on the existent system of petit-

culture and handicrafts or by a synthesis of both. Mechanised and scientific agriculture has enabled Australian wheat and Japanese rice to get a hold on the Indian market in recent years—both of which had to be kept out by imposition of import duties by a country predominantly agricultural in its economic life. Indian agriculture, it is said, has largely ceased to be worked for profit and the cultivators labour not for a net return but for subsistence. Indebtedness, high rents, bad irrigation, illiteracy and want of credit are some of the problems to be solved but in our opinion all of them together would hardly be adequate unless the average holding—6 acres for a family of 5 persons—could be increased to a more workable economic unit by consolidation of holdings and other methods, and the overweight or pressure on land could be *substantially* mitigated.

That surely opens up the question of the industries. Supplementary occupations of the agriculturist were a regular feature of the earlier days, when the country was not so much ruralised by the conquest of western industrialism (1891) 61% lived on agriculture, 1921—73%. But the rural industries have either decayed or died out. Mahatma Gandhi would have them revived along with the Charka and the Khadi on the old handicraft basis. Modern economists drawing their inspirations from the machine age of the West are dubious about the competitive ability of the cottage system of production and are keen on importing modern industrialism look, stock and barrel, without which, they say, it would be impossible to compete with other countries.

But such wholesale mechanization of all industries possibly runs counter to our national character as well as cultural and economic heritage, and could possibly be brought about by a ruthless dictatorship whether of the Russian or of the Nazi type—either of which seems to be foreign to the Indian soil. No doubt, a number of industries, *e.g.*, steel, transport, electricity, etc., cannot but be conducted on a large scale if economy and efficiency are to be ensured; yet it can hardly be gainsaid that the unit of production in most other industries can and should be small, helped by hydro-electricity, transport and marketing facilities of different kinds. Japan is an outstanding example of the synthetic and successful blend of the two types of production. Besides the mechanized industrialism of the west can hardly be called an unqualified success—it has succeeded in producing enormous economic goods but has failed to distribute the same equitably—how else

could we account for the burning of wheat, cotton and coffee in one part of the world, when in another place we find poverty and starvation are stalking over the land.

So there is hardly any case for a wholesale imposition of the modern industrial system of the western type. India's 350 million living machines cannot afford to be given quietus for all time—they must be made to throb with life and sparkle with happiness. But how can this be done? Not by working on one side alone but by resolutely attacking the problem from different directions though mainly economic and social. Writing off or toning down old, accumulated debts of the agricultural classes, development of land mortgage banks and rural credit, quickened and cheaper transport, better and more direct marketing facilities, provision for subsidiary occupation on the model of Dayalbagh industrial colonies, equitable rent and taxation, consolidation of economic holdings, cattle and crop improvements, advancement of literacy and social conditions, healthy trade unionism, minimum wages and hours of work and better housing and sanitation, a check on thriftlessness and extravagance and the rousing of the social consciousness are some of the long list of urgent problems requiring immediate solution.

To this long list of maladies must also be added the problem of over-population and of increase at the wrong social status of the infirm, imbecile and inept part of the population—a matter to which earnest attention was drawn by Col. A. G. H. Russel, Public Health Commissioner of the Government of India, in a recent speech in the Statistical Conference at Calcutta. India has the highest birth rate as also the highest death rate amongst the civilised countries but the average expectation of life is 26 years only, which is two-third of that of the Russian and the Japanese, and less than half of that in the North-Western countries of Europe. Yet population goes on increasing fast; between 1921-30 it had increased by as much as 106% representing a net increase of population equal to the total population of any first class-power in Europe (except Russia); and by 1941 it is expected, short of any great calamity happening or epidemic spreading over the country, to rise up to 400 million human souls. All these present a stupendous problem to the new provincial Governments, nevertheless these are to be attacked with all the resoluteness, wisdom and energy they can command if the Prometheus unbound—that is the Indian masses shorn of their age-old pathetic contentment—are to be

weaned away from treading along the dangerous paths of revolution and communism and diverted into peaceful constructive channels.

For this what is wanted is a planned economy for India that will eliminate waste, encourage efficiency, rectify inequities, co-ordinate agriculture with industries, raise the standard of living and the purchasing power of the millions—assuring a steady market at home and abroad in these unsettled times.

The idea of a planned economy originated with Soviet Russia where a considerable measure of success has been achieved owing to the ruthless driving power of the State, whose ideal was production for consumption and not for profit. But the success of the Five-Year Plan in Russia caught the imagination of the people in other countries, and it has been copied in some form or other in different countries of the West and the East. A flood of production of both industrial and agricultural goods was the natural consequence—augmented by the efficiency of mechanised production. No country at the present day can be impervious to the changes occurring in a different country and the world situation has remained in a state of constant flux since 1930, owing chiefly to over-production and the so-called want of a market.

Each country had a system of regulation, if not of planning, imposed upon it, in order at least to stem the rising tide of competition from other countries. There cropped up besides a queer state of adversity in the midst of plenty. In America, in Europe and in Japan the enormous wealth produced by the production machines could not be properly distributed;—there was widespread unemployment on the one hand and evaporation of profits on the other. The countries began to think in terms of nationalism instead of internationalism; protection replaced free-trade; economic nationalism and self-sufficiency, Imperial preference, trade quotas, and trade agreements, raised their heads and the whole world was torn into warring groups and units—economically at first, politically afterwards, till we find today that the world has practically relapsed into what Hobbes would call a State of Nature—Nature red in tooth and claw—where every one's hand was against the other.

Internally also, class struggle has become extremely acute—greed or hatred having replaced mutual collaboration and justice in most countries—resulting in disastrous civil war in some, in conquests, adventures and in totalitarian or proletarian dictatorships in others.

Britain tries to solve the problem by a policy

of advanced conservatism, and U.S.A. under the dynamic personality of President Roosevelt by cautious liberalism. The natural but predominantly conservative administration of Great Britain, so much more interested in world trade, has nevertheless abjured free-trade, adopted protection, suspended the gold standard, and negotiated a series of trade agreements with other countries under the stress of the world economic and political situation, and within the country has been following a policy of national regulation and tempered socialization—as is evident from increased social services in the form of unemployment relief, old age and widow's pension, national health insurance as well as the national grid system in electricity, sub-division of agricultural holdings, food control and control over other resources even in times of peace.

In U.S.A. also, we find the same tendency operating though the conditions are different. There the economic planning of a courageous President has been more thorough-going, and his "processing of the industries" has met with greater opposition from the plutocrats; but he has defended and upheld those in the interest of society—to save capitalism, as he says, from its own evils and the country from revolution and anarchy.

What is to be done in India? This country has not yet fully emerged from the state of archaic feudalism or from many of the social customs and evils, more in keeping with the dark ages of her past. Though rapidly changing, sometimes beyond recognition, she is still in her period of transition. Capitalism has made considerable stride since the Great War, but has not been fully absorbed as part of her being, as external influence has acted on a people unwilling or unable to keep pace with world events or to adjust itself to new circumstances. That is the crux of the whole economic and political problem of India today.

Production, as we have already said, is both inefficient and insufficient, population unregulated, distribution defective, education barely touched, social conscience unstimulated; and on the soil of a country so unprepared whose people have grown desperate by grinding poverty and the worst social conditions, are being sown all the seeds of disruption from the west,—Fascism, Communism and other *isms*. At least to stem the rising tide of social disruption and to make the life of the people fuller and happier, regulated production and planned economy are necessary for India and such planning must extend over every department of life.

PRE- AND POST- WAR CZECHOSLOVAKIA

By PROFESSOR ISH KUMAR, M.A. (Panjab), B.A. (Cantab.)

THE Czechoslovakian Republic was created by the Treaty of Versailles, January 1919, and its frontiers were recognised by the Conference of Ambassadors, July 1920, and the Treaty of Sevres, October 1920. It is now made up of Bohemia, Moravia and Silesia, formerly parts of the Kingdom of Bohemia, and of Slovakia and Carpathian Ruthenia, formerly parts of Hungary: these are the so-called "historical provinces". The district of Hlucin was added at the expense of Germany and the districts of Valtice and Vitoraz at the expense of Austria.

T. G. Masaryk
First President of the Czechoslovak Republic

The whole area comprises 54,244 sq. miles, but owing to its elongated form, it touches many countries. Its greatest length is about 625 miles and its greatest width not more than 190 miles. Geographically, it lacks territorial compactness—Carpathian mountains, the Bohemian plateau

and the Moravian plains—and the progress of the railway is further hampered by the conditions of the past when the centres of communication were Vienna and Budapest. Its population is still more varied; the figures for 1936 show the following distribution:

| | | | | | |
|-----------------------------------|----|----|----|------|---------|
| Czechs | .. | .. | .. | 7.34 | million |
| Slovaks | .. | .. | .. | 2.35 | " |
| Germans | .. | .. | .. | 3.23 | " |
| Magyars | .. | .. | .. | .69 | " |
| Ruthenes, Russians and Ukrainians | .. | .. | .. | .55 | " |
| Jews (by nationality) | .. | .. | .. | .19 | " |
| " (by religion) | .. | .. | .. | .36 | " |
| Poles | .. | .. | .. | .08 | " |
| Others | .. | .. | .. | .05 | " |
| Foreigners | .. | .. | .. | .25 | " |

TOTAL .. 14.73 ..

Thus the Germans form about one-fourth of the whole population and occupy an area of a little over one-fifth of the entire state, stretching along the frontiers of Bohemia, Moravia and Silesia. It is, however, not a solidly connected area, though more than half of the entire German population inhabits its northwestern part at the foot of the Orr Mountains.

It is sometimes supposed that the Czechoslovakian Republic was the arbitrary and artificial creation of the French politicians to set as a bulwark against German expansion in the east. To show how mistaken that view is, it is necessary to turn a glance at the pre-war history of that country. Ever since the Battle of the White Mountains (1620 A.D.), the House of Habsburg had enjoyed an absolute and undisturbed sway over the whole land for more than two centuries, when the general democratic wave of 1848 which swept over Europe roused the Austrian nations too. But under the new 18 year old Emperor Francis Joseph, the reins of rule were still more tightened. The Bach Absolutism, named after the then Prime Minister, proved a more rigid form of government than was ever witnessed before. The system of local "Estates" was completely destroyed and the uniform and united frame of the absolute and comprehensive state was firmly established. Ruthless war was waged on the "particularist" effort of the various nationalities. A complete and systematic "Germanisation"

of schools and public life followed, with the object of creating a uniform "Austrian" nationality and "Austrian" patriotism.

Then came the disastrous war with Italy (1860 A.D.) and the consequent downfall of the

score of unity of the Empire was gone by the settlement with Hungary, they issued the so-called "Declaration" proclaiming their claim to the historic "state rights" of Bohemia. A wholesale persecution followed—gagging of the press, suppression of the freedom of speech, dissolution of the representative local government bodies and ruthless police control. The Czechs resorted to passive resistance. They refused to send their deputies to Parliament and abstained from participation in the proceedings of the Diets.

The government of Count Taaffe was more sympathetic and the Czechs entered the Reichsrat in 1879 and demanded once more the historic rights of Bohemia. The Czech deputies acting in concert with the old Bohemian nobility soon became an important part of the Conservative majority on which the government of Count Taaffe depended for many years. They secured

Dr. Eduard Benes
President of the Czechoslovak Republic

Bach Absolutism. The old Estates were restored, though the Hungarian Diets were given considerably greater powers and freedom than the rest. But Hungary was not satisfied. Once again a disastrous war, this time with Prussia in 1866, decided the issue. The Settlement of 1867 recognised the special constitutional position of the Hungarian Crown and ended the uniform politics of the Austrian Empire. The old Habsburg Monarchy became a Dual state and began to be called "Austria-Hungary". The Czechs wanted the same position for Bohemia and were indignant especially because, during the Prussian war which was fought on Bohemian soil, they had proved a remarkable fidelity to the Emperor by their unconditional refusal of the Prussian inducement to betrayal and had been promised a speedy fulfilment of their political demands. When they now saw that the old objection on the

Dr. Kamil Kroffa
Minister of Foreign Affairs

some valuable concessions, especially in the sphere of education—the re-establishment of the Czech University in 1882 and the revival of the

National Theatre, Prague

Czech language. But their policy did not go far enough to satisfy the masses who had been awakened to the ideas of liberty. The "Young Czech" party was founded and won overwhelming successes against the "Old Czech" party in elections to the Diet of Bohemia in 1889 and to the Reichsrat in 1891. Profs. T. G. Masaryk and Kaizl and Dr. Kramar were among its leaders though Masaryk resigned his seat two years later and founded a party of his own known as the Peoples' Party. The aim of the Young Party, however, was not the "historic" right of Bohemian independence but securing just proportion in posts and the legislative bodies, the extension of universal suffrage and so on. The universal suffrage achieved what years of agitation had not: it brought the masses in close touch with the national cause and aspirations and paved the way for the crisis that came during the war.

The war was no doubt a godsend to the Czechs but it did not bring them what they did not deserve. They had worked hard for it. They had persistently opposed the powerful Habsburg Monarchy for over half a century. They had steadily agitated and educated the masses and above all they had done all they could in the circumstances to improve the general economic and cultural life of the nation. Both industry (mainly in the hands of the Germans) and agriculture had made a tremendous progress. The *Narodni Listy* was founded in 1861 and proclaimed the freedom of political press. The "Sokol" was inaugurated in 1862

and gave rise to various social and gymnastic activities. There was an outburst of literary and artistic production—poetry, music, painting,

Czechoslovak Legation

sculpture. The University influence contributed to scientific "realism" and all romantic

Dr. Milan Hodza

superstition was condemned. Schools multiplied, mainly due to the efforts of a private organisation called the *Ustredni Matice Skolska* (School Society). The Czech Academy of Science, Literature and Arts was founded in 1880 by the great philanthropist Hlavka. The National Theatre was built a few months later.

The Slovaks were not so fortunate. They were under Hungarian rule as the Czechs were under the Austrian and Magyarisation proved more ruthless than Germanisation. All Slovak Grammar Schools were closed: the Slovak Matica (Book Society) was dissolved and even the churches preached the Magyar spirit. The influence of the Czechs did act as a stimulus but it did not go very far.

But not even the Czechs had yet any idea of severance from the Habsburg Empire. What they resented most was the too close alliance with Germany in which they saw fear to the Monarchy itself: it also complicated their relations with the Germans living in Bohemia. Further they wanted a better understanding between Austria and the Slav states, especially Russia and Serbia. The annexation of Bosnia and Herzegovina in 1908 was an intolerable blow and when finally Austria declared war on

Serbia and subsequently on France and Russia, the Czechs were completely estranged. They did not like to fight against the brother Slav states and France had always inspired them with ideals of democracy. The well-known utterance of Bethmann-Hollweg, the German Chancellor, that the war was a war between the Germans and the Slavs proved the last straw.

The Czechs had not entered the war with any enthusiasm. Now their sympathies were definitely with the Allies and the Czech soldiers voluntarily began to be taken as prisoners especially at the Russian front. One step led to another. The Czechoslovaks scattered all over the world formed powerful revolutionary organisations known as "Maffie" and enlisted as volunteers in the Allied armies. At Paris a National Council was formed under the direction of Masaryk and Benes and the Czechs as well as the Slovaks moved over *en masse* to the "enemy." That started "the rot in the Austrian Army," says Mr. Lloyd George in this morning's (25th July) *Daily Telegraph*, "which hastened that process of disintegration which destroyed its value as a fighting machine." The Czech soldiers fought on all fronts. They made their greatest mark in Russia. From the very beginning the Russian victories had been their hope. They even thought that the Russians would reach Bohemia and establish a Czech kingdom in close connection with the Russian Empire. Prof. Masaryk was one of those very few people who believed in complete independence. He had already established contact with the statesmen of the Entente but it was a hard task to win them to his aims. They regarded Austria-Hungary merely as the victim of German Imperialism and hoped to weaken the enemy from within by detaching the Habsburg Empire. The Empire moreover was regarded as a future European necessity. But Masaryk and Benes were not the men to be discouraged. Their agitation and activities abroad found an enthusiastic response at home. The old Emperor Francis Joseph tried a policy of repression. The Czech press was gagged; the leaders of the Young Party, Dr. Kramar and Dr. Rasin, were arrested; the Czech language and the Czech schools were suppressed. But the Czechs met it all with defiance. Emperor Joseph died (Nov. 1916) and his young grandnephew Charles tried a moderate policy, but things had already gone out of control. The revolutionary organisation, the Maffia, took deeper and deeper roots.

Masaryk achieved his first diplomatic victory in February 1916, when the French Pre-

mier M. Briand received him and an official *communiqué* of the interview was published expressing the French sympathies towards the

possession of all civil as well as military power without bloodshed almost overnight. The Slovaks declared for unity with the Czechs the next day and on October 30, the independent Czechoslovak State became a reality.

One fact that needs emphasising is that the severance from the Habsburg Empire was not the work of the Allies. The French sympathies were no doubt a contributory factor and the publication of President Wilson's letter certainly proved the immediate stimulus, but the British politicians were definitely against what Mr. Lloyd George, than whom there was no more authoritative spokesman of the British point of view at Versailles, calls the "demoniac mutilation of the face of Central Europe." "The tearing up of the Austrian Empire into disparate and unconnected fragments," he continues, in his 13th article on Versailles in the *Daily Telegraph* dated 22nd July:

"The tearing up of the Austrian Empire into disparate and unconnected fragments was no part of the policy of the Allies. We knew there must be a readjustment of

General Krejci

Czechoslovak revolutionary programme. In January 1917, in a letter to President Wilson, the Allies, mainly through the efforts of Dr. Benes, made a definite mention of the emancipation of the Czechoslovaks as one of their peace aims. The French Government recognised the National Council in Paris as representative of the Czech nation. Britain, America, Japan and Italy followed. An interim government—Masaryk. Benes and Stefanik, the leader of the Slavs—received *de jure* recognition from all the allied powers.

It was too late now, October 16, 1918, for Emperor Charles to offer autonomy to the various nationalities under Austrian Federation. On October 21, in his answer to the Austro-Hungarian offer of peace, President Wilson declared that the future of Czechoslovakia must be decided in consultation with the Czech revolutionary leaders. The conference took place immediately at Geneva, but while the Conference was in progress, the "National Committee" declared independence at home and took

Costumes from Moravia

frontiers in favour of Italy, Serbia and Rumania. As for the rest of the Austrian Empire, the idea that found favour was that which had been expounded by General Smuts. This was to confer complete autonomy on the

component races who made up the Austro-Hungarian Empire inside a federal constitution.

"Had that been found practicable there can be no doubt it would have conducted to peace and stability in Central Europe. But when the Austro-Hungarian army collapsed the fissiparous elements took charge of the situation, Czechoslovakia proclaimed its independence and the Slovenic population of the South joined up with the Serbian kingdom."

In the weak condition of the Allied forces possession became nine-tenths of the law and the "small allies and the small enemies" both took full advantage of the situation. The phrase quoted is Lord Balfour's who in one of his notes (*Life*, Vol. II, p. 283) thus describes the situation:

"The former (the small allies) would, one might suppose, obey us through gratitude; the latter through fear. But the gratitude is being rapidly worn away by our persistent efforts to prevent the nations we have saved

history of the Republic has justified all the claims of the revolutionary leaders. The work of reconstruction that has gone on in the last twenty years is simply marvellous.

On November 14, the National Assembly met, repudiated all claims of the Habsburg-Lorraine dynasty, and elected as its first President T. G. Masaryk who, however, could not return to share the joy of the fruition of his efforts for another month. Dr. Kramar, the leader of the Young Party at home, became the Prime Minister with Dr. Benes as Minister of Foreign Affairs, and General Stefanik as Minister of War. General Stefanik, however, was not destined to see his newly-liberated country. The aeroplane in which he was returning crashed (May 1919) and he met a tragic end.

The Constitution finally passed in 1920,

provides a National Assembly consisting of a Chamber of Deputies of 300 members and a Senate of 150 members. Election to the Assembly is based on proportional representation; the franchise is universal and equal, and the ballot is secret and direct. The franchise age limit for the Chamber is 21 years and for the Senate 26—both male and female. Both Chambers have the right of initiation, but a measure passed by the Chamber of Deputies becomes law despite an adverse decision of the Senate. Also the Deputies alone by a vote of no confidence can compel resignation of the government. Both, in joint session, elect the President for a term

of seven years. The President has considerable powers, particularly the right to nominate and dismiss the Government. The whole country is divided into four provinces; Bohemia, Moravia-Silesia, Slovakia and Carpathian Ruthenia, each having a representative body composed of a majority of elected members. Masaryk, the first President, occupied that office till his death last year. Dr. Benes is the President now and M. Hodza the Premier.

The most difficult task before the new Republic of course was to ensure safe defence against hostile neighbours. Thanks to the untiring efforts of Dr. Benes, a defensive alliance was made with Yugoslavia in 1920 and with

Castle "Kort" (Bone) in Bohemia

or created from cutting each other's throat and seizing each other's territory; while the fear cannot easily survive the continental spectacle of our obvious military weakness.

"The cases are many in which a Division or a Brigade or even a Battalion would have made the situation easy which is now difficult and have effectively smoothed the diplomatic path to peace. But asking the War Department of a Great Power for soldiers is like asking a mendicant for a thousand pounds, and you get much the same reply. The Conference is therefore compelled to talk when action is required. Even the threat of action is denied us, for so notorious is our weakness that we cannot afford to bluff."

All this is not to say that Czechoslovakia did not deserve what it got but to say that it got what it deserved by its own efforts. And subsequent

Rumania in 1921. Thus came into being the Little Entente which has played quite an important part in preserving the new political order in Central Europe. The Little Entente formed a powerful and reliable pillar of support in France whose chief interest was to preserve the *status quo* of the Peace treaties. The friction with Austria was considerably lessened when Czechoslovakia gave her effective help in her financial crisis of 1922. The relations with Germany too improved for the time being when the Locarno Pacts of 1925 established better understanding between France and Germany.

In internal affairs, Czechoslovakia has virtually grown from a babe to a Titan in the last twenty years. In 1918, there were not even enough officers for high civil and military posts. The former Austro-Hungarian occupants could not be relied on for many departments, especially in the diplomatic service. A huge task of education awaited the new leaders and they set about it with tremendous energy. Two new Universities (there was one already for the Czechs at Prague), one at Bruno for Moravia and the other at Bratislava for Slovakia, were established, with a number of technical colleges and the colleges for Commerce, Agriculture and Forestry. New scientific research institutions were founded, the most well-known being the Masaryk Academy of Work. Today literacy among the Czechs is over 97%, and among the Slovaks over 85%. Greater attention was devoted to the military defence of the country. A number of legislations finally led to a law providing for the pre- and post- military service of the whole population of both sexes between the ages of 6 and 50. Military service is universal and compulsory now.

In the economic field, the difficulties were not a few. The break-up of the Empire involved new currency and commercial treaties with the different units and with foreign countries. The first task was to check the flow of inflated currency from Austria and Hungary. All notes of the Austro-Hungarian Bank within Czecho-

slovakia were "stamped" and unstamped notes were excluded from circulation. This formed the basis of an independent and stable currency. During the darkest days of Austrian finance in

Mass drill of students

1922 the Czech crown fell to almost 1/20th of its original value but within a year or two it rose to 1/6th and has maintained it since. She was even able to help Austria. In 1934, the depreciation of world currency conditions, particularly of American dollar and the English pound sterling, lowered the value of the crown by 16.5% but the economic condition of the country generally remained unaffected. It is no small achievement when one remembers what happened in Austria, Hungary and Germany.

Far-reaching land reforms were effected in 1919. Before that, there were either small holdings not enough for subsistence or vast estates in the hands of a few families, most of them alien. Better equalisation was effected by law and the general prosperity of the farmers increased. Immense areas of forest were taken possession of by the State and properly looked after.

Today 39.56% of the population lives on agriculture, 33.87% on industry. The standard of Czech agriculture is very high. The most important agricultural industry is sugar. In the manufacture of beet sugar, Czechoslovakia

occupies a position second only to Germany and its exports exceed any other country. Its smoked-meat products especially ham are of world-wide reputation. Timber, paper, textile and leather industries are also highly developed. Czechoslovakia is also rich in mineral wealth. Its most important manufactures are glass, porcelain and pottery; crystal, ground and coloured glass is exported to all parts of the world.

In 1937, the revenue was 8,456 million crowns and expenditure 8,454 million.

The more urgent problems faced the Republic—religion and nationality. The revival of the Hussite religion and the conviction that the Pope was an ally of Austria brought about

a mass cession from the Catholic Church—more than a million and a half. This caused a great deal of skirmish in the country itself and friction with the Vatican, which could not be settled till 1928. The majority of the population, about 67.3%, is still Roman Catholic, but today religion is not a serious problem in Czechoslovakia. The really serious problem—the problem that threatens to involve the world into another war and is at the moment occupying the best political brains of Europe—is the problem of nationality, especially of the three million and a quarter of Germans who are politically mature and economically prosperous and belonged to the ruling majority before Czechoslovakia gained independence.

A VIGNETTE OF THE PAST

By ASUDE

INTERESTING and illustrated reports of Pundit Jawaharlal's visit to the war area in Spain have lately appeared in some of the papers showing him as in the conventional garb of the European tourist conversing easily and with obvious sympathy with the officers and men of the Republican army. The pictures recalled another scene from this man's eventful life-story where if the issues were not so immediately grave, yet the setting was no less

The Pundit at the start. S. Srikrishna Sinha, the present Bihar premier to his left

gruesome and the part the Pundit played in it no less striking. And there will be many who will see a good deal of family likeness in the two episodes, too. I allude to the

aftermath of the Great Bihar Earthquake and the terrible havoc caused to the town of Monghyr by it.

The cataclysm had taken place on the afternoon of the 15th January, 1934, and a month had not passed yet. In spite of the strenuous labour put up by the band of sappers and miners indented from Fort William and the sporadic efforts of local volunteers, the once-picturesque city lay one vast stretch of ruins. The progress made was exiguous in comparison with the gigantic task, and people had begun to lose all hope of ever seeing a restoration of normal conditions. A spirit of utter despair prevailed all over the district. The town itself looked as if it had been subjected to a sustained shelling for hours by a horde of air bombers.

Living in the nearby town of Bhagalpur,—thirty-odd miles away,—I had already made two trips to see the debris and sensed the spirit of depression which overcast the whole place. It was at this juncture that news reached us that the Pundit was due to arrive at Monghyr on February 8, principally to see how the relief work was being carried out, and incidentally, to mediate in and settle some party disputes which had automatically arisen over the distribution of dole amongst the several communities. My esteemed friend and fellow-

townsman, Mr. Deep Narayan Singh, invited me to accompany him in his car to meet the Pundit, and I responded with alacrity. But I was scarcely prepared for the treat in store for me.

We reached Monghyr at 11 A.M. and found the Pundit in a tent pitched on the Girls' School compound,—not a single habitable building being spared by the disaster,—deeply engaged in listening to representations made by the community leaders of the place. Some of the points raised were of such inconsequential character that they would strain the patience of any ordinary man with serious business on hand. But the Pundit appeared to be in no hurry, and gave a patient hearing to everything and suggested remedies in his usual cool level tones. At 11-30, he rose, the meeting broke up, and we had lunch with him in another tent. He ate little, and had the same pre-occupied care-worn look as one finds in the Barcelona pictures.

Punctually at noon, he started out on the programme which he had chalked out for the hour. He was due to leave for Patna by the

the stalwarts pressed into this unfamiliar job. But they were all keen on the new experiment and followed their leader dutifully. Elbowing our dusty way through legions of relief camps,

The Pundit regulating the operations

dense crowds of half the professional begging community in this part of the country, passers-by and hangers-on, we came to stop at a point where pick-axes, shovels, and baskets were handed round.

And then this little army of debris-diggers, led by the Pundit, and the usual "rubbernecks" at the fringe, marched through the streets. nearly a mile, one continuous range of ruins which had once been houses on either side of us, till we reached the place chosen for the work. It was just one heap of debris amongst so many others, but it was suspected that corpses were still buried inside it.

In a quarter of an hour the Pundit succeeded in bringing chaos into the medley, allotted duties to everybody, and the diggers were at work, he himself leading. I may mention here that the bricks of the erstwhile walls were still crumbling, and foothold was extremely uncertain. One single false step might prove disastrous. The Pundit, however, strode up the heap with the ease and agility of an Alpine climber, followed by his contingents, who had, by this time, caught his infection. With the blazing noonday sun scorching the skin mercilessly, and the dry red dust which flew at a touch of the pick-axe suffocating the worker, they proceeded on their job in the most cool and business-like manner. The Pundit himself set about the task as if he had been born to it and been digging debris all his life. The *savoir faire* had that same detached and yet earnest air about it as I had noticed in the morning's meeting and other past settings.

The point, however, which was still more

The Pundit at work

5 P.M. train, and his plan was to fill in the interval by doing a bit of debris-cleaning for himself. He had already given free expression to the chagrin he felt at the apathy of the people in the matter, and his simple object was to demonstrate what he preached, within the short time at his disposal. We would have been glad of a little rest after the meal, but the Pundit gave one no chance.

So we had to follow, Mr. Singh and I, and a host of well-known Congress leaders, members of the several Seva Samitis, a number of Sikhs, a fair contingent of respectable women volunteers, and a huge crowd of "casuals" bent on seeing the "tamasha." Picketing was all very well, but I could not help noticing the sense of strangeness pictured on the faces of

significant, was the rapidity with which this purposefulness spread amongst the other workers. Old Congress workers despite their age and ill-health, ladies out of the zenana, amateur volunteers who had done everything else except a day digging in their lives, stray "tamashawallahs," all fell to with the same zest, unaccompanied by any excitement or demonstrations. And it might just as well be noted that it was not for five minutes or a quarter of an hour, as in laying a foundation stone or, let us say, a bit of fancy-digging in the back garden, but for full four hours in the same unbroken, respiteless routine. There was not even a knocking-off for tiffin or rest.

The result of this assiduity was that it was the Pundit himself who succeeded in unearthing out of the debris-mountain the dead

body of a little girl, and carried her out into the open in his arms. It had been there for twenty-five days. And the upshot of that one day's experiment was that the ex-"casuals" kept up the work for days after the Pundit's departure in the afternoon according to schedule, and the debris-clearing was carried on and completed with a force and vigour which had been woefully absent before.

I hope I have made it clear that it is not this one day's digging which I wish to stress, but the extraordinary and infectious vitality of the man, and the magnetism which could convert the lotos-eaters into useful and enthusiastic workers by sheer force of personality. I see that same spirit of deadly earnestness in his movements in the Spanish *milieu*.

WILL JAPAN DEFEAT CHINA?

Japanese Dig Their Own Graveyard

By CHAMAN LAL

DESPITE Japan's apparently successful march to Hankow, it can be safely asserted that even the downfall of Hankow will not bring defeat of China and God alone knows how many lakhs of innocent men, women and children will lose their lives before Japan will realise her mistake in attacking a neighbour country, whose friendship would have proved a source of great strength to Japan and ultimately to the freedom of all Asiatic nations. The Japanese have simply dug their own graveyard in China. Burning of villages and raping of Chinese women by Japanese soldiers are the crimes which China will never forgive and the fight will continue till Japan is completely exhausted.

It is true that Japan is now at heart anxious for a truce. I know it from personal friends in Japanese circles, but they don't know how to save face. Britain and other powers are trying for a truce between Japan and China, but General Chiang Kai-shek has blankly refused to think of any truce which will not recognize China's complete sovereignty.

CHIANG SPEAKS

In a cable received today in London he says:

"The Japanese must try to take Hankow for the sake of their own prestige."

"We will defend Hankow, but even if we eventually withdraw, it will not mean victory for Japan, just as every other withdrawal has proved after a time anything but victory. Japan's cost in men, treasure, and time increases whenever we lengthen her lines of communication. To withdraw from Hankow will merely mean that the battlefield will be moved elsewhere to the greater discomfiture of Japan."

The generalissimo quashed rumours that the British, Italian, French, Swedish and Swiss Ambassadors, now gathered at Hongkong, are travelling to Hankow this week to arrange a truce.

WE ARE UNSHAKEN

"China will not welcome intercession by Britain or any foreign Power for an armistice unless China's sovereignty is fully restored. Today China is politically united and her people are increasingly determined to resist. The first year of warfare ends with China having emerged with her financial structure unshaken. She has paid her loan obligations, maintained her exchange stability, steadily decreased her unfavourable trade balance, transferred many industries inland, extended financial relief to agriculture, expanded her road and rail communications, mobilised her women to aid in resistance to the enemy, and created a citizens' army to which the youth of the country are flocking. With so many young men and women animated with such spirit, China can never be subjugated."

Who can doubt that the General is not bluffing, but it is the soul of China that speaks

through him. Independent observers in China also feel the same way.

JAPAN HAS LOST HER WAR

A special correspondent of the *Manchester Guardian* writes:

The longer one lives in the Japanese-occupied areas the more obvious it becomes that Japan has already lost the war. This conclusion is forced upon one not so much by the military aspects of the situation, for it is still apparent that Japan can continue to win victories in traditional warfare, as by the growing evidence of her political stupidity.

On January 16 and again on May 10, when the earlier policy was restated in the same terms, Japan, by her decision not to recognize the National Government of China, set herself a political problem for which she cannot possibly find a solution. To chastise the Kuomintang is one thing; to eliminate it is another. By choosing the second the Japanese have committed themselves to the establishment in China of a new Government, a new political theory, and a new Civil Service. Considering the size of China and the length of time it has taken her to build up modern political institutions, it is clear that even under the most favourable conditions such a task would be a severe test of the highest statesmanship.

But the conditions were not favourable. In the first place, the Japanese have not been able, as they expected, to rely upon a powerful pro-Japanese party, a quick seizure of power, the goodwill of numerous disaffected elements, and a rapid collapse of the Kuomintang, which before the war appeared to be so seriously demoralised. The Japanese have reckoned without a quarter of a century of Nationalist education, and they have discovered that Chinese over fifty, such as the decrepit, sorry-looking Anfu clique who man their puppet Governments, have neither the ability to rule nor the prestige to command respect. The second mistake came after the conflict began; it was the grounds on which they chose to conduct their propaganda. These were, briefly to pursue a holy war against Communism in a country which had nothing to fear from it and against a people who, if forced to choose, would certainly prefer Communism to Japan; to eliminate "anti-Japanese feeling" while at the same time doing everything to create it; and, most serious of all, to destroy the first Government which can claim to have united China since the Revolution.

The political problem has been met by pouring old wine into new bottles. Bringing to their task colonial experience in Korea and Manchuria, the Japanese continue to use the methods which have been found to be more or less successful in those countries. They cannot understand or invent any propaganda designed to appeal to people beyond the reach of their bayonets; and even when people are under their bayonets they defeat their own ends by the unimaginative thoroughness of their methods.

THE KINGLY WAY

The Japanese are busy propagating the gospel of the "Kingly Way" in the occupied areas in China, just as they did in Manchuria. The new political theory and all the propaganda that goes with it can be and is being rammed down the throats of the Chinese in the occupied

areas. But what is the use of all this? It has not converted any Chinese to the Japanese cause, nor has it demoralised the Chinese intellectuals. More serious than this is the fact that this propaganda cannot reach the hinterland and that the methods of conquest have provided the basis for the development of a peasant nationalism.

JAPS FEEL THE PINCH

One relieving feature of this tragic war between two Asiatic nations is that the Japanese have now begun to realise that China is not such an easy prey as they were told by their militarists. During the first months of the war with China the Japanese people had little notion of the truth. They were told that it was not a war but an incident, that it would soon be over, that the Japanese Army was invincible, and that the Chinese Government was powerless and about to collapse at any moment. As a result they were not prepared for what has happened and were surprised when suddenly called upon for a great national effort. Wiser now, the Japanese authorities permit more plain speaking. Ministers do not hide the gravity of the situation, and the press has become remarkably frank. Recently, for instance, the *Osaka Mainichi* published a message from its Shanghai correspondent in which he said frankly that "the unity of China under the Chiang regime is unbelievably strong; the more blows he receives the more solid does his regime seem to become." The same correspondent added that the capture of Hankow and Canton would not necessarily "bring Chiang to his knees."

TRUTH DAWNS

The May number of the *Oriental Economist* of Tokio, writes:

"If businessmen, politicians, and others of the intellectual classes here were to disclose their view on the China outlook without reserve, many of them might be found rather pessimistic, for at least a majority of them feels that before the affair is brought to a final conclusion Japan will have to overcome a mountain of difficulties." It also refers to "bungling measures by Japan" as "wholly responsible for the prevailing conflagration," and suggests that the Government's refusal to deal with the Chiang Government may prove to be a mistake. In another passage the same paper openly states that Japanese Army Headquarters "underestimated the Chinese forces" at Suchow.

After all Truth has begun to dawn on the Japanese, though late, but they can still save their complete defeat by calling a halt to bloodshed in China. A face-saving device can be found. But history must take her course.

THE FUTURE OF THE CHIEF COMMISSIONERS' PROVINCES

By DATTATRAYA VABLE, M.A., LL.B.

LACK of uniformity and a curious blend of almost all the incongruities of constitutionalism has always been a feature of the various constitutional reforms in this country since 1909. The proposed federal scheme is perhaps unique in this respect. The areas which have been effected most by the invidious and discriminatory provisions of the new Government of India Act are the Chief Commissioners' provinces. These places do not find any place whatsoever in the new scheme of provincial autonomy, the very definition of which is based upon the Governor's provinces only. The Joint Select Committee in paragraph 48 of its report makes this distinction abundantly clear. It defines provincial autonomy and says:

"The scheme of provincial autonomy as we understand it, is one whereby each of the *Governors' Provinces* will possess an executive and a legislature having exclusive authority within the Province . . ."

The result is that in pursuance of these recommendations of the Select Committee the Government of India Act does not make any provision even for a semblance of responsible or popular government in the Chief Commissioners' provinces which are governed and will continue to be governed under the most autocratic and irresponsible administration known to us.

PRESENT POSITION

At present there are six Chief Commissioners' provinces namely, Ajmer-Merwara, Delhi, British Baluchistan, Coorg, Andaman and Nicobar Islands and the recent addition known as Panth Piploda. It is sufficient to know the present constitutional position of these places in order to realise the acuteness of political drawbacks and disabilities under which the unfortunate inhabitants of these provinces are labouring. Their political status has been summed up in sub-section 3 of section 94 of the new Government of India Act. It reads:

"A Chief Commissioner's province shall be administered by the Governor-General acting to such extent as he thinks fit through a Chief Commissioner to be appointed by him in his discretion."

Therefore with the single though not very enviable exception of Coorg, which has got a

diminutive and powerless Legislative Council since 1923 but whose position also remains unimproved by the new Act, none of the remaining Chief Commissioners' provinces have any institution representative or nominated which may be able to lubricate the autocratic harshness of the administrative machinery by popular or constitutional advice or suggestions.

DISCONTENT AND CHANGE

The growing discontent of the people of these provinces attracted the attention of the erstwhile indifferent All-India Congress and in a resolution at its Faizpur Session which is repeated at Haripura also, it voiced correctly the feelings of those people when it said:

"This Congress is of opinion that the creation of the excluded and partially excluded areas and Chief Commissioners' provinces . . . covering the area of 2,07,900 sq. miles and inhabited by 13 million people is yet another attempt to divide the people of India into different groups with unjustifiable and discriminatory treatment and to obstruct the growth of uniform democratic institutions in the country."

Further on the resolution adds,

"This Congress holds that same level of democratic and self-governing institutions should be applicable to all parts of India without any distinction."

So, this discrimination is naturally causing anxiety in the minds of the people who reside in these places and they seem to have so keenly awakened to their present miserable lot that they are singularly unanimous in their dissatisfaction with the *status quo* and in their demand for a speedy change. In some of the provinces organised efforts are being made to emancipate their lot. At a representative meeting held last year of the citizens of Ajmer-Merwara various interesting suggestions and proposals were made for the constitutional emancipation of their province. These proposals were quite typical of the widespread discontent and could be useful *mutatis mutandis* for almost all the Chief Commissioners' provinces. The intensity and unanimity of this desire to accept anything but the *status quo* would be clear from the fact that those proposals varied from an honourable and progressive demand for full-fledged provincial autonomy or in the alternative the immediately

possible re-amalgamation of the province with autonomous province of U. P. to the utopian suggestion of forming a confederation of Ajmer-Merwara with the surrounding states of Rajputana and the idealistic and perhaps fantastically retrograde scheme of turning Ajmer into an ideal British state which would serve as a model for other Rajputana states. Even an advisory council was regarded satisfactory to begin with. Some of these proposals and schemes no doubt still furnish a satisfactory basis for considering the question of the future of the Chief Commissioners' provinces.

THE TWO METHODS

A careful analysis of all these or any other possible proposal would show that there are only two possible methods into which all these proposals ultimately resolve for achieving the common objective of Chief Commissioners' provinces. The one is the method of Independent Evolution and the other of Amalgamation and it is proposed to discuss the problem under these two heads here.

EVOLUTION

It is noteworthy that some of the important Governors' provinces of today have been the Chief Commissioners' provinces some time or other in the early stages of their constitutional development. For example the Punjab was made a Chief Commissioner's Province in 1854, Oudh in 1856, Burma in 1862, Assam in 1874, C.P. in 1861 and N.-W. Frontier Provinces in 1901. Most of these were then made Lieutenant Governors' provinces and today all of them are full-fledged autonomous provinces. It is therefore natural for the existing Chief Commissioners' provinces to smart under a sense of great injustice done to them by the repeated clogging of their natural and independent evolution. It should be borne in mind that almost all of the existing Chief Commissioners' provinces are older than most of the above mentioned Governors' provinces of today. Ajmer-Merwara was made a Chief Commissioner's Province in 1871 and it still lingers on as such while all its contemporaries have been raised to their full status. The remaining Chief Commissionerships, except for Delhi which was created a Chief Commissioner's Province in 1911, are also marking time without much success though several momentous changes have been made in the constitution of the country since 1854. Like Rip Van Winkle the inhabitants of these provinces find themselves at almost the same place where they stood not merely twenty years

but in most cases fifty to sixty years ago. It is therefore clear that the only way to make some *amende honorable* for their prolonged misfortune would be to raise at least the more advanced amongst them to the status of autonomous provinces. At least two of them namely Ajmer-Merwara and Delhi can justify this claim purely on merits. Both of these Provinces are sufficiently advanced to live up to the standards set in Governors' Provinces. From the point of view of literacy Ajmer-Merwara can even claim superiority over some of the most progressive Governors' Provinces. The bug-bear of financial stringency though a stock and familiar argument against all improvements has got little force in the present case. None of these places can be called deficit provinces and with prudent economy and readjustment should be able to bear the financial burden of responsible Government. No doubt democracy is expensive but then it is an expensive necessity and not a luxury. Moreover if it is in the interest of the country as a whole to keep up the same standard of political advancement everywhere the financial difficulty cannot be allowed to defeat this uniformity.

THE SMALL AREA

It has often been argued that besides the financial difficulty the small size of these provinces is another obstacle in the way of their being treated as autonomous provinces. It is said that such small areas cannot furnish a sufficient number of persons possessing the required general, political, legislative and executive capacity. No doubt this contention of the smallness of area has got some force but to appreciate a difficulty is not to approve of it or to admit its being insurmountable. Necessity is the mother of invention. The occasion would find the man. Moreover it should be remembered that except Andaman and Nicobar Islands, none of the Chief Commissioners' provinces constitute a natural geographical area nor are they based upon any sound principle of territorial division. They are artificial and in some cases gerry-built areas purposely marked out small either for certain political and state-legal motives or as the Faizpur Congress resolution says :

"In order to leave a large control of disposition and exploitation of the mineral and forest wealth in those provinces apart from the rest of India for their easier exploitation and suppression."

Therefore it is obvious that if it is necessary to keep up these areas in their present size for

some political or ulterior motives which it is not possible to forego then it should not be done at the cost of the just political claims and rights of those places. Instead of making their unfortunate position as an argument against them, the Central Government should face the difficulties which are of its own creation and solve the financial and other problems by granting subventions, etc., to them in order to enable them to share the uniform constitutional advancement of the country.

SUCCESS OF DEMOCRACY

The comparatively smaller size of the Chief Commissioners' province is not an argument against, but a good argument in favour of the introduction of democratic institutions in them. The experience of the working of modern democracies has shown that the true ideal of democratic principles can be achieved in smaller areas only where the sovereignty of the people has got greater and easier chances to regulate, control and watch the activities of its representatives. In bigger areas democracy soon degenerates into the worst type of oligarchy and this is the chief cause of the failure of democracies in bigger countries. Switzerland has been declared by the great constitutionalist Bryce as the 'pilgrim place' for the democrats of the world. The success of Swiss democracy is due to the smallness of the area of the country and its provinces. None of the Chief Commissioners' provinces is smaller in size or population than Zurich, the biggest province of Switzerland. The population of Zurich is about two lacs while that of Ajmer-Merwara and Delhi is five to six lacs each. Similarly the other big Swiss provinces (cantons) such as Bale, Bern etc., are much smaller than the smallest Chief Commissioners' Province that is Coorg.

AMALGAMATION

It is quite well known that in Government of India's Political Department which still controls *de facto* and which till recently controlled *de jure* also, the destiny of these Chief Commissioners' provinces, knowledge may come soon but wisdom always lingers far behind. It is therefore not likely that these unfortunate provinces, however just and irrefutable their claims may be, will get their proper place in the scheme of autonomous provinces before long. Specially when it is remembered that the difficulties of smallness of area and of the financial burden are mere camouflage to conceal the real motive as exposed by the Faizpur

resolution the people of these places shall have to wait for some time to come before they achieve their ultimate destiny. Therefore the only other alternative for securing participation in the new reforms on a par with other provinces would be that the present artificial boundaries of these provinces should be abolished and they should either be merged with the neighbouring autonomous provinces or should be so grouped or rearranged as to become sufficiently large for autonomous and responsible administration. There is no constitutional difficulty either in doing so. Section 290 of the new Government of India Act makes a clear provision for the creation of new provinces and alteration of the boundaries of existing ones including those of the Chief Commissioners' provinces as is clarified in sub-section 3, we have already seen that none of the four more advanced Chief Commissioners' provinces are natural geographical entities but have been carved out from their parental physical units. Delhi was a district of the Punjab till 1912. Ajmer-Merwara though physically in Rajputana was never of it politically and was administered as a part of the United Provinces till 1871. Similarly Coorg is in Madras Presidency and was till its annexation by the British in 1832 was under a Mysore Chief. British Baluchistan also has been separated from its native province by the physically unnatural Durand line in 1893. Therefore it can be made practicable for these places to participate in the constitutional reforms by re-merging or amalgamating them with necessary changes of course, with their original provinces to which they in fact and in some cases naturally belonged. No doubt there are certain peculiar difficulties with each of these places but they are all either exaggerated or are such as can easily be overcome.

AJMER-MERWARA

The case of Ajmer-Merwara is more unfortunate because of its situation among the Indian States all around it. It has been recently suggested that the question of its future can be solved by joining it with the surrounding States in a confederation. This idea besides being impracticable at least for some fifty years to come, would be preposterously reactionary and the most retrograde step. A confusion of the backward Indian States of Rajputana with all the evils of old feudalism with the progressive and ambitious province of Ajmer-Merwara would be detrimental in the interest of both the parties to this heterogeneous conglomeration. Therefore as was recommended by the Asworth Committee

FOLK REVIVAL IN ITALY

By MONINDRAMOHAN MOULIK, D.Sc.Pol. (Rome)

THE most interesting attraction for foreign tourists this summer in Rome is the "Dopolavoro" Exhibition which was opened a few days ago in the Circo Massimo exhibition grounds. It is already a bright spot and promises to be the most frequented rendezvous for holiday-makers as soon as the summer conditions set in definitely. Between the Tiber and the Palatine Hills the grounds of the exhibition occupy an ideal site, and the series of modern edifices profusely lighted at night just at the foot of the dark holes of the ruins of Imperial Rome truly represent the spirit of the Dopolavoro ideal which seeks to combine material progress and scientific advancement with the ancient traditions of the people. The Italian Government has taken this opportunity for calling an International Leisure-time Congress at Rome which will be inaugurated this week (end of June). The Delegates from different countries will be shown what Italy has achieved in the matter of offering facilities for amusement to its industrial and agricultural workers. I am told that the Government of Bombay have authorized an Indian gentleman resident in Rome to represent them at this Congress. Mr. Sondhi, Secretary of the Indian Olympic Committee, is also a delegate to this Congress.

Dopolavoro literally means in Italian 'after-work.' The National Afterwork or

Leisure-time Institute was established by Signor Mussolini in 1925, and was designed in the lines of a social welfare institution which could effectively deal with the problem of how best to employ the leisure hours of the workers. The movement for reducing the working hours

A typical holiday-making couple in the regional Dopolavoro costume

in industries gave rise to this problem almost in every industrially advanced country, and everywhere experiments have been successfully made in one way or the other in order to make

the labourers find amusement in healthy diversions. But nowhere the State has taken such an extensive and interested part in the organization of amusements of the labouring classes as in Germany and Italy. The "Strength through Joy" movement in Germany is inspired essentially by the same ideals of social justice and national vigour as the

country reminds the visitor of the golden epochs of Italian rural life. The zeal and enthusiasm with which the people have devoted themselves to the revival of folk dances, folk songs and regional home crafts, appears to me to be a reaction of the peace-loving and festive temperament of the Italian people against over-industrialization and against socialistic preach-

ings in the pre-war days and just before the advent of Fascism in this country. This tendency towards the preservation of old traditional national costumes, old national sports, regional crafts, etc. is not only a characteristic of Italian nationalism but is also to be found in a more or less intensive degree of cultivation all over Europe, particularly in Germany, Hungary, Bohemia, Norway and Sweden. The machine civilization of today has stopped at the door of these ancient traditions handed down through generations of men and women, and has failed to standardize the culture of nations, because life, although sustained by work, is not lived entirely through work.

Open-air concert organized by the O. N. D. at St. Mark's Square in Venice

Dopolavoro movement in Italy. Thus today both these organizations embrace not only the workers and peasants, but also middle class people, professionals and artists. The *Opera Nazionale Dopolavoro* (National Afterwork Institute) has, in fact, offered a great impetus to the revival of artistic, sportive and intellectual life of those classes of the people for whom such pursuits would have otherwise remained a luxury. The Institution itself also sets on foot new movements in the fields of sport, travel, culture, social welfare and the arts, ranging from music to drama, from the Thespis Car to the Radio and Cinema, from fine arts to home crafts. The most important revival in the realm of folk art effected by the Dopolavoro movement in Italy is that of folk dances and folk festivals which once abounded in this country as a genuine expression of its folk genius. The colour and gaiety of the olden times have returned to the villages of Italy with all its traditional splendour, and although prosperity is yet shy, the sentimental abandon of the festive crowds all over the

The more general features of the Dopolavoro movement are already known to a certain extent in our country through occasional articles written about it. Life is being rendered pleasant and attractive in every grade of society through the Dopolavoro organization. The working men, the government servants as well as the rural folk have all been touched by the new spirit of recreation and joy. Historical pageants, parade of popular costumes and regattas, ski-ing, motoring and racing are some of the most familiar diversions in Italy today. The festivals of the patron saints, the triumphal cars, mystery plays and so forth have been likewise rendered popular. To this list have to be added the spring and harvest festivals of the agricultural folk in the villages, of which the grape festival is the most well-known. Physical exercises, excursions, swimming, etc., constitute a fundamental feature of the Italian mass life today. In this article I do not propose to go into the details of these festivals nor into the organization of the O.N.D. throughout Italy, but I should rather devote myself to the

revival of folk dance, folk music and folk costumes that has been largely due to the Dopolavoro movement.

Italy is very rich in the variety of her popular life in all its aspects. From Sicily to Piedmont, there are as many types of human figures, dialects and costumes as may be found between Bengal and Bombay. Ethnically, Italy is one of the most mixed races of Europe. Almost all the currents of ancient and medieval population and culture movements have left their undying traces on the history and daily life of this people. The Teutonic hordes from the north have as much influenced the temperament and character of the people of North Italy as Greeks, Saracens and Arabs have moulded those of the South. A close and intimate study of the popular beliefs and superstitions of the country folk in Italy and of the expressions of popular arts in all parts of the country would reveal this fact that the Italian people combine in themselves the most remote legacies of their pagan past with the most sublime traditions of the Catholic Church. The people take a legitimate pride in these revived traditions of healthy and colourful past which brings with it a sense of self-esteem which is usually denied to the mass of workers who are victims of the machine age. Thus when Herr Hitler came to Rome on his official visit to Italy during May last, one of the most spectacular demonstrations that was shown to him was the popular dances of Italy attuned to the music of a huge choir of village musicians

gaily dressed in their regional costumes. These dancers and musicians were brought down to Rome from different parts of the country specially for this occasion, and the spectacle they offered amidst the magical illumination and the delightful colours of the Piazza di Siena was very impressive indeed. A few years ago when the Prince of Piedmont married, there were similar manifestations of folk costumes and folk dances in Rome.
